GUIDE TO THE AV7 BURUSHO FILE

[This file is concerned with the Burusho, who are the inhabitants of Hunza and Nagir, two small Burushaski-speaking states in the northeasternmost part of Pakistan. They speak an isolated language which has not as yet been traced to any major linguistic stock. Since almost nothing has been written about Nagir, the file is basically on Hunza (the original of "Shangri-La"). Agriculture is the main occupation, with the major crops being wheat, barley, millet, potatoes, buckwheat and pulses. After grains and greens, the essential items of Hunza diet are apricots and mulberries. Some herding is done, mainly for milk and wool. Hunza is a stratified society, with a hereditary ruler, called the Tham or Mir and supposedly descended from Alexander the Great, with a total of six classes. The people of Hunza are Mohammedans of the Ismaili sect, while those of Nagir are members of the Shia sect. Contact with the outside world is quite limited, particularly since Pakistan has barred most travelers from the area because of its closeness to the Tibetan and Kashmir borders.

There are eight sources in the Burusho file, all of them in English. 1: Lorimer is a brief general source on the Kingdom of Hunza which concentrates on agricultural methods, food crops and the food supply. 2: Lorimer is a popular general account of Burusho ethnography which covers the main aspects of the culture. 3: Lorimer, 4: Lorimer and 5: Lorimer are parts of a three-volume linguistic work on the Burushaski language. 3: Lorimer contains an introduction and grammar, 4: Lorimer contains texts and translations, and 5: Lorimer contains vocabularies and an index. 6: O'Leary is a cultural summary based on the first five sources in the file. 7: Tobe, by an organic

gardener, contains a good deal of information on flora, agriculture, diet and general health conditions. 8: Clark is a study of the general health level of the Hunzukuts (inhabitants of Hunza) and debunks the stories of them living to the age of 120 to 140 years. In general the Burusho file is adequate for comparative purposes, although the information is skimpy in many categories. Linguistic data are relatively full and there is much folklore. No special marking decisions were made for the file, which was processed between 1955 and 1968.]

The Burusho of Hunza

by E. O. Lorimer

THE small state of Hunza is the most northerly in British India. It consists for the most part of a close-packed mass of unscaled and unscalable mountain peaks over 20,000 feet, seamed by untrodden rivers of snow and ice; as might be anticipated, it is mainly uninhabited. Its frontiers march with Afghanistan on the northwest and with Chinese Turkestan on the north and northeast. But where the Hunza river has cut its way down from the Pamirs to join the Gilgit river and ultimately the Indus, there remain, clinging to the mountain sides, a few sloping, rocky terraces which, if water can be brought to them, can with diligence be rendered fit for human habitation. These oases of green amidst the barren desolation of rock and cliff and mountain peak are the habitat of a sturdy mountain people, the Burusho, speaking a difficult but extremely interesting language, of so great antiquity that no affinity between it and any other known form of human speech has yet been traced by the comparative philologist.

When D.L. was posted as Political Agent, Gilgit (1920–24) he made it one of his leisure tasks to collect material for a scientific study of Burushaski (the language of the Burusho) the result of which is a three-volume work*—grammar, texts and vocabulary—of which the last volume is just issuing from the press. In 1934—ten years after his retirement—we returned unofficially to Hunza, armed indeed with a considerable knowledge of the language but with no facility in speaking it, to live amongst the peasants and make such a study of their customs, agriculture, economics, etc., as amateur anthropologists might.

During our four years in Gilgit we had not failed to discover that the Hunzukuts (dwellers in Hunza) were the most attractive of all the likable mountain peoples of the Gilgit Agency, the most physically prepossessing, the most intelligent and the most trustworthy. All classes in Hunza gave us a warm welcome, from the Mir—who has

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

INTRODUCTION

THE LAND and the PEOPLE.

Burushaski, the main subject of the present work, is spoken in the States of Hunza and Nagir, which give a name to that tangle of snow-crowned mountains, long-drawn glaciers and deep-cut river beds that form the western extremities of the Karakoram and Kailās ranges of the Geographers. In elevation and ruggedness the tract may compare with any other portion of the earth's surface. The ground covered by the twin States is roughly defined by the lines 74° 10′ and 75° 40′ of East longitude and 36° and 37° 10′ of North latitude. Of this area the bulk falls to Hunza. Hunza marches on the North with Afghan and Chinese territory, from which it is divided by an immense mountain barrier traversable only by a few very high passes — the Irshad (16,060 ft.), the Kilik (15,600), the Mintaka (15,430) and the Khunjerāb.

The southern drainage from this range quickly assembles a few miles below Misgār to form the Hunza river, which proceeds southwards through the Hèrber or Gujhāl valley, or rather gorge. On its way the river receives reinforcement by tributaries from either side — the principal being the Batūra and Pasu glaciers on the West and the Shīmshāl valley on the East. About 15 miles East of Baltit, the capital of Hunza, the river changes to a general westerly course, and level with Baltit it receives on its left bank the waters of the Nagir river which represent the meltings of the

AV7 Burusho AV7

Buluki-ɣaj kor, "Bulūki's-path Cave", where she reared her family. 246.6. 103

Bululo. Name of a gorge up in the mountains above Haidarābād. 551

Bululom from Bālulo. 270.1, 350.5.

Burubedi. Name of a boy. 270.3.

Burulifłan. Name of the twin-brother of Pangchu (Kisar). 110.20, 144.16 ff. Death of 150.21.

Buri Burn. Name of a place, the "Silver Boulder". 234.2.

Buri Kotor. Name of a clan in Galmit. 272.16.

Burondo Bor. The "Ring Nullah", a tributary nullah on the left bank of the Hunza River a few miles above Bāltīt.

Burong. One of the "Four Clans" of Bāltīt. 268.1, 270.6, 302.8.

Burongłals. The territory of the Burōng Clan.

Burum Mow(als). The "White Mud-Flood" at Aliābād. 240.7,15.

Burum Pfut. The "White Div." 2.7 ff.

Burušaski, Borušaski, Borrišaski. The language of the Burūsho of Hunza and Nagir. I have been unable to get confirmation in either Hunza or Nagir of the term "Boorishki" used by Biddulph.

Burushaski is spoken in Nagir above Ghulmit. For its distribution in Hunza see Introduction Vol. I, p. XXXIV, where the facts given are mainly derived from the Census material of 1931. I was previously told (in 1924) that Burushaski was also spoken in Khaibar and Sost in Herbar, and Rāminj in Chupūrsan.

Burušo, Burušo, Burrišo, sg. *Burušin*. The people in Hunza and Nagir whose first language is Burushaski. They call themselves by this name. It is denied that the Burushaski-speaking people of Hunza and Nagir call themselves, or their language, "Yeshkun", as stated by Conway ("Climbing in the Himalayas", pp. 242—3) Classification of the Burūsho as "Yeshkun" by Biddulph (T. H. K. p. 38) is not supported by local practice, as indeed he admits. 101

At the present day the appelation *Yaškun* appears to be used only in differentiating the two main elements of the Shina-speaking population of the Gilgit and neighbouring regions, viz. the *Šin* and the *Yaškun*. See, however, the entries *yrš* and *Yrškunyu* in the Vocabulary, from which it would appear that a more general use of the term could be justified.

The word *Burušo* may be compared wiuh the first element of the words *Wəršagum*, and *Wərškuar* (*Wərčikuar*), the Khowar terms for Yasin and the Yasin dialect of Burushaski respectively. The Burushaski speakers of Yasin call themselves "Burūsho", and their language "Burushaski".

Sarat Chandra Das gives Tibetan "*Bru-tsha*" and "*Bru-sha*" as "the name of a country N. W. of Tibet".

Cp. also Jäschke, "*Bru-ža*", "*Bru-ša*".

Buzur Jamhur. A corruption of the Persian name, Buzurjmihr. 58.2 ff.

Buzurjmehr. 56.16 v. preceding entry.

CHAPTER 30

Who Are the Hunzans?

I HAVE HEARD the people of Hunza referred to as Hunzans, Hunzukuts, Hunzawals and Hunzas. They prefer to be called Hunzukuts. 101

However, in my writing I am referring to them as Hunzans. I do this strictly as a matter of simplification. I find it easy to say and easy to remember and I also believe it to be the most phonetical of all the terms given.

The Mir claims that the rulers of Hunza were and are direct descendants of Alexander the Great. I could find no proof to either confirm or refute this statement. But it is generally believed that not only the Mir, but the people of Hunza are descendants of Alexander or his soldiers. 643 173

It has been related by many writers that the Hunzans are not by appearance an Asian people. To that I will subscribe completely. They are definitely, in 144

nature of their homeland. 000

However, the Mir pointed out to me most clearly and emphatically that intermarriage among members of one tribe is absolutely forbidden. There are four tribes in the Baltit area and they can marry among these four tribes . . . Diramiting, Khorokoch, Borong, Barataling . . . but definitely not among their own tribe. 582 143 [101]

Lest this sounds like a difficult matter to hold in check, I want to explain that this is easier to control than may be imagined, for the simple reason that all marriages must be sanctioned and performed by the Mir. Therefore he positively knows who is marrying whom. [585]

However, even if this has been the rule for many hundreds of years, the total population of Hunza, even today, stands at something less than 25,000 souls and Lord Curzon in his memoirs states that in 1894, the total population of Hunza was only 6,000. Therefore, among so small a population, it is almost impossible for them to marry very far beyond a family relationship. (In 1934 it was estimated that the population had risen to 15,000.) 161 582 143

Let's put it in another way. If the people of Hunza have remained more or less a pure people for nigh on 1,000 years and the population today is only 25,000, there must have been fairly close intermarriages. Perhaps that would, as I mentioned, account for the similarity of features.

I want to stress, at this point, that I came to Hunza primarily to learn and study (1) about their health and longevity and (2) about their means and methods of agriculture. 121

Let's examine or re-examine a few of the more pertinent details of their unusual country. 000

Hunza is a country that lies along the Hunza River

7:Tobe C,T-3 (1959)1960 AV7 Burusho AV7
Hunza
Nagir

CHAPTER 49

Hunza vs. Nagir

184 AFTER I'VE had some time to think over the experiences of my visit to Hunza, I've been asked by others and I've also asked myself, "Is there any reason for the evident superiority of the Hunzans over the neighboring peoples?"

So I took the case of the people of Nagir, for example, and made comparisons with them. I'm not even sure whether that is a fair or proper means of comparison.

It seems somewhat strange to me that while the virtues of the people of Hunza were being extolled, the bad features or unredeeming qualities of the people of Nagir were being brought to the fore. So I took pains [101] to search and investigate and I came up with the fact that the people of Hunza and Nagir are of identical stock and that it was people originally from Hunza who populated Nagir.

7:Tobe C,T-3 (1959)1960 AV7 Burusho AV7
Hunza
Naqir

Therefore, it is my belief, one of the reasons for the Hunzan high standing throughout the world is due to the excellent quality of leadership that they have enjoyed for many years, and is being continued by the present Mir and his staff and family. 643

I don't want anyone to run off with the idea that everything I saw about the Hunzans impressed me or that I thought they were exceptional in every way, because that definitely is not true. I did then and I do today admire the people of Hunza for all the splendid qualities that make them outstanding people. Anyone who could live in the harsh, tough, back-breaking terrain of Hunza must be made of stern fiber. Yet they have their foibles and weaknesses as well. 123 114

You see there are no immigration rules or laws to stop them from going anywhere in that area . . . at least, there weren't until recently. They could have gone to China, India, Afghanistan, Russia, Pakistan or anywhere else where the pickings might have been easier. But their love of freedom and intelligence that told them they were better off than most people in the world, even though financially poorer, kept them on the mountain slopes that are the banks of the Hunza. 486

No book on Hunza would be complete to even a small degree, unless some mention was made of the fact that it was not always known as Hunza. In fact, back before the turn of the twentieth century, Hunza was known as Kanjut and the people as the Kanjuts. 101

From records that I have located, I learned that, when the rulers of Shignam came to Hunza, they called the valley Kanjut. That name remained until the time of the Girkis and they called the country Hunza, because all of the people were united like the arrows in a quiver. In the Burushaski language Hunza means "arrow."

[P. 39-C]

123 pull them out with my fingers. Bohar
164 gasped, then relaxed as the extraction permitted the abscesses at the roots to drain more freely."

101 This was in Hunza, the small, moun-
131 tainous, Central Asiatic kingdom
121 bordering on China, Kashmir, and Afghanistan, about which there has been recurring publicity, characterizing the land as a Shangri-La peopled by men and women of extraordinary
121 health and longevity. Since the beginning of man's role as a traveler, tales of far-off earthly paradises have been brought home to entertain the untraveled. No matter how many such El Dorados perish under examination, the next is inevitably welcomed into the lists with unblemished credulity.

KOLĪ	Republic	Shīn and Yashkun		
PĀLUS ..	Republic	Shīn and Yashkun		

The first five divisions I have already treated of as fully as I was able. We now come to the countries that surround Gilgit.

Nagar lies along the left bank of the Hunza-Nagar River, having Hunza opposite on the right bank. Since about 1867 it has paid a small tribute to the Maharaja, receiving in return a present of larger value; this cannot be considered more than a compliment, and a mark of desire for friendly relations.

The people of Nagar are called Khajanī.

Hunza is a more warlike country than Nagar. As shown in the last chapter, it has often been actively at enmity with the Maharaja, and it has generally been in a state of unfriendliness to him. In 1870 the Hunza Raja sent an agent to Sirīnagar to open friendly relations, who was well received; I do not know

* I have never met any of these people, but I believe them to be Dārda. Goīje is another name by which they are called; that is the territorial name, while Wākhik is the caste name.

Dard AV3
Burusho AV7

B 648 what since has occurred, but there seemed to me to be no likelihood of close friendship.

B 101 The people of Hunza are called Hunzije.

D 101 The people of *Ishkoman*, or *Chatarkun*, are called Ishkomanije, or Chatarkune.

As to *Yāsīn*, the most that we know of it has been told by Mr. Hayward *; I can add little to that. The people of Yāsīn are called Pure.

D 487 Here are some notes, taken from hearsay, of the roads that lead out of Yāsīn:

Yāsīn to Mastūj; Three Roads.

(1) By Shaver, five or six marches; it can be traversed by men all the year round; for horses it is difficult in winter, but is not altogether closed for them, or if it is, then only for fifteen days or so at a time, until the snow has hardened; also it is bad for horses for a fortnight in spring.

(2) By Tūī, three marches; the Pass crossed the second day.

(3) By Nazba, three marches; the Pass crossed the second day.

Both these are closed for traffic by the end of October.

Probably the marches are of 20 miles each.

Yāsīn by Shaver and Tangīr to Swāt;

A five days' journey they say; but I think these are long marches: it may be 120 miles.

Yāsīn to Badakhshān.

This road is the one which Mr. Hayward was taking when he met with his death.

The Pass closes for horses at the end of October, while for two months it remains closed for all traffic. There is a glacier on the north side, but horses can go over it, avoiding the crevasses.

D 101 The people of Chitrāl are called Katare.

361 642 *Dārel.* This has seven fort-villages in a valley about a mile and a half wide; the cultivation, I was told, is continuous along

* Proceedings Royal Geographical Society, 1870.

4: Durand C-3 (1888-93) 1900 . AV1 Kashmir
Burushe AV7

The cultivation in Hunza is very limited; the finest stretch is just below the fort of the chief, and extends for some six and a half miles in length with a width of from a mile to a mile and a half, the whole of the land being irrigated. This main stretch of arable land, which is studded with villages, lies at an altitude of eight thousand feet, and faces south, and the climate here is delightful. Further up the valley lie scattered patches of cultivation, getting poorer and poorer as the altitude increases. The mountains enclosing the valley are very precipitous even for the Hindu-Kush; wood and grazing for cattle are therefore unusually scarce, and the people suffer in consequence. The clothing of the people is practically the same both in Hunza and Nagar as it is in Chitral, and has been described before,[1] the only difference being that the men's stockings are not knitted in such elaborate patterns, and that, as a general rule, the woollen outer robe is, in Hunza especially, more often white than brown. All, except on State occasions when the higher ranks don the turban, wear the Dard head-dress. This is a long bag of brown woollen cloth rolled back on itself till it forms a cap, which is one fold thick on the top, with a border an inch or so thick round the head. It makes a light, warm, and delightfully comfortable head-dress, but is a very poor protection against severe sun.

Nagar, as most of the surrounding people and the inhabitants themselves generally call it, though they also pronounce the word Nagér, and the scientific, for some cause best known to themselves, insist on spelling it *Nagyr*, is a smaller State than Hunza. The population is about the same,[2] and is composed of Yeshkuns, professing themselves Shiahs, but very

Burushe AV7

In Wakhan, Sirikol, and Yarkund, the name of Kunjoot is given to Hunza, though this name is not in use among the inhabitants themselves, nor among any of the people dwelling south of the Hindoo Koosh. The name, according to the pronunciation of the inhabitants themselves, is more properly Hunzoo. In ancient times it was called Challaj Bultum, a name which has now fallen into disuse. 101

The ruling family of Hunza is called Ayeshé (heavenly), from the following circumstance. The two states of Hunza and Nager were formerly one, ruled by a branch of the Shahreis, the ruling family of Gilgit, whose seat of government was Nager. Tradition relates that Mayroo Khan, apparently the first Mahommedan Thum of Nager some 200 years after the introduction of the religion of Islamin to Gilgit, married a daughter of Trakhan of Gilgit, who bore him twin sons named Moghlot and Girkis. From the former the present ruling family of Nager is descended. The twins are said to have shown hostility to one another from their birth. Their father, seeing this and unable to settle the question of succession, divided his state between them, giving to Girkis the north, and to Moghlot the south, bank of the river. 173

Age did not diminish their enmity, and Girkis, while out hunting, was one day killed by an adherent of Moghlot, a native of Haramosh, named Mogul Beg, who under pretence of a quarrel with Moghlot took service with Girkis, and persuading him to look up at some game on the cliff above him, drove an arrow into his throat. Girkis left only a daughter, who, according to the custom of the country, became Queen or Ganish of Hunza. Her first care was to avenge her father's death. The tradition relates that having sworn to tear the murderer's liver with her teeth, she carried out her vow to the letter. Left without a chaperon, she was not long without getting into a scrape, as young ladies in similar circumstances are apt to do. The young prince Kamal Khan of Nager, a younger son of Moghlot, crossed the river by night, serenaded her, and won her heart. Night after night the lovers met, unknown to the rest of the world, till serious consequences ensued; and one fine day it was announced in Hunza that, though Providence had not yet provided the princess with a husband, it had seen fit to bless her with a son. Morals in Hunza are not of the strictest even now, so that few questions were asked, and the good people generally contented themselves with beating their drums, dancing, and the usual festivities proper on the occasion of the birth of the prince Chiliss Khan. Kamal Khan seems to have

Iškuk. A locality in the Chupūrsan Valley, a few miles below the shrine of Bābā Ghwundi. 280.8.

Captain C. J. Morris was given the name as "*Yashkuk*", v. JRGS Vol. LXXI, No. 6, June 1928.

U, Ū.

Ultər, Ūltər. The grazing ground inside the Bāltīt Nullah. Explained as *ul(o)* + *ter* "the inside grazing ground", in which case the expression, *Ultəre ter.* 256.1 is tautological. *Ultəre Bər* the Ūltar Nullah. 292.2. *ultaron* from Ūltar. 248.9, 256.8.

These grounds originally belonged to the Hamachātīng tribe of Ganish, but they were eventually dispossessed in favour of the Khūrukuts, Barātalīng and Dirāmitīng. Later they were appropriated by the Thams of Hunza. 226.1, 246.9,20, 256.1 ff., 350.3.

Ūsengots, Ūsemots, Ūsengomots, Hosengots. Name of the tribe who originally occupied Āltīt, but were destroyed by Shābōs. 236.2,8.

Some survivors are included in the Rōno caste.

According to one account they are reputed to have been left in Hunza, along with the Hamachātīng and the Tapkhients, by Alexander the Great "when on his way back from China". 238.2,10.

5: Lorimer L-3 (1920-4;1934-5) 1935 AV7 Burusho AV7

103
551

Uyum Das. "The Big Plain", described as "an open space between Nagir and Āltīt and near the latter". Perhaps the tongue of land in the bottom of the valley between the Hunza and Nagir rivers, just above their junction, is the place referred to. 204.11.

B.

Baba Γwundi. The name of a Muslim saint (in full: B. Γ. Mord Wali) and of the locality of his grave and shrine, near the head of the Chupūrsan Valley. For further particulars v. 284.10 and 286.19 ff.

Stone suitable for whetstones, and also lead ore and coloured earths are said to be found in the neighbourhood.

Balowski (*baš*). Balti (language), v. *Balo.*

(Cp. Sh. *Palev* Baltistan, *Palowyo* (adj). Balti).

Baltit, Baltit. The capital of Hunza, situated at the mouth of the Ūltare Bar on the cultivated terrace which extends 5 or 6 miles westwards to the Hasanābād Nullah. It is on the right bank of the Hunza River, roughly level with where it is joined by the Nagir River, but at some distance from the river and some hundreds of feet above it.

The dominating feature is the Mir's residence, a fort said to have been built five or six hundred years ago by people from Bāltistān. This stands on an elevation and the huts of the lesser inhabitants cluster below it.

The situation is a strong one, as behind it rise the mountains which are practically impassable, and on the East there is a perpendicular drop of some hundreds of feet to the bed of the Ūltar stream.

On the further (E.) side of the latter stream there is also a cultivated terrace, at the further end of which Āltīt stands, but this terrace is at a considerably lower elevation than the site of Bāltīt.

Abl. *Baltittum.* 208.5, 186.3, *Baltitum.* 212.21.

Adj. *Baltitum.* 258.1.

Loc. *Baltitulo.* 250.1.

Hunzo *Baltit.* Bāltīt in Hunza. 276.12.

The Seed-Sowing festival. 208.1 ff.

Water Supply. 350—352.

Water Supply, increased by Saiyid Shāh Wali. 292.

Clans at Bāltīt. 252.19, 238.1, 248.28, 270.5.

Celebration of Naurōz. 316—318, of Gināni. 326 ff.

Baltitkuts. The people of Bāltīt. 318.7, 350.3.

Baqi Kutor. A clan settled in Shīmshāl. 272.12.

Bare Dan. A tract at Khaibar (in the Upper Hunza valley), lying to the South of the "Northern Gate". 222.2.

103

Baxtek. Name of a man. 88.13 ff.
Baxti. Name of a man. 272.9, 274.8.
Baxtiar. Name of a man. 88.9.
Baxt i Jamal. Name of a man. 48.1.
Baxti Kutor. Name of a clan settled in Shīmshāl. 272.2,14.
Balo. Bāltistān. 384.19. (Cp. *Baloski* and Sh. *Pale*).
Balots. Bāltis, people of Bāltistān. 274.7.
Baltistan. Bāltistān. 274.1,6.
Bani Hašim. The family of the Prophet Muḥammad. 92.2.
Bapo. A son of the Tham, Ghazan Khān. 344.11.
Bər'ataale. The territory of the Barātalīng clan. 200.1.
Bər'atalin, Bəratalin. One of the "Four Clans of Bāltit". Shadun Kapūri was a Barātalīng woman married to a man of the Khūrukuts v. 258.3.
Kulio Laskir (200.9) was of this tribe.
At one time they shared the Ūltar grazing-grounds with the Khūrukuts and the Dirāmitīng. 258.5.
Dances at marriage festivals. 302.9.
Bərbər. Name of a place in Ūltar(?).
Cave. 226.7. Irrigation Channel. 350.3. 352.6.
Bərča. Name of the Wazir of Shīri Badat. 384.4,19.
Baseŋ Gaisri. A former Tham of Nagir. 276.1 ff.
The name is also given as *Maseŋ*.
Baturra. Nullah and glacier which debouch from the West into the valley of the Hunza River just above Pasu.
B'eričo, sg. *Berits*, an alien people, calling themselves *Dum'a*, who are settled in small numbers in Hunza and Nagir. They serve the community as blacksmiths and musicians. They have an Indo-Aryan language of their own, but also speak Burushaski fluently. [563]
B'erišale. The territory of the Bēricho. 250.11.
Bibi Anjir. Name of a woman. 364.10.
Bidiro Mal. The "Round Field", a field belonging to the village of Sumaiyar. 198.9.
Bir'aldo Bər. A valley and glacier, formerly traversable, between Shīmshāl and Bāltistān. For present conditions v. "Unknown Karakoram" by R. C. F. Schomberg. 1936.
Boxar Tham. A king of Haihaiyūl (Hunza). He is mentioned with Shāh Tham, Nōni Tham and Lali Tham as contemporaneous kings (or members of the ruling family?) of Hunza, expelled and supplanted by Kisar. 142.16.
Biddulph, in his genealogical table of the Nagir and Hunza royal families ("Tribes of the Hindoo Koosh", p. 135) begins with

551 *Boryo.* V. Vocab. s.v. *borin.*

103 *Boryo Gal.* "The Bōyo Juniper Tree". 214.2.

Brunkapardono. The name of a supernatural Golden Calf, birth of 104.22, hunting of 120.22, 124.2, 132.9 ff., death of 134.5. (In Sh. *dorno* = bull).

Bura Gan. "The Cow's Road", name of a track leading out of Ūltar above Bāltīt. 248.1.

Burbuli Gas. Princess Būbuli — a Princess of Haibaiyūl married by Kisar. 142.21 ff. Proposal that Kisar should marry her. 184.1.

Burbulimutiŋ. Būbuli's Peak; name of a mountain peak in the form of an aiguille, close to Bāltīt and to the N. W. of it. Pronounced:
Burbuli Mutiŋ, but the *-mu-* is the fem. gen. suffix, not the Pn.pf. with *tiŋ* peak. 142.28.

Budol's Kutor. Name of a clan in Galmīt. 272.18.

Bulčidas. Name of a locality in Gujbāl near Galmīt. 386.8.
(Probably *bul* + *či* (= *tsi*) + *das* the open ground at the spring).

Bulčutorko. 1. Name of a man who stole gold from a *ḍaŋalathas.* 204.1 ff.
2. (*Bulčathoko*) name of a man who knew the language of birds and fetched Sumalik to succeed Hazir Jamshèd as Tham of Gilgit. 386.4,6.

Bul Das. A place near Gilgit. 382.21, 386.5,6.

Bul Mal. "Spring-Field", name of a piece of land near Bāltīt. 246.12.

Bulwki. Name of a Hamachātīng girl who married Dīram Chūram, the sole survivor of the Tapkhiènts, and so originated the Dirāmitīng. 248.18 ff.

Lorimer L-3 (1920-4; 1934-5) 1935
AV7 Burusho AV7

Buluki ɣaḷ kur, "Bulūki's-path Cave", where she reared her family. 246.6. 103

Bululo. Name of a gorge up in the mountains above Haidarābād. 551

Bululum from Bālulo. 270.1, 350.5.

Burubadi. Name of a boy. 270.3.

Burmliftan. Name of the twin-brother of Pangchu (Kisar). 110.20, 144.16 ff.
Death of 150 21.

Buri Bun. Name of a place, the "Silver Boulder". 234.2.

Buri Kutor. Name of a clan in Galmīt. 272.18.

Burondo Bor. The "Ring Nullah", a tributary nullah on the left bank of the Hunza River a few miles above Bāltīt.

Burong. One of the "Four Clans" of Bāltīt. 268.1, 270.6, 302.8.

Burongāle. The territory of the Burōng Clan.

Burum Mos(ale). The "White Mud-Flood" at Aliābād. 240.7,15.

Burum Pfut. The "White Dīv." 2.7 ff.

Burušaski, Borošaski, Borušaski. The language of the Burūsho of Hunza and Nagir. I have been unable to get confirmation in either Hunza or Nagir of the term "Boorishki" used by Biddulph.

Burushaski is spoken in Nagir above Ghulmit. For its distribution in Hunza see Introduction Vol. I, p. XXXIV, where the facts given are mainly derived from the Census material of 1931. I was previously told (in 1924) that Burushaski was also spoken in Khaibar and Sost in Herbar, and Rāminj in Chupūrsan.

Burušo, Burušo, Burušo, sg. *Burušin*. The people in Hunza and Nagir whose first language is Burushaski. They call themselves by this name. It is denied that the Burushaski-speaking people of Hunza and Nagir call themselves, or their language, "Yeshkun", as stated by Conway ("Climbing in the Himalayas", pp. 242—3) Classification of the Burūsho as "Yeshkun" by Biddulph (T. H. K. p. 38) is not supported by local practice, as indeed he admits. 101

At the present day the appelation *Yaškun* appears to be used only in differentiating the two main elements of the Shina-speaking population of the Gilgit and neighbouring regions, viz. the *Šin* and the *Yaškun*. See, however, the entries *yeš* and *Yeškuyu* in the Vocabulary, from which it would appear that a more general use of the term could be justified.

The word *Burušo* may be compared with the first element of the words *Wəršogum*, and *Wəršikwar* (*Wəršikwar*), the Khowar terms for Yasin and the Yasin dialect of Burushaski respectively. The Burushaski speakers of Yasin call themselves "Burūsho", and their language "Burushaski".

Sarat Chandra Das gives Tibetan "*Bru-tsha*" and "*Bru-sha*" as "the name of a country N. W. of Tibet".

Cp. also Jäschke, "*Bru-ža*", "*Bru-ša*".

Buzur Jamhur. A corruption of the Persian name, Buzurjmihr. 58.2 ff.

Buzurjmihr. 56.16 v. preceding entry.

103 551

Čarrəambi Kutor. Name of a clan in Galmīt. 272.18.

Čəča Hər. Name of a place near Galmīt. 336.9.

Čhhalt. Name of a village in the lower part of Nagir, situated in a considerable open tract of ground on the right bank of the river, where it turns to the south. 276.4.

Čaman Gul. Name of a place near Galmīt. 336.6.

Čangi H'irpal. Name of Pangchu's (alias, Kisar's) horse. 122.7, 124.3, 156.17, 162.16.

Čaprot. Name of a nullah and settlement in lower Nagir. The nullah debouches from the West into the main valley at Chhalt. It provides the water for Chhalt cultivation. 228.1. 227.12.

Čə' Gazi, Čthil Gazi x. The "Forty Yards", name of a Jinn or Dīv who lived at Khaibar. 222.1 ff.

The measurement perhaps refers to his stature, but in that case his seven cubit stick would be too short. Prs.

Čin. China, Chinese territory. 344.21, 386.20.

Čitrar. Chitrāl. 344.15, 346.1.

Čorro Nur Ša. Nūr Shā, son of Chōro. 296.5.

Čupursan, Čupursan y. An open valley leading down from the Chilinji and Irshad Passes, and proceeding eastwards till it joins the valley of the Hunza River above Gircha. 280.1, 284.13 ff., 384.13.

Čuram. V. Dīram Chūram.

D.

Dəyur. Sh. *Dāiyor*, a place on the left bank at the junction of the Hunza and Gilgit Rivers, close to Gilgit. 380.21.

Dadi. Name of a Bilas who lived at Hīndi. 192.1 ff.

Daltas Manuko. A son of Sīng of Hīndi. 260.13 ff.

(In Sh. *manuko* = frog).

Dantsile Bun. The "Sulphur-Boulder", at Murtazābād.

Dərbušo. Son of Pfaqīr 'Alī. 180.2 ff.

Dašaman Xurdik. Fifth son of Dīram Chūram. 246.4.

Datu Siŋ. Name of the man who succeeded to Khamar's land. 252.16.

Datu Siŋkuts, his descendants.

Dəqoni Pir, Dehkan Pir. The prophet Khizr. 328.7, 332.3.

Di.emor. Local name of the mountain, Nanga Parbat. The form in Sh. is *Di.amər.* 134.9.

Diramišale, Dir'amišale. The territory of the Dirāmitīng clan. 216.6.

619 *Diramitiŋ, Dir'amitiŋ.* Name of one of the "Four Clans" of Bāltit, among whom they take precedence. They were said to number about 100 households (excluding the Tharakuts section?).

These four clans are individually exogamous, but intermarry with each other. Endogamy is said formerly to have entailed penalties and expulsion.

5:Lorimer L-3 (1920-4;1934-5) 1935 AV7 Burusho AV7

619 Nowadays though rare, it does not appear to be penalised. The Four Clans are not now confined to Bāltīt, but also form part of some of the Thuānts settlements.

The Dirāmiting are the descendants of Diram Chūram, the sole survivor of the Thapkiènts (V. 248.33 and 238 ff.) and are spoken of as the "seed", i.e. descendants, of the original population of Hunza. 348.1.

They are said to have resided originally in Shīshpar, where they succeeded no doubt to the lands of the Thapkiènts, but to have also cultivated land in Bāltīt which is now their headquarters.

At the time of the quarrel between the Khūrukuts and the Hamachāting they were still living in Shīshpar, but after acting as arbitrators they obtained rights in Ūltar. 258.4 ff.

Darbèsh, who had the adventure with Mūnulum Dādo (180.2), was a member of the Dirāmiting, who at that time also were resident in Shīshpar.

A member of the clan in later days was Karamo Darbèsh. 214.1.

The mention of the Dirāmiting at 238.2 appears to be anachronistic.

For the part played by the Dirāmiting at the Bopfau V. 208—72, at the annual celebration of marriages. 300.13, and 302.7, at the Ōdi. 322.

The Dirāmiting are not liable to do gold-washing. 348.1 ff.

103 *Dov Khan.* Name of a village adjoining Aliābād on the East.

551 *Dumani.* A mountain in Nagir to the South of Ghulmit the "Rakaposhi" of the maps.

Duŋpa Miru. Father-in-law of Kisar's mother. 100.5 ff.

F.

Faizu. Son of Wazīr Asadullah Bèg. 344.4.

G.

Gan Siŋge. A re-incarnation of Būmlīftan. 176.20.

Galdaŋ Galpo. The name of a "Pfūt" or demon. 174.19.

(Cp. Tib. *rgyal-po*, king).

Galmit. The principal village in Gujhāl, or Hèrbar. It is situated on the right bank of the Hunza River about 20 miles above Bāltīt. The inhabitants are of Wakhi origin and talk Wakhi as their first language.

For the Galmītum Rōm, the clans of Galmīt, v. 272.

Ganiš, Ganeš, Ganiš. One of the three original villages of Hunza, the other two being Bāltīt and Āltīt.

It is situated on a terrace below and to the south of Bāltīt, between it and the Hunza River. According to one account it was founded by Shīshkīn, a lame man of the Khitāi. It was occupied by the Hamachāting before the time of Azur Jamshed. 236.1 ff., 238.2.

Ganišum. Abl. and Adj. 246.20, 322.9.

551

Bulchutōko's grave at. 206.15.
Bilas at. 190.1 ff.
Diram Chūram. 244.10 ff.
Trangfa of. 318.2.
Twin Calves. 354.1 ff.
Water Supply. 352.10 ff.
Ashtanē's descendants. 382.7.

Ganiškuts. The people of Ganish. 318.6, 350.1.

Gantsupər. A locality in the mountain range which separates the Hunza and Nagir Rivers for some miles before their junction, and opposite Atā.abād. 204.3, 206.6.

Gər'ełt. A village close to the right bank of the Hunza River, below and level with Haidarābād. 204.2, 206.4. Marble is said to be found there.

Gər'ełtum Hərary. The "Garełt Tribe", a name applied to certain water-birds, black with long beaks, that sit and fly in lines (cormorants?), said to have been originally human inhabitants of Garełt. 206.12.

Gərib. A man of the Dirāmiting Clan. 208.8.

G'ərmʌh'ałmʌs, Gər Mʌhał Mʌs. The name of a goldsmith and blacksmith. 162.12 ff. (Cp. perhaps Tib. *mgar* smith).

Gilit, Giłt- y *Gilgit.*

gote Giłt(t)sum. From this Gilgit (here). 204.1.
Giłtum Thamu.s. The Gilgit Thams. 280.1.
Gil'it Yʌčh'ini. The Gilgit Yachini. 222.6.
Gil'itər. To Gilgit. 222.11.
Gilt-ołu, -ər, -e, -ʌfər. 376.1, 278.8, 380.9,10, 382.10.
(Sh. *Gil'it, Giłt-*).

[173] *Girkts.* The first Tham of Hunza after the political separation of Hunza and Nagar. His brother Mughlōt similarly became the first Tham of Nagar. They are the immediate progenitors of the two existing Royal Families.

Biddulph gives the parents of the brothers as Maiyroo Tham and a daughter of Trakhan, himself a descendant of Shīri Badat's daughter and Azur Jamshēd. In genealogical tables in my possession they are variously shown as the sons of Shā Tham and Lali Tham. The claims of the latter are at present favoured. Cp. the entry under *Baxa Tham* above, Biddulph T. H. K. pp. 24, and 135, and the addendum to the notes on Text XLVII.

Gohər. A man's name. 364.13.

Gu.iski. Adj. Wakhi. *gu.iski* (*ba*) the Wakhi language.

Gu'its, pl. *Gu'iṡo.* Wakhi (man). 338.9.

Guwʌči. Name of a locality and small village on the Nagar and Gilgit-Wazārat boundary, on the right bank of the Hunza River between Chhalt and Nomal. Abl. *Guw'ʌčim, Guw'ʌčitsum.* 276.5.

Guyo Bun. "Gūyo's Boulder" near Ganish, Gūyo being the name of a man. 190.10.

5: Lorimer L-3 (1920-4;1934-5) 1935
AV7 Burusho AV7

Γ.

103 551 Γazi Kutov. The name of a clan settled in Shīmshāl. 272.14.

Γaduꞷ. The name of a man. 384.1.

Γatoꞷiŋ. The name of a man.

pfilamiciŋ gatanꞷraꞷ Γatoꞷiŋ. Gh. the pattu-fuller.

jamiꞷp(t)ꞷ dukuꞷγanaꞷ Puꞷno Γatoꞷiŋ (you are) Gh. son of Puno, who work yourself to death for others, i.e. you are a self-sacrificing altruist.

Γaꞷan Xan. 1. A former Tham of Hunza, father of the present Mir, Sir Muḥammad Naẓīm Khān. He was murdered at the instigation of his eldest son, Safdar 'Ali, who succeeded him. 344.8,14.

2. The present Mir's eldest son and heir.

Γaṭam Sor. The name of a place. 388.9.

Γulmit. A village in Nagar on the left bank of the river, between Nilt and Minapin. 294.22, 276.3.

Γulmitkuts. The people of Ghulmit. 294.21.

Γulwa Kago. The name of a man of the Ghulwāting. 200.10,13 note.

Γulwaṭiŋ. A section of the Burōng Clan, whose ancestor is said to have come from Puniāl, or, according to others, from Gōr. The living (1924) notables, Muhammad Rafi' and Zarparast belong to it. 200.10.

Γund, Γuund. A place stated as being in Wakhān. 286.21.

Perhaps Ghūnd in Shughnān is intended).

Γuno. The name of a woman. 232.11.

H.

Haclasa Boin. Name of a supernatural being. 250.10.

Haꞷzir Jamšed, Azur Jamšed. Supplanter and successor of Shīri Badat as King of Gilgit. An ancestor of the present Royal Families of Hunza, Nagar and Gilgit. 380.20.

Habaš. Abyssinia. 66.4.

Hakuꞷcar. Name of a place in Nagar, below the Phekar terrace and to the East of it. 294.4.

619 *Hamaꞷaṭiŋ.* 1. The name of one of three original tribes of Hunza (the other two being the *Usenuts* and the *Tapkhiants*) who, according to one tradition, were left in Hunza by Alexander the Great when "on his return jonrney from China". They were established in Ganish before the Azur Jamshed Thams came to power. They were almost exterminated by Khisran Tham. The survivors are now represented by the Rōno caste of Gilgit.

They owned Ūltar until they quarrelled with, and were dispossessed by, the Khūrukuts. 258.2.

Cp. 265.19, 238.2, 244.12 ff., 236.2,7, 352.10.

5: Lorimer L-3 (1920-4; 1934-5)1935
AV7 Burusho AV7

[619]
103
551

2. Said to be the name given in Nagar and Yasin to the Rōno caste of Gilgit, who are represented in Chitrāl by the Zundra.

H'amaći. An irrigation channel, carrying water from the Ūltar Nullah, which supplies Ganish. 352.10.

Hamza. Son of 'Abdu'l Muṭṭalib. 88.22.

Hanisawi. The name of the Gilgit River. 382.20. V. Vocab. s.v. *Hanizawi.*

Hanuman Mum. The name of a mountain in Shishpar which has a high grassy spur. 180.3.

Perhaps *hanuman*, alone, isolated + *mum* stump.

Hərayšuŋ. The name of a track, leading from Ganish and passing above Bāltīt into the Ūltar Nullah. From a note it appears that it is to be taken as 2. *hərayy* + *šuŋ* = the "Track of the Tribe", i.e. of the Hamachāting. 248.3, 256.2.

Hər'ayy, pl. *Hərak'indəro*, and perhaps *Həraiyo* (? Biddulph), a term applied to the original independent tribes of Hunza.

V. s.vv. *Hamaćatiŋ*, *Hərayšuŋ*, and cp. *Gərelium Hərayy.*

Hərći, Hərće. The water-course issuing from the Ultar Nullah, immediately to the East of Bāltīt. 352.8,12.

Hər'eli. A locality 3 or 4 miles West of Gilgit on the left bank of the Gilgit River. 378.1.

Hərəŋ Gaδeŋ. The mountain side above Askūr Dās in Nagar, to the West of Sumaiyar. 198.3,8.

Həri Siŋ. A man of the Dirāmitīng, son of Mūko, son of Pūno, son of Garīb. He was an old man in 1923. 211.21.

Hasanabad. A village at the mouth of a nullah called after it, which debouches into the main Hunza valley on the north side about 6 miles West of Bāltīt. It marches with Aliābād on the East. The nullah is now, except at the lower end, filled by a glacier, but it is said that it was formerly warmer and that there was no glacier. The Shishpar Nullah is a tributary of the Hasanābād Nullah. 238.3.

Hazarat Suliman. King Solomon, who according to Muslim authorities "inherited from David the gift of prophecy and knowledge". 384.7.

Haidərabad. A village about 2 miles West of Bāltīt. 318.3, 346.10.

Haidərabadkuts. The people of Haidarābād.

Haihaiyul. The name of a country. Said to be the old name of Hunza. Alexander the Great is said to have brought his force through it. Seized by Kisar. 142.17.

It is explained as composed of "*hai hai*" an exclamation used to urge cattle along, and "*yul*" road.

Cp. T. *yol*, road.

Herbər, Her Bər. The Hunza valley from Galmit upwards, officially known as Gujhāl. 336.2, 342.6.

5: Lorimer L-3 (1920-4; 1934-5) 1935
AV7 Burusho AV7

103
551

Hindi, Hini. A village in Hunza on the right bank of the river opposite Mīnapin and about 14 miles below Bāltīt. The inhabitants are Ṣhèn. 192.1 ff., 260.1 ff.

Hindikuts. The people of Hindi. 196.5.

Hinzal. A village about 7 miles West of Gilgit on the right bank of the river. 384.13.

Horyul. The name of a country visited by Kisar. 142.23. It occurs in this form in the Ladakhi version of the Kesar Saga, while "hor" alone is used as the name of a conutry in the Tibetan version given by Madame David-Neel "The Superhuman Life of Gesar of Ling" (1933).

(W. Tib. *hor* Turks, *yul* country).

Huks Manu. "Dog's Milk", the name of a famous "bīṭan" of Hunza. 186.1 ff., 202.3.

It was stated in 1924 that a descendant of his, named Barak, was then living in Misgār, and that there was another in Bāltīt, but that under pressure from the religious authorities they had ceased to practise as "bīṭans".

This was probably exceptional and temporary, as between 1920 and 1924 I twice saw public displays by "bīṭans" in Bāltīt, and in 1935 in Aliābād a female candidate for recognition as a qualified "bīṭan" gave a public demonstration of her powers.

Humayun Big. An able and distinguished Wazir of Hunza, son of Wazīr Asadullah Bèg and half-brother of Wazīr Muhammad Thara Bèg. He became Wazir when Muḥammad Naẓīm Khān was installed as Mir in 1892 and continued in this office till his death in 1916.

Three sons by his first wife were prominent in Hunza in 1924. The eldest, Shukurullah Beg had succeeded him as Wazir, but had not inherited his personality or force of character. The second, 'Ināyatullah Bèg (IUB), acted as schoolmaster and provided me with a considerable number of Burushaski words in writing. The third, Imām Yār Bèg, was a Jemadar in the Gilgit Scouts and a noted polo-player. Most of the material in this book I owe to him (IYB).

Circumstances have now altered. Imām Yār Bèg was murdered in Gilgit in 1934, and Shukurullah Bèg was, I believe, deprived of his Wazirship in the end of 1935.

The family belong to the Tharakuts section of the Dirāmitīng. 196.8, 344.10.

Hunza Nagar. The States of Hunza and Nagar. 344.2, 380.10.

Hunzo, Hunzu y. The State of Hunza. In a strict geographical sense it seems to apply to the tract on the right bank of the river between Āltīt and Murtazābād. The form "Hunza" is not normally used by the people of the country.

Hunzo Baltitulo. At Bāltīt in Hunza. 238.1.

Hunzo nokan. Seizing Hunza. 196.9

Hunzewer. To Hunza. 294.13.

Hunzolo. In Hunza. 186.2.

Cp. 192.8, 200.1, 208.1, 214.4, 238.1, 276.12, 292.4 f., 298 (title), 316.3, 320.1, 342.1, 344.17, 352.6,9, 354.1.

Hunzokuts. The people of Hunza. 272.1, 296.4,8.

Hunzumo. Of, belonging to, residing in, Hunza.

Hunzumo ba. I am of Hunza. Cp. 274.3.

Hunzumo bayen. The Hunza fowls. 322.1.

Hunzumo thamo. The Thame of Hunza. 266.20.

Hunzulem. From, belonging to, Hunza.

Hupar. Hopar, a place in Nagar, about 3 miles up the valley from Nagar village.

Hoporem. Belonging to Hopar. 380.18.

Hurukutsis v. *Xurukutsis.*

Hurukuts v. *Xurukuts.*

Huzrgots v. *Carogots.*

J.

Jawas, Jamasnaram. The names of a man and of a book. 48.1.

(Pers. Jāmāsp, Jāmāspnāmak).

Jaufu Sokowi. A tower at Hindi. 112.2.

Janfu was elsewhere given as the name of a man of Hindi.

Jaturikuts. A Clan said by IYB to have come to Hunza from Astor. At the present time they form a section of the *Burūng.*

K.

Karg Jakun v. *Qarg Jakun.*

Kargor Malik. A son of Shiri Rafat. 358.10.

Kaṡgor. Kashgār. 386.19.

Kampire Diar. The name of a place in Chapūrsan. 296.15.

(Wkh. *kampir* old woman + *diar* settlement, village).

Karamo Dorlet. An old man (in 1924) of the Dirāmiting. 214.1 f.

Karogafimots. An aqueduct that carries water from Ālitit to Karimābād over the track that leads down to Ālitit. 160.3.

(V. Vocab. s.v. *karogafi*).

Karimabad. Land belonging to the Mir of Hunza on the spur below Ālitit, where he has summer quarters, gardens and greenhouses. 380.4.

Karga. A nullah that debouches into the Gilgit Valley from the South, about three miles West of the Gilgit Fort. 222.11.

Kaṡmir. Kashmir. 254.1.

Kaṡmiri. Kashmiri; *Kaṡmiri ba*) the K. language.

Katiré Malkuts. The name of a woman. 160.17 f., 176.15.

S: Lorimer L-3 (1920-4; 1934-5) 1935
AV7 Burusho AV7

103
551

Kilik. The name of a Pass (15,600 ft.) leading from Hunza to the Taghdumbāsh Pamir. It lies to the West of the Mintaka Pass. 252.23.

Kirgiz, Кыргыз, Qyrgyz. The Qirghiz. 290.2,5.

Kirum'in. A place in the lower half of the Chupūrsan Valley. 344.13.

Kisar. The hero of Text No. IV. The "Kesar" of the Ladākhi "Kesar Saga", the "Gesar" of Madame David-Neel's "The Superhuman Life of Gesar of Ling" (English Translation. Rider and Co., London 1933), and the "Bogda Gesser Khān" of the Mongolian Version. (V. introductory note to the text).

See also the entry *Pirgin*, which is his alias when in his inferior form.

When in Hunza, Kisar lived at Altit. 134.4, 142.18 ff., 152.8—160.20 174.4—178.2, 182.18 ff.

Kisar's pl. The Kisar Clan, Kisar's uncles. 110.21, 112.15, 114.5,10.

Ka'ard. Name of a King (of Persia).

Kolilais. A family group descended from Kuli, the father of Kulio Laskir.

Kuli.'o Lask'ir. Laskir, son of Kuli, a famous Hunza "hipan" of the Barātaling Clan. 198.1, 200.9.

(*Kuli.o* ought probably to be *Koli.oy*.

-*oy* appears to be a recognised patronymic suffix).

X.

Xaw Wali. A place in the Misgār region. 252.22.

Xawaz. Khārazm. 56.12, 58.7.

Xawazum sodager. A trader of Kh. 56.12.27.

Xamor. The name of a man. 250.1 ff.

Xerum Bal. The "Split Stone", below the Mir's quarters at Karīmābād, overlooking Ganish. 210.5, 252.12.

Xayu Bol Šalowra. A polo-ground which once existed in Shishpar.

Xaibar. A village in Herbar (Upper Hunza) on the right bank of the river between Passu and Gircha. It is approached from N. and S. by narrow passages called "Gates". 222.1, 224.4 ff.

Xairullah. A son of Wazir Asadullah Beg. 344.3.

Xiwrau. A Thum of Hunza. 236.7. In one genealogical table a Khisrau is shown as the grandfather of Girkis and Mughlōt, but in the authorised pedigree the only Khisrau shown is a direct ancestor of the present Mir (Muhammad Nasīm Khān) in the fourth ascending generation. This makes the destruction of the Hamathāling a matter of recent history.

Xtavi. Chinese Turkistan, or the inhabitants thereof. 344.22. V. also s.v. Šakta.

Xodaabard. A village in Upper Hunza at the junction of the Chupūrsan Valley with the main valley. 342.27, 352.18.

Xuvi.as Burn. The name of a boulder situated in the lands of the Khūrukuts which extend downwards from the Bālīt pologround. 206.14.

5: Lorimer L-3 (1920-4;1934-5)1935
AV7 Burusho AV7

103
551

Xuro, X'oro. The ancestor of the Khūrukuts. 250.1 ff.

Xuro Pferi. "Khūro's Pond", a piece of open ground somewhere near Dudōur Murku. 276.13.

Xurukulals. The territory of the Khūrukuts Clan.

Xurukuts. One of the "Four Clans" of Bāltīt, the descendants of Khūro. The headquarters of the clan are still at Bāltīt, though nowadays there are Khūrukuts in some of the Thuānts villages. 252.19, 258.3, 302.8, 352.15.

Xul Beg. The name of a man. 274.3.

Xurwats, Qurwats. A mountain above Ālṭīt and in Ālṭīt territory. 212.6.

In regard to the note on the passage, *Xurwats* appears to be the form of the name by which the place is always referred to.

L.

Lakar(a)t. Sir William Lockhart, afterwards Commander-in-Chief in India. 344.20.

Lat Manat. The two idols worshipped by pre-Islamic Arabs. Mentioned in the Qurān, Sura LIII. 19. 96.12.

Lali Tham. A king of Haihaiyūl. 142.16. V. s.v. *Bozu Tham.*

Lamay. A place or country, variously said to be Bāltistān or Tibet. 100.1, 144.5, 174.3.

Laqabrumo. A princess of the country of the Kisare. 116.9 ff., 136.10 ff., 142.23, 164.14 ff., 174.11 ff., 176.16 ff.

Lato Hor. The name of a place described as a "trench". The second part is therefore probably 2. *hor* = ravine, nullah. 190.7.

Leli. Laila. 362.3.

Liqp'rkisar (also *Liqkp'rkisar*). An alternative form of the name of Kisar. 142.15, 156.12, 168.6, 174.14.

In the Ladākhi "Kesar Saga" gLing appears to mean "the earth", "the world" and then to be used of Kesar's country. Madame David-Neel now claims to have identified Ling (gLing), Gesar's kingdom, as "part of the land of Kham" Vide "The Superhuman Life of Gesar of Ling", p. 16.

(Cp. Tib. *gling* = "part of the globe", "division of lands" according to Sarat Chandra Das).

M.

1. *Mahmad Shā.* A man said to be a descendant of the "biṭan" Shongukūr. 226.5.

2. *Māmad Shā.* The name of a man. 214.9.

Mamwtas Mal. A field at Ālṭīt, where some parts of the "Bōpfan" ritual are carried out.

Madarin. The cities of Madīna and Mecca(?). 48.1, 98.9,14.

Mamu Hor. The "Milk Ravine", a locality on the farther side of the Ūltar Bar from Bāltīt, so called because of its white soil and foaming water. 276.12.

Mano Bay'rtham. A man of the Dirāmiting Clan. 214.16.

5: Lorimer L-3 (1920-4; 1934-5) 1935
AV7 Burusho AV7

551

Masot. A place in Nagar on the left bank of the river below Ghulmit and above Thöl. 276.8.

Matum Dasluts. The people of Matum Das, a Hunza settlement in Gilgit territory. It is situated on the left bank of the river nearly opposite Nōmal. The land is held on some terms from the Kashmir State. 318.10.

Maiyon. A village in Lower Hunza on the right bank of the river, downstream from Hindi and opposite Nilt. The people are Şhèn, speaking Shinā. 318.9, 348.12.

Meri Dooeni. The name of a "dangalaṭhas". 206.8.

Mingtaka. A Pass (elev. 15,430 feet) leading over from Hunza to the Taghdumbāsh Pamir. It is situated to the East of the Kilik Pass. 252.23.

(The word means "A thousand Ibex". Turki *ming* = 1000 + *taka* = he-goat).

Mizor. Egypt. Ar.

Misgaw. A village in Upper Hunza. The inhabitants are Burūsho. 252.22, 290.1, 318.9, 348.13, 344.1.

Misgawkuts, Misgawi. The people of Misgār. 290.6,7.

Moryol. The father of Diram Tītam.

More Daw, Mori D. "The Plain of Words" or "the Plain of Discussion", a locality in Lower Hunza above Maiyōn and opposite Ghulmit, where the people of Maiyōn and Ghulmit used to meet to discuss measures for defending themselves against a common enemy. Now called Mortas. 276.11, 352.20.

(Sh. *more* words, speech etc.).

Muḥammad Baqir. The personal name of Bāba Ghwundi. 286.23.

Mun. V. *Hanuman Mun*.

(Sir) *Muḥammad Nasīm Xan*, (K. C. S. I., K. C. I. E.). The present Mir of Hunza, son of Ghazan Khān Tham. 196.3,7, 346.6, 352.21.

Munkir. The angel who with Nakir examines the Muslim dead. 218.5, 312.11.

Munolum Dado. "The Grandfather, or Old Man in (*or*, of) the Mūn", i.e. of Hanuman Mūn, a mountain in Shishpar in which he resides. He married Kisar's grandmother, V. 180—184.

A laconic note equates "Tapkhiènts Dāda", "Bāba Adam" and "Mūnulum Dādo", which perhaps means that the last is regarded as the primal ancestor of the Tapkhiènts and of the human race.

Murk'u. The name of an irrigation channel. 352.18. It perhaps refers to the same place as Doğōng Murku. 276.13.

Murkuli. A locality about 13 miles N. of Misgār, where the water-courses coming down from the Mingtaka and Kilik Passes unite.

(In the text given as *Murkoi*). 352.18.

Murtaza.abad. One of the *Thu.ants* (q.v.) villages in Hunza, situated just below the junction of the Hasanābād stream with the main river. 352.18.

5:Lorimer L-3 (1920-4;1934-5)1935
AV7 Burusho AV7

551

N.

Nafis Xan. A half-brother of the present Mir of Hunza (Muḥammad Naẓīm Khān). 342.21.

Nagər, Nagir. The State of Nagar.

Nagirum belonging to N., Nagari. 276.2, 344.22, 354.8.

Nagir is, I believe, the usual pronunciation in that State.

Nagər is what I heard in Hunza.

Nakir, Nakir. The angel who with Munkir examines deceased Muslims in their graves. 218.5, 312.11.

Namay. (Earlier recorded as *Nomay*), the village "Nōmal", which is the first stage on the road from Gilgit to Hunza. It is in Gilgit territory and about 17 miles from Gilgit Headquarters.

Nazimabad. A village in Upper Hunza near the junction of the Chupūrsan and main Hunza valleys. Previously called "Shīshkē Das" and renamed after the present Mir. 342.21.

Noni Tham. A king of Haibaiyūl (Hunza). 142.16.

V. entry s.v. *Boza Tham.*

Nur Bazā. A daughter of Shīri Badat. 380.12 ff.

Nuro. A man of the Burōng. V. 346.8 note.

Nūširwan. The Persian King Nūshīrwān. 86.25, 92.28 ff.

P.

Pangču, Pančū. The hero of Text No. IV. The original name of Kisar, and applied to him again when in his inferior form. 110.19 ff., 162.1—172.14.

Pahardan Galpo. A king of Hōryūl. 144.4.

(Cp. Tib. *rgyal-po* = king).

Panja.i Šah. 288.3.

Pfaqir Ali. 180.1.

Pfasan Karaski. 104.14.

Paiyambər. The Prophet (Muḥammad). 90.17.

Pfikər, Pfekər, Phekər. A village in Nagar on a very high terrace on the left bank of the river about 6 miles upstream from Mīnapin and Hindi. 242.12.

Pfekərum of or belonging to Pfekar. 242.7.

Pir Šah Nasir i Xisrau. The historical character, Nāṣir i Khisrau (c. 1004—1088 A. D.), poet and writer on Ismailism. For the latest account of him and his works see "A Guide to Ismaili Literature", by W. Ivanow, R. A. S. 1933.

In Hunza he was spoken of as the introducer of Maulai-ism into Turkistan, and was described as "of Kohistan", and again as "of Lutkoh" (in Chitral).

He is said to have sanctioned the use of musical instruments (the "charda" and the "daf") as an aid to religion, and to have attracted converts by musical entertainments. 314.3.

103
551

Pisan. A village in Nagar on the left bank of the river a little below Mīnapin and nearly opposite Hindi. 262.1 ff.
Pisankots. The people of Pisan. 266.12.
Ponzki Pforpfor. The name of Aba Dumbu's horse. 148.26 ff.
Ponal Maidan. A place near Gilgit (?). 384.20.
1. *Puno*. The father of Ghatōsing, q.v.
2. *Puno*. A man of the Dirāmitīng. 208.8 ff.
3. *Puno*. Wazir of Hunza in the time of Tham Shāh Silum Khān and father of Asadullah Bèg. 352.14.
Pfuruv Bul. The "Reed Spring". 292.12.
Puyesi Šamšer Bek. Shamsher Beg, son of Puyēs. 232.11.

Q.

Qang Jak'un. The "Braying Donkey". 202.4.
Qaraćokor. The name of a place in the Kilik-Mingtaka region (?). 252.23.
Qibla. The Qibla. As a point of direction, it is treated as being roughly West of Hunza. 310.1.
Qirgiz v. *Kirgiz*.
Qoli.'o Laskir v. *Koli.'o Lask'ir*.

R.

Ramrnj. A locality at the lower end of the Chupūrsan Valley. There is a tributary Nullah of the same name on the South side of the valley.
Raskam. A district (river and valley) lying to the East of Shīmshāl, beyond the main mountain range.
Right of occupation has been maintained by Hunza in spite of intermittent claims to ownership raised in recent times by the Chinese authorities in Kashgar.
V. "Unknown Karakoram" by R. C. F. Schomberg, 1936.
Rid'e Ramal. The name of a cook. 382.5.
Rum. The country of Rūm, the Eastern Roman Empire, Turkey.
Adj. *Rumi*. 34.1 ff.
Ruzdor Kotor. Name of a clan in Galmīt. 272.18.

S.

Sadi. The Persian poet, Sa'di. 362.3.
Saharla Bovin. A supernatural being. 250.9.
Sahib Xan. A Tham of Gilgit. 388.2 ff.
Safdar ('Ali) Xan. Tham of Hunza, son of Ghazan Khān. 344.14.
Saladar. Son of Alqash Wazīr. 66.5 ff.
Sariqol. The country of Sariqul lying to the North of Hunza.
("Sarikōl" is now generally regarded as the correct form of the name).

551

Sərkar Angrizi. The British (Indian) Government. 196.9.

Sai.id Ša Wali. A miracle-mongering saint. 292—296.

Siŋ. A man of the Hamachāting, ruling in Hindi. 260 ff.

Siŋ appears as the second element in some double names of men. Cp. *Datu Siŋ*, *Həri Siŋ*, and probably *Γatəsiŋ*.

Soγurali. The name of a place near Ganish (?). 234.11.

Sumalik. Succeeded his father Hāzir Jamshèd as Tham of Gilgit. 386.10.

Sumaiyər. A village in Nagar on the left bank of the river, opposite Ganish and Bāltīt. 294.3, 354.2.

Sumaiyərum ine that man of Sumaiyar.

Š.

Šabaz Xan. The second and last surviving son of the present Mir of Hunza (Muḥammad Naẓīm Khan) by his first royal wife. 342.21.

Ša Γazanfər. A Tham of Hunza, grandfather of the present Mir, Sir Muḥammad Naẓīm Khān. 274.3, 352.6.

Šahre Bano. Heroine of Text No. I. 12.7 ff.

Šahzada Behram. Hero of Text No. I. 2.1 ff.

Ša Rais. A King of Gilgit, killed and succeeded by Shīri Badat. 376.1 ff, 380.8.

Šari (Šahri) Šaskin. The name of a country or place. Said to be the equivalent of the Persian "shahr i sabz". 26.1 ff.

Ša S'ilom Xan, (Solom, Salim). A Tham of Hunza, father of Shāh Ghazanfar. 240.12, 352.11.

(The various forms are, I believe, corruptions of Salīm).

Ša Tham. A King of Haihaiyūl (Hunza). 142.16.

V. s.v. *Boxar Tham.*

Šayar. A village in Nagar on the left bank of the river, between Sumaiyar and Pīkar, and opposite Aliābād. 294.3.

Šadon Kapuri. The name of a woman. 256.4 ff.

Šabos. I.e. Shāhbāz, a Tham of Hunza, of whom the present Mir (Muḥammad Naẓīm Khān) is a direct descendant in the sixth generation. This seems to give a comparatively recent date for the extermination of the Usenguts. 236.8.

Šamtu Miru. Wazir of the King of Haihaiyūl. 148.1 ff.

Šin. Shīn (people). Used of the Shinā-speaking people of Lower Hunza and Nagar.

Šiniski (baγ). The Shinā language. 302.3.

Šigir. The place generally known as Shigar in Bāltistān. 274.6.

Šikaki.ants. The name of a place a little to the West of Bāltīt, near the foot of the mountains. 292.16.

Šim'al Baγ. A garden in Bāltīt. 328.14.

Šimšal, Siŋšal. A large valley in the East of Hunza which is very difficult of access. Its drainage joins the Hunza River a little above Pasu. 272.10, 274.1 ff., 344.16.

Since 1924 Shīmshāl has been visited by the Vissers (See "Among the Karakoram Glaciers in 1925" by Mrs. Visser-Hooft, Edw. Arnold, London 1926, and "Wissenschaftliche Ergebnisse der Niederländischen Expeditionen in den Karakorum . . ." by Dr. Ph. C. Visser and Jenny Visser-Hooft, Vol. I Brockhaus, Leipzig 1935); by Captain C. J. Morris. (See JRGS June 1928); and by Colonel R. C. F. Schomberg ("Unknown Karakoram", Honkinson, London, 1936).

Širi Badat. A reputed early King of Gilgit, Hunza-Nagar etc. 378.5—384.15.

Širi Bərai.i Bayər Tham is said to be the Burushaski name of the same person. His cannibal habits, his vulnerability (to fire alone) and his destruction by Azur Jamshèd, are a favorite theme in Gilgit.

The Thumushèling fire is supposed to commemorate his death, as formerly did the Talèni festival in Gilgit. V. Biddulph T. H. K. p. 100.

Leitner gives an elaborate version of his history in "Dardistan in 1866, 1886 and 1893" pp. 9 ff.

I have another record in Shinā.

Širi Bər'ai.i Bay'ər Tham. A supernatural young man. 210.11 ff.

In his title to Text No. XLVII Gh. Kh. gives the name as a synonym for Shīri Badat. In a Gilgit legend a certain "Bagar Tham" is said to have been the son of Kisar and the grandfather of Shīri Badat.

Leitner gives a word "barai" in both Burushaski and Shinā as meaning fairy. In Bu. he marks it as feminine.

Perhaps it is a variant of "*pəri*".

1. *Šiskin.* A lame man of the Khitai, who according to one account founded Ganish.
2. *Šiskin.* The name of a locality pertaining to Ganish. 206.15.

Šiske Das. The former name of the present Nazīmābād (q.v.). V. 342.21 note.

Šiəpər Bər. A tributary nullah of the Hasanābād Nullah in Hunza. Originally occupied by the Tapkhiènta, who also cultivated land at Bāltīt. After their destruction (240.5 ff.), the Dirāmitīng succeeded them in their possession and rights.

The climate of Shīshpar is said to have become colder, and there are now no permanent habitations in it, but the nullah is used as a summer grazing ground by the Dirāmitīng who enjoy exclusive rights in it.

There was formerly a polo ground at a locality called *Xayu Bəl Šəbərin*, which is now the site of a grazing camp.

There is (or, more probably, was) a track leading over to the Irshad Pass, i.e. into the Upper Chupūrsan valley.

It is also said that two dogs once came over from Ishkōman into Shīshpar, but there is no practicable route at the present day.

The Woolly Flying Squirrel (v. 2. *bada*) is found in Shīshpar. 180.2, 182.1 ff., 238.5, 240.3.

Šəri Pəri. The name of a "pari" or fairy. 358.14.

Yarkand. Yarkand. 386.21.

Yaçh'eni. V. Vocab. s.v.

Yal Botort. The name of a country. 104.14.

Yaqin. The name of an Akhōnd living in 1924 in Dirāmitīng territory. 214.12.

Yasin, *Yasin*. The district of Yasīn in the N. W. of the Gilgit area. 208.3, 386.12 ff.

Z.

Zuŋartiŋ, *Zuŋnartiŋ*. A village, in Hunza proper(?). 320.1.

the Hunza River is the principality called Hunza. 131

It is nestled in a most enchanting setting, surrounded by three of the world's greatest and tallest mountain systems. Another piece of knowledge that adds even greater interest and appeal is the meaning of the names of the three mountain systems: Hindu Kush means "killer of Hindus" because so many Hindus have lost their lives in crossing this range; Himalaya means "abode of snow", well-named when one considers their height and the vast masses of glaciers lying on the mountains' breasts; Karakorum means "the black rock" and one has to actually penetrate this system to realize how accurately those hard bare stone walls are named. The word Kush is pronounced with an "oo" sound. Himalayas is pronounced with the accent on the "al". The Karakorums are pronounced with the broad "a" accent for the first syllable and "oo" sound for the "um". This word can be spelled either "am" or "um". I prefer "um" because that is more in keeping with the sound as spoken by the people of that area.

Hunza actually forms a part of what was the old Kashmir and on maps it is shown as part of Kashmir and Jammu.

During my travels through the area I was plagued with the questions . . .Where exactly are the Hindu Kush, the Karakorums, the Himalayas? Where among these ranges is Hunza? 'Tis simple, you say? That's what I said, too, until I began to investigate and ask questions. Then I found myself in a maze of confusion from which I found it difficult to extricate myself.

Surely one would believe that learned people, high school or university graduates both in America and abroad, would know a bit about the most important mountain systems in the world. But, no! Ask them yourself. See the ambiguous answers you get. Then you

7:Tobe C,T-3 (1959)1960 AV7 Burusho AV7
Hunza

Part or all of the armies of Alexander the Great wound their way through the Hindu Kush mountains. Whether or not they ever found their way into the Karakorums, history does not designate, but I suspect that they did, because the Hunzans are supposed to be descendants of Alexander the Great or his soldiers and Hunza is in the Karakorums. 131 133 [173]

The Himalayas in the encyclopedia are stated to lie in India, Tibet, Nepal, Sikkim, Bhutan and China but I know for certain the Himalayas extend into Pakistan as well.

At this point I am not seeking to take issue with any gazetteer, encyclopedia or other volume of facts. I am just pointing out the difficulty I encountered in getting the information down to a semblance of order and accuracy. Further, I have consulted with, written to and requested details from many sources who should know the facts, and in practically every case I came to a dead end. It seems as though very few people in the world know the exact location and extent of these three mountain systems. [114]

One man who did seem to know them and placed them accurately was Eric Shipton and by the heavens, he should know—he spent more time among these mountains than any white man in history.

A curious thing about the people of Hunza . . . they do not have names for the peaks in the area and there are some mighty lofty peaks. Even the famed Rakaposhi has no individual name in Hunza. It is just called "Dumani," the same as every other high mountain or mountain peak that they came across. Actually, "dumani" means "covered with a cloud." 823 103

I guess they're so accustomed to seeing these awesome peaks that they become impervious to them. So what? Another hill! Every time I asked one of the

823 bearers the name of yon mountain, he pointed to it
103 and said, "Dumani!"

It was quite some time before I found out that it wasn't the same mountain we kept seeing from different views or angles. In fact, after the second day's travel and the only peak that we had passed was "Dumani," I began to get suspicious and thought that somebody was pulling my leg. As a matter of fact, I didn't find out that "Dumani" meant "covered with a cloud," "high peak" or "big mountain" until I came across Professor Berger in Baltit. He, being interested in the language of the people, put me straight on the "dumani" business.

What made matters even worse—or should I say, more difficult—was the fact that long after we had left the Hunza area, people kept telling me about the "Dobani" nullahs and the "Dobani" mountains. Sometimes they said "Dobani," other times they said "Dubani" and then they would also say "Dumani" and "Domani." I don't think they know themselves exactly
[133] what they mean. Of course when they said Dumani Nullah, it would mean the "river flowing from the glacier on the breast of the mountain" and when they pointed to a hill and said "Dumani," they meant it was a big hill.

133 In trying to relate the circumstances covering our travel and journey from Gilgit to Hunza one must maintain a sort of running encounter of the trail and the incidents surrounding it. Then, too, in other parts of the book I try to tell about the agriculture, the habits and health of the people of Hunza. Therefore little time remains for one to describe the charm, the beauty and whatever else may be said about the scenes one passes.

So will you bear with me while I try to describe as

human being take to a task so assiduously and with so 114
much profound love and feeling. I don't know when it's
going to be published or by whom, but I'll certainly
make sure to get a set or a copy of the volumes, even
if they are printed in German.

The word "Burushaski" is pronounced almost as it 104
is written, except there is a "u" sound in the last 197
syllable rather than an "a" sound. My reaction was to
spell the word "uski" and all through the writing of
my manuscript that was the way I spelled it, but as I
found every other source, with one exception besides
myself, spelled it "aski" I had to admit defeat and also
use that spelling. The spelling of "uski" was used by
the Mir and his grandfather in his book. I still think
it sounds like "uski" rather than "aski". Dr. Berger
agreed with me that it did sound like "uski" but he
felt that for the sake of uniformity, it would be better
if I, too, used the "aski".

Nevertheless, though their code of laws remains un- 671
written, justice does not seem to suffer. The people of
Hunza are well acquainted with the laws in vogue. I
believe it was Napoleon who said that a nation that has
many laws has a lawless people. Perhaps because the
Hunzans do not have many laws, they are law-abiding.

Until the partition of Pakistan from India, Hunza 648
was a part of India or, at least, it was definitely included
on the map as Indian territory. But there is nothing in
Hunza to indicate that they obeyed, owed or acknowl-
edged sovereignty to India.

The Mir was and is the absolute ruler. He supposedly 643
has the power of life and death over all his subjects. I 175
know this power has never been used or abused by the [642]
present Mir, who came to the throne in 1945 at the
death of his father who ruled but 8 years. Very little
is said or recorded about his father's tenure in office.

Burusho Cultural Summary

Orientation

105 The Burusho are the inhabitants of Hunza and Nagir, two small Burushaski-speaking states in the northeasternmost part of West Pakistan. The area, in the center of the Karakoram Himalaya, consists for the most part of a close-packed mass of peaks and glaciers, a great number of the former being over 20,000 feet high. Where the Hunza River (an affluent of the Gilgit River which flows into the Indus from the north) has cut its way down from the Pamirs there remain a few shallow terraces which are cultivated by the natives of the regions, the Burusho. They speak an isolated language which as yet has not been traced to any major linguistic stock. Comparative population figures are as follows:

	1878	1921	1931
Hunza	6,000	12,117	13,241
Nagir	10,000	14,188	13,672
Totals	16,000	26,305	26,913

The population density in 1931 for Hunza was 3 per square mile, that for Nagir was 9 per square mile -- Nagir being a much smaller kingdom with more level ground. Since almost nothing has been written on the State of Nagir, most of the following refers to Hunza.

105 The original inhabitants of the kingdoms are said to be descended from three soldiers from the army of Alexander the Great. The rulers of the two states (called Thum or Mir) claim actual descent from Alexander, although their families came from Iran about six centuries ago. At any rate, the physical type is definitely Caucasoid and not Mongoloid, with fair complexions, heavy beard, eyes which are usually brown, but sometimes blue or grey.

Economy

Agriculture is the main occupation of nearly all the inhabitants. The major crops are wheat, barley, several kinds of millet, sweet and bitter buckwheat, potatoes (introduced by the British), and several kinds of pulses. Barley seems to have been the original cultigen since it is basic in all festival and ritual foods. Wheaten bread is much preferred, but barley remains the largest crop. Bitter buckwheat is detested, but a good deal of it is planted, since it is a very hardy plant and will resist cold that would kill other grain crops.

They are skilled farmers and have a good knowledge of crop rotation, soils, and climates. All fields are irrigated, the water being carried by kuhls or aqueducts which extend along the mountain faces, some of them for many miles. This is necessary since nearly all of the fields are high above the river level, and rainfall at the levels at

105 which they live (6,000 to 8,000 feet) is meager.

Seed is sown broadcast in the fields. Fields are ploughed with a wooden plough, and the wooden digging stick, shod with iron, is the other major field implement. The fields are manured patiently with aged animal and human manure -- not a scrap of either being wasted.

Their main food is bread, which is made in a large number of varieties, both leavened and unleavened and with the addition of various pounded fruits and grains. Whole milk is not an article of diet. Milk produced by the cattle, sheep, and goats, is generally converted into butter (maltash), curds, and other products. Meat is taken perhaps two or three times a year at festive occasions.

The women have small vegetable plots in which they grow carrots, turnips, marrows, gourds, and a great variety of greens. They also have a few tobacco plants, although not much tobacco is smoked.

After grain and greens, the essential items of Hunza diet are the apricot, fresh and dried, and mulberries. A few apples, pears, and peaches are grown, but these are not particularly valued since they do not dry and preserve well. They also grow a few grapes, which are either eaten fresh or made into wine. Since the growing season is so short there usually is not enough time to make them into raisins.

Some herding is also done, principally for milk and wool. The most animals a family usually possesses is a flock of from 20 to 25

105 sheep, goats, and cows. Some of them are pastured during the summer at higher altitudes and are tended by herdsboys.

Each peasant family is almost entirely self-supporting and independent, eating of the produce of its own fields and herds. There is always a period of extreme scarcity in the early springtime, since the production of all crops is low due to the poorness of the soil. The most that can usually be expected is a tenfold crop, with a seven-fold crop being more usual. They would rather starve than use the seed crop which is put away at the end of the harvest. As a result of all this, the diet is quite poor, especially lacking in proteins. However, the population of Hunza as a whole remains relatively free from disease, possibly due to the stringent cleanliness which custom forces on them.

Weaving is done by many families; the men spin the goat hair and the women spin the sheep wool. However, most clothing is made from cotton cloth which is imported. Clothes are kept until worn out, then picked apart and the thread used to make new cloth.

Social Organization

Hunza is a stratified society, with a hereditary ruler, the Tham or Mir, at the top. The "classes" generally are as follows:

1: The Thamo, i.e., the royal family with the Tham or Mir at the head;

2: The Uyônge or Akhbirting - the "Great," the superior officers of the state, but not of royal blood;

105 3: The Bär, Bäre, or Sīs - the cultivators, the bulk of the population;

4: The Shadarsho - the servants, who are exempt from menial labor;

5: The Baldakūyo or Īsīlgalasho - the load carriers;

6: The Bèrīcho - the musicians and blacksmiths.

The latter, the Berīcho, are a small community of ultimately Indian origin who were brought in to supply the blacksmith needs of the people. The Wakhi, an immigrant group, live in the higher areas of the kingdom and speak a different language and have a different culture. They are generally considered inferior to the Hunzukuts (inhabitants of Hunza).

Although the society is stratified, there is remarkably little servility in the population. In effect, there are two strata, the royal family and the rest of the people. There is no age stratification, but the elders generally enjoy higher prestige because of their greater experience. There is no great sex status differentiation. Although the Hunzukuts are Moslem, their sect, the Ismaili, does not force them to debase their women and accordingly they have a quite high status. The Nagar belong to a different, more orthodox sect and the situation is accordingly different there.

Social position is indicated more by the condition of clothing and house than by any outward difference in cut or pattern. The people are generally obedient and seldom defy authority unless there is a grave contravention of established custom.

Marriage

105 Although they are Moslems, they retain their old custom of exogamic marriages between the four main clans. Although cross-cousin marriage is the preferred marriage in Islam, it is rarely practiced in Hunza since it savors of incest to them in comparison with the exogamic practice. They very rarely take marriage partners from outside their own Hunza society, although the Mir and his family sometimes exchange wives with the corresponding family in Nagir. Marriage with other groups is almost non-existent. Although polygamy is mentioned in one source, none of the other sources mention this practice, although it probably is permitted.

Child marriages do not take place, but it is very rare that a girl older than 16 or a boy older than 18 is unmarried. A bride price is paid, but it is not large for the poor. It depends on the special status and wealth of the individuals concerned. The Mir's family pays the highest bride price. Divorce is allowed if the wife proves to be incompetent in the management of family affairs, or if husband and wife prove to be incompatible. No stigma is attached to divorce, and widows, widowers, and divorced people commonly remarry.

Inheritance

The majority of peasant families are freeholders. The land passes from generation to generation without tax during life or duty after death.

105 The land is generally not in one piece but in small lots scattered over the area. A woman cannot inherit land. When the father dies, the land is fairly divided among the sons -- the land classified according to the various types of trees on the land, its arability, etc. Although women do not inherit, the men have the obligation to see that the women are successfully taken care of or married. If a wife dies, the husband may remarry again, but if he has had any sons by the first wife he must divide his land equally with these sons. Thus if he had two sons, he will get one-third of the land and only the latter will be passed on to any sons he might have by his second wife. The youngest son inherits the family house, the eldest son inherits the best land.

The Sexes

Man and wife cooperate in their work without embarrassment and no work is taboo for either sex. In work men and women have recognized roles but these roles seem to be regulated by physical capacity and convenience rather than by established custom. There is nothing rigid about these working roles. For instance, usually a woman or girl will drive a ploughing team, but sometimes a man or a boy will take a hand.

The women hold a position of freedom and respect rare in other Eastern societies. It is quite common for a wife to entertain male

105 visitors without her husband being present, and when he arrives he feels no resentment. The women move about freely, unveiled and unaccompanied. They live in extended families, with the son bringing home his wife to live in the father's house. The young couple sleep in the common living room until conception, then they move to the common sleeping platforms, one for the men and one for the women.

Clans

The Hunzukuts are divided into four major clans, which are centered in Baltit, and several minor clans scattered over other villages. These clans are not localized groups since members can be found in every village in Hunza. Exogamous marriage between the clans is the rule. The clans are all of equal status, but the Diramiting clan is considered first in prestige for historical reasons.

Settlements

The Burusho cling to their settlements along the eight or nine mile stretch of the Hunza River below Altit at an altitude of 6,000 to 8,000 feet. They live grouped in several villages along this stretch. The houses are almost indistinguishable from the rocks against which they are built wherever they can stick; since the area is so steep there is no chance for an orderly layout of the villages. The buildings are

105 constructed of mud and stone. In many of them, the pillars supporting the roof, the lintels, friezes, and wainscoting are carved from wood and ornamented. The Hunza dwelling is generally a fortress-like cube whose front door is screened from the hostile mountain air by a barn built onto the house. The door of the barn is strategically placed at right angles to the door of the house and some distance from it. The only ventilation is the central smokehole. The idea is to have a draughtfree house, which is quite necessary in a country so lacking in fuel for fire. In the main part of the house are two sleeping benches arranged along the sides, about 18 inches above the floor. One of these is for the men and the other for the women. The cooking areas are near the ends of the benches. Cooking vessels were originally generally of soapstone, but nowadays aluminum and iron pots and pans are being brought in. Gourds are used as jugs. Spoons and forks are carved from wood or imported.

Administration

The villages are communities which live within definite geographical limits. They were originally centered around the khans (fortified places) which were used for protection before the British entered the area during the 1890s. They have no police. The headmen have no authority generally except for their personal influence and that of the

105 Mir. There are two or three headmen in most villages. There are a couple of officials in each village who arrange supplies for travelers, and also government appointed men who for a small regular retainer do necessary jobs for the central government. The Mir may deport ill-doers from the country for definite periods.

Each village group is an administrative unit. The Tham (Mir) is represented in it by one to three men who direct his orders to the public. The population is divided into five districts each of which bears one share of rajaki (obligatory labor). These are Baltit, Genish, Altit, Hindi, and Towants.

There is a long series of "courts" for settling disputes. In the first, the heads of the two houses involved and the families have a council. The second is a council of community headmen. Then there is a council of the headmen of the four principal clans. The Mir is the ultimate authority in making legal decisions.

As noted earlier, the Burusho are divided into two states, Nagir and Hunza. A Mir is at the head of each state, but the Mir of Hunza seems to be the more important. Both states were autonomous as regards internal affairs and acknowledged the Maharaja of Kashmir. Since 1947, when Gilgit Agency, which includes these two states, broke from Kashmir, the states have acknowledged the supremacy

105 of Pakistan. However, to enter the states it is still necessary to get the acquiescence of the Mirs. General access to the area is still blocked both by the Pakistan government and by the Mirs of Hunza and Nagir.

Religion

The people of Hunza are Mohammedans of the Ismaili (Mauli) sect. They are in no way fanatic. Restrictions, formalities, and ritual are reduced to a minimum. Religious freedom was declared in the state in 1892. There are no mullahs in Hunza, but rather khalifas (lay priests) who are the spiritual leaders or teachers. Religious observances do not play an evident part in Hunza life. The people of Nagir are members of the Shia sect of Islam and are much more strict and orthodox in their observance of the tenets of Islam. The Burusho became converted to Islam about three centuries ago. The people of Hunza became Ismaili heretics about five generations ago.

External Relations

The two states have not been on particularly good terms with each other, particularly since the conversion to Ismailism. In pre-British days, the people had a very bad reputation as warriors and brigands who raided the caravans in Central Asia. They made

105 many slave raids, but usually sold them rather than bringing them back to their own country. Since the British rule in the 1890s they have moved away from their tight-packed villages under the protection of the forts. Warfare as such has become a thing of the past.

Kinship

Although data concerning kinship terminology are poor, the cousin terminology seems to be of the Hawaiian type, i.e., all cousins are either equated with siblings or called by terms clearly derivative from those for siblings. This is reflected in the marriage pattern in which, contrary to Islamic custom, cross-cousin marriage is not the preferred type and in fact is very rare.

Conclusion

Burusho culture as of this date seems to be fairly stable, although contact with the outside world is increasing. Many Hunzukuts work for brief periods in Pakistan and probably as a result mild epidemics of infectious disease which were rare are becoming more common. Contact with the outside world will probably remain fairly limited for some time to come, however, in view of the complicated international situation, since China (i.e. Tibet) is along one border and Kashmir is quite close.

mentioned as being 100 miles long. 131

A few miles above the spot where the Hunza River 133
meets the Gilgit is a village called Secunderabad. It is here that Hunza begins and if you follow the Hunza River up to its source beyond Misgar, almost on the Chinese border, where it springs from a glacier, you will find in following the contours of the river that the country is almost 200 miles long. I have carefully checked this figure with the best authorities—the Mir being one of them—and I found that the 200 mile figure was as close as it can possibly be measured.

They are Asians. Of course they are Asians because 144
they dwell in Asia. But in appearance they are definitely unlike Asians. Without trying to sound dramatic or authoritative, the general appearance of the people of Hunza shows marked European characteristics. They are totally unlike the Indians, the Afghans or the Chinese. To me they looked like the Mediterranean peoples. At this stage I am not harping or relying on the fact that they claim to be descendants of Alexander the Great or some of his soldiers.

Primitive—Most writers refer to them as primitive 105●
people or say that their way of life is primitive. I will agree with the use of that term in describing the people of Hunza, if you will agree with me that the Christian world is primitive, because it too follows the teachings of the Bible which was written 3,000 or 4,000 years ago. It is agreed that the people of Hunza follow a 105
primitive form of agriculture and use no chemical fer- 241.
tilizers or modern sprays and insecticides. But then, they don't need chemical insecticides and chemical fertilizers. They use no modern machinery on their small, hard won, shallow surfaced fields. Their conduits which guide the glacial waters to their fields are, I agree, primitive, but no better form is known anywhere.

105 where. They use water to turn the mill that grinds
[376] their bread and that is primitive. But many thousands of people throughout the world would say that it is the right way. The adroitness and the ability of the Hunzan men would match that of any people in the Western world.

I cannot say that I found anything about them that was primitive. Further, they can choose the modern way of life if they so desire it. But the only people who seek it are those who are forced to leave Hunza because of the shortage of actual living room.

511 *Poverty stricken*—One writer referred to them as being poverty stricken. If the beast of the fields and forests and the birds of the air are poverty stricken, then I guess we would have to admit that the people of Hunza are poverty stricken as well. If you want to feel sorry for birds, because they have to seek shelter in their unheated nests high up in the trees, where the winds blow around them, and because they do not have oil heating for their nests or motors for their wings as a sign of poverty, then I will be forced to agree with you.

As long as the people of Hunza are free, have a bit of land to till and a house of their own that is not mortgaged or tax-ridden and are in good health and attain long life, I definitely cannot accede that they are poverty stricken.

142 *Fair complexioned*—Now and then some author refers to them as being fair complexioned. I did not see one fair complexioned person in all of Hunza. Perhaps
[144] the writers meant to say that they were Caucasians, which is true, as compared to Orientals or Negroes. They are not a fair people any more than the Spaniards, Italians or Greeks are fair complexioned peoples.

805 *Precise, exacting*—An occasional writer sought to

Dard AV3
Burusho AV7

B [564]
D 564

(c) *Yashkuns*—The most numerous of the lot—come next in importance and form almost the entire population of Hunza, Nagar and Punial; they also outnumber all other classes in the rest of the Agency. They are of Turanian origin but intermarriage with people of Tartar and Aryan descent has obliterated most of their original characteristics.

(d) *Saiyids*—Who are thinly scattered through the Agency, declare that they first settled in the country when Tamerlane was king. They are greatly respected by all classes and receive the daughters of the ruling families in marriage. The daughter of a Saiyid usually can marry only in the same clan. Occasionally, however, they are married by kings and ruling chiefs, and also, in this district, by Akhuns and Mullahs.

B [564]

(e) *Kamins, Doms and Shotos*—They are of an inferior caste. The Kamins who do not exist in Hunza and Nagar are millers and potters and are most numerous in Darel and Chilas. The Doms who are musicians, blacksmiths and cobblers, are found mostly in Yasin, Nagar and Chilas. The Shotos are leather workers and exist only in Nagar.

(f) *Kashmiris*—Form the largest section of the population in Gilgit proper. They settled in the time of Ahmad Shah (about 1760) and are mostly weavers, goldsmiths and carpenters.

(g) *Gujjars*—Nomadic cattle owners form a floating population chiefly in the highlands separating Gilgit from the unadministered territory of Tangir and Darel.

D 105

3. A chief comes from the aristocrat class and usually marries only one wife from that class the children of the union being recognized as heirs, to the exclusion of children by a wife of an inferior class.

B 105

4. The organisation is autocratic in theory, in practice any important point is settled by a Jirga of headmen.

5. The origin of the tribes in the Gilgit Agency is conjectural. There would appear to have been three main movements—an incursion from the North as the inhabitants of Badakshan gradually expanded over the Hindu Kush; an invasion of the Shins from the South and the conquest by the Tartars from the East. There is also evidence that Tibet ruled in this part of the country for many generations.

Owing to the inaccessibility of the country, Hunza and Nagar seem to have been less affected by these movements than the rest of the Agency, and among the people living in the more isolated parts of these provinces, traces of Turanian descent can still be seen.

6. Most of the inhabitants are cultivators and all three types of cultivation are to be observed, depending entirely on the conformation of the ground. In hilly country terraced fields, often rivetted with stones, are the rule: where the country is open and flat ordinary plots are made.

Irrigation is carried out almost universally by water kuhls, some of which extend along the precipitous faces of the mountains for many miles. Where possible small canals are hewn out of the rock; where the hill is too steep the water is conducted through hollowed tree trunks which are propped by wooden supports.

7. There are no megalithic monuments in the Agency.

Two Budhist Stupas exist; one on the hillside about three miles east of Gilgit; the other on the road to Nagar, between Chalt and Minapin. There

is also a small Budha carved on the rocks at the mouth of the Kirgah Nulla, about three miles west of Gilgit and small Budhas and Budhist relics have been found in Yasin.

D 105

8. Stone is not used for seats.

B 105

9. Buildings are mostly constructed of mud and stone. In many of them the pillars supporting the roof, the lintels, friezes and wainscot are of carved wood.

There would appear to be no restrictions: the material used depending on the material available.

10. The social position of a man is indicated more by the condition of his clothes and house than by any particular cut or pattern.

11. The sun is considered to be masculine and to be composed of fire: the moon feminine, and made of glass.

The markings on the moon are accounted for as follows in Hunza and Punial:—

> A small girl went out one night to fetch water for her mother and saw the moon descending from the sky. Fearing that she would be carried away, she clutched a small tree but in spite of this precaution both she and the tree were swept up to the moon where they can still be seen. In the rest of the Agency the tree is omitted.

In an eclipse a large dragon swallows the sun or moon. Fortunately it has a slit in its throat so their eventual emergence from this is assured. Never-the-less to hasten matters drums are beaten and a great deal of noise is made.

The stars are thought to be basket shaped, to have no light of their own and to smell badly. The reason for this seems to be that a falling star (meteor) crashed into a field once long ago and had all these characteristics.

There are no specific names for any of the constellations.

Earthquakes are caused as follows:—

The theory more general is that a bull stands on the water supporting the the earth on one of his horns. When he itches he moves his body a little causing the earth to shake.

In certain parts of Hunza the theory is that at the centre of the earth a great bull stands and supports the ground on his immense horns. Should anyone sin greatly the bull shakes his head in remonstrance and the earth rocks.

The rainbow is supposed to be an animal which inhabits the clouds. Sometimes he comes down to drink at the river and the water he drinks is supposed to come out again at the other end.

12. The face of the dead is kept to the West. The head to the North and legs to the South. Both the hands *generally* are straight. In some parts of Hunza the right hand is placed under the cheek.

13. The ultimate abode of the righteous man is a land of comfort and good things. What he has desired in life he gets in abundance in death. There is no food there but the smell of the flowers which carpet the ground is enough.

For the bad man is a place of terror and misery. All kinds of tortures await him there; from fire, from insects, from knives. Toads and snakes abound and there he will remain until pardoned of God.

6:India G-3 (1931)1933 AVI Kashmir
Dard AV3
BURUSHO AV7

D 105
B 105

14. The complexion is, in most cases, very fair. Straight eyes, usually brown but not infrequently grey or even blue. The hair is straight, in some cases of a decidely reddish tinge and is often shaved over the pate.

The physique is good, although in many cases there is lack of stamina and a certain indolence, more mental than physical, is often observed.

The prowess of the locals on the mountains is remarkable and, probably unsurpassed elsewhere.

15. Seed is sown broadcast; fields are ploughed with a wooden plough.

16. Musical instruments are produced on any excuse and chiefs are invariably accompanied by their bands wherever they go. The most common instruments are the Sarnai; the Daramal which consists of a pair of drums on one of which the skin is tight and on the other loose, and a big drum.

In addition to these there is the Rubab and the Zitha stringed instruments which are played with remarkable skill and effect.

17. Swords, Guns and Rifles are the chief weapons, although bows and arrows still survive.

Heads are not taken from enemies.

PART "B".

In the Gilgit Agency there is little more contact with the outside world now than there was formerly and as, in the Political Areas, the Ruling Chiefs are encouraged to govern their own countries as much as possible without interference by the Political Agent, the effect of political dominance is not marked.

Education is carried out in all the larger centres, but it has been started so recently that it is impossible to tell at the moment, what its eventual effect will be.

In a land where ninety nine per cent. of the population is illiterate, where the threat of starvation is ever present, and where stark poverty is the universal rule, there is little chance of the inhabitants becoming slack and apathetic.

PART "C".

1. Ornaments of silver and semi-precious stones are worn but tattooing is not practised. The women apply certain drugs to their faces to protect the complexion against the rigour of the climate.

Tooth paste is not used and teeth are usually cleaned with a willow twig.

2. Wine, the only intoxicant indulged in, is drunk in Hunza, Punial, Ishkoman, Yasin and Kuh-Ghizr, where most of the inhabitants are Maulais. There are no general restrictions of age, sex, etc. but wine is usually produced only when entertaining guests, or at marriage ceremonies and occasions of rejoicing.

3. The people generally are very obedient and seldom defy the authority of their Chief unless there is any gross contravention of established custom. Various scales of fines are imposed in different districts and these are generally paid with good grace, as, in almost every case, they are imposed by the Chiefs in consultation with the elders of the country. Imprisonment is also awarded but excommunication is not observed.

4. Prayers are offered to God in the same manner as in other civilised places in India.

Dard AV3
Burusho AV7

D 105

5. Agriculture forms the sole occupation of nearly all the inhabitants of the Agency. Trade has recently been started by a few of the more enterprising people but at the moment the numbers engaged in it are almost negligible.

B 105

6. A pregnant woman is given no special diet and the delivery is assisted by any old woman who may be selected to help. After the third day the mother's clothes are washed and on the 10th day she, herself, takes a bath and is considered clean again.

The baby is washed in hot water immediately after birth and a man calls "*Azan*" first in the right ear and then in the left—if the child is male guns are fired and the firers are given a goat.

Alms are given soon after birth and again three days later.

A male child is preferred though, as no record exist, it is impossible to say to which sex the first child generally belongs.

No ceremonies are performed when the child reaches puberty.

7. Girls are not generally offered free. In rare cases they are exchanged with other girls but never sold. Rs. 60 to 80 is usually offered for a girl at the time of betrothal or before marriage. Ornaments are given by the girl's parents only and not by the groom's family.

Woman has sole authority in household matters, does all the work in the house and when it is finished helps in the fields. In some districts she also fetches fuel from the jungle.

A priest, who may be any man with enough religious education, is necessary to read the *Nikah* at the marriage ceremony, and receives from the bridegroom Re. 1 as his fee.

Polygamy is practised but the status of the first wife is considerably lowered by the arrival of a second, as this is usually caused by her own incompetence in household matters or to greater attractiveness on the part of her rival.

Sometimes, however, a man marries his brother's widow under compulsion, and in that case the position of the first wife is not altered.

Betrothal is the usual prelude to marriage. It is performed in this manner:—

The boys father or in his absence, any other important relative or friend goes with 4 or 5 other influential persons to the house of the intended bride and asks her guardian for her hand. He replies that his relatives must be consulted and tells the deputation to come again after a few days. When the party again visits the house if the reply is favourable the girl's family is presented with the following articles:—

Cloth	...	about 6 yards.
Cash	...	„ Rs. 10

Should it be desired *Nikah* can be read at that time. Usually, however, it is reserved until the marriage takes place.

Unless the *Nikah* has been read the alliance can be broken by either side on any pretext. If the move for annulment comes from the girl's side the gifts are returned: If from the boys they are not recovered.

Divorce is allowed in cases where the women is unable to manage the household affairs or is of bad habits. Rarely a divorce takes place where the husband finds it impossible for him to cope with his wife. Divorced persons are permitted to remarry.

D 105

Marriages are arranged for auspicious days and hours which are ascertained on each occasion from the village priest.

B 105

Temporary unions are allowed by Shias only.

Free access is not allowed before marriage generally.

No caste prohibits remarriages of widows. Moral laxity prevails to a certain extent.

8. *Death.*—The head of the dead points North but the face is turned to the West towards Mecca, the religious centre of Muslims. When a death occurs food is not cooked in that house for three days and cooked food is sent by relatives for that period. On the third, seventh and fortieth day alms are given to avert calamities, also on the first anniversary after the death.

Indigenous drugs are used for medicines and almost every one knows the medicinal properties of certain local plants and use them when required.

9. *Amusements.*—Swimming, polo playing, racing, wrestling, tug of war, archery, dancing, singing, etc., are some of the amusements indulged in; women do not participate in the sport undertaken by men. They hold their own separate congregation on occasions of rejoicings such as Id and indulge in singing and dancing away from the eyes of the men.

Festival occasions.—Id-ul-Fittar, Id Haj, Id Ghadir and Nauroz are the chief occasions on which rejoicings are made by dancing, singing, polo playing, running and wrestling etc. Dancing is held in a circle to the beat of drum.

D 585 539

10. Before a number of the village people after sunset on the night before the marriage the following song is sung at the bridegroom's house in the following manners:—

B 585 539

A large iron pan is placed in the middle of the assembly and a man of the Katchate or Babuse family rushes forth with some ghee, atta, and seeds of wild rue or leaves of chili, and, putting these things into the pan burns a little fire under it till the contents begin to smoke. To fumigate all the air in the room he holds the pan by its brim and lifting his hands above his head, commences to dance to the accompaniment of the band, while the people applaud and sing a song of which the following is a translation:—

(1) The pan belongs to Bair Gul.

I will never let any one place this pan on the hearth.

I will place it there myself.

(2) The pan belongs to Malik, the Chief of Gilgit.

I will never let any other place this pan on the hearth.

I will place it there myself.

(3) The pan is worthy of belonging to kings, etc.

(4) The pan is worth being kept by a family, etc.

(5) The pan belongs to Shah Mir, the Chief of Kashmir, etc.

(6) The pan belongs to Maqpun, the Chief of Skardu, etc.

(7) The pan belongs to Mughlot, the Chief of Nagar, etc.

HRAF copy

[The author attempts to correct in this source certain misconceived ideas held by many people regarding the small, mountainous, Central Asiatic kingdom of Hunza as a Shangri-La or virtual Himalayan paradise peopled by men and women of extraordinary health and longevity (reaching the ages of 120 to 140 years). Using these erroneous assumptions as a starting point the author proceeds to list the many cases of disease which he encountered while maintaining a general dispensary in the area, and the dietary deficiencies in the native foods which contributed immeasurably to the development of such diseases. Upon investigating alleged cases of longevity the author found that usually the individual was simply estimating his age. Later investigations based on the rate of dental wear indicated that such elderly Hunzas were in reality no older than sixty to seventy-five years of age.

Other data to be found in the source pertain to the political organization of the kingdom, the status of women, weddings and the Tumushuling celebration, population emigration, and soils, agriculture and land use.

The author, Director of the Central Asiatic Research Foundation, visited Hunza twice between 1948-1951, with the primary purpose of discovering what resources were available to the Hunzas and to teach the people to use them to the best advantage.]

The Burusho of Hunza

by E. O. Lorimer

101 THE small state of Hunza is the most northerly in British India.
131 It consists for the most part of a close-packed mass of unscaled
and unscalable mountain peaks over 20,000 feet, seamed by
133 untrodden rivers of snow and ice; as might be anticipated, it is
197 mainly uninhabited. Its frontiers march with Afghanistan on the northwest and with Chinese Turkestan on the north and northeast. But where the Hunza river has cut its way down from the Pamirs to join the Gilgit river and ultimately the Indus, there remain, clinging to the mountain sides, a few sloping, rocky terraces which, if water can be brought to them, can with diligence be rendered fit for human habitation. These oases of green amidst the barren desolation of rock and cliff and mountain peak are the habitat of a sturdy mountain people, the Burusho, speaking a difficult but extremely interesting language, of so great antiquity that no affinity between it and any other known form of human speech has yet been traced by the comparative philologist.

114 When D.L. was posted as Political Agent, Gilgit (1920–24) he
121 made it one of his leisure tasks to collect material for a scientific study of Burushaski (the language of the Burusho) the result of which is a three-volume work*—grammar, texts and vocabulary—of which the last volume is just issuing from the press. In 1934—ten years after his retirement—we returned unofficially to Hunza, armed indeed with a considerable knowledge of the language but with no facility in speaking it, to live amongst the peasants and make such a study of their customs, agriculture, economics, etc., as amateur anthropologists might.

181 During our four years in Gilgit we had not failed to discover that
609 the Hunzukuts (dwellers in Hunza) were the most attractive of all the
643 likable mountain peoples of the Gilgit Agency, the most physically prepossessing, the most intelligent and the most trustworthy. All classes in Hunza gave us a warm welcome, from the Mir—who has

113 * *The Burushaski Language*, by Lt.-Col. D. L. R. Lorimer, Oslo, 1935 (England: Williams and Norgate) published by the Norwegian Institute for Comparative Research in Human Culture.

Chapter 15

ILLNESS CALLS A HALT

000 WHEN after three days we had got the house habitable, cupboards and bookshelves ordered, lamps burning, water and food routine running smoothly, and the first friendly contacts with our neighbours established, we asked leave to pay our first call on the Mir, the king of the country and our host.

Two horses were found for us—it was a welcome let-off that the nature of the country made it useless to keep our own horses—and we started early, while it was still cool, on the 441 four-mile ride to Báltít, his capital. The Great North Road from Kashmir to Central Asia is here some four to five feet wide; the only rideable road in the country. For the first couple of miles it runs fairly level between high field walls, just dipping 50 feet now and again to cross a stony gully, down which pour at times irresistible floods of mud and boulders; then it staggers almost perpendicularly up some hundreds of feet till it reaches the level of the Dála and runs along with the water channel (which is perhaps 4 feet wide and 2 feet deep) on its left and a steep drop on the right into the first fields below. High above us towered staircases of narrow fields and behind them great serrated snow peaks, the most interesting of which culminates in a 2,000-foot needle of sheer granite too steep ever to hold the snow.

133 773 This is Princess Búbuli's Peak, and the story goes that when the hero Kiser (the Gesar of Tibetan myth[1] and an

● 113 [1] For original Tibetan versions of his story, see Madame Alexandra David-Neel, *Gesar of Ling*; for the Burushaski version, see D. L. R. L., in *Folklore*, XLII, June 2, 1931.

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

of India that it should not be taken over by Russia. It was 643
decided to put on the throne a younger brother of the fugitive 648
Safdar Ali's—who by good luck had escaped murder. This young man, Muhammad Nazím Khán, had had an unusually wide political education. As a boy of only nine or ten he had been sent down by his father as a hostage to Gilgit, and had there met British officers for the first time and gained many new ideas. Later he had acted as ambassador and negotiator for his father and his brother on missions to Chinese Turkestan and Afghanistan, and he could talk Wakhi, Turki, Khowar, and Hindustani, as well as his own Burushaski. Above all, he was an extremely able youth, and had drawn his own deductions from his varied adventures. In 1892[1] he was therefore made king, with the able Humayun Beg as his Wazir, and since that time he has been our trusty and faithful ally, guarding for us the lofty passes that are the extreme northern gates to India on the west. For four and forty years he has now ruled his people with firmness, sympathy, and kindness, maintaining security, dispensing justice in accordance with local custom and public opinion, keeping up and encouraging the traditional festivals that punctuate the year with joust and dance, music and merriment.

During his reign there have been only two murders on 674
Hunza soil, serious crime is unknown, and even theft and 625
petty pilfering are non-existent, though there are in the 697
country no prisons and no police. On rare occasions when
some mischief-maker threatens serious trouble, the Mir, with 691
the concurrence of his subjects, may deport the would-be disturber of the peace to the distant valleys of Shimshál to tend the royal flocks that pasture there or to spend his energy on roads or aqueducts. Food and pasturage are plentiful, and life in some respects more luxurious than in lower Hunza; but the Hunzukuts loves his home, his family, his apricots, and after a couple of years' exile the malcontent returns a wiser man. It is amusing to see a recent book indicting the Mir of Hunza for the "tyranny" that imposes so humane and so useful a punish-

[1] A popular account of these high matters may be found in Algernon 113
Durand's *Making of a Frontier*, and in E. F. Knight's *Where Three Empires Meet*.

fewer youths to be educated. On the other hand they have for many years been in very close contact with one foreign language, Khowar, which has been brought to their doors, and for many into their daily lives This is reflected to some extent in the Werchikwar vocabulary as far as it is known, but I do not know enough to say anything definite about morphological and structural analogies between the two languages.

Earlier Work on Burushaski and Werchikwar by Europeans.

The only original work of importance done in the past on Burushaski is that published by Col. J. Biddulph in 1880 (revised 1884) and by Dr. G. W. Leitner in 1889. In the Linguistic Survey of India, Vol. VIII their results are revised and summarised and a version of the parable of the Prodigal Son is added. Biddulph's work is sound as far as it goes, but it is only a brief sketch. There are 22 8vo. pages of Grammar, 4 pages of sentences and texts and 20 pages of Burushaski-English Vocabulary. He deals with the Nagir dialect which he calls "Boorishki" (v. footnote p. XVIII). Leitner in his "Hunza and Nagir Handbook", 1889, also principally describes the Nagir dialect. He collected a considerable vocabulary, extensive paradigms and a large mass of miscellaneous information, all of which he presents unfortunately in an ill-digested and unsystematic manner. His translations are often so loose as to suggest that he did not fully understand his texts, and naturally errors are not lacking.[1]

In both Biddulph's and Leitner's Vocabularies a considerable number of Shina words are to be found. This is probably characteristic af Nagir Burushaski, which has always been more exposed to infection by Shina than the Hunza speech.[2]

[1] It would be unwise to express a final judgment on Leitner's work without checking it through in detail with the assistance of Burushaski speakers, which I have not done.

[2] Cp. also the Bibliography in LSI, Vol. VIII, 1, p. 551. — Manuscript vocabularies compiled by B. L. Grombchevskiy and M. S. Andreev are in the possession of the Asiatic Museum of the Russian Academy.

For the rest I can only hope that they may be attributed to physical limitations rather than to economy of endeavour on my part. I have made a vast number of corrections in the proofs, but unfortunately this is a case where anything short of complete achievement acquires no merit. 128

I have made no effort to turn this into a comparative philological dictionary, a task beyond my competence, but I have aimed at indicating obvious loan-words, for the benefit of those who may approach Burushaski with a mininum knowledge of other oriental languages 121 192

The bulk of these loan-words will be found to be Arabic-Persian, i.e. Arabic words current in Persian, most of which have probably been acquired, more or less indirectly, from the latter language. 192

The original source of dissemination of Persian in all this part of the world has undoubtedly been the language of the Tajik population of the plains of what is now known as Tajikistan iu USSR territory. This Tajik Persian is now beginning to receive attention (Cp. W. Lentz, "Pamir Dialekte, I" Göttingen, 1933, Introd. pp. 31 ff. and H. Sköld, "Materalien zu den iranischen Pamirsprachen", Lund 1936, Introd. pp. 8 ff.). Work has been done on it in recent years by Soviet scholars, but copies of their publications are not easy to obtain. [113]

What proportion of the Persian words recorded by me in Burushaski are familiar to all Burushaski speakers, I cannot definitely say. Illiterate and untravelled men and most of the women would not, I think use, or know, many Persian words for which there are adequate Burushaski equivalents. Against this, every child in Hunza seemed to know the word *taswi'r* for "photograph". It was a very old man who, when he had lost or damaged his portrait, asked if he could have another copy of the *girm'inum*, the "script".

Other non-adjacent languages which have been laid under contribution are Hindustani and Punjabi.

With Tibetan I have no direct acquaintance but I have noted a few words in Burushaski which can be found in the standard Tibetan dictionaries.

Burushaski—English Vocabulary

192 Burushaski and the dialect of Tibetan spoken in Baltistan possess some words in common, and comparison has now been facilitated by the Vocabulary printed in A. F. C. Read's "Balti Grammar" [113] (RAS 1934), which became available to me only after the greater part of this volume was in print. A separate note on the subject is now appended, v. pp. 532—536.

192 Turkish and Eastern Turki stand in much the same position as Tibetan. They have contributed words to Burushaski, but I have 197 no personal experience of these languages, and have only indicated words that I happened to know or such as were readily traceable. The source of these borrowings has undoubtedly been the Eastern Turki spoken in Chinese Turkistan.[1]

On the other hand, coming to Burushaski's immedate neighbours, I have quoted all the parallels known to me in Shina, Khowar and Wakhi. Except where otherwise stated, these are furnished from my own collections.[2] This is a first step towards a comparison of the complete vocabularies of these languages — at present impossible owing to deficiency of material — which would yield some interesting results. We should learn for instance the extent to which the various vocabularies overlap, the nature and amount of borrowing by one language from another, and the area of survival or dispersion of Burushaski words, Burushaski being by hypothesis the original language of a much wider tract than it occupies at the present day.

I have made some attempt to illustrate the possibility of tracing the transference of grammatical devices and idiom within this group of languages in a paper which is due to appear in the "Transactions of the Philological Society" of 1937.

[113] [1] An examination of G. Raquette's "English-Turki Dictionary", Lund, 1927, reveals a very large number of Ar. Pers. words. Of the genuine Turki words there recorded very few are to be found in Burushaski.

[2] In the Kho. words the cerebrals and aspirates are probably fairly correctly marked. In Shina words many have probably gone unnoted. I have therefore quoted any forms given by Grahame Bailey which differed from mine. In Wakhi I could get no assistance in phonetics from my informants. I recorded cerebral ṭ, ḍ, ṇ and occasionally ṭ, but no aspirates, which proves little.

The Burusho of Hunza

by E. O. Lorimer

THE small state of Hunza is the most northerly in British India. It consists for the most part of a close-packed mass of unscaled and unscalable mountain peaks over 20,000 feet, seamed by untrodden rivers of snow and ice; as might be anticipated, it is mainly uninhabited. Its frontiers march with Afghanistan on the northwest and with Chinese Turkestan on the north and northeast. But where the Hunza river has cut its way down from the Pamirs to join the Gilgit river and ultimately the Indus, there remain, clinging to the mountain sides, a few sloping, rocky terraces which, if water can be brought to them, can with diligence be rendered fit for human habitation. These oases of green amidst the barren desolation of rock and cliff and mountain peak are the habitat of a sturdy mountain people, the Burusho, speaking a difficult but extremely interesting language, of so great antiquity that no affinity between it and any other known form of human speech has yet been traced by the comparative philologist.

When D.L. was posted as Political Agent, Gilgit (1920–24) he made it one of his leisure tasks to collect material for a scientific study of Burushaski (the language of the Burusho) the result of which is a three-volume work*—grammar, texts and vocabulary—of which the last volume is just issuing from the press. In 1934—ten years after his retirement—we returned unofficially to Hunza, armed indeed with a considerable knowledge of the language but with no facility in speaking it, to live amongst the peasants and make such a study of their customs, agriculture, economics, etc., as amateur anthropologists might.

During our four years in Gilgit we had not failed to discover that the Hunzukuts (dwellers in Hunza) were the most attractive of all the likable mountain peoples of the Gilgit Agency, the most physically prepossessing, the most intelligent and the most trustworthy. All classes in Hunza gave us a warm welcome, from the Mir—who has

* *The Burushaski Language*, by Lt.-Col. D. L. R. Lorimer, Oslo, 1935 (England: Williams and Norgate) published by the Norwegian Institute for Comparative Research in Human Culture.

[Pp 1-4 contain no textual material]

NOTE

121 THIS is not a serious book. Comparative philologists hoping for news of Burushaski, anthropologists interested in the highly civilized though materially primitive life of the Burusho of Hunza, ethnologists curious as to their origin, the scientifically-minded of every sort, are once for all referred to the published and to the yet unpublished books and articles of my husband, Lieutenant-Colonel D. L. R. Lorimer, late of the Indian Army and the Foreign and Political Department of the Government of India, hereinafter referred to as David or DL.

121 I have been concerned merely to set down our personal day-
114 to-day experiences—they do not merit the name of adventures —and our first impressions of the delightful people who for fourteen months in 1934–35 were our neighbours and our friends.

The journey to and from Hunza and the semi-camp life there had at an earlier period been the commonplace, all-in-the-day's-work life of ourselves for four years (1920–24), as of a long series of other Political Agents and their wives both before and after us. The only thing that lent a spice of adventure to this last tour was our delightful freedom from all official responsibility, and our age. Changes of climate and altitude, shortages of food and sleep, fatigues of travel, at which one smiles at forty present a graver challenge to fifty-five.

αο The triumph of our elderly excursion lies not alone in the sheaves carried home by DL, but in the fact that we both came back more than a little battered, it must be confessed, but still smiling; and treasuring memories which are worth incomparably more than the price exacted.

121 My excuse for writing so superficial—perhaps worthless—a book at all must be that it has made me happy to recall this silver honeymoon spent in the Karakoram and to pay a tribute to our hospitable and beloved Hunzukuts as they were in 1935, as they must have been for uncounted generations in the past, as they may be for generations yet to come, if the poverty

Chapter 2

GILGIT APPRENTICESHIP

THERE followed four glorious years in Gilgit. The seven districts or provinces under David's supervision gave him plenty of official work and lots of incident, of which in another time and place I should love to write. One, the district of Chilas in the Indus Valley, was directly under a British Officer, Assistant to the Political Agent. Lying on the borders of the restless, untamed democracies of the independent territories of Darel and Tangir (casually lumped together in ordinary speech as Yághistan—"The Home of Rebels") it had, unlike the rest of the Agency, an unenviable record of serious crime, including from nine to fourteen murders a year. Gilgit itself was then administered by Kashmir officials with all the paraphernalia of Wazír-i-Wazárat, Revenue officers, and law-courts. With these two districts the Political Agent was less directly concerned, though his official headquarters were in Gilgit, the only really prosperous oasis of any size in the Agency. Then there were the four political *iláqas*, small states ruled by Government-appointed governors, Punial, Yasin, Kuh-Ghizr, and Ishkoman, and finally the two semi-independent kingdoms of Hunza and Nagir, with their own kings, or Mirs, hereditary chieftains whose families (or family, since the two Mirs are descended from a common ancestor) have held sway in their present territories for at least six hundred years, since the days of our earliest Edwards. Since the famous Hunza Nagir Campaign of 1891 the two Mirs have been our trusty and faithful allies.

It was David's job to be the friend and counsellor of governors and chiefs; to keep a sharp eye out for tyranny or oppression; to be at all times, whether at headquarters or on the road, immediately and easily accessible to humble folk with

114 real or imaginary grievances; to ensure that slave-trading, arms-traffic, or foreign intrigue did not disturb the peace of the hardy peasant populations that were wringing a livelihood from the rocky mountain sides of what must be one of the highest and most inhospitable inhabited regions of the earth. This entailed constant travelling. He visited each district at least once a year, and most of them twice. Each tour entailed four or six days' travelling out and again four or six days back, up or down one river or another, for travel is only possible amongst the mighty mountains of the Hindu Kush and Karakoram where a river has contrived to cut its way. In summer he would push out beyond the inhabited oases to the great passes that form the gates of entry to British India from Afghanistan and Central Asia or the links with Chitral.

The spacious, if oddly planned and straggling, bungalow in Gilgit that was our home, with its English garden and valuable fruit and vegetable supplies, saw him only for a few weeks at a time between these ever-recurring tours on which I joined him when possible, but by no means always, for I could not feel it fair to nurse and baby to leave them too often alone. On the longer tours, moreover, during which David traversed every inch of the Gilgit frontier and crossed some unknown internal passes, difficulties of supply and transport which would impose burdens on isolated hill communities where the barest necessaries of food and fodder are cruelly scarce, debarred me from adding two extra mouths—mine and my pony's—to the party.

During those eventful and yet peaceful years David worked steadily and unremittingly at mastering and recording the local languages.

Obviously the first language to attack was Shina, and in this he accumulated over 400 foolscap typed sheets of texts, with ample notes, recording current folk-lore and superstitions, local history, customs, etc., and worked out the skeleton of a practical grammar to be amplified later into a more detailed, more scientific one, and collected a comprehensive vocabulary.

While he thus worked systematically I would sit by, knitting woollies for baby, mending the family socks and absorbing as

much as I could of what was passing between David and his 114
informant. Then, as I went my daily rounds with the servants, weighing in firewood, or issuing stores, packing away woollen clothes to protect them against moth or what not, I would enquire the Shina for all I saw, and listen to the servants' talk amongst themselves, jotting everything in my notebook to memorize it later, until by degrees I could substitute Shina for my sketchy memsahib's Hindustani. Not frequently but sometimes a phrase or word or form which I thus caught on the wing proved useful to supplement DL's much wider-flung enquiries.

Next came Khowar, the language of Chitral, of which David had made a preliminary study during nine months as Political Agent there during the War. To my bitter grief I had not been allowed to accompany him, and so had missed his first steps in Khowar. Though by listening I learnt enough for typing and indexing purposes, I always felt this delightful language something of a step-child compared with Shina, and I never attempted to speak it. The "Royal Families" of Yasin and Punial are descendants of the Chitral Khushwaqts, who had conquered parts of the Agency two hundred years ago. They retain their native language and have, to a certain extent, imposed it as a second language on the upper strata of their subjects. Throughout the Agency it is therefore regarded as a polite language, meet for chiefs. In the same way as for Shina, DL collected texts, notes, vocabulary, and all the data for a scientific grammar to supplement his considerable material from Chitral, noting how very trivial were the differences between the two varieties of Khowar.

Not until the end of our third year in Gilgit was he able to devote himself to the infinitely more thrilling task of acquiring Burushaski. Now Shina and Khowar are both members of the Indo-Iranian family of languages—possibly taking off from the parent stock before the Indian and Iranian branches were fully differentiated—and are therefore related to Hindustani, Persian, Pashtu, and each other, as for instance Icelandic to Rumanian, or Dutch to French. There was therefore nothing sensationally new about their structure, and a large number

114 of their words had for a scholar recognizable kinship with Sanskrit or Avestan roots. They might, in fact, be styled relatively "easy."

114 Burushaski was another matter. Here was, it would seem, a
197 language entirely unrelated to its neighbours, or to any other known form of human speech, alive or dead. If, as Sir George Grierson conjectured, it was the survival of an aboriginal language spoken perhaps over the whole of northern India before the Sanskrit-speaking Aryan invaders pushed their way southwards across the mountain barriers into India (some two or three centuries before Christ?), it had been driven ever further and further up into the inaccessible mountain valleys of the Karakoram, where it is preserved almost pure among the sturdy peasants of Hunza, somewhat contaminated by Shina amongst their Nagir neighbours across the river, and subject to independent development across the ranges in Yasin, where the peasant people speak what they call Burushaski, though the Khowar-speaking upper classes dub it Werchikwar.[1]

The fact that the structure of Burushaski is utterly non-Indogermanic, non-Semitic, non-Turkish, non-Mongolian, non-anything-known, and that—with the exception of a few Persian-Arabic loan words which have filtered in with the coming of Islam—its vocabulary is entirely its own, awaking no echoes in the mind to aid the memory, makes it a difficult language to tackle. Though British officers have been regularly associated with Hunza and Nagir since 1891, and less regularly for some years before, the only one who had attempted to work on it was that fine old sportsman, Colonel Biddulph—who had published in 1880 twenty-two octavo pages of grammar, our of sentences and texts, and twenty pages of vocabulary. Leitner, of the Educational Department, published a *Hunza and Nagyr Handbook* in 1889, which contains a considerable amount of material in unsystematic form. Both

[1] In the language of Chitral, -wár means "speech" and -ík "the people of a country." Their own language Kho-war is the "speech of the Kho people" and Werch-ík-war "the speech of the Weresh (= Burush) people," the earlier, if not necessarily aboriginal, dwellers in Yasin, at the time of the Chitrali conquests.

114 these pioneers deserve the greatest credit for their work, and
197 had to wait for forty years to find a successor. They had worked chiefly on the Nagir form of Burushàski, and had not, of course, distinguished the Shina elements in it, and they had to work wholly through interpreters, which accounts for much misunderstanding and inaccuracy. David therefore thought it wiser to start from scratch, as in the case of Shina and Khowar. Here, again, with infinitely greater labour, he amassed texts, notes, and vocabulary.

000 When we eventually bade a sad farewell to Gilgit in 1924 to go "on leave, pending retirement," we were comforted by knowing that we need not relapse into bath-chairs in Cheltenham or Camberley to bewail the good old times, the decay of the British Empire and the shortcomings of the young, nor to shout "koi hai?" to an unresponsive world, but had enough material in manuscript and typescript to keep us happily employed for the rest of our joint lives.

114 Incidentally David had snatched fleeting opportunities to
563 collect also some Wakhi material, though not on the same
197 scale as the other three languages. Wakhi is spoken in the higher levels of Hunza by immigrants from the Afghan territory of Wakhan, who have established themselves at the non-apricot-growing heights—often 10,000 feet and more—which the Hunzukuts proper consider barely habitable. Wakhi is a language of Persian descent, and was of particular interest to DL who, during many years in Persia, had made himself an authority on several unrecorded dialects of Modern Colloquial Persian, and while in Chitral had done what work he could on the Persian dialects of Madaglasht and Badakhshan.

128 [DN] The Burushaski material which had been collected in the leisure of one short year, while DL was continuing work on Shina and Khowar, took four and a half years of steady desk work to prepare for press, and resulted in three stout volumes of 464, 418, and 545 large printed pages. The typing for the printer was, of course, nearly concurrent with the manuscript draft, and when this was completed the next question was to find a publisher.

The prospect looked none too bright, and we gloomily predicted that some German or Russian would anticipate David's work on Burushaski, when an unexpected letter came from Professor Georg Morgenstierne, himself a professional philologist and a pioneer worker amongst Central Asian languages, asking whether DL would care to submit his Burushaski work for consideration by the Norwegian Institutet for Sammenlignende Kulturforskning (Institute for the Study of Comparative Human Culture) with a view to its possible publication by them at their expense. The offer was too generous to refuse. We felt sad, homesick as it were, that Oslo, not Oxford, should stand on the title-page; but if Norway with scientific endowments could face what unendowed English publishers could not, national pride had to give way before the practical consideration that if the work was to be of use to scholars it must first be printed, and if it were not speedily printed it might be anticipated. David therefore gratefully accepted for his Burushaski the honour of a place in the Institute's distinguished series of learned publications. We found later, to our surprise and pleasure, that the Institute having once undertaken a scientific book, undertake also that nothing shall prevent its reaching the right public, and are prepared to send copies to almost *any* person interested enough to want them—a generosity which no ordinary publishing firm could emulate. It will be remembered that when Hooker was bringing out his great *Flora Indica*, his publishers expressly stipulated that no copy was to be given free to anyone who could possibly require the book!

So the typescript went to Oslo in 1931 and work began on the proofs, the reading of which was even more laborious than

Chapter 6

EAST AGAIN

We knew, of course, that it would not be possible to ride over the snow passes into Gilgit before June or July, but we had no wish to incur the heat of the Red Sea or the Indian plains in May. We therefore sailed on March 1st (1934), a slack shipping season, for few people return to India just before the hot weather if they can help it. After an uneventful journey out, with an unprecedentedly dull lot of fellow-passengers (or were we ourselves grown old and dull? we didn't feel it. We felt like a pair of school children who had snatched an unexpected holiday and were off on a wild adventure), we found ourselves back in the familiar clammy dampness of Bombay. We made it our first business to pay a courtesy call on the Russian scholar, Professor Ivanow, with whom DL had had correspondence from time to time. We thought of no practical advantage beyond the pleasure of the great man's personal acquaintance. Professor Ivanow is, of course, one of the leading authorities on the doctrines, practices, and literature of Ismailism, the Muslim sect to which the Hunza people belong. But the Hunza peasant would know as little about these esoteric mysteries as the nominal Church of England peasant aboutt he homoousian or filioque controversies or the detail of the Thirty-nine Articles.

It happened, however, that the Professor was in touch with some Hunza people in Bombay, more especially with a small deputation which had just come down—on foot through the winter snows—to pay their respects and their annual "Peter's Pence" to His Highness, the Agha Khan, the spiritual head of the Ismailis, and to them God's vice-regent upon earth, whether his headquarters be Paris or Monte Carlo or the racing stables.

in the summer), or that with luck we might see a doctor in a 759
month or two. In our little home-town there are indignation meetings because we have to travel seven miles in a motor ambulance to reach our nearest hospital.

Another pleasant thing had been the presence of the Indian sub-assistant surgeon in charge of the local dispensary. True when you were sick you would echo George the What-ever-it-was: "Give the doctor my compliments and say I am too ill to see him," but he had a store of any simple drugs absent from our own medicine chest and he kindly acted as sanitary inspector and supervised the disposal of the kitchen refuse, etc., and directed the activities of the sweeper. This removed a source of possible anxiety.

Altogether things might have been a lot worse. It was per- 000
fectly maddening for David to have missed all these interesting weeks of the harvest; but he had seen something of it from his window, and from the verandah, and if he was pretty fit again by mid-September we still had an entire year's cycle ahead of us. And I had sat about a good deal in the fields (within sight of the house and within earshot of his whistle—though he never blew it), and made lots of friends and taken what notes I could with as much of my mind as was on the spot. It wasn't a lot, for I was often anxious and always rather underslept. But with luck we should fill in the missing bits next year.

The September weather was delightful; the "bitter" heat 132
had gone, and it was like the best days of an early English summer, but with perfect dryness and the security we never have at home that to-morrow and the day after would equally be fine.

Before coming we had been afraid that further knowledge 114
might reveal all sorts of mistakes in the Grammar and the Texts (now finally in print and about to appear). We were immensely relieved to find as we worked that there was *nothing* incorrect. It seemed almost incredible. A few difficult points could be further cleared up, but there was nothing to retract. The Vocabulary proofs were beginning to come—and a hideous fag it was correcting them!—but this gave opportunity to eliminate a few question marks and occasionally to

114 add a new meaning without disturbing the main text. DL did not attempt to incorporate new material. It would be better not to tinker with the existing work but to wait till our work here was done and put new facts into shape for a supplementary volume.

The anthropological material would in any case be an entirely separate business.

194 One very tiresome task connected with the Vocabulary was to achieve what certainty was possible about aspirates and cerebrals. Neither David nor I had when young any scientific training in phonetics—the modern science of phonetics simply did not then exist—and perhaps our ears are not naturally acute. Anyhow, neither of us can distinguish these finer shades of sound with any certainty. Burushaski has, for instance, four different t's: a dental t and a cerebral t (= t and ṭ) and the same two sounds plus a light aspiration (= th and ṭh). It is practically convenient and scientifically lamentable that the English t holds an intermediate position between them. Our ordinary t does quite beautifully for conversational use. No doubt in all cases it sounds slightly "foreign" to a Hunza ear, but it seems to be perfectly acceptable. This, however, isn't good enough for accurate recording. Fortunately Qudrat Ullah was intelligent enough to detect the difference, and David has taught him to be on the *qui vive*; so they set to work through the whole Vocabulary to check every single spelling authoritatively. The scientist and phonetician will therefore be able to get the accurate spellings there and the more casual spellings of the Grammar and Texts will be good enough for the ordinary student.

If it was only the t's! But there are a dozen other sounds afflicted with cerebral and aspirate doubles. It was a long and weary business to register them all, but one at least which could only have been tackled on the spot. The ordinary speaker is of course unaware of these refinements of his own pronunciation. An odd point is that the aspiration is frequently dropped in Hunza speech in derived forms, whereas Nagir Burushaski is more logical in the matter; with them apparently "once an aspirate, always an aspirate" is the usual rule.

8: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

195 noticed, too, that when I asked: "Are you well?" the return question would sometimes be couched in the ungrammatical form: "Are your name well?" but this was chiefly used by the children as more respectful. I was told it would be unsuitable for me at my age to use to anyone, even to the King. Otherwise in Hunza spades are spades.

114 DL's original vocabulary (vol. iii of the book already alluded to) comprises some 3,000–4,000 words. From our first day with the Hunzukuts to our last, we were recording new words without ceasing, or registering new meanings for words we thought we knew. Far from having "completed" a vocabulary of Hunza Burushaski after a hard year's work DL felt he was just beginning it. Ten years more could have been profitably spent on the task if we had had them to spend. At least no language enthusiast can complain that the field is bare; there are ample gleanings left for him or her. A rich harvest indeed awaits the reaper—but labourers to date are few.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

PREFACE.

The present work deals with a language which is spoken in some inaccessible mountain-valleys at the meeting-point of three great linguistic families, viz. the Indo-European (represented by Indo-Aryan Shina and Iranian Wakhi), the Tibeto-Burman (represented by the Balti dialect of Tibetan) and Turkish, but which is unconnected with any of them. 1114 128

It belongs to a small and remote community, which has never played any rôle in history, nor contributed anything to the development of civilisation. Yet the Institute for Comparative Research in Human Culture has recognised the importance of assisting in saving from oblivion this relic of the past, of which, so far, only very summary descriptions have been given, and which in spite of, or perhaps just on account of, its apparent isolation may help to throw light upon the linguistic history of Asia.

The Institute has therefore undertaken to publish the first comprehensive account of Burushaski and the notes on the closely related Werchikwar dialect prepared by Lt. Col. Lorimer. During his term as a political officer in Gilgit, close to the Burushaski speaking country, the author contrived to collect very ample and reliable material relating to the language, and he has since successfully carried through the difficult task of classifying and arranging it, describing in detail the highly complicated grammatical system of Burushaski. He has earned our gratitude for

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

114 128 the painstaking energy with which, despite many difficulties, he has prosecuted this pioneer undertaking.

The writer of these prefatory pages, who has had the privilege of discussing with the author a number of questions relating to Burushaski, can testify to the accuracy and care which has been bestowed upon the work.

In scientific importance Burushaski may be classed under several categories. Each of these presents its own special problems which will require separate and detailed study, and here it is only possible to draw attention to a few points selected more or less at random.

---

193 In the first place Bu. is of interest to the student of general linguistics on account of the many peculiar features of its morphological structure. These have been described in detail in the Grammar, and I shall only mention here one or two which seem worthy of consideration.

The division of nouns, etc., into four classes[1] is, of course, one of the outstanding features of Bu. grammar. L. is, no doubt, right in considering the first two categories (m. and f.) to be subdivisions of a common class denoting human beings (h.). The plural endings, the demonstrative and interrogative pronouns, and the numerals are the same in m. and f. nouns, and it is only in 3 sg. of the prefixed pronouns and of the personal suffixes of the verb that the two classes differ. This is an interesting parallel to the Indo-European gender system, in which the distinction between m. and f. is supposed to be more recent and less fundamental than that which exists between m. and f. on the one hand and n. on the other.[2]

Of course, the Bu. x. and y. categories cannot be indentified with the I. E. n. As a matter of fact, the x. class, which among other things comprises non-human animate beings and which may, with great reserve, be defined as denoting individually conceived objects,

[1] §§ 19 sqq.

[2] V. e.g. Meillet, BSL (CE), 31, 7.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

Moreover several obviously Indian or Iranian loan-words in Bu. are used to demonstrate the relationship with Cauc. 197 114

On the whole, most of Bl.'s comparisons are unsatisfactory and are based on a slight and illusive similarity of sound. Cases like Bu. girkis *rat:* Karata herkwa, Awar hinxu, Varkus qurka; Bu. tatas *palm of the hand:* Georg. t'ot'i *paw*[1]; Bu. čumu (Shina čimu) *fish:* Mingrelian čhomu etc. are not sufficient evidence for us to build far-reaching conclusions on. Some kind of connection is perhaps possible between Bu. bičil *pomegranate:* Georg brec'ouli[2]; Bu. tili *walnut:* Georg. t'hili; Bu. šoγori *a kind of pear:* Budukh čüγür, Tabass. šeher[3], but such words may easily wander from one language to another.

I do not think that Bl. has succeeded in proving the probability of a relationship between Bu. and Cauc., and I very much doubt whether it is possible to prove anything of that kind at present. But the whole problem will certainly deserve a renewed and methodical consideration when the Cauc. languages and the connection between their different groups have become better known. And if we ever succeed in connecting Bu. with some other group of languages, it will be of the greatest importance for our understanding of the early history of Western Asia.

Our chances of ever being able to reconstruct older forms of Bu. either by comparisons with W. or by means of internal evidence in Bu. itself are not very promising. 197 195

Only in very rare cases is it possible to employ the latter method. We have mentioned above[4] that initial mediae may go back to older tenues.

Another case where a reconstruction seems possible is that of the pl. suffix -o.[5] Before this suffix certain consonants are palata-

[1] "Cf. Bar. *-to-to paw". Lorimer 2—4—1935.

[2] Acc. to Bl. himself this comparison is 'zweifelhaft'.

[3] Taken from Erckert's not very reliable material.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

194
197

Apparently ʊ and ɪ are unstressed variants of *u* and *i*, cf. e.g. gukɛ: guˑkɛ *these*. But in spite of cases like goˑn, gun *dawn o* and *u* must be considered to be separate phonemes. The same is undoubtedly true also of *ai* : *e* and *e* : *ə* although we find, exceptionally, (personal?) variations such as tail, təil, te.il, teˑl *such*, γai.iŋ, γe.iŋ *grapes*.

The vowel system of Bu. would thus appear to include the following phonemes; *a*, *e*, *i*, *u* and *o*. To these should probably be added *aˑ*, although quantity does not appear to be of phonemic significance in other parts of the system.

As regards the consonants L. is probably right in taking *ǵ*, *γ̇*, *q̇* to be variants of *g*, *γ* and *q* due to the proximity of *y*.[1] But the last mentioned sound is certainly a separate phoneme.

Regarding the cerebrals, aspirates, gγ and W. *ł* see below.

● 114
194
[115]

During my stay in Chitral in 1929 I had an opportunity to take down short lists of Bu. and W. words. My Bu. informant was a certain Abdullah[2] from Baltit. The other called his language Wəˑčik waˑr and his native valley Wərči guˑm = Yasinˑ.[3]

I worked with each of them for a couple of hours only, and I am, of course, aware of the utter insufficiency of my observations. But both of my informants had a very good and clear articulation[4] and on the whole my notations agree unexpectedly well with those of L. and Zarubin (whose material I had not at hand). It may not be devoid of interest, therefore, to compare some of my words with those given by L. for the sake of checking and corroborating his perception of the sounds.

114

Many words are identical in L.'s and my notation of Bu. E.g. toˑrumo *ten*; maˑtum *black*; -ʂan *chin*; haˑγur *horse*; guʂ'puˑr *prince*; -ˈtatas *palm of the hand*. In some cases my notation of vowels differs slightly from L.'s. This may partly be due to individual latitude

[1] V. § 6. b.

[2] Brother of Ali Madat, cf. Texts, p. II.

[3] Acc. to Abdullah: Burušugum.

[4] I had less difficulty in recognizing their aspirates and cerebrals than those of some Dardic dialects which I had the opportunity of hearing for a much longer time.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

fewer youths to be educated. On the other hand they have for many years been in very close contact with one foreign language, Khowar, which has been brought to their doors, and for many into their daily lives This is reflected to some extent in the Werchikwar vocabulary as far as it is known, but I do not know enough to say anything definite about morphological and structural analogies between the two languages.

Earlier Work on Burushaski and Werchikwar by Europeans.

The only original work of importance done in the past on Burushaski is that published by Col. J. Biddulph in 1880 (revised 1884) and by Dr. G. W. Leitner in 1889. In the Linguistic Survey of India, Vol. VIII their results are revised and summarised and a version of the parable of the Prodigal Son is added. Biddulph's work is sound as far as it goes, but it is only a brief sketch. There are 22 8vo. pages of Grammar, 4 pages of sentences and texts and 20 pages of Burushaski-English Vocabulary. He deals with the Nagir dialect which he calls "Boorishki" (v. footnote p. XVIII). Leitner in his "Hunza and Nagir Handbook", 1889, also principally describes the Nagir dialect. He collected a considerable vocabulary, extensive paradigms and a large mass of miscellaneous information, all of which he presents unfortunately in an ill-digested and unsystematic manner. His translations are often so loose as to suggest that he did not fully understand his texts, and naturally errors are not lacking.[1]

In both Biddulph's and Leitner's Vocabularies a considerable number of Shina words are to be found. This is probably characteristic af Nagir Burushaski, which has always been more exposed to infection by Shina than the Hunza speech.[2]

[1] It would be unwise to express a final judgment on Leitner's work without checking it through in detail with the assistance of Burushaski speakers, which I have not done.

[2] Cp. also the Bibliography in LSI, Vol. VIII, 1, p. 551. — Manuscript vocabularies compiled by B. L. Grombchevskiy and M. S. Andreev are in the possession of the Asiatic Museum of the Russian Academy.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

000 In the past Werchikwar has received even less attention than Burushaski. The Linguistic Survey of India, Vol. VIII contains a brief notice of it and a version of the parable of the Prodigal Son furnished by an Indian Official, Khan Sahib Abdul Hakim. Recently, however, I. I. Zarubin has furnished in Russian a valuable description of the language (v. § 500 below), to which he appends a vocabulary and a detailed criticism of the L. S. I. "Prodigal Son", which appears just, as far as I have examined it.

The Present Work.

●111 The world has recently been presented with works on little-known Indian languages which represent the knowledge and labour of half a life-time. Such are Hoffmann's "Encyclopaedia Mundarica" and Bodding's Santali Dictionary. The present work makes no pretence to such a foundation. It represents merely an endeavour to squeeze the contents out of such material as I was able to collect hurriedly in a short time, and to arrange and present it in a systematic manner, so that it may be conveniently available to the student.

In September 1920 I took over charge as Political Agent, Gilgit, and remained there till September 1924. During the greater part of the first three years I devoted my spare time to the Shina and Khowar languages and it was only in May 1923 that I added to these Burushaski. From then until July 1924 it somewhat interruptedly received a portion of my attention. In 1921 my wife had made a start on Burushaski, working for two or three weeks with Gushpūr Maḥbūb 'Ali Khān, son of the Mir of Nagir, a bright and intelligent youth. I now turned to her work and gained some idea from it of the principal features of the language, the use of pronominal prefixes, the four "genders" and the main lines of inflexion. Otherwise I started from zero, as I did not wish at this point possibly to prejudice my openness of mind by having recourse to Biddulph and Leitner. In the event I never consulted them at all while I was in Gilgit.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

126 England I settled down first to translating the texts and working
128 out the vocabulary, and then to an intensive comparative study of every word and every grammatical form occurring in my material. On this basis I then prepared and annotated the Texts and drew up the Grammar and Vocabulary as they now stand. This took in all four and a half years, from January 1926 to June 1930.

I have dwelt at some length on my methods of work, because without such knowledge it is impossible for the reader to form any just estimate of the degree of authority to which the book can lay claim. For the same reason I have made a free use of question marks in the Vocabulary and elsewhere to indicate points in regard to which my information is uncertain. I hope I have stated nothing as a fact except on reasonably adequate grounds.

●114 The whole edifice stands essentially on the foundation of Jemadar Imam Yar Beg's Burushaski, a foundation the general reliability of which I think no one in Hunza would dream of questioning. But this statement requires serious qualification: it is IYB's Burushaski as affected by the mishearings and misunderstandings of the recorder. That there are such I have not the slightest doubt. I am only surprised that the substance of the Texts has worked out so homogeneous and, as I have now some ground for believing, so correct.

A special word of warning should be given in regard to the Phonetics. I am myself no phonetician and made no constant systematic attempt to distinguish by all means at my command between different sounds which sooner or later I knew to exist, but could not myself certainly distinguish. This applies specially to the two parallel series of cerebrals and non-cerebrals, aspirates and non-aspirates. Many cerebrals and aspirates may have escaped undetected; I can only say that where a sound is marked as cerebral or aspirate, it may safely be assumed to be such.

121 My general aim in the preparation of this work is now sufficiently evident; it is simply to give a perfectly objective view of what I was able to ascertain about the language. I have created a hypothesis

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

only where it seemed necessary to attain brevity and clarity in the statement of facts. Such is my theory of the initial *-A- of many nouns and verbal bases, and the combination of it with the pronominal prefixes. Otherwise I have avoided speculation in realms outside my competence. I have raised no questions of the relationship between Burushaski and other languages and I have also intentionally omitted to point out many parallels in grammatical usage and idiom between Burushaski and the adjacent, though non-related, languages Shina and Khowar. In the Vocabulary on the other hand I have noted when the same word, or obviously a form of the same word, is in use in those languages. I have done this because I believe that many of these Shina and Khowar words have not before been recorded, and even when they have been, will not always be readily accessible to the reader.

As I have eschewed questions of relationship, so for still better reasons I have abstained from any attempt to propound linguistic theories of a more general nature. With less certain virtue I have also failed to supply any new grammatical terminology. Another terminology than that of my boyhood's reminiscences of Latin Grammar is certainly needed to describe the phenomena of Burushaski. I do not know that such exists, and I have thought it wise to leave this thorny matter to hardened experts and not to complicate the issues by amateur attempts which would only prove a stone of offence.

The principal work that remains to be done for Burushaski as I see it is:

1. To make a scientific determination of the phonetic system.
2. To clear up existing grammatical problems and to discover more.
3. To ascertain the relative frequency of various syntactical usages. Some which in my material occur rarely are probably in fact common enough.
4. To make a parallel study of Nagiri Burushaski and local variations in phonetics and vocabulary.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

000 5. To complete the vocabulary and to collect obsolete and obsolescent words. There are a multitude of general terms to be collected, while there is undoubtedly an immense field of "technical" terms, in the widest sense, to be covered.

In this last task the most fruitful line of approach will be by the way of anthropological interests and anthropological methods. Burushaski also appears to have a great facility in the metaphorical use of specific words, especially verbs. These uses can only be educed with time, patience and experience.

To these various subjects for enquiry, except the first, I now hope to be able to make some contribution.

114 122 Self-determination and luck have brought me again, after ten years, to the land of the Burusho, in the midst of whom, at Aliabad in Hunza EOL and I are now living. This luck I owe "first", as they would say here "to the grace of God", and then to the "kindness" of the Trustees of the Leverhulme Research Fellowship Fund, who have granted me substantial financial assistance. It is a short time spent again with Burushaski-speakers that has enabled me to say above that the Texts and Grammar appear to be generally sound beyond my dreams. This does not at all mean that they are impeccable.

How much can now be done will again be governed by the time factor — the harvest is ripe, but the labourers are few.

But this is anticipating.

000 Meanwhile in what concerns the present work there remains to me the pleasure of paying many debts of very genuine gratitude. To the Tham of Hunza, Sir Muhammad Nazim Khan, K.C.I.E., I have paid my tribute in the Dedication. To him I owe much personal kindness and hospitality and also the services of IYB over a long period. The Burushaski of the Dedication, I may say, has been constrained with much expert advice to an unprecedented use.

Next I have to thank my active collaborators, to whom ultimately everything is due, Jemadar Imam Yar Beg, Inayat Ullah Beg,

7:Tobe C, T-3 (1959)1960 AV7 Burusho AV7
Hunza

I cannot see what difference it would make to them whether they were a part of the British Empire, India or Pakistan, or if they were independent. They receive little or nothing from the outside world and contribute little or nothing in return. They are content to leave the world alone if the world will but leave them alone. The law of "live and let live" seems to be the "Golden Rule" in Hunza. If only more peoples and nations throughout the world would follow this simple principle!

Why have the people of this tiny principality so fascinated the world? That is a question that I have sought to answer.

I believe it was Mrs. Lorimer's book *Language Hunting in the Karakorams* that first brought Hunza to the attention of many parts of the world. Then, too, Robert McCarrison mentioned the health of these people in his research writings. Other writers followed. J. I. Rodale in *The Healthy Hunzas* did a lot to focus attention on the people of Hunza. Then G. T. Wrench, Barbara Mons, Frank and Jean Shore, John Clark, Lowell Thomas, Jr., Owen Williams, Ian Stephens, Peter Fleming, Irene V. Unruh, Ben Ruhe and Dr. Allen Banik.

Here I would like to devote a few lines to the work of the above mentioned authors.

I still believe that the most accurate and detailed information about Hunza was given by Mrs. Lorimer.

Barbara Mons in her book *High Road to Hunza* gives a splendid account of the people. The only serious thing I found wrong with it was that there wasn't enough . . . her book left me hungry, eager and yearning for more information about these delightful people. I rank her work as the most concise, informative, pleasurable book on Hunza.

7:Tobe C,T-3 (1959)1960 AV7 Burusho AV7
Hunza

114 John Clark in his book *Hunza—The Lost Kingdom of the Himalayas* devoted himself chiefly to his wood carving project and left little or no time to say, examine or do anything about the important happenings in Hunza.

When Lowell Thomas, Jr., and his party were in Hunza, they were too busy with the excitement and work involved in filming the scenes for Cinerama to learn much about the country and its people.

In the *National Geographic* of January, 1960 appears the story by Tay and Lowell Thomas, Jr. Part of this story deals with their visit to Hunza. However, the *National Geographic* takes pains not to mention the date of the trip to Hunza, which was December, 1954.

Frankly, I never believed that a magazine of the repute or supposed repute of the *National Geographic* magazine would stoop to that level—to publish an article about 5 years old and allow its readers to assume that it was of recent vintage. I guess the *National Geographic* must have been hard up for an interesting Asiatic story, so it dug up that old one of the Thomases.

A very good book that dwells here and there on Hunza in passages and references is one by an Englishman by the name of Ian Stephens. His book is called *The Horned Moon*. It is well written and this man does know the people of India and Pakistan . . . having been a leading correspondent and executive of one of the English newspapers in that country for many years.

Irene V. Unruh was a German doctor who spent considerable time in Hunza. Her observations concerning the health of the people are most enlightening. She attributes their good health to their unsophisticated, simple way of life and also suggests that the glacial water they consume plays an important role.

Owen Williams, who wrote *First Over the Roof of the World,* was one of the first Americans to see Hunza, although he spent very little time there. He just passed through. Hunza happened to be on the itinerary of the expedition of which he was a member. 114

Ben Ruhe, a young newspaperman from Allentown, Pennsylvania, spent some time in Hunza and Nagir and his account, published in his home town newspaper (and elsewhere) represents some of the best written and presented facts, tales and fables about the people of this part of the world that I have read anywhere and it's a pity that Mr. Ruhe didn't do a book. Perhaps there is still time.

And last, there is Dr. Allen Banik's book, *Hunza Land*. Dr. Banik was sponsored by Art Linkletter to go to Hunza and he found a great many obstacles blocking his path but eventually, when he did get into Hunza, he unfortunately spent but a short time there and his observations do not correspond very closely with my own. But I salute his inalienable right to differ! Dr. Banik, a genial pleasant man, ready and willing to help anyone, has been busy addressing meetings and making appearances throughout the United States and from the reports that I have read, he seems to be pleasing his audiences.

Peter Fleming's book *News from Tartary*, while it is to be regretted that he devotes a scant 15 pages to Hunza, is probably one of the best pieces of writing on the country, the scenery and the people that you will encounter—no matter where you search. Also, his findings are pinpointed. Peter Fleming had a keen eye, a sharp mind, an understanding far beyond his years when he wrote *News from Tartary*. The references, written 25 years ago, are as sharp and as clearly in focus as if written today. I compliment Mr. Fleming

114 on a remarkable piece of reporting!

A splendid bit of writing about Hunza appears in the book called *After You, Marco Polo* by Jean Shore. Mrs. Shore is a remarkable traveler, a wide-eyed, eager observer and a writer with a fine sense of humor. Although only 36 pages of her book are devoted to Hunza, they are "must" reading for anyone who wants to have a clear picture of the Mir, the Rani and the ways of life and the people. Oh, yes, and her description of the country is a delight.

114 164 Now I must deal with two books that deal principally with the health of the people of Hunza. They are written by G. T. Wrench in 1938 and J. I. Rodale in 1948. If the health of the Hunzans is a myth, then these two gentlemen helped spread or perpetuate the myth. However, here is evidence that should dispel any thought of fancy.

Sir Robert McCarrison, C.I.E., M.A., M.D., D. Sc., L.L.D., F.R.C.P., B.A.O., spent the years 1902-4 as regimental medical officer in Chitral and 1904-11 as the Gilgit Agency surgeon. In that important office he had a splendid opportunity to study the health of the inhabitants of that area. Hunza is a part of the Gilgit Agency.

Dr. McCarrison reports: "During the period of my association with these people I never saw a case of asthenic dyspepsia, of gastric or duodenal ulcer, of appendicitis, of mucus colitis, of cancer. . . . Among these people the abdomen oversensitive to nerve impressions, to fatigue, anxiety, or cold was unknown. Indeed their buoyant abdominal health has, since my return to the West, provided a remarkable contrast with the dyspeptic and colonic lamentations of our highly civilized communities."

This lends credence to the outlines and hypothesis

concerning the health of the Hunzans. I have found the observations made by both authors, J. I. Rodale and G. T. Wrench, to be both authentic and comparatively reliable when it is taken into consideration that their work was done in the early years when not much information was available from Hunzaland. They were pioneers in the field to show the people of the world that there was a simple, natural, organic way to health. 114● 164

Can anyone doubt that Hunza is located in one of the most inaccessible parts of the entire universe? The fact that a people—a handsome, virile, intelligent, civilized people—could live in such an inaccessible part of the world and still be considered among the healthiest of all people on the face of the globe is intriguing, to say the least. 131 164

Perhaps the story of their health, longevity and energy so shocked our concepts that we had to look twice or read twice to make sure that the statements we were reading could be accepted. Probably because of our smugness—with the feeling of security because of our modern medicines, our miracle drugs, our hospitals, our research techniques, our lab equipment and such—it was incomprehensible to us that a people so remotely located without all of these tremendous benefits could even exist, let alone be considered to be the healthiest and longest living people in the world.

Was it our disdain of eastern methods and way of life that rattled our concepts? 164

Now it could be that the dreamers among us had our imagination fired like it has never been fired before . . . to think that a people living truly on the roof of the world without benefits of modern civilization could subsist or exist, let alone be healthy!

But as one investigates, he finds that Hunza is one of the few places in the entire world, where there is a [177]

the past year the total collected from fines imposed by me upon the citizens of Hunza totaled less than 200 rupees. You know that my people do not have much money. There is no way or means of earning money—except by the few. We do not require money in order to live in Hunza. Further, the full amount that was collected in this manner was used in the maintenance of the irrigation system."

I waved my hand and said, "I only asked. I didn't think it was true, but I've read so many tales about Hunza in which ridiculous and fantastic statements are made without any justification or background."

"A few years ago," I went on, "two of the most influential and widely circulated magazines in the United States published an article by a famed and capable couple of writers—man and wife. I know they visited Hunza on two occasions because I saw their names in your guest book. Now the story they told and which both of these magazines published stated that it was a custom in Hunza for the mother-in-law to go and live with a newly married couple and remain with them on their honeymoon to teach them the ways of life. You explained that this was the reason why Hunzan marriages were so successful and there was seldom, if ever, a divorce.

"Before asking you to clarify this, I just want to tell you that I read this story and when I came to this specific part, I could hardly believe my eyes. But, as I have learned, there are many strange customs followed by different people throughout the world and of course, this could be absolutely true. But it certainly is strange and weird sounding to me anyway. So tell me, is that story true? Is it the custom of the people of Hunza to have the mother-in-law stay with the newly married couple during their honeymoon?"

•114 585 "I said it as a joke," replied the Mir. "I had no knowledge that it would be so widely publicized and written and taken as a fact. I did not mean to mislead the writers you mentioned."

"Then it is not true!"

"No," replied the Mir, "I meant it only as a joke!"

643 115 522 There was no doubt in my mind that the Mir had a keen sense of humor. In fact, through all my talks and discussions with the Mir which were frequent, there was seldom a time when he would pass by an opportunity for a bit of witticism or to laugh and have a bit of fun. He was just about as pleasant a man as could be found anywhere. He was not only a great ruler but he had a sense of humor. It was too bad that the writers referred to took him seriously. Maybe it was one of their bad days.

249 "Do you grow poppies here?" I asked the Mir bluntly and more or less out of the clear blue sky. I put this question to the Mir for a most definite reason.

On a few occasions I saw what I believed to be a field of flowers waving in the distance. But I wasn't sure. Invariably these patches of color were a mile or many miles away. I wondered what they were but I never could get close enough to see them. They were always sighted at great distance from where the road lay.

[123] You might ask why I didn't definitely, once and for all, set out across the field and find out. But remember, when you're in a more or less strange unusual territory, you just don't go off across the fields into someone else's private property.

All told, I doubt if I saw more than half a dozen of these patches of color during the full length of my travels. There might have been many more but I certainly didn't see them and I have an idea that if they

question, the error was cleared up. 128

Remember, I do not claim to be a Sherlock Holmes 124
or smart enough to detect by scent or otherwise an untruth or misunderstanding, so they may crop up in various places in the book.

Long before I left home I had prepared a set of queries. Among them were things for me to investigate —places, customs and chores for me to see and do. And from all this I was to make my own values and estimates as to the validity of the claims made about Hunza and its people. I tried to cover every aspect of importance and interest and I believe that, with very few exceptions, I faithfully accomplished my mission.

In preparation for the trip I read every book I could 122
find or locate that involved Hunza and in each case 114
the author had done a credible job, but most of them had failed miserably to give sufficient information—at least, for me—because 'twas information that I wanted. I wanted to know more about the agriculture of Hunza, about the health of the people, about their methods, their means and their way of life. None of the authors gave much of that vital data.

Right from the first moment that I made plans to go 121
to Hunza I decided that, if I wrote a book, it would 114
contain the most complete, the most detailed and the most thorough study of the people of Hunza yet accomplished by any writer. This determination came upon me from the frustrations I felt when I read the available books on Hunza and was left with a feeling that only the surface of the subject had been scratched.

In my endeavors to fulfill this undertaking, I have spared neither time, effort, risk nor expense. I certainly don't want my readers to be left with the feeling that all about Hunza has not been told. I definitely realize that no one in a short few weeks or even months could

121 learn all there is to know about these most unusual
114 people. At least I wanted to learn the answers to the many questions that come into the average individual's mind.

Therefore, it is my hope that I have not failed in these positive respects.

If my narrative is not everything that you hoped and expected, I sincerely trust that I will make up in the details and information of an authentic nature that I give to you concerning these remarkable people.

42 The facial features of the people of Hunza are most striking. They are invariably finer featured than the people of the West—more angular, more clearly outlined and defined, without being harsh or bold. Their facial characteristics can best be described by the phrase "finely, delicately chiseled physiognomy" . . . like the intricate creations of a gifted sculptor.

Whether because of the rugged outdoor life they lead or because of the tanning or curing process of their smoke-filled homes during the winter, the texture of their skin is quite unusual. I think I can describe it best if I say that their faces looked as though they were made out of smooth chamois.

I was struck by the similarity of the features of the people of Hunza. In the West, everybody you meet or know doesn't look like anyone else that you know. In fact, if you do happen to come across someone who has the likeness or features similar to those of someone else you know, you're immediately struck by that resemblance, which illustrates my point. In the Western world, there is a wide divergence of facial features and characteristics. In Hunza that does not hold true.

A little thought will establish the reason for this
[143] situation. Intermarriage during the centuries must have been the order of the day because of the confining nature of their homeland.

Hunza

CHAPTER 41

Cleanliness

ON VARIOUS OCCASIONS I have read and heard reports that the Hunzan homes are scrupulously clean. To that I will not subscribe. I just can't go along with any such assertion. 356 114

I peeked into, looked over at and viewed hundreds of the homes in Nagir on the trek and I also had a chance to see into many of the homes in Hunza and there isn't any question about it—the Hunzan homes are cleaner, tidier and have fewer odors (or none at all) than the others of this same area. But to say that they are scrupulously clean or that you could eat off the floor is, to my mode of thought, a gross exaggeration.

Obviously, the places the other writers saw were very clean and tidy. But, to me anyway, it is clear that the owners were notified in advance that they would have visitors.

Being curious and nosy by habit and turn of mind, I 356 123

7:Tobe C,T-3 (1959)1960 AV7 Burusho AV7
Hunza

CHAPTER 42

Government

I DON'T KNOW whether to describe the mode of government of Hunza as being complex or simple. The language of the people of Hunza is Burushaski and this language is totally unwritten. Therefore, they have no written code of laws.

The first dictionary of the Burushaski language was written by Colonel David Lorimer in 1935 and at the present time Doctor Hermann Berger, a German language professor, a specialist in Sanskrit, is seeking to write another and perhaps a more thorough and complete dictionary of that language.

I recall in Chalt, while I was enjoying the company of Professor Berger, he showed me a set of books that was published in Norway in 1935. They were Colonel David Lorimer's dictionary of the Burushaski language.

In my estimation Dr. Berger's work should be a masterpiece, because never in my life have I seen any

human being take to a task so assiduously and with so much profound love and feeling. I don't know when it's going to be published or by whom, but I'll certainly make sure to get a set or a copy of the volumes, even if they are printed in German. 114

The word "Burushaski" is pronounced almost as it is written, except there is a "u" sound in the last syllable rather than an "a" sound. My reaction was to spell the word "uski" and all through the writing of my manuscript that was the way I spelled it, but as I found every other source, with one exception besides myself, spelled it "aski" I had to admit defeat and also use that spelling. The spelling of "uski" was used by the Mir and his grandfather in his book. I still think it sounds like "uski" rather than "aski". Dr. Berger agreed with me that it did sound like "uski" but he felt that for the sake of uniformity, it would be better if I, too, used the "aski". 104 197

Nevertheless, though their code of laws remains unwritten, justice does not seem to suffer. The people of Hunza are well acquainted with the laws in vogue. I believe it was Napoleon who said that a nation that has many laws has a lawless people. Perhaps because the Hunzans do not have many laws, they are law-abiding. 671

Until the partition of Pakistan from India, Hunza was a part of India or, at least, it was definitely included on the map as Indian territory. But there is nothing in Hunza to indicate that they obeyed, owed or acknowledged sovereignty to India. 648

The Mir was and is the absolute ruler. He supposedly has the power of life and death over all his subjects. I know this power has never been used or abused by the present Mir, who came to the throne in 1945 at the death of his father who ruled but 8 years. Very little is said or recorded about his father's tenure in office. 643 175 [642]

you realize that Hunza's neighbors are Afghanistan, China and India and slightly above a narrow corridor of Afghanistan there is Russia, just a scant few miles from the Hunzan border. 648 [131]

Therefore, any person who wanted to start trouble with either Russia or China could get into the Hunza area and it wouldn't take too much maneuvering to cause an international incident, especially if the Chinese or Russians were looking for an excuse. So I don't blame the Pakistani government for being cautious and realistic about those possibilities.

Just a few years ago an American scientist working with funds raised by an organization started for that purpose, known as the Central Asiatic Research Foundation, wanted to take a couple of the Hunzan boys to the United States and have them educated there and then brought back again to Hunza. At first the Mir flatly refused. Then after reconsidering the matter, and perhaps in consultation with others, he changed his mind and gave his permission. I did not inquire as to the exact rhyme and reason for the developments that took place, but eventually the Pakistani government decisively and definitely refused to allow the boys out of the country. 648 177

It appeared to me that the Mir felt that there was no reason why he should refuse when the foreign policy of his country was being looked after in Karachi. I am more than certain that the Mir's opinion was recorded in Karachi.

But John Clark, the writer of a book about Hunza, and some American authorities were very annoyed at this and felt that the Mir was being unreasonable, ungenerous and to say the least, unkind in not allowing these boys to come to America. [114

I did not know then the true reasons behind the Mir's

to the average little red school house in the West. The one in Baltit was quite a bit better and as good as any of our schools of 25 years ago . . . which I would say was mighty fine going for a far off place like Hunza. 871

Then I asked the Mir what had happened to John Clark's woodworking school and he told me, with calm deliberation, that he knew and felt that Mr. Clark was an earnest, honest man with the best of intentions. . . . "But, how could he," went on the Mir, "hope to improve the economy of our little country by means of a woodworking school and the training of our men in woodcraft when we do not have the required wood? We can't cut down our apricot trees, which are our very life, in order to get wood to use in making things that we could export to the United States!" 874 322 177 114

Then I recalled from Mr. Clark's book that he did have great difficulty in locating suitable lumber for his school.

From what I have read and learned on the scene about Clark's work, I know he was a man of high caliber and integrity and did a mighty good job with the boys, but for some strange reason there is an unusual silence about his work and his efforts. I could neither understand nor explain it. I'm still trying to get the true impression of the people concerning this matter.

At this point I want to emphasize that I am not seeking to pick a battle with anyone, but from my travels back and forth and around the Hunzan territory, it is fantastic to believe that there could ever be sufficient timber to make it worthwhile to run a woodworking school, especially to make woodcraft for export purposes.

Stonecraft, yes—for stones, even including some of the more precious and rare types, could without doubt be found in Hunza or at least in the mountains close

874 by. And if they were taught to make useful jewels and
177 do other types of work with rock, then they would have
322 something, because the supply is absolutely unlimited.
114 I agree wholeheartedly with the Mir that the thought of making a worthwhile contribution to the people of Hunza by opening a woodcraft school is utter nonsense.

in other countries distant from Hunza, would attach an aura of mystery or superhumanness to the people of Hunza, but the truth of the matter is that even in Pakistan the belief or the tale concerning the superiority of the Hunzan people also exists. In Karachi, when I mentioned I was going to Hunza or seeking to go to Hunza, ears pricked up quickly. They were interested, they were intrigued, for they knew and had heard tales of the prowess of the Hunzans.

A few weeks before I left home I learned that there was a Pakistani boy employed in Niagara-on-the-Lake and I made an attempt to contact him. My wife just about that time met the Pakistani lad and his wife at a social function and she told him that I wanted to see him and talk to him about Pakistan and about the people of Hunza. Then, when he heard that I intended to go to Hunza, he excitedly informed my wife and stressed that she be sure to tell me not to go because the roads in the mountains were terribly dangerous, that one could penetrate into that country only at the greatest of risk and danger and that many people had set out for Hunza and never been heard of again.

When my wife brought this tale to me, I was perturbed. I was worried and my wife was even more concerned. If a native of Pakistan, and not an illiterate, I want to remind you (this man was a technician), held these people in such awe and fear, you can see that the myth about the people of Hunza is universal.

It is further claimed that the people of Hunza have endurance that is unsurpassed by any other people on earth. I believe it was Eric Shipton, the famous mountain explorer, who said that the Hunzans had more endurance than even the Sherpa guides that are found on the borders of Nepal and Tibet. These Sherpas have long been considered the people with the greatest en-

durance and stamina known anywhere, and if Shipton says that the Hunzans had more endurance and stamina than these people, no higher tribute can be given. 114 [147]

It is my humble opinion that too much has been written about the people of Hunza by people who have never been there and know little or nothing about the actual conditions that prevail in that country. Then, too, many visitors spent most of their time taking pictures, viewing the scenery and dining at the Mir's and didn't pay much attention or learn anything about the actual living conditions of the people.

The people of Hunza have not in the least benefited by the visitors that have reached Hunza, and if future visits are discouraged, I believe there would be good cause for it. 177

Most of the diseases known to civilization are unknown in Hunza. I do not ask you to take my word for it but that is my report from consulting the resident doctor in Hunza, as well as a German woman doctor who visited Hunza. 164 [759]

It is further true that the Mir's wife, the Rani of Hunza, had her appendix removed and she took a trip to Rawalpindi to have it done. But in the first place she does not live according to Hunza standards and besides, it was probably stylish to have an appendix operation. On the other hand, if a good surgeon were let loose in Hunza for a few weeks, there's no doubt about it, he'd have hundreds of appendixes removed before he could be stopped.

Another important point that I wish to make at this time is that I paid my own way to and from Hunza. I had no financial backing. Therefore I am not committed to aid anyone or any product or radio station or newspaper. I have no one to fear and no one to please. I can afford to tell the truth. 122

7:Tobe C,T-3 (1959)1960 AV7 Burusho AV7
Hunza

CHAPTER 44

Health

For me to say that the Hunzans are the healthiest 164
people of the world, which many authors and writers 114
have claimed, would be sheer effrontery . . . mainly because I have not studied the health of all the peoples of the world, nor have I even met them. However, I do attest from what I have seen and observed, that the Hunzans are one of the healthiest people of the world.

To say that they are completely free from diseases or 754
health problems is definitely not true. At the time when 115
I visited Hunza there was a resident doctor located at [743]
Aliabad, where he was in charge of a 10-bed hospital. I conversed with him and questioned him daily during my stay and he answered my pressing questions with complete frankness and candor.

He is only a young man, a Pakistani, and his name is Dr. Mohammed Yusuf Khan, M.B., B.S. He is a handsome, capable, well educated doctor and is, in my

177 their salt and soon there will be a few more items added
263 and, as more of their people go out of the country to
439 earn a living and come back to visit or retire, more of civilization's curses will be brought back with them.

165 The doctor rather clearly indicated that infant mor-
•114 tality was not as low as some writers would like us to believe. I repeat—he made this quite clear.

164 Now I'll let you decide how it ties in with the statements made by Sir Robert McCarrison: "During the period of my association with these people I never saw a case of asthenic dyspepsia, of gastric or duodenal ulcer, of appendicitis, of mucous colitis, of cancer. . . . Among these people, the abdomen oversensitive to nerve impressions, to fatigue, anxiety, or cold was unknown. Indeed their buoyant abdominal health has, since my return to the West, provided a remarkable contrast with the dyspeptic and colonic lamentations of our highly civilized communities."

276 Smoking in general is not an addiction in Hunza. The water-pipe or hubble-bubble is used by some of the people, usually at gatherings or ceremonies. It is then passed around in a wide circle, each one taking a puff
[562] or two. The women are included, but only after all the men have finished.

Some of the citizens use snuff. It is tobacco mixed with the ash of a plant called "sopa," which is indigenous to that area. They take the tobacco and the sopa ash, put in a dash of water, stir it up and mix it into a paste. Then they place gobs of this paste under their lip, exactly the same as the snuff chewer does in the West, although this practice has been dying out in the Western world.

164 Just how much of the health of the people of Hunza
132 is due to the fact that they get a lot of sunlight? That is a most pertinent question and one that will take a lot

of study before an answer can be given. They do get more sunshine than the Nagirwals—of that there is no doubt. While in Nagir fields are definitely in better tilth, their land is deeper, they have broader and more fertile valleys and can grow more and better food, yet undoubtedly the people of Hunza are by far the handsomer, healthier, more industrious and more energetic. 132 164 [133]

For my part I wasn't completely sold on the principle that the people of Hunza did have much more sunlight than the people of Nagir and I debated the matter with a few individuals. But each of them maintained stoutly that they did and claimed that they had scientific proof that Hunza did get more sunlight.

The last man with whom I did battle on the subject was Dr. Hermann Berger of West Germany. From his investigations he said that he had reached the conclusion positively and unequivocally, that the northern slope of the mountains through which the Hunza River flowed did get more sunlight than the southern slope which was Nagir. 132 114

As I found considerable difficulty and doubt concerning the theory of the people of Hunza getting more sunlight than the people of Nagir, I decided to draw a little chart that would illustrate the situation as I eventually found it to be. After seeing the drawing I think it will prove to you that the principle is natural and reasonable. (*See Fig.* 1.) 1/A

1/A [facing p. 390 - ANALYST]

131 will understand why "it plagued me thus."

133 Many writers who have visited the area, and many [114] others who have not, refer to Hunza as being in the Himalayas. I am sorry to be forced to contradict these good people, but from my research—and I repeat, research—I have come to the conclusion that Hunza is definitely in the Karakorum system and not the Himalayas.

[114] If this error was made just occasionally by casual visitors or tourists, it could go unmentioned, but when men with science education and degrees make this mistake, it is somewhat unpardonable. There are very few maps or gazetteers that give this information accurately, and if you think I came by this information easily, I would suggest that you take down whatever maps you have available and do some research on the topic.

The eventual decision as to which are the Karakorums and which are the Himalayas came about when it was firmly laid down in one place that the northwest upper Indus separates the Karakorums from the Himalayas. The Karakorums seem to start about where the Hindu Kush ends in Kashmir. The exact spot, according to the best data that I could obtain, is 74 degrees east longitude and from there the Karakorums run approximately 300 miles southeast down to the main bend of the Shyok River. Even encyclopedias are not completely reliable in this instance, because one encyclopedia (in fact, Columbia is the one I'm talking about) lists Mountain K2 which is now known as Godwin Austen as the second tallest mountain peak in the world and places it both in the Karakorums and in the Himalayas. The Hindu Kush culminates at Tirach Mir —26,426 ft. high. Just about there the Karakorum range takes over and extends as specified above.

Part or all of the armies of Alexander the Great 131
wound their way through the Hindu Kush mountains. 133
Whether or not they ever found their way into the [173]
Karakorums, history does not designate, but I suspect
that they did, because the Hunzans are supposed to be
descendants of Alexander the Great or his soldiers and
Hunza is in the Karakorums.

The Himalayas in the encyclopedia are stated to lie in India, Tibet, Nepal, Sikkim, Bhutan and China but I know for certain the Himalayas extend into Pakistan as well.

At this point I am not seeking to take issue with any [114]
gazetteer, encyclopedia or other volume of facts. I am just pointing out the difficulty I encountered in getting the information down to a semblance of order and accuracy. Further, I have consulted with, written to and requested details from many sources who should know the facts, and in practically every case I came to a dead end. It seems as though very few people in the world know the exact location and extent of these three mountain systems.

One man who did seem to know them and placed them accurately was Eric Shipton and by the heavens, he should know—he spent more time among these mountains than any white man in history.

A curious thing about the people of Hunza . . . they 823
do not have names for the peaks in the area and there 103
are some mighty lofty peaks. Even the famed Rakaposhi has no individual name in Hunza. It is just called "Dumani," the same as every other high mountain or mountain peak that they came across. Actually, "dumani" means "covered with a cloud."

I guess they're so accustomed to seeing these awesome peaks that they become impervious to them. So what? Another hill! Every time I asked one of the

the commodities that they eat. If that is the criterion, 241
then I am forced to admit openly that the fruits, vegetables and cereal grains of Hunza do not compare with those of the West.

Contrary to what any writer, expert or visitor to [114
Hunza has stated, in my opinion and belief, Hunzan fruit, vegetables and grains are not superior to those of the West. From the strict viewpoint of taste, size and appearance the American fruits, vegetables and grains are far better than those grown in Hunza. In this matter I must humbly yet fairly state, that the American standards and qualities in fruits make the similar varieties of fruits of other countries seem poor, puny and second rate by comparison.

Hunza need not feel too badly because of this as millions of dollars are spent annually in America by a hundred or more experimental farms of vast acreages, breeding fruits, nuts, vegetables, forage crops and grains. If some of these newer varieties of fruits or vegetables and grains were grown on Hunzan soils and under Hunzan conditions, I might have a different story to tell.

Let me cite an example. In America, in order to find
a better strain of strawberries, millions—and I repeat, millions—of seedlings have been planted. These plants have been carefully tended and watched. Then a selection of a mere handful from all of these for further testing was made. From these results a few new varieties which have shown an excellence of habit of growth, vitality, good foliage, ease of propagation, resistance to various diseases, flavor and color of fruit, good bearing qualities and other important factors were selected and disseminated throughout the country. No one in his right mind would expect tiny Hunza to follow such a procedure. In fact, only in the United

7:Tobe C, T-3 (1959)1960 AV7 Burusho AV7
Hunza

on my own farm we definitely and positively use neither 241
chemical fertilizers nor sprays.

You can understand in Hunza that tastewise there is no interference or problem from chemical fertilizers and sprays.

I believe that the myth about the flavor and succu- [114]
lence of the Hunzan apricots came about because visitors ate the apricots ripe and freshly picked from the trees, whereas at home the apricots they ate were picked from the trees days before, because they had to be shipped long distances, and therein lay the difference in flavor.

In January, 1959, I sent the Mir of Hunza good 123
sized packages of the different kinds of hardy wheat 241
that were created by the experimental farms of the 177
Dominion of Canada. It was special seed, tested for hardiness in the colder areas and of such quality that would produce a fine loaf of bread.

I also sent the best strains of carrots, cabbages, Brussels sprouts, lettuce, beets and other vegetables. But when I was dining with the Mir and asked him about the results with the seeds, he admitted that the only seed they had got planted that year was the lettuce, which was being enjoyed at the Mir's table. He said that he would try the rest of them the following year.

It is understandable that the Western world would have better varieties of fruits, vegetables and grains, because here we spend millions and millions of dollars on hybridizing, trials, selections and improving the various strains . . . so we should get some results from our efforts . . . and we do! Therefore, without question, the Hunzans could profit by using Western strains of grains, vegetables and fruits. This is one aspect of modern civilization that could help them greatly.

The apricots that I saw, tasted and ate were not the

7:Tobe C, T-3 (1959)1960 AV7 Burusho AV7
Hunza
Nagir

Then wherein lies the difference? What happened through the years to create the obvious difference that everyone sees and feels the minute he comes into the territory? I am not an anthropologist, nor have I training in any scientific field. Therefore, I am quite unprepared to speak with any degree of authority, but I am told the difference is that the people of Nagir accepted or welcomed strangers and settlers from other parts of the area and thus, they became a polyglot group of mixed blood, habits, customs, religions and thought, whereas the Hunzan people, then and today, discourage outsiders from coming to live among them in their country. Then, too, I guess another important factor looms and that is that Hunza is not nearly as inviting from an economic viewpoint to a man coming from another part of the world to settle, whereas Nagir does offer many more advantages.

For me to assert that there are no mixed bloods in Hunza would be an untruth, because even in my travels about the towns and along the road, I saw distinct types that were not of the run-of-the-mill Hunzans. Some were distinctly Chinese and I am also reasonably sure that there is a fair amount of Afghan blood among the Hunzans; besides Russian—for, as you may recall, Russia is but a scant 14 miles away.

It is not my intention to try to build up a case for true-bloods as being the Hunzan heritage, for history clearly indicates that it is among the people of mixed bloods where the greatest advances are made in science, industry and the creative human arts.

In Hunza there are very few plains or expanses where farming on a large scale could be practiced. However in Nagir it is quite different. There were sections through which we passed that were wider than the eye could reach, covered with good soil that was carrying

PRECEDING
FICHE

7:Tobe C,T-3 (1959)1960 AV7 Burusho AV7
Hunza
Naqir

Therefore, it is my belief, one of the reasons for the Hunzan high standing throughout the world is due to the excellent quality of leadership that they have enjoyed for many years, and is being continued by the present Mir and his staff and family. 643

I don't want anyone to run off with the idea that everything I saw about the Hunzans impressed me or that I thought they were exceptional in every way, because that definitely is not true. I did then and I do today admire the people of Hunza for all the splendid qualities that make them outstanding people. Anyone who could live in the harsh, tough, back-breaking terrain of Hunza must be made of stern fiber. Yet they have their foibles and weaknesses as well. 123 114

You see there are no immigration rules or laws to stop them from going anywhere in that area . . . at least, there weren't until recently. They could have gone to China, India, Afghanistan, Russia, Pakistan or anywhere else where the pickings might have been easier. But their love of freedom and intelligence that told them they were better off than most people in the world, even though financially poorer, kept them on the mountain slopes that are the banks of the Hunza. 486

No book on Hunza would be complete to even a small degree, unless some mention was made of the fact that it was not always known as Hunza. In fact, back before the turn of the twentieth century, Hunza was known as Kanjut and the people as the Kanjuts. 101

From records that I have located, I learned that, when the rulers of Shignam came to Hunza, they called the valley Kanjut. That name remained until the time of the Girkis and they called the country Hunza, because all of the people were united like the arrows in a quiver. In the Burushaski language Hunza means "arrow."

CHAPTER 71

Misconceptions

121 THIS CHAPTER I find the hardest of all the chapters in
114 the book to write.

So many gross errors or misrepresentations concerning Hunza have been given widespread publicity that I felt it was high time these errors were corrected.

110 It is established that a writer or a speaker who makes statements must stand behind the statements that he makes. That is all well and good in such instances and cases where the truth can be readily verified by means of encyclopedias, dictionaries or other reliable sources of information.

197 Inasmuch as Hunza is concerned, this definitely is not possible. To begin with, the language, Burushaski, is spoken only by the people in Hunza, Nagir and in a small area thereabouts. Dr. Berger in his intimate studies and broad travels has come upon only one other spot on the earth's surface where a similar tongue is

126 "nothing" where the ledge once led . . . a few well
192 appointed steel rods forced into fissures being the total
491 support. As yet I have failed to discover or learn the proper word describing these galleries.

114 I must admit that many or most of the errors or misconceptions concerning Hunza are due to the fact that insufficient time was spent by some of the writers who visited Hunza.

At first it was my wish to pass by this chapter on misconceptions because I did not feel that I should be involved in a hassle with other writers. But then I asked myself if I had any doubts as to whether or not I was right. And this made me feel that I definitely wanted to write the chapter on misconceptions.

It is not my intent or desire to be contradictory nor arbitrary. I am not seeking to pick a quarrel with anyone. But the facts and statements herein related are based on my seeing, hearing, research, questioning and investigating.

I have tried to make my book as accurate as humanly possible. And if and when errors are found, I trust they will be brought quite forcibly to my attention. I would like to believe that if I can dish it out, I can take it, too!

134 *Fertile valleys*—Some writers have referred to various valleys in Hunza as fertile valleys. By the standards to which we are accustomed, there is not one single fertile valley in all of Hunza. That the soil is productive and the valley green and beautiful, no one will deny. But at best the soil in Hunza is shallow and to be productive, it must be maintained assiduously. I repeat, in Hunza there are no such things as naturally fertile valleys as compared, for example, to parts of the Willamette Valley in Oregon.

131 *Hunza is scarcely* 60 *miles long,* says one writer. An-
133 other says it is 80 miles long and elsewhere I saw it

487 I am sure that a people who saw these caravans coming
177 and going could not be called isolated by any stretch of the imagination. They just like their little piece of paradise too well to leave it.

133 *Hunza empties into the Indus.* Two famed writers who should know better . . . or should I say, should have checked more closely . . . made the statement that the Hunza River flows into the Indus. Even a cursory glance at a map would show that the Hunza empties into the Gilgit and the Gilgit empties into the Indus.

585 *Mother-in-law taken along on honeymoon*—This bit of stupidity, or should I say absurdity, appeared in no less than two of the foremost publications in America.

Who ever heard of a honeymoon in Hunza? Not having a Niagara Falls, probably they'd go up and sit on top of Rakaposhi with the mother-in-law between them to cool their ardor.

When the Mir made this statement, he was joking, never believing for a moment that anyone would take such a broad joke as being factual.

481 *Hunzans walk* 60 *to* 100 *miles as though it were*
147 *nothing.* In fact, one author stated somewhere that the Hunzans could walk 60 miles easier than she could walk upstairs.

I will readily grant that I believe the Hunzan people are the world's best walkers and well they would have to be, because there just happens to be no other mode of locomotion. I'll even go further and say that all through my travels in that territory I did not once see a Hunzan man, or for that matter a Nagirwal, who appeared to be worn from the rugged walks and climbs. So it is clear that they have tremendous reserves of energy and stamina . . . but let's not go overboard!

486 *Anyone can visit Hunza.* Contrary to the assertion
114 made by one writer that anyone can get into Hunza, I

would like to mention that since 1950 here is a list of all the people who were allowed into Hunza from the outside world: Franc and Jean Shore, April, 1952; Lowell Thomas, Jr. in December, 1954; Benjamin Ruhe in July, 1956; Barbara Mons, May, 1956; Dr. Allen Banik, July, 1958; and John Tobe and Cecil Brunton in July, 1959. 486 114

I've a letter here from the Embassy of Pakistan, Washington, D. C.: 486

"Dear Dr. Keller,

"Please refer to your letter of September 29, 1959, regarding your request to visit Hunza.

"The Government of Pakistan have regretted their inability to grant permission for your visit to this area. We would like to mention that we have received a number of similar requests from other individuals and we have not been able to comply with those requests.

"We have been informed by Dr. Francis Pottenger of Monrovia, California, that he and Dr. William Albrecht of the University of Missouri, also planned to accompany you on your proposed visit. We would appreciate it if you could kindly convey our regrets to Dr. Albrecht. We are writing to Dr. Pottenger ourselves.

"Yours sincerely,

A. Fatch, Second Secretary"

This should establish clearly, once and for all, whether or not it is easy to get into Hunza.

Court fines go to Mir's treasury. This statement was made by one of the writers on Hunza and when brought to the Mir's attention by me, it was vigorously denied. 652

Any revenue obtained in this manner goes to the state and helps maintain the canals and aqueduct systems. Further, the total obtained from fines during a year would not exceed 200 rupees, about $40.00. [312]

000 from what you saw in Hunza?"

I'm glad to have the opportunity of answering this question. I believe the lessons I have learned in Hunza have already removed years from my appearance. I am healthier, more active and of happier countenance. I possess boundless energy and seldom tire.

Since my return from Hunza, I have drastically decreased my intake of cooked foods. In their place I am consuming as much as possible (depending upon my ability to make the change) of natural, unprocessed, uncooked foods. Today I say that the only excuse for eating cooked foods is that they taste good or have a nicer flavor and are pleasant and appetizing. But I do not believe any food is nutritionally improved by cooking, baking, frying or roasting. Again I repeat, you may improve its palatability, its flavor, its taste and its succulence . . . but you have positively not improved it nutritionally.

I believe that I can live to be 100 years old if I care to live that long . . . and if the good Lord is willing . . . by following the lessons learned in Hunza.

"If you are convinced that there are so many benefits in following the ways of the people of Hunza to health, why don't you start a crusade?"

114 Well, let's be sensible. Mrs. Lorimer did a very nice delineation on the people of Hunza in her writings. McCarrison did a terrific piece of work in showing people how, by following the health habits of the people of Hunza, they could maintain or regain their health. So did Wrench and J. I. Rodale, Unruh and others. But only a small segment of the people of the world—even among those who have read the books—followed the principles. What makes you think they would follow my admonitions and advice, any more than they did 000 those capable illustrious ones who wrote before me? I

798 gious sect to which all Hunzas belong;
643 the Mir of Hunza is administrator, but not religious deputy, for the Ismailians of the Central Asian District.

114 THE notes about Bohar and his teeth were made after I had worked with the Hunza people for almost three years during two prolonged stays in the small kingdom. I was introduced to this part of Asia as a reconnaissance engineer on General Stilwell's staff, and returned twice be-
114 tween 1948 and 1951. My primary
123 purpose as Director of the Central Asiatic Research Foundation was to discover what resources were available to the Hunzas, and to teach them to use these to their own best advantage. From the start of my second visit I operated a general dispensary with

[Text continues on p.41-A]

Hunza

[P. 41- A]

114 Western equipment. (Training in anat-
123 omy, some concentrated informal studies of Asian diseases, plus previous experience, made this possible for me. In addition, I ran three experimental gardens and founded a craft school. with the Mir's approval.)

164 Bohar had developed scurvy, after
146 which staphylococcus infected the
123 gums and abscessed the roots of his teeth; the abscesses had then eroded downward through the jawbone and out through the flesh and skin. After washing out the sores, I gave him vitamin C tablets to stop the scurvy, and vitamin D with calcium lactate to cure the rickets that were stiffening his knees. The old man was by no means
[752] atypical. My dispensary was always beset by lines of waiting patients, all with afflictions that belied popular beliefs about "the Healthy Hunzas."

165 seventeen." Two years before he had
576 told me he was thirteen.

165 Because the Hunzas, themselves,
[217] have no written records, I attempted to
[128] estimate longevity on the basis of physical signs of age.

165 THE elderly Hunzas, I discovered
145 firsthand, show impressive dental evidence of being no older than sixty to seventy-five, not an unusual old-age
[146] in Western countries. Owing to a lack of vitamin D and milk in their diet, the great majority of Hunzas have soft teeth. A young man of about twenty-one, just cutting his wisdom teeth, typically has six-year molars that are worn flat. This allows a rate-of-wear calculation that is relatively dependable in determining age. For instance, a man over one hundred years old, at this rate, would have all his molars worn down to the jawbone, but this does not occur even in the teeth of the very oldest Hunzas.

262 "Purity" has been attributed to the
[114] Hunza diet, but the diet itself has seldom been more than superficially observed or related to its highly seasonal pattern. In the summertime the Hunza cuisine is limited, but not too bad.
[272] Chapatties—shaped like pancakes and made of coarse, whole-barley flour and water—form the staple, and salted tea is the beverage. Mulberries, fresh apricots, cucumbers, and occasionally sheep-milk butter, round out the

Chapter 6

EAST AGAIN

We knew, of course, that it would not be possible to ride 114
over the snow passes into Gilgit before June or July, but we had no wish to incur the heat of the Red Sea or the Indian plains in May. We therefore sailed on March 1st (1934), a slack shipping season, for few people return to India just before the hot weather if they can help it. After an uneventful journey out, with an unprecedentedly dull lot of fellow-passengers (or were we ourselves grown old and dull? we didn't feel it. We felt like a pair of school children who had snatched an unexpected holiday and were off on a wild adventure), we found ourselves back in the familiar clammy dampness of Bombay. We made it our first business to pay a courtesy call on the Russian scholar, Professor Ivanow, with whom DL had had correspondence from time to time. We thought of no practical advantage beyond the pleasure of the great man's personal acquaintance. Professor Ivanow is, of course, one of the leading authorities on the doctrines, practices, and literature of Ismailism, the Muslim sect to which the Hunza people belong. But the Hunza peasant would know as little about these esoteric mysteries as the nominal Church of England peasant aboutt he homoousian or filioque controversies or the detail of the Thirty-nine Articles.

It happened, however, that the Professor was in touch with 792
some Hunza people in Bombay, more especially with a small 115
deputation which had just come down—on foot through the winter snows—to pay their respects and their annual "Peter's Pence" to His Highness, the Agha Khan, the spiritual head of the Ismailis, and to them God's vice-regent upon earth, whether his headquarters be Paris or Monte Carlo or the racing stables.

115 racing stables. They came to see us—a cheery, pleasant group of wholesome mountain people—oddly out of place in the lounge of a Bombay hotel. They were naturally eager to get home as quickly and inexpensively as possible, and we were able to annex two. One, Daulat Shah, was willing to act as personal servant and factotum, though untrained in such work and more familiar with plough and spade than artificial European needs. Throughout the whole of our stay in Hunza "Dádo" was our trusty, loyal friend. God bless him! Secondly, a well-educated man of the Wazir's family, distantly related to the humbler, peasant-proprietor Daulat Shah, one Qudrat Ullah Beg, who proved an invaluable language-informant, and worked well for David to the end. He was not capable of the same whole-hearted devotion to us and our affairs as Dádo, and never stirred our affections to the same degree, but his knowledge of Persian and Hindustani was considerable; he could write as well as speak them both, and he possessed an interest in and a knowledge of his own language that proved unique. Under David's tuition he ultimately became in fact a fine philologist, and took the greatest delight in every new revelation about Burushaski that their joint work afforded. He was the kind of man that would have been an ornament to any Oxford Senior Common Room, and like the don of fiction was somewhat conceited, very self-centred, and little use in practical affairs.

It was incredibly cheering—within forty-eight hours of landing in Bombay—to have acquired two Burushaski speakers as travelling companions.

Dádo began his duties at once, took charge of our kit on the railway, and performed such shoe-cleaning, bed-making services as he could, with intelligence and will. Easter Saturday, 1934, saw us driving up the famous poplar avenue into Srinagar, and by teatime next day happily and most comfortably installed on a jolly little boat, aptly called the PAX. It was Easter Sunday, but luckily the Kashmiri does not observe our pagan festivals.

We moored our boat at the side of the main river, well upstream from the picturesque but highly septic city, quite

elaborate the statement: "She is my sister, at least: the 601
daughter of my Little Father."

David sadly bemoaned the hideous "waste" of nine weeks 126
spent in illness and convalescence; but in fact he managed to put in a lot of most valuable spade work. Even in the periods of weakness between the fever attacks he got a good deal done—including the Introduction to his first volume of the Burushaski—and during his convalescence he worked steadily and increasingly long hours every day, though he was not able to move freely about the countryside. Qudrat Ullah proved extremely intelligent. David suggested a subject he would like to go into—the rotation of crops; the clans; marriage or funeral rites, etc., etc.—and Qudrat Ullah went home to ponder and collect fuller information than he himself could give offhand, from his entire family, including the elders. Then he wrote out the facts in Burushaski (using still the inadequate and unsatisfactory Arabic script) and came a day or two later to read his "essay." This David took down verbatim—thus getting at least all the relevant technical vocabulary, asked further details, and suggested further lines of enquiry, drawing by this means on a far larger range of informants than he could hope to get into touch with single-handed. As soon as he was able to get about he was able to discuss matters on the spot with a background of knowledge that made it easier for him to understand the less sophisticated speakers, and from their talk and his own observation to check and supplement the information Qudrat Ullah had supplied. This method worked 115 ●
admirably. Nor was Qudrat Ullah his only sedentary informant: the levies and others took their turn in the study.

It proved immensely valuable to have the carefully dictated 000
manuscripts from Qudrat Ullah, with supplementary notes and comments. As soon as these had been worked through, I took them one by one and typed them out in triplicate, so that even if all our manuscript notebooks were to perish by fire or flood or avalanche—which heaven forfend!—we should still have *some* written record to supplement our memory. The two spare copies were posted home to the Bank in separate batches at longish intervals for safe custody till our return. In some ways

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

231 to keep her strength up—and this in one of the poorest houses,
844 where they have had no bread nor butter for themselves for
262 weeks. *Daudo* is one of the nourishing dishes you make for a human mother, and the cat was such a pet that the kittens were considered as a birth in the family, one of the emergencies budgeted for. There is as little need in Hunza for an R.S.P.C.A.
231 as for an anti-litter crusade. Everyone is devoted to his animals,
562 and the children have pet names for ever[illegible]mb and kid. You will often see a boy or girl carrying home [illegible] tired animal slung over the neck like a fashionable lady's fur. Only people who have lived in the East can realize how amazing was this affectionate care for a pet; or how still more amazing this happy family life where father could come in and find his wife and daughters entertaining two strange men and be obviously delighted to see the guests. At least, if this sort of thing is possible elsewhere in the East, I have not heard of it.

231 When we passed next day we heard that a strange cat, which must be the only other one in Aliábád, for in general everyone is too poor to keep either cat or dog, had come in while the mother was mouse-hunting and had killed two of the kittens.
[115] Yaman, the only brother of our most beloved young friends, and most intelligent of informants, lifted a pathetic little white body with his toes from the field to show us. The children were half horrified and half amused at the kittens' fate.

137 There were a few wild flowers these June days amongst the scanty grass of the *toqs*: red bladder campion, stitchwort, and an occasional starved-looking forget-me-not. The children were much amused when we told them what the English call it, and that sentimentalists amongst us use it as a love-token. After that, one or another would run up to us offering a tiny blue flower and saying, "Don't forget me!" Some future linguist, language-hunting like ourselves, may be puzzled to hear of *je til akol* growing in Hunza fields and rack his brains as to how
123 the idea came to the Karakoram. On principle we have tried to avoid poisoning the ground for future workers by importing European ideas, legends, or phrases, and in this connection the forget-me-not, the "one little pig" and Afrot's *How do you do?* are the only sins on my conscience.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

194
197 Apparently ʊ and ɪ are unstressed variants of *u* and *i*, cf. e.g. gukɛ: gu·kɛ *these*. But in spite of cases like go·n, gun *dawn* o and *u* must be considered to be separate phonemes. The same is undoubtedly true also of *ai* : *e* and *e* : *ə* although we find, exceptionally, (personal?) variations such as tail, təil, te.il, te·l *such*, γai.iŋ, γe.iŋ *grapes*.

The vowel system of Bu. would thus appear to include the following phonemes; *a*, *e*, *i*, *u* and *o*. To these should probably be added *a·*, although quantity does not appear to be of phonemic significance in other parts of the system.

As regards the consonants L. is probably right in taking *ǵ*, γ, *q̇* to be variants of *g*, γ and *q* due to the proximity of *y*.[1] But the last mentioned sound is certainly a separate phoneme.

Regarding the cerebrals, aspirates, gγ and W. *ł* see below.

---

114 During my stay in Chitral in 1929 I had an opportunity to
194 take down short lists of Bu. and W. words. My Bu. informant
[115] was a certain Abdullah[2] from Baltit. The other called his language Wə·čik wa·r and his native valley Wərči gu·m = Ya si·n.[3]

I worked with each of them for a couple of hours only, and I am, of course, aware of the utter insufficiency of my observations. But both of my informants had a very good and clear articulation[4] and on the whole my notations agree unexpectedly well with those of L. and Zarubin (whose material I had not at hand). It may not be devoid of interest, therefore, to compare some of my words with those given by L. for the sake of checking and corroborating his perception of the sounds.

194 Many words are identical in L.'s and my notation of Bu. E.g. to·rumo *ten;* ma tum *black;* -san *chin;* ha γur *horse;* guš pu·r *prince;* -tatas *palm of the hand*. In some cases my notation of vowels differs slightly from L.'s. This may partly be due to individual latitude

[1] V. § 6. b.

[2] Brother of Ali Madat, cf. Texts, p. II.

[3] Acc. to Abdullah: Buršugum.

[4] I had less difficulty in recognizing their aspirates and cerebrals than those of some Dardic dialects which I had the opportunity of hearing for a much longer time.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

My mode of procedure was as follows, and in all the circumstances it seems to have justified itself. For a few weeks I worked with Nazer of Aliabad, head of my establishment of domestic servants, eliciting from him the principal inflectional forms of the language as well as the chief pronominal forms and the numerals. Nazer, though illiterate, was a man with excellent brains and the instincts of a teacher and elucidator, and Hindustani provided a medium of intercourse. After this I secured the services of Imâm Yâr Bèg, brother of the Wazir of Hunza and a Jemadar in the Gilgit Scouts, and began to take down texts to his dictation. Each day I wrote down as much as I had time to, making every effort to record the sounds phonetically as far as I was able to appreciate them, and to make sure of the division of the words. I did not make a point of fully following and understanding what I wrote. The same day, or the next working-day, I read out to him what I had written, corrected it as far as I could from every point of view and strove to arrive at the exact meaning of every word and sentence. I made notes of the translation and obtained the principal parts of verbs, the plural forms of nouns and so on, and recorded other words and phrases that were suggested by those of the text. 126 1150

All this was very hurriedly done, but the results have in general proved satisfactory and the texts themselves seem to be readily intelligible to Burushaski-speakers when read aloud to them. They will often complete a sentence and continue the narrative, where it is short, in much the same words as the original, for though there are no professional story-tellers in Hunza, many of the local stories or accounts of customs appear to be told habitually in a customary, if not stereotyped form. [537]

Imam Yar Beg was a man of first-rate intelligence, great energy and a forceful personality. His own tastes ran naturally to sport and the practical. He was an enthusiastic and skilled polo player and I fear linguistic enquiries must sometimes have bored him, but he stayed the course until at length he unfortunately fell ill a month or two before I left the country. In that month or two,

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

115 126 of course, everything was going to have been checked and corrected and much additional information was going to have been obtained — an impossible programme!

126 Simultaneously with the writing of the texts I ran through an extensive list of common English words and obtained as far as possible their Burushaski equivalents by direct enquiry. This method helps to fill up unexpected hiatuses which will always be found in the vocabulary obtained from any moderate body of texts and casual information. It works well enough with nouns that are the names of material objects and with the simpler direct verbal conceptions. As a sole method, with an imperfectly-known common language as medium of communication, it would be quite unsatisfactory.

Also, in desperation, to make the most of the time available, I adopted a still less satisfactory expedient. I commissioned Imam Yar Beg's elder brother, 'Ināyatullah Bèg, to write out for me a list of all the Burushaski words and proverbs he could think of with explanations in Hindustani. He had some months in which to do this. I gave him for the purpose a large number of slips, each to be used for a single word, of which the vital inflected forms were also to be given. Unfortunately I was not able to convey my instructions by word of mouth and IUB devoted himself to a paper-economy campaign, writing as many words in pencil in a small hand on each slip as he could cram on to it. The result was almost illegible. I handed these slips over to Shāhzāda Yūsuf of Yasin to re-write. He had an adequate knowledge of Burushaski and non-literate Burusho at hand to consult. With great industry he rewrote all the words on separate slips, adding in some cases Roman transliterations of his own. This did not suffice, however, to distinguish with any certainty a from ā, i from e and u from o, nor to exclude ambiguity in the case of some other sounds.

128 All this material, which contained much that was new to me, I was unable to examine till years later when in England and unable to obtain help. Another very difficult manuscript with which I

PREFATORY NOTE.

The following texts were collected by me in 1923—24 in the manner described in the Introduction. No.s 1—3, 5—45 and 46. B. were supplied by Jemadār Imām Yār Bèg, son of the late Wazīr Humāyūn Bèg, a man of distinction to whom some reference will be found in Durand's "Making of a Frontier" and who later rendered valuable services in the Chitral Campaign of 1895. The eldest son, Shukr Ullah Beg, has been Wazir of Hunza since his father's death. Of some of these texts IYB wrote out versions in the Arabic script, which I possess. They do not always agree verbatim with the dictated versions.

On my return to Hunza, after ten years, in July 1934, I met Jemadar Imam Yar Beg briefly on two or three occasions and it was a great pleasure to renew our old cordial relations, and a happy prospect to look forward to their continuance. But this was not to be. On the evening of the 27th October Imam Yar Beg was shot in the Gilgit Bazar and died three hours later in hospital. This morning his body was carried past here on a bier, attended by the brothers and a throng of mourners. And in company with the local population, I could only pay a last tribute to an old friend as the cortège passed on its way to Baltit to the sound of a melancholy dirge and subdued lamentation.

So has disappeared in his prime a vivid personality from Hunza life. As I knew him in earlier days he was the embodiment of energy and zest for life. What his hand found to do — riding,

4: Lorimer L-3 (1929-4; 1934-5) 1935 AV7 Burusho AV7

115 hunting, polo — he did it with his might; manly, competent and fearless; a dynamic figure, not necessarily every man's friend. Since then he had visibly aged, but there was still about him something of the alert, dashing air of the born adventurer.

To return to the Texts: No. 4 was related by a then old man, 'Ali Madat of Baltit, who, I believe still survives, though perhaps no longer capable of repeating his effort of eleven years ago.[1] IYB's help was essential in recording this text.

Nazar of Aliabad supplied the version of the "Prodigal Son" given in No. 46 A. No. 47 was written out and sent to me by Gushpur Muhammad Ghani Khān, the son of the Mīr by a local, non-royal wife. He also was a man of vigour and ability who died quite young of some illness, four or five years ago.

The Proverbs were furnished to me in writing by 'Ināyat Ullāh Bēg, the second of the three sons of Wazir Humayun.

The Werchikwār Texts No.s 1 and 2 were obtained by me in Yasin from Hidāyat Shāh of Thui, and the translation of the "Prodigal Son" from Bahādur Amān Shāh of Yasin. In recording these I had the valuable help of Mēhtarghau Shāhzāda Yūsuf of Yasin.

538 One point of interest may be noted with regard to the Buru-
[565] shaski Texts, especially those containing local narrative. I have found, on reading out bits of them at random to several people here of the upper class, firstly that they appear readily to follow my rendering of the Burushaski, and secondly that they can habitually continue the statement at any point in almost the same
[195] words as the recorded text. This shows that, though there are no professional narrators in Hunza, with the possible, partial exception of Ali Madat, the ordinary people are in the habit of passing on tales and explanations of customs in a more or less
[175] stereotyped form of expression. This is probably the relic of a former custom of the upper classes of spending the evening after

[1] I have, since writing this, sought him out, and found him decrepit, but cheerful. Public opinion denies him any large measure of sympathy, as "he is not really old and has a number of sons who support him in comfort".

S: Lorimer L-3 (1920-4; 1934-5) 1935
AV7 Burusho AV7

PREFACE.

The following Vocabularies are based on the material collected in 1923—24, to which reference has been made in the Introduction, Volume I (pp. lvi. ff.), and were completed in 1930—31. 122 128

Thanks to assistance received from the Leverhulme Research Fund, I was able to revisit Gilgit and Hunza in 1934—35, and I then collected a considerable amount of new material.

Of this practically nothing has been incorporated in the present work. The additions, in the way both of new entries and of the elaboration of the existing entries, would have been considerable, and their preparation would have entailed great delay in publication. As matters stand I have not yet worked out the new material[1], and this has saved me from much temptation. 128

The revision of the *Burushaski—English Vocabulary* as it already existed, was, however, one of the many items of a too ambitious programme, which I did carry out, if only in a hasty and perfunctory way.

For this work I was fortunate in obtaining the assistance of Qudratullah Beg (QUB), son of Subadar Muhabbatullah Beg, a literate and extremely intelligent young man, with a remarkable feeling for language and the refinements of phonetics. [115]

A thorough examination of the forms, meanings and uses of the words in even this very modest vocabulary would have been a major task requiring an almost infinite amount of time. I had therefore 128 121

[1] Attention may, however, be called to a note on certain features of Burushaski, published in the BSOS Vol. VIII, 1936, pp. 627—636, which throws light on some grammatical and phonetic devices of the language.

after the usual greetings, he asked how Cec was doing. 122
"He seems to be quite a bit better today!"

"I'm awfully sorry he had to leave last night," said the Mir.

I didn't think he'd even noticed it—but he had.

"The doctor is up visiting him now," I told him. "He said he would join us in a few minutes."

"What does he usually have for breakfast?" the Mir asked me.

"Oatmeal, poached or soft boiled eggs, toast, jam and coffee would be wonderful if they are available."

"Not only is it available," said the Mir, "it is ready, for that is part of the breakfast we usually prepare for our guests. It will be taken up to him immediately."

A signal and a few words in Burushaski and Cecil's breakfast was well on its way up.

So we had breakfast in the dining room and chatted 124
and I sought to make every moment count by asking questions that were vital to me . . . that is, questions about Hunza.

I am quite sure that the Rani understood most of [191]
the things that we talked about. She could not have been shamming as she looked both interested and charming while the conversation went on.

"I have arranged for an interpreter to accompany 124
you on your trips and you can go wherever you like, 115
providing you can get through and the roads are open," 191
the Mir told us.

Shortly after, Sultan Ali appeared. He was the schoolmaster and also taught the Mir's children at home. He was to be our interpreter and guide. He was a slender, handsome young man. I'd judge his age as being in the early twenties. His command of English was very good. But I don't think his English was up to the standard spoken by the Mir, who spoke so fluently

124
115 that one would never believe that it was only a secondary language to him.
191

231 "You know," I said to the Mir, "one of the things
115 that I wanted to see when I came to Hunza was a yak. I understand from my readings that yaks are used in this part of the country and I have been looking everywhere as I walked along the road to Baltit, but I have as yet seen no sign of a yak!"

"That is not hard to explain," the Mir said. "The yaks are further up in the mountains. They cannot stand the heat and we keep them in the higher altitudes where they can be comfortable. If they are brought to the lower altitudes, they suffer. They like to be up around 11,000 feet or higher."

"Well, then how can I get up to see them?" I asked. "I don't mind if I have to walk for a day or two, but see them I must!"

"I'll do better than that," said the Mir. "I will phone and have two yaks brought down as quickly as possible. They will have to come from Passu which is about 38 miles from here. I will have action taken at once and see that the yaks are provided."

115 (Does that not indicate to you the kind of man and
124 host was the Mir of Hunza?)

I then took my leave of the Mir and the Rani and went out with Sultan Ali and Jahangir to look, see, pry and ask questions.

344 Our first jaunt was a good stiff climb to the old
644 palace located about two miles from the Mir's new palace. As the crow would fly I'm sure it would not have been more than ¾ of a mile. But in order to get up there one has to wend and weave and climb slowly.

I was now becoming quite accustomed to the altitude. Kerimabad is up about 8500 feet and I am sure

Hunza

CHAPTER 29

Hunzan Crafts and Skills

THE NEXT MORNING Jahangir came to our quarters just as I was ready to leave for breakfast. Cec again remained in bed on the doctor's advice.

The Mir was waiting for us in his bright, pleasant sun room when we entered and with him was another handsome, beaming man whom he introduced as his brother, Ayesh, who had just returned from a trip up country.

It is customary for the Mir's oldest brother to remain unmarried and act as an advisor, assistant, secretary or whatever else this position might be termed. He also acted as the Mir's emissary and was the engineer of the electric light outfit in operation at the palace.

We were then ushered into the dining room for breakfast. The Mir, Ayesh and the Rani seated themselves just to keep us company and of course add delight and conversation while we breakfasted.

124
115
644
[373]

124 "You understand," he said, "that the reason I do
[788] not have breakfast with you is due entirely to the fact that I must rise at 3:30 every morning to perform my religious duties . . . and 'tis then I have my morning meal."

"Thank you most sincerely for your explanation. It is most important to me so I may better understand the ways of your people and yourself."

Then the Mir went on, "I have received word that two yaks are being brought down from Passu and should arrive at Altit some time during the night and will be there tomorrow morning."

Then I said to the Mir, "Would it be all right if I walked to Altit and rode one of the yaks back here to your palace?"

"That's exactly what I had in mind for you," said the Mir.

"Well, seeing there are two yaks coming down, as you mentioned, and my friend Cec is confined to his quarters by the doctor, I'll take Jahangir along and he'll ride the other yak back."

"Fine, fine!" said the Mir.

124 Then the conversation continued and the Mir said,
●115 "I have another brother and I certainly hope you will
644 have an opportunity to meet him. He is serving in the Pakistan army—as a captain. I expect him back within the next 3 or 4 days and you will enjoy meeting him, I know. He is a most likable and interesting man. I hope he gets here before you decide to leave."

"I'd be very happy to meet him and I, too, hope he arrives before we depart."

"We call him Salat," he said. "That means mous-
[302] tache in our language. He has one of those handlebar moustaches and he's a big man—bigger than either Ayesh or I. His proper name is Capt. Jamshed Khan."

Ayesh was a most jovial character. He had the most pleasant smiling happy countenance of any man I've ever met. He was always either laughing or smiling and every time I looked at him I had to smile as well. He was a handsome man but in contrast to the Mir, who had a good head of dark hair, Ayesh was balding, the same as I.

124
115
[644]
[142]

It was most pleasant to see the splendid cordial relationship that existed between him and the Mir's entire family.

"How are you coming along with your quest for information?" asked the Mir.

"Exceptionally well, sir," I replied. "But there are also many questions that only you can answer and I'm hoping that you can spare a few minutes some time within the next few days in private so that I may gain this information."

"Any time you say," replied the Mir pleasantly. "I'm at your disposal. You mention the time and that will be it."

"You are indeed very kind to grant me this great favor and I appreciate it," I said.

So there and then we made an appointment for 5 o'clock the following day.

Every meal at the Mir's was a joy and a delight and both the Mir and the Rani were always present. I had already mentioned to him that this was a trouble and an imposition and too much to expect of him. But he said that it was the way he wanted it and that nothing was too good and no effort too great for his guests. Well, what can you do with a man like that?

122
574

Then he informed me concerning my friend's health. "The doctor has things under control now," he told me, "but he will remain here with me as my guest at the palace during your stay so there will be no worries

122
758

114 "I said it as a joke," replied the Mir. "I had no
585 knowledge that it would be so widely publicized and written and taken as a fact. I did not mean to mislead the writers you mentioned."

"Then it is not true!"

"No," replied the Mir, "I meant it only as a joke!"

643 There was no doubt in my mind that the Mir had
●115 a keen sense of humor. In fact, through all my talks
522 and discussions with the Mir which were frequent, there was seldom a time when he would pass by an opportunity for a bit of witticism or to laugh and have a bit of fun. He was just about as pleasant a man as could be found anywhere. He was not only a great ruler but he had a sense of humor. It was too bad that the writers referred to took him seriously. Maybe it was one of their bad days.

249 "Do you grow poppies here?" I asked the Mir bluntly and more or less out of the clear blue sky. I put this question to the Mir for a most definite reason.

On a few occasions I saw what I believed to be a field of flowers waving in the distance. But I wasn't sure. Invariably these patches of color were a mile or many miles away. I wondered what they were but I never could get close enough to see them. They were always sighted at great distance from where the road lay.

[123] You might ask why I didn't definitely, once and for all, set out across the field and find out. But remember, when you're in a more or less strange unusual territory, you just don't go off across the fields into someone else's private property.

All told, I doubt if I saw more than half a dozen of these patches of color during the full length of my travels. There might have been many more but I certainly didn't see them and I have an idea that if they

492 riding, I need more than that. Here I didn't have any reins but I could put my hands on the horn of the saddle. This was a case where I had the horn to hold onto and didn't need it. With those scrawny, skinny horses I could have used that appendage but I didn't have it.

This is also an excellent time to emphasize that a yak, whatever his sterling qualities, is by no means ever a speed demon . . . and that is for certain. He is built for comfort and security and my, oh, my, how important that is in the Karakorum or Himalayan terrain. The usual expected speed of a yak is approximately 9 miles per day which is somewhere around 1 mile per hour. However, I did not complain of the time that it took us to get from Altit to Baltit. I was having the time of my life and for once I wasn't the least bit afraid of falling off.

491 The road from Altit to Baltit actually is quite hilly —precipitous and steep in some places. But true to the Mir's prediction, I felt neither ascent nor descent because of the flexibility of the yak's legs.

Here I was 8,000 or 9,000 feet up in the firmament windingly wending my way around ledges and narrow trails while resting comfortably on the back of a yak. For the first time since leaving Gilgit I felt no fear or worry while riding. The beast on which I was sitting gave me a feeling of confidence.

The top of the final climb took us to the narrow opening of the valley. Here, if you turned right, the road led to the polo field and old Baltit Fort; if you turned left, to the Mir's courtyard.

115 I noticed what I thought to be a particularly unusual figure coming from the opposite direction, heading towards the pathway that led to the Mir's courtyard. He was in the company of another individual

whom I recognized as being a typical Hunzan. But the old fellow who caught my attention did so because he was so strange looking. He was slightly stooped, short of stature, looked very old, had a firm yet halting walk and a beard of bright henna red and wore a long brown coat that touched his boots. It didn't require intuition or even a keen mind to recognize that this man was not ordinary in any sense of the word and I remarked to Sultan Ali that this was someone with whom I would like to converse—by means of an interpreter, or course.

We headed the yaks over so we'd be directly in front of the two as they passed by, and Sultan Ali spoke to them. Then he turned to me with a smile and said, "You are quite right, there *is* something most unusual about this man. He says he's 105 years old today—it's his birthday—and he's come to pay his respects to the Mir."

I allowed myself to slide down off the beast's back as I asked Sultan Ali to introduce me to the fine old fellow and we shook hands. He said, "Salaam aleikum!" and I, too, said, "Salaam aleikum!"

I was really very happy and felt privileged to meet a grand old man like this!

I appraised him from head to foot, scrutinized every part of him—up, down, to the right, to the left—and I smiled as best I knew so as not to offend the fine old fellow. He was indeed a patriarchal old man, but he still looked in mighty fine fettle; he'd come from a little farm a few miles away, on foot!

The old man's name was Dado and he lived in Hasanabad. He has one son, two grandsons, three granddaughters and fifteen great-grandchildren. Dado has 10 close friends, all of whom are more than 95 years of age. Membership in that exalted group is hard to come by . . . a most restricted organization.

●115 Now I didn't see his birth certificate and I might as
165 well tell you, right here and now, that no vital statistics are kept in Hunza. I accept the figure of his age as he told me but remember, I was not there at the time of his birth!

344 When I was through with my spasm of inspection
644 and admiration, we began to parade up the long driveway that led into the Mir's garden. This area is flanked on the right by space that looks as though it were a parking lot, and maybe that's exactly what it is, but instead of cars, the guests or members of the family park—or should I say tether—their horses and yaks in this area. Maybe now they park their jeeps there.
[493] The Mir owns two of them, but one, I understand, was away in Pindi being repaired. (Or was it the shambles and horrible wreck of a jeep that I came across a week later, on the road back to Gilgit?)

126 Now I noticed that the Mir, Ayesh, the doctor and Cec were coming along the roadway to meet us, and soon we joined forces and were gathered in one group. I thought this was the ideal time to take some photographs and, luckily for us, they were the best photographs we took on the entire trip. Photography is something that has never interested me and I had never taken half a dozen pictures in my life. Before leaving
[122] home, I did try to learn a bit about photography, but I couldn't learn enough fast enough.

124 When the fun, excitement and fast-flowing humorous remarks had subsided, I said to the Mir, "If you've nothing more important to do or if you would care to give me a little more of your time, we could start that question and answer session that I arranged with you for this afternoon."

"I am at your service," he replied pleasantly and with alacrity.

Hunza

CHAPTER 44

Health

FOR ME TO SAY that the Hunzans are the healthiest 164
people of the world, which many authors and writers 114
have claimed, would be sheer effrontery . . . mainly because I have not studied the health of all the peoples of the world, nor have I even met them. However, I do attest from what I have seen and observed, that the Hunzans are one of the healthiest people of the world.

To say that they are completely free from diseases or 759
health problems is definitely not true. At the time when 115
I visited Hunza there was a resident doctor located at [743]
Aliabad, where he was in charge of a 10-bed hospital. I conversed with him and questioned him daily during my stay and he answered my pressing questions with complete frankness and candor.

He is only a young man, a Pakistani, and his name is Dr. Mohammed Yusuf Khan, M.B., B.S. He is a handsome, capable, well educated doctor and is, in my

759 humble opinion, equal to the best medical men that we
115 can turn out of the European or American universities. Besides his medical degree, he also has a bachelor of science degree which most of our doctors do not have. So if anything, he is perhaps a little bit better learned than our average physician.

164 One of the first questions that I asked of the Mir of Hunza was, "Are there many known epileptics?"

The Mir thought for a moment and then shook his head and said, "No!"

So I turned to the doctor who was on my left and said, "Doctor, do you know of any epileptics in Hunza?"

At that instant the Mir got up and left the room . . . and I wondered about this.

There was a definite purpose behind my question concerning epilepsy. You see, it has always been my conviction—or at least for 25 years—that epilepsy is strictly nutritional. Of the few epileptics that I knew in my life all had peculiar eating habits . . . that is, they had their positive likes and dislikes . . . and from that day to this I have believed that epilepsy was basically nutritional.

"Yes," the doctor replied, "right at this present time I am treating three epileptic patients. One is from Nagir and two are from entirely different locations in Hunza. But the Nagir case is one of these dream cases —the kind that every doctor hopes he'll come across some day in his work."

"Yes," he went on, "this Nagir case performs every act described in the medical journals. He's a perfect textbook case. The sick man has every condition, symptom and manifestation of epilepsy known to medical science."

Statistics indicate that in America there is one epileptic to every 350 of the population. The population of

Hunza

CHAPTER 55

Treasured Gifts

EITHER I AM most naive or I have an awful pile of unmitigated gall, because I kept harassing my fine and wonderful friend, the Mir, with continued questions. Luckily for me, the Mir is a most understanding man and he tolerated my questions. In fact, I sometimes believe he welcomed them. 115

I recall on this day we were chatting in his sun-living room and I said to him out of the clear blue sky, "Do you have any hermaphrodites in Hunza?" 838

A puzzled expression appeared on his face and he shook his head and said, "I don't know what you mean. I never heard the word before."

I smiled and said, "Don't let that make you feel too badly because most people, even native born English or Americans in many instances have never heard the word before either."

I started to grope for another word that would

The Burusho of Hunza

by E. O. Lorimer

THE small state of Hunza is the most northerly in British India. It consists for the most part of a close-packed mass of unscaled and unscalable mountain peaks over 20,000 feet, seamed by untrodden rivers of snow and ice; as might be anticipated, it is mainly uninhabited. Its frontiers march with Afghanistan on the northwest and with Chinese Turkestan on the north and northeast. But where the Hunza river has cut its way down from the Pamirs to join the Gilgit river and ultimately the Indus, there remain, clinging to the mountain sides, a few sloping, rocky terraces which, if water can be brought to them, can with diligence be rendered fit for human habitation. These oases of green amidst the barren desolation of rock and cliff and mountain peak are the habitat of a sturdy mountain people, the Burusho, speaking a difficult but extremely interesting language, of so great antiquity that no affinity between it and any other known form of human speech has yet been traced by the comparative philologist.

When D.L. was posted as Political Agent, Gilgit (1920–24) he made it one of his leisure tasks to collect material for a scientific study of Burushaski (the language of the Burusho) the result of which is a three-volume work*—grammar, texts and vocabulary—of which the last volume is just issuing from the press. In 1934—ten years after his retirement—we returned unofficially to Hunza, armed indeed with a considerable knowledge of the language but with no facility in speaking it, to live amongst the peasants and make such a study of their customs, agriculture, economics, etc., as amateur anthropologists might.

During our four years in Gilgit we had not failed to discover that the Hunzukuts (dwellers in Hunza) were the most attractive of all the likable mountain peoples of the Gilgit Agency, the most physically prepossessing, the most intelligent and the most trustworthy. All classes in Hunza gave us a warm welcome, from the Mir—who has

* *The Burushaski Language*, by Lt.-Col. D. L. R. Lorimer, Oslo, 1935 (England: Williams and Norgate) published by the Norwegian Institute for Comparative Research in Human Culture.

ANTIQUITY

[643] ruled his country in the humanest and wisest of benevolent autocracies,
181 since the treaty of 1892 placed him on the throne of his murdered father
609 and parricide brother—to our humbler neighbours in Aliabad, the village four miles below the capital which we made our headquarters for fifteen months. As soon as the people grasped the purpose of our
[212] coming (which was not easy to explain to an illiterate people) they were overjoyed that a 'Sahib' should trouble to learn their vernacular—a thing which no white man or woman had done before—and take an interest in their customs and hereditary lore. At first they would hesitate: 'but you have wheels (=machines) in England, and can do all these things better than we can'. Within a few days they were vying with each other in explaining, demonstrating and bringing ploughs, looms, winnowing forks, bows, stone cooking pots to the resthouse where we were installed, that D.L. might measure them and take 'studio portraits' of them, 'for you mustn't put anything in the book about us that isn't exactly true'.

132 The entire life of the Hunzukuts is centred in water. The rain-
312 fall in the oasis level (7–9,000 feet), is negligible—we reckoned less than 2 inches per annum; in default of any means of raising the
361 water, the river, flowing between its crumbly earthen cliffs, 500 or 1,000 feet below their fields is useless for irrigation; there are no springs or wells; hence all water for all purposes must be trapped high up at the snout of some side glacier and conveyed on galleried aqueducts across yawning gorges and the faces of sheer cliffs. The main water channel, the Dala, which supplies all the more recent villages of Hunza, 'the new settlements' as they are called in contradistinction to the three original villages—Baltit the capital, Altit and Ganesh—travels some 8 or 10 miles in its circuitous route from the Herber glacier in the gorge behind Baltit, cradled between snow-peaks of 23,000 feet, before it peters out in a semicircular sweep round Aliabad.

312 The Dala was dug some three or four generations ago (90–100
412 years) with wooden shovels and wooden picks tipped with ibex horn, and represents an amazing feat of engineering skill for people without
816 any instruments of precision. The sluices that control the distribution of water—every teaspoonful of which is rigorously allotted—are of the simplest; most often a slab of flattish stone plastered in with mud, sometimes a wooden shutter sliding in a rude wooden frame, sometimes when the water is being taken off to a lower level a circular hole in a stone slab, closed at need with a mushroom-shaped stopper, rough hewn from a solid tree trunk.

1: Lorimer T-3 (1920-4; 1934-5) 1938 AV7 Burusho AV7

THE BURUSHO OF HUNZA

342 The Hunza dwelling house is a fortress-like cube of stone and mud whose front door is screened from the hostile outer air by a barn,

102

342 the door of which is strategically placed at right angles to, and some
354 distance from, the main door. The only ventilation is the central
171 smoke-hole of highly elaborate construction, three wooden frames

1: Lorimer T-3 (1920-4; 1934-5) 1938 AV7 Burusho AV7

[17] diagonally superimposed on each other, exactly duplicating some of
354 the ancient smoke-holes recently unearthed in Central Asia by Le
342 Coq. A large store-room about 6 feet deep runs the full width and height of the house and is entered by a door at the back of the central atrium. It is provided with a minute, unglazed, shuttered window, the only 'window' known in Hunza except in the houses of the Mir
352 and the Wazir. The furnishings of the living room are simple but adequate. Two large sleeping benches, some 7 feet wide and 9 feet*
513 long, flank the side walls, and are raised 18 inches or so above the floor.
354 The sleepers roll themselves in homespun blankets or padded quilts and sleep crosswise on the bench like parallel sausage rolls. One bench is reserved for men and the other for women. The hearth occupies the centre of the floor and is outlined by four stone kerbs. The sleeping benches, which serve by day as sitting places, are screened at head and foot by capacious cupboards, one of which serves the mistress of the house for her kneading trough and other utensils, another takes the form of a large bin with sub-divisions to hold the current supply of flour.

415 The normal cooking pots and oil vessels, lamp cruses, etc., are of hollowed soap-stone, often of gracefully irregular shape, reflecting that
324 of the boulder from which they have been hewn. Gourds furnish the usual 'jugs', and wooden bowls, nowadays frequently turned on a
322 lathe, the eating vessels. Wooden spoons and ladles are cut in one piece, the handles being formed by a convenient branch or twig. The
177 delightful result is that no two pots, bowls, or spoons, are identical in size or shape. Unfortunately aluminium or enamelled iron vessels and galvanized buckets are finding their way into the country. We ourselves were, I fear, guilty of adding to their number and even introducing a few multi-service kerosene tins.

241 The greater number of field implements are still of wood, though
412 the ploughshares are now usually shod with an iron shoe or tip, and a lucky family may have acquired an iron spade or hoe or a five-pronged
563 iron fork. A small community of ultimately Indian origin, the Béricho,
326 lives amongst the Burusho and supplies the music for their polo and dancing and the blacksmithery of their simple ironwork: the shears, the rude sickle, the sharpened scrap of iron that serves as razor.

[412] The sharpened stone or ibex horn, which till very recently served
335 for all necessary carpentry, is now replaced by the iron-headed adze which hacks out the steps on the log ladder and shapes the narrow planks
342 for doors and cupboards. The true Hunza door consists of a set of

P. 8 (7)

342 these narrow planks placed side by side and pierced by horizontal holes
335 through which two parallel rods are threaded ; the hinge is a longer piece of wood pointed at both ends and rotating into holes in threshold and lintel ; while the whole is secured by an ingenious wooden lock.
177 Most villages, however, now possess a carpenter or two, trained in the
463 P.W.D. workshop at Gilgit and armed with plane and saw, who can pro-
322 duce more Europeanized doors and cupboards, to the greater comfort of their owners and the selfish regret of the anthropologist. The old, home-made door is still in use for barn and byre.

592 Every peasant family is almost entirely self-supporting and independent, eating the produce of its own laboriously and beautifully
291 terraced fields (PLATE I), wearing the woollen cloaks and caps spun
177 and woven from the wool of its own sheep, and booted from the skin of its own beasts. The only foreign garments worn are the cotton shirts and trousers of comparatively recent introduction, now
415 considered indispensable by both sexes, and the merry little cotton caps,
237 plain or silk-embroidered, which have replaced the heavy woollen
281 salvation-army bonnet of the women. Butter is made and water carried in skins ; grain and flour are carried in skin-bags or sacks and stored in skin-sacks or wooden bins. Rugs, saddlebags and ropes are woven of goat's hair.

137 In a country where no unirrigated tree can grow, timber is very scarce. An old apricot or appletree is sometimes available, or the root
415 of an old vine, otherwise the only general timber is the poplar, grown primarily for poles and rafters, and the willow, absolutely essential for baskets (PLATE II), a dozen varieties of which are needed for carrying apricots, manure, dry leaves, straw etc., and for storing potatoes and dried fruit.

[134] The soil of Hunza is unimaginably poor, consisting in fact of little but powdered-up mountain side. The scarcity of water means also
233 the non-existence of pasture, and the few animals that can be fed eke
246 out a spartan existence on the scraps of grass growing on the rare semi-irrigated strips of hillside or beside the water-channels, and on such weeds amongst the growing crops as are not earmarked for human consumption or remain after the crops have been reaped. This scanty provision is supplemented by the autumn harvest of dry leaves (not one of which lies on the ground ungarnered), the straw and stubble, and occasionally a small quantity of dried grass. Only a few families command enough land and water to grow a little lucerne for fodder.
233 The most livestock that the average household of 10 to 20 persons

ANTIQUITY

233 The most livestock that the average household of 10 to 20 persons
241 hopes to possess is a tiny flock of 20 to 25 sheep, goats and cows. In these circumstances manure is more precious than gold, and the small
237 children who conduct a cow to pasture carry a shoulder basket in which
592 every ounce of the day's output is scrupulously collected and brought home.

233 When the snow retreats on the upper mountains a few patches of green are left here and there, and the more athletic beasts are taken up by young men who live in shelters with their charges, collect the manure, convert the milk into butter and bring these home with the animals when the snows claim their own again. These patches of high pasture, several thousand feet above the villages, are all too few and can only be reached by serious feats of mountaineering. Through field-glasses we could see the grazing animals clinging—by their eyebrows as it seemed—to their precipitous 'summer pastures', but it was impossible to ride up even on a yak, and at our age impossible to climb on foot for a nearer view.

As soon as the trees put out their leaves in spring, each 'donkey tree' (*i.e.*, non-fruit-bearing) is stripped of every scrap of spare foliage to feed the half-starved beasts. This luxury diet has to be very carefully administered lest the animals should perish of its unaccustomed succulence.

243 The major crops grown by the Hunza people for their own use are wheat, barley, several kinds of millet, sweet and bitter buckwheat,
[177] nowadays also the highly-valued potato (introduced by the British in 1892) and small quantities of various pulses. Barley must have been the original staple crop, for all the traditional festivals, the Seed-sowing of early spring, the First Reaping of early summer and the Harvest
[242] Home, relate to barley alone. The peasant is wise about rotation of crops and the various types of wheat, millet, etc., which thrive best in given conditions. Wheaten bread is much preferred to any other, but barley remains the larger crop because spring-sown barley ripens three or four weeks before even the winter-sown wheat, and the vacant fields can be resown with millet; whereas after the wheat only buckwheat can hope to ripen before winter. Bitter buckwheat is frankly detested, but it is hardier than the sweet and can better withstand an attack of early frost, so a certain amount of it is always sown as an insurance.

So poor is the soil, so scanty the manure, that in the newer villages like Aliabad, the average return is only sevenfold and even the storeyed fields of Baltit, which have been tilled in the sweat of man and woman's brow for at least 600 years and probably for twice or thrice as long, yield

THE BURUSHO OF HUNZA

a miserable ten—none of your 'some thirty, some sixty, some an hundredfold'—while lucerne only gives three crops. 243

'The Hunzukuts' main food is bread, of which the housewife makes a large variety, from the leavened wheatened cake with butter for feast days, the unleavened flapjack of wheat, barley or blended flours for everyday, to the bitter buckwheat scones of leaner times. Milk is not an article of diet; the animals yield little at the best and none at all when their own offspring is weaned. Such milk as there is contains little fat content, which is not to be wondered at in view of the food on which the animals exist; it is converted into butter, curds and such preservable forms. Butter is stored in birch-bark wrappings beneath an adjacent water-channel and broached only on festive occasions or for the entertainment of a guest. Meat is tasted at most twice or three times a year, at festivals or on some day of domestic rejoicing, a wedding or a birth, and then it will be 'some tainted wether of the flock, meetest for death' who supplies the sacrifice. 262 234

The womenfolk tend small vegetable plots in the corner of a field or separate garden, where carrots, turnips, marrows, gourds and half a hundred kinds of humble 'greens' are grown, and a few plants whose leaves or seeds are esteemed for flavouring, along with a few tobacco plants for the men's pipes. After grain and greens, the essential item of Hunza diet is the apricot, fresh in the early summer and dried during the rest of the year; mulberries, fresh and dried, come next in importance, then a few apples, pears and peaches (these little valued because they will neither keep nor dry) and a few grapes for such relatively well-to-do houses as can afford space and water to grow them. Grapes ripen too late to be dried into raisins and the small quantity not consumed fresh is converted into light wine, brightening the winter days for those who have it, and drunk within a couple of months of manufacture. The apricot has yet further uses. Its kernel yields the oil which lights very modestly the winter nights. The Burusho woman is said to refuse, most wisely, to live above the level of the ripe apricot (say 9–10,000 feet). This is, I suspect only a base pretext of her husband's for refusing to live at these altitudes himself. Be that as it may, the upper villages of Hunza are almost exclusively inhabited by immigrants from Wakhan accustomed to a treeless existence and a diet of barley only. Grafting fruit trees is an art thoroughly understood. The above-mentioned fruits supply the only sugar which the Hunza people know. 244 262 245 [273] [354] 361 245

Despite all diligence in tilling the ungrateful soil, despite the utmost 262

262 care in rationing the year's supply (rationing begins the moment the first barley crop is harvested), scarcely a household we knew but was out of flour and out of potatoes weeks before the first barley was ripe, and was living solely on turnip tops, greens and edible weeds. 'Starvation Springtime' in Hunza evokes no poet's raptures, only a wailing of hungry babies who, as their mothers apologetically explain 'are too small to understand', and a tightening of the belt by those who do; but never a complaint. How these hardy people exist and work and smile—and keep on smiling—on a diet which no Minister of Health would consider even 50 per cent. adequate in quantity or 10 per cent. adequate in proteins, is a mystery, and must represent a miracle of
147 natural selection over centuries. There are no sick or ailing in Hunza; men, women and children are wiry, tough and fit, and a fair
888 proportion live to a ripe and honoured age, busy to the last about
561 such tasks as suit their waning strength and valued for their experienced counsel, for no devilish inventions—cinemas, wireless or machines—have created a gulf between the generations.

243 Harvesting processes are extremely simple. When barley or wheat is ripe, the adults of the family turn out and pull up the shallow-
476 rooted crop by hand, laying the swathes in neat rows to dry. Even when a sickle is used, it is used to pull with, not to cut. As soon as a suitable field is bare, it is flooded, and a circular (more rarely a rectangular) space is enclosed by a small mud wall four or five inches high. When the ground is soft but no longer wet, the whole family, down to the tiniest toddler, forms in line and marks time systematically over the surface to level it. After three floodings and tramplings the new threshing floor is as smooth and even as a hard tennis court. Two neighbouring houses sometimes share a threshing floor which becomes the focus of family activity till the last sheaf is gathered in. The cut crops are stacked conveniently near, and a small quantity of corn is spread on the centre of the floor. Then while Grandfather with his beautifully graceful five-pronged fork throws in more grain from time to time, the team of five cows, loosely lashed together by their muzzles, is driven round by man, woman, boy or girl in turns until the threshing
243 is complete (PLATE III). The person in attendance on the trampling beasts has a switch in the right hand and in the left a wooden bowl
262 as 'dung-dish' in which all excreta of either type are conscientiously collected, not only because the Hunza folk cannot afford to waste an ounce of manure but equally because they are too fastidious to tolerate the fouling of their food. Great was the contempt of our Hunza

companions who came down with us to Kashmir to observe peasants ploughing with *oxen* (whose wants could be less completely met) and without a dung dish ! 243 262

When the corn is fully threshed, the winnowing begins in cooperation with a light breeze. Next the winnowed grain is passed through a coarse sieve (barakbèsh) whose mesh is composed of thin leather thongs which retain any particles of straw, and it is finally tossed in a finer sieve (gherbèl) which retains the grain and lets the dust through. The grain is then loaded into great skin-sacks and carried off to store. The due amount required for seed-grain is set aside first, and not the utmost extremity of hunger would induce a Hunza peasant to encroach thereon. Next, emergencies are budgeted for—births, weddings, dues such as rent (if any) and hospitality, which includes deaths in *other* homes, for relatives and friends would be disgraced if a bereaved family had themselves to bake during the first seven days of mourning. What then remains, represents the year's supply. 243 261 251

Ripe millet is treated by being beheaded, and the ears may then be threshed by cows or beaten with poles according to quantity. The buckwheats are beaten only, even small children merrily cooperating half in fun, half in earnest to show their prowess. 243

Grain for current use is carried to the mill in sacks or bags of skin. The mill-house is a picturesque cube of stone and mud situated beside a convenient irrigation channel. It may possess one wheel or two. The wheel is a vertical oblong of tree trunk, fitted with 10 or 12 wooden wings ; the lower end of its axis is supported on a horizontal pole, the upper fitted into a central hole in the upper millstone. The water is led on to it by a steeply sloping hollowed log. The inside of the mill, lighted only from the door, is fitted with a cross rafter built into the walls on to which the hopper is ingeniously hung by a forked segment of tree. The hopper itself consists of a section of log, tapered and hollowed out. Attached by a string to the small tray below the aperture in the base of the hopper, is a loose clapper which is gently agitated by the rotation of the upper millstone on which it rests, this shakes the tray and encourages a steady flow of grain. The flour as ground is ejected into a hollow trough. Near by, a wooden pole, impaled on a horizontal wooden pin, projects up through the earthen floor. Each end of the pin rests on a 'Heath-Robinson' pile of stones and a simple adjustment of its height regulates the position of the lower millstone and thus the coarseness or fineness of the flour desired. The mill, the loom and the comparatively new-fangled lathe are the only [343] 402

402 'machines' known in Hunza, and the mechanism of all three is so simple that parts can be replaced, repairs or adjustments effected, by any intelligent child—and we met no *un*intelligent Hunza child.

286 Anyone desirous of doing so can acquire a weaver's skill, and in our village of some 200 families there were seven or eight expert weavers. The loom-pit is a hole in the ground, 2 feet wide and deep and 2 feet 4 inches from back to front, with a stone bench at the back. Two horizontal poles balanced on stones a couple of feet above the ground at either side carry the heddles, etc. Here the weaver sets up his home-made loom of ingeniously simple construction worked by four treadles in the bottom of his pit. While he works, the owners of the wool sit by and wind his bobbins. A skilful weaver can make the nine yards of narrow homespun required for a man's cloak in a day and a half. The loom-pit occupies fully half the width of the 'street' and when being used forms the centre of a shifting group of cheerfully gossiping passers-by.

Goat's hair is woven on an even simpler upright frame, a forked piece of tree supplying the single shed required.

322 Turning is a rarer accomplishment than weaving, and our village boasted only one lathe-master. Like the loom the lathe is set up in a pit. The person desiring a bowl supplies the necessary rough-hewn block of wood (apricot or vine root preferred) and the motive power required to turn the horizontal bar, on to one end of which the wood is spiked. The turner crouches alongside with a selection of small curved chisels which he rests on an adjustable tripod to steady his hand (PLATE IV).

415 There is no room to tell of all the simple yet ingenious household
411 utensils which the Hunzukuts conjure from the scanty resources at their disposal: the spliced wooden bow faced with plates of ibex
322 horn and beautifully curved; the boys' catapult bow with double string of horse sinew, for scaring birds; the double-chambered wool-container made of rowan bark; the small vessel like an ash-tray which steadies the woman's rotating spindle and is moulded from the refuse of the apricot kernels left after the oil has been expressed. Not a
372 shred of anything is wasted in Hunza. What cannot be eaten or turned
132 to use—even the shell of the apricot kernel—is gratefully seized on as fuel for the pitifully small fire that cooks the bread and vegetables. Fires for mere heating are an undreamt of luxury. Hence the draught-proof house is essential, for at 7–8,000 feet, with snow mountains all round and a temperature of 19° Fahrenheit, the 'Great Cold' is

1: Lorimer T-3 (1920-4; 1934-5) 1938 AV7 Burusho AV7

sufficiently severe. Happily winter is short, two or three months at most, and for the rest of the year day and night are spent mainly out of doors. 372 132

The social culture of the Burusho of Hunza is as high as their material culture is primitive. Three centuries of Islam—they are now Ismaili heretics, having been Shiahs until three or four generations ago—have not induced them to veil or despise their indomitable women, nor to abandon the wholesome tradition of exogamy between their different clans in favour of first-cousin marriage. They are freer from superstition and fanaticism than any people east or west of whom I have heard or read. Whatever be the esoteric teaching of the Ismailis of which Professor Ivanov might tell, it concerns the Hunza peasant as little as the homoousian controversy disturbs the mind of the British schoolboy. He goes his way in cheerful confidence that hard work, fair dealing, kindly affection and generosity must be as well pleasing to God the Merciful, the Compassionate, as ritual prayer or ceremonial fast, and his dreams are not broken by over-anxious fear of Hell or hope of Heaven. 771 [582] 783

The fastidiousness and personal cleanliness of the Hunza peasant are remarkable. Close packed amongst the crowd at festivals or sitting on the threshing floor amongst the workers, or entertained in their hospitable houses, we were never distressed by human exhalations or molested by parasites. The drinking water is guarded with scrupulous care from pollution by man or beast. Men and women cooperate without embarrassment or restraint and no work is taboo for either sex, though for obvious reasons the heavier jobs of wall-building, irrigation and ploughing fall more naturally to the man, and the care of infants to the woman. But as soon as the father is allowed to handle his child, he will carry the baby proudly and tenderly out for its first airings, while boys and girls alike play with and watch over the toddlers. 515 271 462 593

Again and again, in face of the high morality and unquenchable spirit of the Hunzukuts, we were ashamed to think of what in our vaunted civilization ' man has made of man '. 000

NOTE

121 THIS is not a serious book. Comparative philologists hoping for news of Burushaski, anthropologists interested in the highly civilized though materially primitive life of the Burusho of Hunza, ethnologists curious as to their origin, the scientifically-minded of every sort, are once for all referred to the published and to the yet unpublished books and articles of my husband, Lieutenant-Colonel D. L. R. Lorimer, late of the Indian Army and the Foreign and Political Department of the Government of India, hereinafter referred to as David or DL.

121 I have been concerned merely to set down our personal day-
114 to-day experiences—they do not merit the name of adventures —and our first impressions of the delightful people who for fourteen months in 1934–35 were our neighbours and our friends.

The journey to and from Hunza and the semi-camp life there had at an earlier period been the commonplace, all-in-the-day's-work life of ourselves for four years (1920–24), as of a long series of other Political Agents and their wives both before and after us. The only thing that lent a spice of adventure to this last tour was our delightful freedom from all official responsibility, and our age. Changes of climate and altitude, shortages of food and sleep, fatigues of travel, at which one smiles at forty present a graver challenge to fifty-five.

000 The triumph of our elderly excursion lies not alone in the sheaves carried home by DL, but in the fact that we both came back more than a little battered, it must be confessed, but still smiling; and treasuring memories which are worth incomparably more than the price exacted.

121 My excuse for writing so superficial—perhaps worthless—a book at all must be that it has made me happy to recall this silver honeymoon spent in the Karakoram and to pay a tribute to our hospitable and beloved Hunzukuts as they were in 1935, as they must have been for uncounted generations in the past, as they may be for generations yet to come, if the poverty

Chapter 1

THE HUNT IS UP

[pp 12-14 contain no textual material]

IT was in 1920 on a summer afternoon in Ziarat, the little hill station in Baluchistan, where various civil and political officers of the Government of India have their hot-weather bungalows at 8,000 feet among the barren but juniper-scented hills. David was at the moment away in Quetta conferring with colleagues, and I had to go alone to an afternoon tennis party at the Summer Residency.

David had had five or six gruelling months in Loralai, and I knew that he was finding thoroughly unsatisfactory to a man of his particular temperament and previous experience the unending office work, blent of law, revenue, and red-tape, that prevented his freely getting out to travel on horse or on foot and learn to know the people of his district—the first duty, as he saw it, of a political officer. All his earlier posts, military and political, had been actually on the frontier, or beyond it, in the Tochi or the Khaibar, in Persia, Arabia, or Mesopotamia, where human relationships were of more importance than office files and where senior officers were sufficiently distant to let the man on the spot get on with his job.

We were deep in a well-contested four when I saw the Chief advancing with a sheaf of papers. We finished the rally before I turned my head and responded to an imperious call. "Should you be willing to go with your husband to Gilgit?" was barked at me, in a tone which said plainly to the bystanders: "Of course, being a woman she'll prefer to stand in his way." The Chief's attitude to wives always challenged me, and I barked back: "I'm willing to go with my husband to HELL." This unconventional, not over-courteous, outburst provoked a milder: "Then I may wire him and say you'll have

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

000 no objection?" "It will be a waste of time. He knows." We resumed the interrupted game, but my head was joyously humming at the thought of escape, escape to Gilgit; for me my first sight of great mountains, for David the open road again—people—the work he loved.

He returned from Quetta, overjoyed at the unexpected prospect of a transfer to Gilgit, a place he had always longed for, though—true to his principle of never clamouring for or pulling wires to get a coveted job—he had never applied for it. I had a suspicion that it was not thus that most of his colleagues nursed their careers. His only misgivings about Gilgit were that it might be rough on me: "It'll be lonely, and I shall be most of the time on trek, and you won't always be able to come." That didn't worry me. I asked only one question: "What language does it mean?" "I've been asking; there are four or five more or less unknown vernaculars, but the chiefs and headmen all talk a certain amount of Hindustani, and the Political Agent carries on in that." "And shall you?" He smiled without waste of words, and I knew we were for it. Gilgit offered few amenities, a hard life and constant travel at all temperatures; it offered the tangled politics of seven different provinces; it offered possible opportunities—if there were time—for mountains and big game (his favourite hobbies as a boy; some of his trophies still hung in the Guides' mess, some of his records were still holding a place in Rowland Ward); but above all, it offered "four or five more or less unknown vernaculars."

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

Chapter 2

GILGIT APPRENTICESHIP

THERE followed four glorious years in Gilgit. The seven districts or provinces under David's supervision gave him plenty of official work and lots of incident, of which in another time and place I should love to write. One, the district of Chilas in the Indus Valley, was directly under a British Officer, Assistant to the Political Agent. Lying on the borders of the restless, untamed democracies of the independent territories of Darel and Tangir (casually lumped together in ordinary speech as Yághistan—"The Home of Rebels") it had, unlike the rest of the Agency, an unenviable record of serious crime, including from nine to fourteen murders a year. Gilgit itself was then administered by Kashmir officials with all the paraphernalia of Wazír-i-Wazárat, Revenue officers, and law-courts. With these two districts the Political Agent was less directly concerned, though his official headquarters were in Gilgit, the only really prosperous oasis of any size in the Agency. Then there were the four political *iláqas*, small states ruled by Government-appointed governors, Punial, Yasin, Kuh-Ghizr, and Ishkoman, and finally the two semi-independent kingdoms of Hunza and Nagir, with their own kings, or Mirs, hereditary chieftains whose families (or family, since the two Mirs are descended from a common ancestor) have held sway in their present territories for at least six hundred years, since the days of our earliest Edwards. Since the famous Hunza Nagir Campaign of 1891 the two Mirs have been our trusty and faithful allies.

It was David's job to be the friend and counsellor of governors and chiefs; to keep a sharp eye out for tyranny or oppression; to be at all times, whether at headquarters or on the road, immediately and easily accessible to humble folk with

114 real or imaginary grievances; to ensure that slave-trading, arms-traffic, or foreign intrigue did not disturb the peace of the hardy peasant populations that were wringing a livelihood from the rocky mountain sides of what must be one of the highest and most inhospitable inhabited regions of the earth. This entailed constant travelling. He visited each district at least once a year, and most of them twice. Each tour entailed four or six days' travelling out and again four or six days back, up or down one river or another, for travel is only possible amongst the mighty mountains of the Hindu Kush and Karakoram where a river has contrived to cut its way. In summer he would push out beyond the inhabited oases to the great passes that form the gates of entry to British India from Afghanistan and Central Asia or the links with Chitral.

The spacious, if oddly planned and straggling, bungalow in Gilgit that was our home, with its English garden and valuable fruit and vegetable supplies, saw him only for a few weeks at a time between these ever-recurring tours on which I joined him when possible, but by no means always, for I could not feel it fair to nurse and baby to leave them too often alone. On the longer tours, moreover, during which David traversed every inch of the Gilgit frontier and crossed some unknown internal passes, difficulties of supply and transport which would impose burdens on isolated hill communities where the barest necessaries of food and fodder are cruelly scarce, debarred me from adding two extra mouths—mine and my pony's—to the party.

During those eventful and yet peaceful years David worked steadily and unremittingly at mastering and recording the local languages.

Obviously the first language to attack was Shina, and in this he accumulated over 400 foolscap typed sheets of texts, with ample notes, recording current folk-lore and superstitions, local history, customs, etc., and worked out the skeleton of a practical grammar to be amplified later into a more detailed, more scientific one, and collected a comprehensive vocabulary.

While he thus worked systematically I would sit by, knitting woollies for baby, mending the family socks and absorbing as

much as I could of what was passing between David and his 114
informant. Then, as I went my daily rounds with the servants, weighing in firewood, or issuing stores, packing away woollen clothes to protect them against moth or what not, I would enquire the Shina for all I saw, and listen to the servants' talk amongst themselves, jotting everything in my notebook to memorize it later, until by degrees I could substitute Shina for my sketchy memsahib's Hindustani. Not frequently but sometimes a phrase or word or form which I thus caught on the wing proved useful to supplement DL's much wider-flung enquiries.

Next came Khowar, the language of Chitral, of which David had made a preliminary study during nine months as Political Agent there during the War. To my bitter grief I had not been allowed to accompany him, and so had missed his first steps in Khowar. Though by listening I learnt enough for typing and indexing purposes, I always felt this delightful language something of a step-child compared with Shina, and I never attempted to speak it. The "Royal Families" of Yasin and Punial are descendants of the Chitral Khushwaqts, who had conquered parts of the Agency two hundred years ago. They retain their native language and have, to a certain extent, imposed it as a second language on the upper strata of their subjects. Throughout the Agency it is therefore regarded as a polite language, meet for chiefs. In the same way as for Shina, DL collected texts, notes, vocabulary, and all the data for a scientific grammar to supplement his considerable material from Chitral, noting how very trivial were the differences between the two varieties of Khowar.

Not until the end of our third year in Gilgit was he able to devote himself to the infinitely more thrilling task of acquiring Burushaski. Now Shina and Khowar are both members of the Indo-Iranian family of languages—possibly taking off from the parent stock before the Indian and Iranian branches were fully differentiated—and are therefore related to Hindustani, Persian, Pashtu, and each other, as for instance Icelandic to Rumanian, or Dutch to French. There was therefore nothing sensationally new about their structure, and a large number

114 of their words had for a scholar recognizable kinship with Sanskrit or Avestan roots. They might, in fact, be styled relatively "easy."

114 Burushaski was another matter. Here was, it would seem, a
197 language entirely unrelated to its neighbours, or to any other known form of human speech, alive or dead. If, as Sir George Grierson conjectured, it was the survival of an aboriginal language spoken perhaps over the whole of northern India before the Sanskrit-speaking Aryan invaders pushed their way southwards across the mountain barriers into India (some two or three centuries before Christ?), it had been driven ever further and further up into the inaccessible mountain valleys of the Karakoram, where it is preserved almost pure among the sturdy peasants of Hunza, somewhat contaminated by Shina amongst their Nagir neighbours across the river, and subject to independent development across the ranges in Yasin, where the peasant people speak what they call Burushaski, though the Khowar-speaking upper classes dub it Werchikwar.[1]

The fact that the structure of Burushaski is utterly non-Indogermanic, non-Semitic, non-Turkish, non-Mongolian, non-anything-known, and that—with the exception of a few Persian-Arabic loan words which have filtered in with the coming of Islam—its vocabulary is entirely its own, awaking no echoes in the mind to aid the memory, makes it a difficult language to tackle. Though British officers have been regularly associated with Hunza and Nagir since 1891, and less regularly for some years before, the only one who had attempted to work on it was that fine old sportsman, Colonel Biddulph—who had published in 1880 twenty-two octavo pages of grammar, our of sentences and texts, and twenty pages of vocabulary. Leitner, of the Educational Department, published a *Hunza and Nagyr Handbook* in 1889, which contains a considerable amount of material in unsystematic form. Both

[1] In the language of Chitral, -wár means "speech" and -ík "the people of a country." Their own language Kho-war is the "speech of the Kho people" and Werch-ik-war "the speech of the Weresh (= Burush) people," the earlier, if not necessarily aboriginal, dwellers in Yasin, at the time of the Chitrali conquests.

GILGIT APPRENTICESHIP

114 these pioneers deserve the greatest credit for their work, and
197 had to wait for forty years to find a successor. They had worked chiefly on the Nagir form of Burushàski, and had not, of course, distinguished the Shina elements in it, and they had to work wholly through interpreters, which accounts for much misunderstanding and inaccuracy. David therefore thought it wiser to start from scratch, as in the case of Shina and Khowar. Here, again, with infinitely greater labour, he amassed texts, notes, and vocabulary.

000 When we eventually bade a sad farewell to Gilgit in 1924 to go "on leave, pending retirement," we were comforted by knowing that we need not relapse into bath-chairs in Cheltenham or Camberley to bewail the good old times, the decay of the British Empire and the shortcomings of the young, nor to shout "koi hai?" to an unresponsive world, but had enough material in manuscript and typescript to keep us happily employed for the rest of our joint lives.

114 Incidentally David had snatched fleeting opportunities to
563 collect also some Wakhi material, though not on the same
197 scale as the other three languages. Wakhi is spoken in the higher levels of Hunza by immigrants from the Afghan territory of Wakhan, who have established themselves at the non-apricot-growing heights—often 10,000 feet and more—which the Hunzukuts proper consider barely habitable. Wakhi is a language of Persian descent, and was of particular interest to DL who, during many years in Persia, had made himself an authority on several unrecorded dialects of Modern Colloquial Persian, and while in Chitral had done what work he could on the Persian dialects of Madaglasht and Badakhshan.

Chapter 3

THE PRACTICAL VALUE OF VERNACULARS

000 It must not be imagined that the value of DL's work on these local languages of Gilgit Agency was merely scientific. His colloquial knowledge of them was turned to advantage every day. As he rode along from stage to stage, the fact that he greeted the villagers in their own tongue instead of Hindustani, and chatted with them about their crops; the fact that even if he used an interpreter in complicated discussions about ownership, inheritance, or water-rights, he was following the petitioner's speech himself and interpolating questions or comments in the vernacular gave pleasure and evoked confidence as well as surprise. In another respect, too, he created a precedent. At the Annual Jalsa in Gilgit it was the custom for the Political Agent to make a speech in English to the assembled chiefs and their retainers, which was then repeated in Hindustani by the Indian Assistant. At his first Durbar a few months after our arrival, DL followed, of course, the usual routine; at the second he made a short speech in Shina; at the third in Khowar; and at the fourth in Burushaski. This last effort came as a complete surprise. David had given much care and thought to the speech, and rehearsed in private with a good informant, but no rumour of it had got about even within the household.

Sitting on the dais behind him I saw with amusement an electric shock go through the Hunza Nagir ranks in the usual place of honour on the right of the large audience: bodies tautened and leaned forward, eyes brightened, faces smiled; there was no mistaking the amazement and delight with which the Burushaski speakers heard their language for the first time on the lips of a white man. Every syllable rang out clearly, every word was followed with rapt attention, and when cere-

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

monies and presentations were over and the Political Agent had ridden off in state, the Mir of Hunza came over to me, radiant, to shake hands and offer congratulations. "Was it all right? Could you really understand?" "Every word and every sentence was perfect," he said, "far better than I or Nagir could have done it, for you know we don't ever attempt public speaking." His sincerity was transparent and his congratulations were presently reinforced by the Mir of Nagir. But the happiest moment of a happy afternoon still awaited me. After greeting the various other chiefs, I mounted as quickly as I might and trotted full speed uphill to the Agency House to see that tea and drinks were all in order for the informal gathering that always followed the Durbar. I rode round to the back verandah and made straight for the pantry to cast a final eye on boiling samovars and trays of cakes. All was well in train, but the place was buzzing with unwonted excitement. All our best servants were Hunza men, and the head-boy, Nazar, came forward, seized and kissed my hand with tears in his eyes: "Mother, dear Mother, we didn't know that it was possible." A chorus of appreciation echoed from the other Hunzukuts, standing respectfully about. This humbler tribute delighted me, I need hardly say, even more than the Mirs', and I noted with pleasure that Nazar's emotion had betrayed him into this unwonted form of affectionate address—little suspecting that the respectful "Mother, dear Mother" of Hunza would one day become so familiar, though never to the point of losing its thrill for me.

. . . . .

When we had settled into our own house at home and at last got books and papers sorted, and a study—woefully small after the spaciousness of Eastern rooms—into working order, the question was where to begin the long task of hammering all this material into shape. It was clear that Burushaski, being far the most difficult and "foreign" of the languages we had been working on, would also be the easiest to forget, and it was wise to set to work while the sounds of it were still fresh in our ears, if by no means fluent on our tongue. Also, it would be the most interesting to the comparative philologist, and

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

000 possibiy when all David's data were available some scholar with a wider range might discover the affinities—if any—with perchance the Munda languages of southern India, which had been driven to the south by the same wedge of invasion as had (by hypothesis) pushed Burushaski up into its remote asylum in the Karakoram; or conceivably with the languages of the Caucasus; or better still, with some hitherto undeciphered language rescued from the dust-heaps of Central Asia by the archaeological zeal of Aurel Stein, Lecoq, or Sven Hedin.

His task would not be easy. For even if Burushaski *had* blood relations surviving anywhere, it had developed in isolation on its own lines for at least five thousand years, and in the absence of any record of its form at any point in that long stretch of time, relationship could not be superficially easy of detection. If there were no history, no literary records, no intermediate language-links, it would be "some" philologist who could now prove the identic origin of *cow* and *beef*, of *quick* and *vivus*, or the kinship between the Gaelic of the Scotch Highlands, the Greek of modern Athens, and the language of Bengal. Anyhow, all this was other people's job; ours the more modest one of throwing the bone for them to blunt their teeth on.

In writing "we" and "our," let me make it clear from the outset that while I was always vividly interested in David's work as he went along, and while I picked up enough of this and that to save his time by acting as amanuensis, I did no serious research of my own. This may seem feeble. To myself in retrospect it does. But I was pretty well occupied with the house and the nursery, with humble questions of clothes and linen, with keeping the "godowns" stocked with fuel, oil, food supplies, and wine, with supervision of the servants, the household accounts, the entertainment of passing travellers, the occasional outbursts of official hospitality entailed by Christmas, the King's Birthday, the Annual Jalsa, with routine family correspondence and business letters of various kinds—the thousand and one distracting but essential jobs which are the natural work of what the Census reports describe as "the unoccupied woman": the mere wife.

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

Chapter 4

AT HOME

THE language material amassed in the four Gilgit years was by no means in such coherent form as to be immediately available for other scholars. The final process of reducing it to order was not less but more laborious than the original collection. In Burushaski alone DL had some hundreds of pages of foolscap type-written texts carefully correlated by reference numbers with the original notebooks from which they had been copied, and in addition eight fat quarto notebooks full of notes in small writing on every imaginable subject. His first task was to make a careful, literal translation of the texts, aided by his own manuscript notes made at the time of recording; the second to work through these and the notes of every sort, card-indexing every word as it occurred with all its inflected forms and the reference to each place of its occurrence. This being done, he was able to begin to work out the grammar. For the paragraphs about the noun, for instance, 1,800 cards had to be taken out, examined, sorted, the results analysed and tabulated till the four gender-like categories and the thirty-eight possible plural forms of Burushaski were reduced to order. The subtle and complicated Burushaski verb eventually revealed its secrets —or the bulk of them—only to an examination of hundreds of cards, each packed full of recorded forms. The commonest and most everyday verbs gave—as every dictionary maker will understand—incomparably more trouble than the rarer ones.

Then the texts had to be edited with the necessary explanatory notes and a key-translation to help the potential student, for whom a free translation in more polished English would be less useful. Finally, the Vocabulary, or Dictionary, had to be drawn up with examples of the uses of the words.

128 The Burushaski material which had been collected in the
[114] leisure of one short year, while DL was continuing work on Shina and Khowar, took four and a half years of steady desk work to prepare for press, and resulted in three stout volumes of 464, 418, and 545 large printed pages. The typing for the printer was, of course, nearly concurrent with the manuscript draft, and when this was completed the next question was to find a publisher.

The prospect looked none too bright, and we gloomily predicted that some German or Russian would anticipate David's work on Burushaski, when an unexpected letter came from Professor Georg Morgenstierne, himself a professional philologist and a pioneer worker amongst Central Asian languages, asking whether DL would care to submit his Burushaski work for consideration by the Norwegian Institutet for Sammenlignende Kulturforskning (Institute for the Study of Comparative Human Culture) with a view to its possible publication by them at their expense. The offer was too generous to refuse. We felt sad, homesick as it were, that Oslo, not Oxford, should stand on the title-page; but if Norway with scientific endowments could face what unendowed English publishers could not, national pride had to give way before the practical consideration that if the work was to be of use to scholars it must first be printed, and if it were not speedily printed it might be anticipated. David therefore gratefully accepted for his Burushaski the honour of a place in the Institute's distinguished series of learned publications. We found later, to our surprise and pleasure, that the Institute having once undertaken a scientific book, undertake also that nothing shall prevent its reaching the right public, and are prepared to send copies to almost *any* person interested enough to want them—a generosity which no ordinary publishing firm could emulate. It will be remembered that when Hooker was bringing out his great *Flora Indica*, his publishers expressly stipulated that no copy was to be given free to anyone who could possibly require the book!

So the typescript went to Oslo in 1931 and work began on the proofs, the reading of which was even more laborious than

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

we had anticipated. In spite of the most generous co-operation 128
of Professor Morgenstierne, many sheets had to be read seven
or eight times, the first two volumes eventually appearing in
1935 with Messrs. Williams & Norgate as the English agents
of the Institute; and the third, the Vocabulary, in 1938.

Chapter 5

A DREAM COMES TRUE

122 THOUGH happily occupied with his other language work, David was pondering sadly on how much Burushaski there was yet to learn; how many questions of custom, beliefs, etc., he had not been able to pursue; how many knotty problems could only be resolved by a visit to Hunza and a study of peasant life on the spot. We toyed with the idea; it haunted us; it lured us. But a military pension in a post-War world, with a daughter still at school, could not by any arithmetical juggling be made to finance a private expedition to the Karakoram. Then luck took a hand. An elderly maiden aunt in Scotland, whose very existence David had almost forgotten, on whom we had no claim and from whom we had no "expectations," came to die, and left a small legacy. Prudence might suggest investing it, but what is the annual income from a couple of hundred pounds, which may at any moment be "converted" into even less? Common sense pointed out that this was not nearly enough for so long and expensive a journey and a lengthy stay. It wasn't. Then luck once more took a hand. One day we read in *The Times* of the new Leverhulme Research Fellowships for advanced workers, who lacked means or opportunity to complete a piece of research already begun. Not for some days did the idea dawn on us that perhaps David might come into the category of possible "fellows."

We pooh-poohed it to each other. The research would need to be on the line of pulverizing atoms, or curing cancer, or curving space, or liquefying air, or adding another span to already useless lives; it could hardly cover research into the speech and life of the Burusho of Hunza. Yet while laughing at the thought that our work could seriously engage the atten-

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

tion of the Leverhulme Trustees, DL decided to lay his 122
programme and his financial problems before them. We could hardly believe our eyes or ears when we found that he was one of the first seventeen fortunate workers to be awarded a fellowship for which there had been four hundred applicants. We wasted some sympathetic philosophizings on the 383, and then began to think. There was a lot to think of.

It would take time to make preliminary arrangements, and while these were going forward DL attended lectures on Anthropology at London University, since clearly the anthropological approach to our task would be the most helpful, though his interest was primarily linguistic. We were both reasonably widely read in the subject, but in Professor Malinowski's lectures and seminars at the London School of Economics he got encouragement and stimulus, as well as new and useful points of view, and made many valuable acquaintances. In the interval various negotiations were proceeding. Would the Government of India permit an ex-Political Officer to return and settle for a year or more unofficially in his successor's bailiwick? Would the present Political Agent have enough faith to raise no objection? Would the Mir of Hunza, firm friend though he had always been, welcome the proceeding? The suggestion was entirely unprecedented. Retired officials do not come back.

> Our sons inherit us, our looks are strange,
> And we should come like ghosts to trouble joy.

Obviously an indiscreet ex-Political Agent might raise all kinds of trouble. Could all these parties be convinced that DL's interests were wholly scientific? Could they believe that he would show tact and detachment enough to cause no disturbance in the happy but always delicate relations between the Mir and his people, the Political Agent and the Mir?

To everybody's credit—not least, perhaps, to the memories of goodwill and understanding that DL had left behind him—Government opposed no objection, while the Mir and the Political Agent, Major Gillan, offered a cordial welcome; but all this varied correspondence took time.

A DREAM COMES TRUE

122 We were grateful for what was ultimately accorded: permission to go at all; to use the Government rest-houses *en route*, subject, of course, to the prior claims of officers travelling on duty; to draw supplies on payment from depots of the Indian Army Service Corps (more familiarly known to us by its original name of the Supply and Transport Department); to bring in kit and equipment duty free. This was a very great deal.

I seem perhaps to be dwelling rather sordidly on money matters, but despite the generosity of the aunt and the Leverhulme, we were going to have to exercise the utmost economy at every step if we were to avoid bankruptcy. A minor deficit we might hope to make good by spartan retrenchment on our return—though our normal way of life left little room for more spartanism—but a major deficit would be a disaster. And the expenses ahead were impossible to estimate.

Chapter 6

EAST AGAIN

We knew, of course, that it would not be possible to ride 114
over the snow passes into Gilgit before June or July, but we had no wish to incur the heat of the Red Sea or the Indian plains in May. We therefore sailed on March 1st (1934), a slack shipping season, for few people return to India just before the hot weather if they can help it. After an uneventful journey out, with an unprecedentedly dull lot of fellow-passengers (or were we ourselves grown old and dull? we didn't feel it. We felt like a pair of school children who had snatched an unexpected holiday and were off on a wild adventure), we found ourselves back in the familiar clammy dampness of Bombay. We made it our first business to pay a courtesy call on the Russian scholar, Professor Ivanow, with whom DL had had correspondence from time to time. We thought of no practical advantage beyond the pleasure of the great man's personal acquaintance. Professor Ivanow is, of course, one of the leading authorities on the doctrines, practices, and literature of Ismailism, the Muslim sect to which the Hunza people belong. But the Hunza peasant would know as little about these esoteric mysteries as the nominal Church of England peasant aboutt he homoousian or filioque controversies or the detail of the Thirty-nine Articles.

It happened, however, that the Professor was in touch with 792
some Hunza people in Bombay, more especially with a small 115
deputation which had just come down—on foot through the winter snows—to pay their respects and their annual "Peter's Pence" to His Highness, the Agha Khan, the spiritual head of the Ismailis, and to them God's vice-regent upon earth, whether his headquarters be Paris or Monte Carlo or the racing stables.

115 racing stables. They came to see us—a cheery, pleasant group of wholesome mountain people—oddly out of place in the lounge of a Bombay hotel. They were naturally eager to get home as quickly and inexpensively as possible, and we were able to annex two. One, Daulat Shah, was willing to act as personal servant and factotum, though untrained in such work and more familiar with plough and spade than artificial European needs. Throughout the whole of our stay in Hunza "Dádo" was our trusty, loyal friend. God bless him! Secondly, a well-educated man of the Wazir's family, distantly related to the humbler, peasant-proprietor Daulat Shah, one Qudrat Ullah Beg, who proved an invaluable language-informant, and worked well for David to the end. He was not capable of the same whole-hearted devotion to us and our affairs as Dádo, and never stirred our affections to the same degree, but his knowledge of Persian and Hindustani was considerable; he could write as well as speak them both, and he possessed an interest in and a knowledge of his own language that proved unique. Under David's tuition he ultimately became in fact a fine philologist, and took the greatest delight in every new revelation about Burushaski that their joint work afforded. He was the kind of man that would have been an ornament to any Oxford Senior Common Room, and like the don of fiction was somewhat conceited, very self-centred, and little use in practical affairs.

It was incredibly cheering—within forty-eight hours of landing in Bombay—to have acquired two Burushaski speakers as travelling companions.

Dádo began his duties at once, took charge of our kit on the railway, and performed such shoe-cleaning, bed-making services as he could, with intelligence and will. Easter Saturday, 1934, saw us driving up the famous poplar avenue into Srinagar, and by teatime next day happily and most comfortably installed on a jolly little boat, aptly called the PAX. It was Easter Sunday, but luckily the Kashmiri does not observe our pagan festivals.

We moored our boat at the side of the main river, well upstream from the picturesque but highly septic city, quite

near the Residency, the European Club, the Post Office, and the major shopping centre—the Band. To get to our boat we had to cross the river in a shapely little shikára, a cross between a punt and a canoe. We drew up alongside and stepped straight in to our drawing-room. 000

Our reach of the river ran roughly east and west, and caught the light of rising and setting sun and the reflections of sky and cloud in the most entrancing way. The left bank was irregularly but amply lined with willows and tall, thin poplars; the right with immense chenars—a particularly lovely type of maple—of untold age; both had barges, native boats, and European houseboats packed tight along them.

Walking down our tiny gangway and climbing a few feet of sandy, muddy beach we were at once in a little willow wood with rough grass underfoot. Going straight through it and up a bank which is the base of a fine row of poplars, we looked out over a sea of bright yellow mustard with occasional willow edges, across the valley to a huge range of glorious mountains, the Pir Panjal, averaging 10,000 to 15,000 feet, the lower half of which took every possible shade of blue, violet, and purple while the top half was still covered in snow. Close behind us in the other direction were small mountains (only 8,000 to 9,000 feet!), bare, rugged and seamed, drenched in the loveliest, ever-changing colours; these foothills screened from us the giant Karakoram.

We had some months to put in before the passes would be open, but we were able to live more economically than at home, and with our two Burusho retainers housed on the cook-boat next door we were able to work our fill—and did. After the fatigue of the last months at home, anthropologizing, buying equipment (cameras, exposure meter, cine-cam, etc.), packing kit, clearing the house for our tenants, and so forth, the peaceful Jhelum days and all the beauty round us gave us a deserved and needed rest. We were on occasion hospitably entertained by Colonel Lang, the British Resident in Kashmir, and Mrs. Lang, and by Colonel Colvin, the Maharajah's Prime Minister, and by an old friend of Gilgit days, Captain Wreford, now Food Controller for the Kashmir Valley, and his wife.

Chapter 7

HALT IN KASHMIR

BEFORE leaving home I had with some temerity approached *The Times* to ask whether I could perhaps, if opportunity offered, act as their amateur correspondent during our travels. I was met with the greatest kindness and courtesy, given some hints as to what sort of articles or news might prove acceptable, and provided, to my amused elation, with "cable facilities" for occasional use. This gave me a right—or at any rate the shadow of a right—to introduce myself to various departments and officials, whom as a private individual I should have hesitated to molest, and added greatly to the interest of our enforced halt. Colonel Millar, of the I.M.S., the Principal Medical Officer in Kashmir, allowed me access to his files, and demonstrated the immense progress that has of late been made in securing a trustworthy supply of drinking water for the city, in introducing vaccination, combating epidemics, fighting tuberculosis and venereal disease—a record of which the State has every reason to be proud.

Captain Wreford most generously gave a whole forenoon to showing us over his Food Control Department, and allowed us to wander at any time through the gardens and take photographs at will.

A visit to the State granaries was a most refreshing experience. Forty great containers, each capable of holding close on four hundred tons, are dotted about in an ex-royal garden with grass walks and stately trees and rows of willows. They are built of local wood, to a locally evolved design, by local workmen, and fit into the landscape as no ferro-concrete silos could. So perfect are the arrangements for turnover of stocks, extermination of vermin, etc., that the total loss from all causes is

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

less than two-thirds of one per cent. With further grain stores in the city, the department is able to hold stores of over twenty-two thousand tons, which amply guarantee the valley against fear of famine, and help to stabilize general prices in times of scarcity.

With Sir Ivo Elliott, the inspiring spirit of the new Kashmir Constitution, we enjoyed motor drives to places of interest in the Kashmir Valley, which we had not been able to visit on previous fleeting visits to Srinagar, and which without his hospitable car would have been beyond our range.

In striking contrast to India, Kashmir has been jealous of her past and diligent in recording it, and the historian has stores of native material for the basis of his research. The early Hindu dynasties who held sway until the middle of the fourteenth century left their records not only on the written page but in magnificent stone temples, which not all the iconoclastic zeal of their Muhammadan successors was able wholly to blot out. There remain lovely ruins of cut limestone, dating from the third to the eighth century, to demonstrate that the ancient Kashmiris fully deserved the name by which the Indians knew them—"The Architects." Their architecture is their own, entirely distinct from the Buddhist and Hindu architecture of India, and to a Western eye no less impressive and incomparably more beautiful. It owes to Greek influence its pediments, its fluted columns with base and shaft and capital—learnt, probably, from the Bactrian Greeks of Kábul. The priceless possession of plentiful timber, as well as stone, permitted the Kashmiris to adapt Greek forms to Buddhist and Hindu ritual and to a climate of winter rain and snow. Their pillars were spaced farther apart than the Greek, their pediments pitched higher and their temples crowned with pyramidal roofs tapering to a single lotus blossom, while the interior walls were enriched with deep reliefs. Here their multifarious deities were depicted: the three-faced, eight-armed Vishnu, the river goddess Ganga with her crocodile and the rest, along with many real-life figures of lovers in balconies, ascetics, huntsmen, and dancing-girls, many rich designs of bird and beast and flower, interwoven with geo-

000 metric patterns of great intricacy and beauty. Much excavation and restoration has been done under the direction of Sir John Marshall and his worthy Kashmir disciple, Mr. Ram Chandra Kak, author of *The Ancient Monuments of Kashmir*. The best preserved of these stone temples are at Awantipura and Martand, both within easy motoring distance of Srinagar.

Mr. Kak's excavations of the site of Herwán have brought to light another style of Buddhist architecture immensely more primitive and yet apparently contemporary with the dressed-stone buildings of Martand. These are temples whose mud walls are beautifully faced with a diaper of pebbles, or of smooth boulder slabs framed in a setting of pebbles and small stones, their floors paved with self-coloured baked tiles bearing interesting reliefs and arranged in ingenious mosaic designs. India has, as yet, shown no other examples of this primitive yet beautiful building.

These refreshing distractions only added zest to the steady slogging at Burushaski. As time drew on we had to give more and more attention to preparation for our long ride to Hunza, the repacking of our kit in mule-trunks and small cases for pack transport, the purchase of saddles and camp gear of every sort, and homespun clothes for ourselves on the road.

My own riding outfit required some thought. I had come out to the East in 1911 with an expensive regulation side-saddle and habit which I never wore, and which, of course, had to be scrapped when we started on our 350-mile ride to Kerman fron the coast at Bandar Abbas. I had then substituted for it a dirzi-made divided riding skirt of the length and fullness that in 1912 seemed "suitable for a lady" when the mere idea of riding astride (the only non-suicidal thing to do) was a sufficiently dashing innovation. By 1920 women's fashions had become saner, and I adopted riding breeches like David's, with brogues and puttees and a Norfolk jacket for everyday, and smart riding boots and long, well-fitting white coat and white breeches for more ceremonial occasions. I rather fancied myself in this gear in 1920. But regretfully studying in the glass the more matronly figure of 1934, I decided to revert to the divided skirt (of more rational length and width than

1912's), and the capacious pockets of a Norfolk jacket. I had no reason to regret this. It proved an eminently practical and comfortable get-up, yet neither unsightly nor unseemly (at least so I imagined).

As always, we laid in a stock of Kashmir *chapplis*, well-fitting sandals with soft leather socks ankle-high, and well-nailed soles. These are safer and more serviceable for walking than any European shoe. The inner sock fits snugly and keeps out sand and pebbles, and when these creep in above the sandal sole they are easily ejected by gestures of the toes.

As the road to Hunza has rest-houses at convenient stages (which we had official permission to use) we were saved the necessity of carrying tents.

Chapter 8

OFF AT LAST

MINDFUL of age and infirmity we knew that we must not attempt the passes till they could be *ridden* over. As June approached, with their official "opening," due on the 15th, we made such enquiries as were possible from occasional down-coming travellers. Their reports were not reassuring. There had been an abnormal late snowfall, and the passes would be slow to clear. My *Times* cabling had introduced me to the kind-hearted and obliging telegraph master, and he promised to keep us informed. One day we heard with joy that he had learned by telephone from Minimarg (the last telegraph station on the Kashmir side of the Burzil) that the pass was entirely clear of snow on the southern side.

We paid off our Kashmiri cook and boatmen, who, being over-paid and over-tipped, characteristically bade us a surly and injured good-bye. The better friends you are with a Kashmir servant, the more generously you treat him, the more he regrets on parting that he has omitted to squeeze more out of you. It is a well known but unlovable trait, and does the Kashmiri less than justice, for he is essentially a kindly, willing, even affectionate fellow, and these grudging farewells spoil your kindly thoughts of him. They mean nothing, however; he greets your return with radiant face.

We mobilized and started in the highest spirits on June 12th, comparing with amusement and no regret the very modest houseboat that bore us down the Jhelum and across the Wular Lake with the more sumptuous barges that the Political Agent of other days had commanded. We even welcomed the lesser luxury as proclaiming to ourselves and others our complete freedom from the ties of officialdom.

OFF AT LAST

000 At the other side of the Lake—growing less attractive with each year as its water surface shrinks and its mud-flats extend—we found our flock of pack animals awaiting us, and spent the night as the guests of Major Rice, of the I.A.S.C., in his bungalow at Sonawain, a couple of miles above the landing-place at Bandipur. He had already shown us much thoughtful kindness in Srinagar by placing a large storeroom in his depot at our disposal for the re-packing and assembling of our kit; cameras, photographic supplies; typewriters and eighteen months' stationery; reference books and lighter literature; carpenter's tools; Aladdin lamps; first-aid requisites, and all sorts of odds and ends that experience had taught us would be worth gold three hundred miles from shops; and, of course, the usual kitchen and pantry paraphernalia. Our own personal kit was a minimum, though we could not leave evening and "Sunday" clothes behind, as we should have liked to do, since we might have to turn out on occasion as civilized folk. Luxury stores, such as tinned meat, fruit, and vegetables, wines, or spirits, we took none: our only alcohol was one bottle of cognac for medical emergency. When emergency came we both forgot to use it, and David eventually drank it by thimblefuls out of a measuring glass (since we had no wine-glasses) during the last fortnight in Hunza to avoid the bother of re-packing it. We had always eschewed the use of tinned foods ourselves, though in official days we had had to keep goodly store of them, as of wines, for entertaining. So our "Europe stores" were confined to soap and baking powder, tea, coffee, and Quaker Oats, a little cornflour and arrowroot, and a few pots of marmalade, with some tinned milk and butter for the road.

We owed to Major Rice the supply of transport animals and all arrangements for their due payment in the regulation instalments. His kindness greatly simplified our upward journey as far as Gilgit.

Kashmir had been warming up; we had been painfully toasted in the sun-facing parlour on the boat coming down river, so we were not sorry to leave behind the sun-baked

flats of Bandipur and climb through scented pine-woods towards the Tragbal rest-house, some 6,000 feet above the lake. It was a glorious day of radiant sun as we mounted to begin the 200-mile preliminary ride to Gilgit, and it was a delight to feel a horse between the knees again. Looking back as we breasted the hillside we could see the whole fertile Kashmir plain outspread below us like a patchwork quilt in pastel colourings, silver-seamed by innumerable waterways, and dotted by dark green clumps of the magnificent chenár trees that Kashmir owes to her Mughal conquerors.

All the far horizon was enclosed by the jagged, snow-clad peaks of the Pír Panjál, the mighty range that separates Kashmir from the torrid plains of the Punjab. This middle and further distance formed a delicate study in water-colour under a pale blue sky, while the immediate foreground was a contrast in strong oils: spur after spur of pine-fledged ridges plunging abruptly into the plain like giant cliffs guarding a wide sea-coast.

Next day we rode up and ever upwards, still through pine forest, till we emerged on the great exposed plateau of the Tragbal itself, commanding a matchless panorama to north and west and east, of crowded snow-crowned peaks, conspicuous amongst them the sharp twin teeth of Haramuk on our right, and far ahead, beckoning us on, the glorious mass of Nanga Parbat.

Even on such a perfect summer day it was easy to realize how deadly this wide smooth plateau can be to bewildered travellers in mist or driving snow.

A long, slow descent—the first mile or two through unpleasant stretches of half-melted, slushy snow which our ponies emphatically did not like, then over easy grassy slopes—led us through forest to the wooded banks of the river, where our next rest-house nestled amongst pines at the junction of two mountain torrents.

Soon after us some of the caravan got in, and we looked forward eagerly to lunch—breakfast seemed to belong to a distant past—but still no sign of Shafi (the cook). We got hungrier and hungrier, and I began to be afraid that he had

sprained his ankle and David that some accident had happened to the balance of the kit. This seemed improbable, for it was as easy a stretch of road as we were ever likely to see. Presently Shafi came hurrying in on foot (happily unharmed) thinking of dinner—for lunch-time was long since past. He brought gloomy news. The ponymen had let their ponies cluster too close to drink at one of the little streams that crossed the track; two started a scrap, and one had contrived to fling his double load spinning down a steep hillside. Both boxes were smashed to smithereens, and Shafi had dutifully stayed behind to see that the men retrieved as much as they could of the scattered contents. We were not far ahead when it happened, and—oh!—if they had only called us back to superintend the salvage! The worst loss was one of the two new Coronas. It was spewed out from the nest of cushions and eiderdowns into which I had so carefully lashed it, out of its own travelling case, and smashed into three independent bits, with all its delicate arms and legs twisted and bent—a sorry sight. As well as this, all our precious stationery for a year and a half was scattered over half a mile of hill. Picture ten thousand index slips of different colours, ten reams of typing paper, boxes of carbon paper, dozens of file-covers and folders, quires of blotting paper, a ream of "shelf paper" for scribbling, envelopes of every sort and size, and two dozen nice large different-coloured note books and as many little ones, luggage labels, pins, paper clips, rubber bands—all scattered sheet by sheet and pin by pin like the track of an insane giant's paper-chase. It must have looked quite funny though we might not have seen the jest. To improve matters there came a heavy thunder shower to drench the mess. The poor ponymen, full of contrition over an inexcusable piece of carelessness, gathered up everything—including, alas! twelve unrolled typing ribbons—higgledy-piddledy into handkerchiefs, blankets, saddlecloths, and whatnot, and presently brought in these dripping bundles. It was inky dark; there was nothing to be done that night unless we had buried it darkly with a lantern dimly burning—as we should have liked to do. We went to bed and bitterly thought of the morrow. Just as we had got into a mournful

sleep one end of David's wooden *charpai* collapsed, and he spent the rest of that ill-omened night upon the floor.

Next day took us through the loveliest stretch of river and wooded hill country that even the Kishengunga can boast, and we gave ourselves up to the delight of the day's march. Happily a day's halt was due in Gurés. The rest-house is extra roomy, designed to house two parties at need; there was no one else there, so we had plenty of space. We got all the damp stuff dumped in a wide, sheltered verandah and started opening the unappetizing bundles. It was a grim sight.

We roughly sorted note books from papers, and papers from envelopes, etc., and carried bundles in and spread them on big kitchen tables (part of the most valuable equipment of every rest-house) and roughly wiped off the worst of the most obvious mud, and then spread things out on the grass to dry. Happily there are large rough lawns around the house, and by great luck there was no wind. We toiled all that afternoon till sunset; then carted everything into a big room and lit a fire and went on. Early next morning (the day that was to have been a rest) we were at it again—wiping, sorting, spreading, gathering, tying up and smoothing out—it was quite the dismallest and most fatiguing eighteen hours' work I have ever done at a stretch. You can't conceive how much ink lives in twelve typing ribbons, nor how much dye in the cover of a note book, nor how much gum in the flap of a manila envelope, nor how many sheets are in a ream, nor how many slips to a thousand till you have tried a job like this. Dádo and the others helped all they could, and we despatched a couple of ponymen to see whether they could anywhere raise a couple of packing-cases. There were none in Gurés, but seven miles ahead there was an S. and T. depot (why placed so far from where any traveller could want it, we never discovered), and after many formalities and the signing of documents and a promise to hand the boxes back to the depot in Gilgit, we succeeded in procuring four dirty, smelly kerosene oil cases without lids, which after some work with saw and hammer served well enough to pack the revolting stuff into as it was ready. How disgusting it looked I cannot tell you. All the file covers were

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

000 cobbled and distorted; all the smart note-books had their covers smeared, defaced, and bent; every single sheet of every one was smudged with ink or grass or mud or dye or gum or a mixture of them all; every sheet of paper, every index slip the same; the flap of every envelope was firmly stuck on to something else; almost everything would after a fashion be useable and must be used, for it would take too long to replace them from home. But to think of taking all our notes and writing all our writes on this revolting paper! However, it might have been much worse; it might have been the cameras and chemicals. On the other hand, if these precious ponymen could do this in the easy Kashmir country, what might they not do on the precipitous cliff roads ahead!

We cabled for typewriter ribbons and went to bed with aching backs and legs and hearts.

The next march was a short one to the hillside bungalow at Peshwari. We halted there a day to let the animals graze and to rest ourselves. The jolly little bungalow, clinging to the hillside above the Burzil river, was haunted more than any of the others we had passed, by memories of baby—in particular of her arrival there one pouring afternoon. The Willesden canvas cover of her doolie that should have completely sheltered her, had begun to leak in places, and as the willing coolies rushed the cradle up the last steep bit of hill we noticed that the faithful Alipo, who had voluntarily marched beside it every foot of the way from Bandipur, had stripped off his own homespun cloak and flung it over to keep Missie Baba dry. Good, smiling Alipo, wet to the skin! We could see him vividly again, and we gratefully remembered.

To-day there was no rain. It was the first time we had ever seen Peshwari without, and a very pleasant little spot it is in sunshine. Peasants were ploughing tiny fields below us, the grass of the slopes above was lit with big blue cranesbill, Siberian wallflower, hellebore, and spikes of blue larkspur, and a lovely yellow "weed" with flowers in feathery balls, over which armies of butterflies were hovering: tortoiseshells, painted ladies, half a dozen kinds of fritillaries and tiny blues, and one magnificent pair of swallowtails. We spent a happy,

OFF AT LAST

lazy day, strolling out to get a few photographs of this lower section of the Burzil Valley in the intervals of working at Gurezi Shina. The hillsides on our bank of the river were wholly bare of trees but covered with rich grass and grazing herds, while on the steeper-faced cliffs opposite us triangular masses of spruce and pine rushed uphill, vertically striped by pencil lines of muddy waterfalls.

As we rose and rose during the next day's march, through scenery that grew bleaker and wilder at every step, as we noticed the snows above us creeping lower and nearer, and as we saw the lines of fretful waterfalls now paralysed into silent impotence, our faith in the telephonist from Minimarg grew every moment less. We saw the village itself lying across the river in a bay of valley to our right, just below the present snow, magnificent snowpeaks towering over it; we turned the last corner and high above us saw the snow stretching right down to the last rest-house some 2,500 feet below the pass.

This was a blow. Pensively we climbed the steep hill to the bungalow of Burzil Chauki. The last half mile was soft and soppy, alive with water and carpeted thick with short-stalked primulas, mauve, purple, white, and glorious pink, masses of a starry waterflower like a huge white king-cup, quaint little bushes with yellow feathery tufts, and a thousand other lovely things only a botanist could name. There could be no waiting for the pass to clear; it would be a matter of weeks, and on these journeys you hope at such uninhabited stages to find at most one day's supply of fuel and fodder. The *chaukidár* (caretaker) agreed that by day the sun would make the snow impossible: there was nothing for it but to cross by night.

Chapter 9

ENTERING THE GILGIT AGENCY

CHILLUM CHAUKI
June 22, 1934

AT this point the two passes were safely behind us, and we had had amazing luck in having perfect weather for both. Anxiety had haunted me about them before we left home in the early hours of many a morning (when it is very hard to be a hero). I greatly feared that DL might crock on one of these passes and I be helpless to get help in time, or that I might crock and be a nuisance to him. Those spectres were now laid. We were over, and, though stiff and tired, apparently not a penny the worse. We were pleased to find in Kashmir that we were still able to fling a leg over our ponies (small pack animals only, not the officers' chargers of earlier days), and that the height of the Tragbal (close on 12,000 feet) didn't worry either of us. In fact, we had never trekked together in better spirits than those first days. The scenery and the smell of the sun-drenched pines were glorious. We were thankful to get away at last from Srinagar and the cramped quarters of the houseboat, and barring the accident to the stationery the journey to Burzil Chauki at the foot of the pass was leisurely and uneventful, but as I have explained, our "intelligence department" had failed us badly.

We had pushed on in good faith that we should be able to ride to the top of the Burzil Pass. We both admitted that it was unlikely that we could, either of us, *climb* at any altitude, and we had sat patiently two and a half months in Srinagar to avoid all risk of having to do it. At Peshwari we were passed by a cheery young couple, Wing Commander and Mrs. Somethingorother, who had been up for three weeks' shoot-

2: Lorimer T-3 (1929-4; 1934-5) 1939 AV7 Burushe AV7

ing; they reported an abnormal amount of snow which was walkable only, and walkable only by night. There would, however, be a good moon from sunset till one-thirty.

After a picnic lunch at Burzil Chauki (11,100 feet) we consulted with the ponymen. They averred, quite truly, that the snow would be too soft till after midnight—so the precious moon was a washout. We agreed to start at twelve, and turned in to get what prophylactic sleep we could—which was little: partly height, partly uncertainty about the coming adventure. The caretaker of the rest-house assured us that there was a well-trodden riding track to the top, 13,775 feet according to one, 13,900 feet according to another reckoning. At ten-thirty we dined—or breakfasted?—and dear Shafi, instead of giving us plain hen and potatoes, outdid himself to produce a three-course meal, adding soup flavoured with rancid fat and birch-wood smoke, and finishing with "fritters" of dried apricots, fried in the same rancid grease, followed by gritty, smoked coffee. He meant kindly, and we did our best to do justice to his intentions, but we mounted our ponies with heavy tummies and some foreboding.

What moon remained had disappeared behind the mountains. Steep above us rose two fine snow peaks on the top of which squatted respectively the Great Bear and Cassiopeia, both looking oddly hunched up and accessible. In the snow-filled trough between lay our Pass, out of sight to the left, some 2,600 feet above and about six miles distant by the normal, well-graded, zigzag road, which we had ridden four times before in perfect comfort, but which was now smothered in snow and indiscernible. It was a beautiful, clear night with heaps of stars; our valley was darkened by the moon's shadow, and brightened only by the faintly starlit snow. Dádo led off on foot with a lantern, which it is true revealed immediate pitfalls but was otherwise nothing but a blinding nuisance. We followed on horseback, and behind came Qudrat Ullah leading Dádo's pony. A specially engaged "tiffin-coolie" carried two ferrostats of tea and a basket of sandwiches for future use. The laden caravan was to follow, lit by the remaining lanterns.

We zigzagged comfortably for about 200 feet, then all trace

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

000 of track disappeared and there was nothing but a wilderness of steep snow slopes. The ponies refused to set hoof on the untrodden snow as long as we were on their backs. You couldn't blame them; the extra ten or twelve stone made all the difference to their feet going through—into what?—and they took the safety first line. So we set out on foot. We had nail-studded *chapplis*, and each a long staff with an iron point.

Dádo, of course, is mountain bred; and DL, without being a mountaineer, had always loved mountain sides and heights and spent leave big game shooting in Tibet. He had at least the memory of the right muscles in his legs and the right wind in his lungs. But in my lady-like Victorian childhood the mildest exercise was enough for any girl, and never in my absurd life, overfilled with futile examinations, had I walked ten miles at a stretch or climbed 1,000 feet even at sea-level. Anyhow, whatever we had once been able for, we were both out of training and getting on in years. The others led on silently, and I followed carefully—even I silent for once—learning to prod my stick horizontally into the snow slope beside me. It was all rather thrilling and romantic.

The lantern only obscured larger issues, so we banished it behind us, while David and the hill-wise Hunzukuts chose routes and slopes keeping an eye on the general direction. It would have been easy to climb futilely up and down and reach an impasse every time. Now we swung left to avoid too steep a rise, now hastily veered right to escape an involuntary slide down unseen slopes at the base of which we could hear the torrent crashing below its crust of ice and snow. You would have been sure of an icy bath and a dislocated or broken limb. Woefully soon my wind gave out and I had to stop and blow. The slopes were about 65 degrees, and you could lean almost upright against them. The heat of my body would melt the snow under me, which then refroze, so I had always to tug myself free, wondering with amusement whether each stage of my progress would be marked by little tufts of fair-isle wool. David was unspeakably patient with me, urging me to go slow and take my time, and assuring me, in answer to gasping apologies, that the compulsory halts were equally necessary

for him (which was only partially true, for his early training was standing him in good stead).

So on we plodded, my halts getting longer and more frequent. It was the queerest experience. You felt quite active and vigorous when suddenly every muscle and sinew turned into vermicelli, your head got a centrifugal whirl inside it as if your skull and eyes and eardrums might fly up at any moment to join Cassiopeia and the Pleiades, and a deadly sea-sickness took hold. No amount of resolution could induce another step and you had to flop again against the sloping snow. Then for a second or two you felt as if you could never move again, while your body heaved involuntarily from head to foot with the deepest deep-sea breathing I have ever known. I could feel the wind whizzing in under my toe-nails. After a bit your head eased up and you could deep-breathe less violently, but still leaned paralysed till quite suddenly your muscles braced again and you set out full of new hope and vigour, only to collapse once more a few yards on. This effect of altitude was interesting and by no means wholly unpleasant; relapsing half vertically against the gentle snow, there came a delicious sense of powerlessness and utter, abandoned weariness, like the onset of a pleasing anaesthetic. At those instants I should have asked nothing better of life than in an ecstasy of self-surrender "to cease upon the midnight with no pain."

My mind restlessly toyed with relevant and irrelevant quotations from the poets (do other people, I always wonder, keep a first-aid outfit of this kind with them?)—"My eyes are closing and my lute is dumb, slower and slower go my songs to sleep—Geometria una et aeterna est in mente Dei refulgens—Because he finds his egg contain, green, hungry, horrible and plain, an infant crocodile—De l'enfer il ne sort que l'éternelle soif de l'impossible mort—For the wind has blown into my body and blown away my soul . . . in the pine-trees' top and dallies with the wind and scorns the sun—Der Dichtung Schleier aus der Hand der Wahrheit—and perchance the coming night is full of stars—Heureux ceux qui n'ont jamais vu la fumée des fêtes de l'étranger—and God have pity on the sadder folk who travail without hope—sie zu verscheuchen hab'

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

ich dann gepfiffen die frechen Reime eines Spottgedichts . . . —forest-tribute, sombre sightly"—miles and miles of forgotten poetry reeled through my head. I battled with the all too vivid memory of Shafi's fritters; I laughed inwardly (having no wind to spare for outward laughter) to think of starting mountain climbing at fifty plus; I wondered with a quiet chuckle whether David would have the nerve and wisdom to slide a vacated body down the hill and let Nature deal with it; I knew that even if he had the sense he couldn't do it before witnesses, and the thought of cumbering him at such a moment with an unmannerly, unhandsome corpse revived my will; I thanked whatever gods there be for his unconquerable soul.

The coolness of the air was like a draught of icy water on a hot-weather day. When after laboured gasping you were again able quietly to breathe your fill, there came an intoxication unlike any other delight I have ever known. David would constantly offer a hand to pull me upright or an arm to help me on; each time I gratefully refused it; reckoning that he might need all his own strength to reach the top. I could not, however, prevent his plunging his long alpenstock into the snow below my feet and standing guard for fear of an accidental skid.

At first an alluring boulder projecting from the snow occasionally tempted me to choose it for a prop, but as I took a step towards its reassuring firmness I plunged shoulder deep in softened snow. I was so green as not to know that the heat accumulated in the stone by day would have half melted the snow beside it! One lives and learns.

By day the melting snow had cut deep furrows for itself, whose ridges were as sharp as the teeth of a giant comb. Their graceful sweeps followed the curves of the mountain side as the natural waves of a woman's hair follow the lines of her head (a fact the "perm" forgets—a murrain on it!), but they flowed at an angle to our course and made progress infinitely laborious. These little trenches, only perhaps a foot across and eight inches deep or so, which any intelligent beast stepping from crest to crest could have negotiated easily, put the wind up our ponies, who gathered their four feet together—

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

like the chamois, in sudden short spasms on the brink of deep chasms—then leapt as if competing in a steeplechase and landed plunging and frantic in the bottom of the next trough. At one point of these winter sports Dádo's pony escaped from Qudrat Ullah, and an anxious hide and seek in the dark followed till he was recaptured.

About three-quarters up we gleefully recognized the mail-runners' shelter—a tiny hut that projects on wooden stilts above the 40 feet of winter snow and looks so otiose in summer time. Its legs were still buried knee deep in snow.

Inch by inch we crept up till we were within a couple of hundred feet of the top, and I was very, very near the end of my tether. Suddenly the rise grew extra steep again. If we had had to do it unaided (except by the poets) at my then rate of progress, we should be there still. By great good luck the snow here was harder and the slope straighter, and we struck a snow furrow running for once in the right direction. A reluctant pony was induced to walk in the inconvenient narrow trough; kind hands boosted me into the saddle and towed me to the top. So with bumps and jerks and springs and plunges I thankfully and ungallantly rode the remaining feet. Just then a dazzling star showed above a bend in the mountain to our right; I gasped out a query as to what planet it could be. David said it was the Morning Star, and right enough there was a slight glow all round, not coming, as for a moment I had thought, solely from the star. For the next few minutes you were conscious not so much of the coming of light as of the silent, mysterious disappearance of the stars. Then dawn crept on, and just as we landed on the brow of the Pass a first streak of gold caught the highest crests of the white-grey snow, and one tiny pipe of one tiny bird greeted the double event. The three direct miles had taken us just five long hours.

We jerked onwards to the four-roomed shelter that crowns the Pass and sat down in the verandah. It was dirty enough, but inside was unspeakable. I don't suppose it is ever cleaned, and generations of weary beasts, including man, have refuged there. Though cold, the night was windless and not bitter. Eight feet of snow lay round the shabby, welcome hut. The

sun's daytime heat echoing from the walls (a phenomenon I now thoroughly understood) had melted a wide, steep-sided moat all round it, and it stood there in comic isolation. The prudent Hunzukuts had brought some wood and invited us to a blazing fire. It was eminently cheering, but as we were well clad and warm and they had only cotton trousers—in spite of a generous gift of rupees "to buy warm clothes," which we suspect they had spent on gaudy rubbish!—we presently withdrew and called them in to cluster round it. I noticed with pride in them that they called the Kashmir sweeper to come and share the warmth. To the true Muslim, not contaminated (as so many Indians are) by Hindu caste-prejudice, all believers are men and brethren, whatever their occupation. It warmed my heart to see Sheikha, as they called him, treated as an equal and a friend.

So we sat awhile, paralysed with weariness, but happy and glad to be alive, and watched the gold creep down the peaks, and lovely lights and shadows flow across the basin of snow in which we sat. We saw our bird, who was neither a phoenix nor a simurgh as he should have been, but an impish, dingy, indomitable Cockney sparrow. I swear it was a sparrow. David had other theories, but could not supply a name. Anyhow it was the only bird in sight. Then we got up and tried to photograph the unforgettably lovely scene; but we could make no guess as to what exposure would record the grey, the white, the gold, the pale blue of the sky, and the meter was in a knapsack miles away. We lingered perhaps an hour, till the growing light, welcome as it was—for the relief from the impotence of darkness was very great—reminded us of snows softening below us and the thirteen miles that still separated us from Chillum.

The sandwich-coolie offered us his wares at the top, but we were too dead weary to eat just then, and waved him on: "Not just now; a little later." The caravan came up and toiled bravely past us, not daring to halt, and presently we started the descent. It was too steep to ride, but now gravity (pace Einstein) was with us, and we stepped out manfully. Soon we passed from softening snow into a welter of treacherous

slush and marsh and mud, and by the time we reached dry land again the sun was fiercely hot. We called for a little food, but the tiffin-coolie (despite the most explicit instructions) had streaked on and we found him innocently waiting for us at the next rest-house! We felt not only hungry but ashamed that our excellent *bandobast* had broken down. Only very inexperienced travellers incur unnecessary starvation. We peeled our outer wrappings, which were many and various, but we could not so easily rid ourselves of more intimate woollies, and that last seven miles was as hot a ride as I remember.

The triumph of that memorable night was wholly David's, for he had not only done the climb himself but by silent moral suasion enabled me to do it too. The joke was, of course, that our mighty feat would have been nothing to younger folk in training—a fact to which we were fully alive, but it was a feat we had very definitely done our best to avoid performing. The weather had been perfect. In wind or mist or driving snow there would have been a different tale to tell—and we should not have been the tellers.

Beyond being full of half a hundred aches and rather off our grub and off our sleep, with heads still somewhat dazed and buzzy, we did not seem seriously the worse. Neither of us would willingly have missed that Morning Star, that dawn, that piping sparrow, nor I my first experience of mountain sickness. Though I now it was not the height but Shah's meal of grease and birch-wood smoke that accounted for my nausea.

Chapter 10

TOWARDS GILGIT

AFTER the fertility of the wooded and grassy Kashmir valleys, the bleak grandeur of the first Gilgit marches, familiar though it was, was finely impressive. Chillum rest-house looks out over a great delta of grey high-piled boulders, flowing down from the Burzil, with a few storm-tormented birches sparsely scattered on the rocky mountain sides. Gradually you descend with the waters. The rare villages are built still somewhat in the Kashmir style, mainly of logs plundered from the rare pines, but already their lower walls are stone. The landscape grows in patches more genial, where pine and fir succeed to birch.

The women in their tiny terraced fields—which seem at this height to grow only barley and broad beans—wear woollen bonnets like a cloth bag with brass ornaments at the back, and in front Salvation Army peaks with a row of brass circles along their upper edge.

About five miles beyond Godai we came to a lovely well-remembered village with a real polo ground, levelled and well cared for, shaded by rows of tall, spreading poplars (the kind that do spread). Where every inch of levellable ground is priceless, it is touching to see, as from now on you do, the best piece always set aside for polo; no English heart can resist this silent appeal. From here we knew we must look for our first full peep at Nanga Parbat above the bleak and barren foreground hills. And there in fact she was, but before cameras could be snatched from knapsacks she had swathed herself, as she loves to do, in veils of flying cloud.

Soon after, you turn almost at right angles into the Astor Valley, and the crystal clear waters of the Burzil-Chillum

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

torrent are cut across by the muddy flood of the Rupal Nullah and bringing the drainage from the northern glaciers of Nanga. The two unite to form the wild, mud-laden Astor River, flowing between steep earthen cliffs. Gurikot is a beautiful and large oasis, the more lovely for the arid desolation round: some miles of poplars, walnuts, willows, and fields of barley, wheat, and beans, the two latter sown and reaped together.

The next two marches are tiring, for the road dips from its average level of 9,000 feet or so right down to the river-bed many hundreds of feet below, where glorious stretches of tamarisk-bearing sand invite a lovely canter (if you have a beast that isn't a pack pony), and laboriously up again. The picturesque village of Dashkin, perched on a crag, bears an unenviable reputation for leprosy, and its rest-house is invariably (in our experience) stiff with flies. After it, came a well-remembered mile or two through a belt of shady, scented pine forest, the last glimpse of natural vegetation we were to see for many a day, and we were out again on the bare mountain side. From the crest 10,000 feet or so which towers above Doian—a tiny settlement of small fields, clinging incredibly to precipitous rocks 2,000 feet below—we looked down into the utter and unredeemed desolation of the Indus Valley. It is the most awe-inspiring view I know, and reduces man to his true stature of a fidgety intrusive insect.

Immense mountains in every direction fold, project, retreat, hemming in the plain below, their browns and chromes, sepias and khakis indistinguishable from the colours of the boulder-strewn sands of the plain, and these again from the muddy flood of the Indus between the railway-cutting of its barren banks. And for all the miles the eye can see from this lofty eyrie, there is not one blade of grass, not one tree, not one human habitation, no sign of man or beast or bird. The only touch of hope is the line of jagged snow peaks in the far distance, whose tips contrive to peep over the dun-coloured nearer mountains. Without map and compass-bearings we could not distinguish which was Rakaposhi, which Haramosh, and which the guardian peaks of Hunza.

At the tiny Doian rest-house we met Major and Mrs. Gillan

on their way down to Kashmir. He was the outgoing Political Agent, and we owed it to his non-obstructiveness that we had obtained the Government of India's consent to our coming. They hospitably gave us tea and dinner, and we then retired to bed to snatch a few hours' sleep before another midnight start. By all that was unlucky, having had unexpectedly late snow on the Burzil, we were now plunging into a record heat-wave. The Fates clearly do not approve of *revenants*! A mile or so beyond the Ram Ghat defile the road crosses the Devil's Gorge, and the bridge across it had been carried away some years before, so that travellers have to make a long detour up the rocky sides of the ravine to find a possible ford. The torrent was now in full spate under the late June suns, and could only be attempted—with luck—at dawn, when the stream after the coolness of the night would be at its minimum. Hence we had to brace ourselves for another midnight start. The air of the Doian heights was deliciously bracing and cold, but the 4,000 feet drop of the next march would land us in the stifling heat of the Indus Valley. If you could sail down on a tea tray it would not be more than three miles to river level, but the graded road is full ten miles, now interminably criss-crossing the steep face of the Hattu Pir, where it seems impossible that a road should cling (and in fact it often slithers quietly downhill and has to be coaxed into place again), now along a rock-shelf where the left cliff almost overhangs the track and the right falls sheer 800 feet into the river below. The fact that you hear no murmur from the full, raging torrent at the bottom adds awe to the sense of height. Then another endless, precarious zigzag brings you down to the deafening roar of the Astor River as it plunges through the rocky narrows of the Ram Ghat defile to fling itself and its glacier mud into the Indus.

We crossed Ram Ghat, still in the dark, by the steel suspension bridge and duly reached the Devil's Gorge just before dawn. A day or two before I had had the bad luck when tramping downhill to crash—from carelessness or sheer fatigue—full weight with my left knee on a spiky rock, and the pain of that night's walk was an ugly nightmare. I wel-

comed the relatively level rock-shelf where I could mount again, for though the cramped position with foot in stirrup was hardly less painful, it was a change of pain. With instinctive chivalry Dádo leapt off his own pony and without a word led mine, knowing that with the wounded knee I could have no effective grip; and on these rock *peris* one slip may send horse and rider to certain—but not necessarily immediate—death. At any time this march is a somewhat racking one, but, with a treacherous moon throwing inky shadows where you most wanted light, it was even less luxurious than usual.

Having left the Astor torrent behind us we climbed up a rough track to the so-called ford, marked by the ruined piers of a dead bridge (one of many, for this ill-famed gorge is unkind to its bridges), bitterly grudging the extra miles entailed by some arm-chair official's economy campaign that had left the broken bridge unreplaced, and found that we ourselves were just able to cross three-quarters of the stream on two long tree trunks. Dádo insisted on going before us backwards and piloting us across; we both have steady heads, and slightly resented being treated as babies, but there was no doubt that his bare feet had a better grip than our *chapplis*, and his intentions were noble. A belt of swirling water still lay between us and the farther bank. The Hunzukuts, plunging in to their armpits, coaxed the riding horses over, then Dádo returned and insisted on carrying us over shoulder high. Again we should have preferred to take our own ducking as he had his, but one could not wound the sporting fellow by insisting.

The next two hours were anxious ones. We stood and watched the sturdy Kashmir ponymen, seconded by our resourceful Hunza people, post themselves on vantage points of steady boulders amidst the tossing, foaming waters. One man chased a reluctant pony in, the next caught it, steadied it, and pushed it on, and so, like the chain of buckets at a fire, the animals were herded safely over one by one. At every moment some precious box threatened to take a header into the maelstrom, where it would infallibly have been dashed to pieces. Would it be the cameras or the chemicals, the reference books or the one surviving typewriter? But luck this time was with

us. All loads, of course, were thoroughly splashed, but none were soaked or lost, and tin-lined cases and double waterproof wrappings guarded the most perishable stuff from harm.

During this anxious transit Shafi, the cook, provided some comic relief. He was a Hunza man we had picked up in Srinagar, and his main qualification for the job was the fact that he was a Burushaski speaker—we did not want to import language and racial distractions by taking on a Kashmiri. Secondly, he had served for some time as "cook's mate" in a Rawalpindi hotel, and he presumed he could "carry on." He did. It was we who nearly perished. Meantime, in contrast to his fellow-countrymen, he was a frail little creature, who had deteriorated physically in India. He insisted, however, on "helping." He kept mounting on rickety boulders and falling off and having to be rescued from a watery grave, causing endless agitation and delay. Again and again the others fished him up and with perfect good humour and much laughter redumped him on a steady rock. We shouted to him from the bank to leave the pony work, ride ahead, and put the kettle on; but either the roar of the water drowned our voices or he was fanatically determined to be a hero. Nothing would induce him to quit. We found out afterwards that—apart from his cooking—he had learned other evil things, including drug-taking, in India. He left Hunza again, for his country's good, soon after our arrival, heartily unregretted.

At last, after two hours of struggle, the crossing was accomplished without casualty to man or beast or kit, but the sun was now well up and there remained for us seven miles of red-hot riding over burning rocks and stones and sand to the thrice-accursed oasis of Bunji—hot enough at any time, but in summer a foretaste of Hell. The only vegetation in all the hateful Bunji plain was the great octopus of the caper plant, with its rubber ha'pennies of leaves and bold white flowers whose yellow stamens and pert pistil give a gay and insolent turn to its expressive face.

When we had scrambled out of the steep gorge and up on to the plain, we were rewarded by a magnificent early-morning view of the whole Nanga Parbat range blocking the valley to

the south, for once entirely free from cloud, dazzlingly white against the burning blue. The German party were on their way there. We tried to spy out their probable route, but it is never easy to tell among all those mighty peaks which is officially "the top." If they were blessed with such weather. . . .

We vainly tried to sleep through the hot day (100° and anything in the shade), and midnight saw us again quitting Bunji by a treacherous moon—I'm sorry to be always so rude to the moon—riding through a desolate waste of rocks and sand, in imminent danger of losing the semi-invisible track and having to plunge wearily up and down the countless gullies which seam the plain and which the "road" skilfully circumvents. The valley is shut in on both sides by giant hills whose surfaces of stone breathe out with interest the heat absorbed by day, and the hot air throbbed against our cheeks like the blast from a baker's oven.

The worst of night-marching (which in great heat is necessary for the animals) is that you can get little sleep in one-storey sun-steeped bungalows, thronged by flies despite their wire doors. Tents are, of course, infinitely worse, and the rest-houses on the Gilgit road are a most welcome mitigation both of heat and cold.

Seven miles out from Bunji we reached the river, flung ourselves full length on soft sand between the boulders and breathed deep of the cool river-borne air, then halted as we crossed the great bridge of Partab Pul to look down for a moment into the unplumbed muddy depths of the Indus. Swift, silent, and stealthy she flowed below us, terrifyingly still, hypnotizing and paralysing you with a sense of resistless latent power, like a great wild beast crouching to spring. No ripples, no waves, no sound. She might have been dead and motionless but for the quivering of her tawny hide and pitiless tiny whirlpools gleaming like a tiger's eyes.

As we turned from the Indus into the almost equal barrenness but lesser monotony of the Gilgit Valley, having seen "our" river noiselessly swallowed up by hers, we felt a delightful sensation of nearing home. At the mouth of the Gilgit River the mountain side wildernesses of stone and boulder are

2: Lorimer T-3 (1927-4; 1934-5) 1939 AV7 Burusho AV7

extraordinarily varied; no doubt a geologist could read their riddles. Some are of grey granite, some a dark chocolate colour, some the shade of golden sand. At one place for a hundred yards or more the cliffs and their boulder offspring are deep chocolate streaked with cream in the pattern of fantastic Swiss rolls.

On the two marches between Bunji and Gilgit there are many precipitous cliffs, *peris* as they are locally called, across the face of which the road rises and falls in flights of hairpin bends, where a false step at any turning will plunge you 50 or 100 or 200 feet into a rocky ravine. Even by day these ask for careful riding, but in quivering moonlight and pitchy shadow, when your eye can scarcely distinguish the narrow, grey path from the grey of the river far below, they strain your tired attention to breaking point. Whatever snatches of sleep I might have got by day had been banished by my aching knee, and at moments I nodded so helplessly on my pony that David would grow alarmed, and when we came to a flattish bit of ground would gently help me to dismount and lay me out between the boulders for a ten-minute snooze. It was luxury to stretch the aching leg and ease the nagging toothache in the joint, but I was never sure whether the temporary relief was not too dearly bought by the agony of mounting and dismounting. On the other hand, the tiny bouts of sleep enabled me to go on again with less risk of dozing in the saddle, which might have been final. As on the Burzil I felt apologetic for adding to a husband's anxieties.

After another sleepless day in Pari we passed the two welcoming oases of Minór and Seker,[1] and soon after daybreak were toiling slowly up the interminable, rock-strewn delta of Jutiál, but with the knowledge that invisible beyond the crest lay the glorious three miles of Gilgit cultivation.

On the brow we suddenly spied two horsemen who instantly dismounted to come towards us. It was two dear old retainers: Sar Faráz and Jemadár Kasír, less changed by time than we, whose happy faces radiated welcome, and who flung forward to cover our dust-stained *chapplis* with their kisses.

[1] Not "Minawar" and "Sequár" as British officers tend to dub them.

TOWARDS GILGIT

We were profoundly moved, for such demonstrations of personal affection are not offered to the official. They had nothing now to hope for from us, and we nothing now to grant; but man to man they were glad to see us back, and came to say so. It was worth the Burzil and the heat to know that we were remembered after all the ten long years with this disinterested affection. Riding between the prosperous fields where golden wheat was waiting to be reaped or was already stooked, where young rice was showing four inches of brilliant green, and purple lucerne bespoke a wealth of fodder; to the tinkle of flowing water—what a sound in arid lands!—and in the shade of willow hedges, we beguiled the way with eager question and answer; we enquiring for other Gilgit friends, they asking wistfully after Missie Baba, now a strapping, tennis- hockey-playing schoolgirl of fifteen. It appeared that this was the second morning they had ridden out and waited, for we had been expected yesterday. Everywhere peasants in the fields stopped their work to wave a greeting, more and more old friends joined our escort, and as we entered the gates of our old home, the Agency house (which the absent Political Agent had most graciously placed at our disposal), we were given a royal welcome, all the more impressive that it was not complicated by flags or guns or guards presenting arms.

We had indeed come home. Flowers in familiar vases stood everywhere that flowers could stand; dishes of lovely garden fruit were on the tables; tea was brought in cups we knew of old and drunk as we lounged in dear old chairs, while the very carpets smiled an old-time welcome. Our faithful new friends, Dádo and Co., looked on, half proud that we should be so popular, half perhaps a little jealous while older friends unwound our putties and carried off our dusty sandals.

We halted ten days in Gilgit, and no long-lost parents could have been given so much glad service and assistance on every hand. Unfortunately the heat-wave gave us 105° in the shade, and sandflies offered unwelcome company, so that our rest was less refreshing than we had hoped. David, who had held out on the journey so much more manfully than I, succumbed to an ominous bout of fever, and from his bed made the necessary

133

Looking up the Hunza River gorge, half a march from Aliábád. The road (see Plate V) runs round face of right-hand cliff. (*See p.* 67)

PLATE IV

[Facing P. 64]

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

arrangements for paying off our Kashmir ponies and engaging local ones for our further journey. Meantime my knee obligingly mended itself, and in a few days DL rallied. We bade a regretful farewell to our staunch old friends, left the rich crops, the trees, and the English gardens of Gilgit not unwillingly behind, crossed the fine Gilgit bridge, passed the new landing-place for aeroplanes on a jutting windswept promontory at the junction of the Gilgit and the Hunza rivers, and turned north into the great barren gorges that lead to Hunza Nagir. After the first march—seventeen miles of sheer and utter desolation—the scenery gains in grandeur and shakes off the suggestion of wasteful, wanton chaos that haunts the Indus marches.

One of the inevitable economies that had hit us rather hard was the lack of our own good riding ponies. They would have entailed the wages of two extra men and extra fodder, so in Bandipur we had just chosen the two best of the pack ponies and made them do. They were stout, sure-footed beasts enough, with whom, however, it was impossible to establish human contact. They treated us as packs—of awkward shape and tiresome habit—and jogged steadily their wonted two and a half miles per hour, refusing to be cajoled or coerced into varying the pace. This meant that a twenty-mile stage which we had always ridden in three and a half hours would take us eight. Every traveller knows that it is not the distance covered but the number of hours in the saddle that measures the fatigue of each day's trek. Sometimes, as the cold bit through our wraps, or we raced the relentless rising of the sun, we thought fondly on Mohawk and Black Beauty, Ginger and Habshi, who had so gallantly carried us of old. But now we had exchanged the secure if uninspired Kashmiri mounts for two rickety old screws from the Gilgit bazaar—the only beasts available. David's white one was like a starved rocking-horse, whose legs needed to be better screwed in and whose back had been disjointed and badly set; while my brown was about the size of a mouse or a fairy cycle, and weak though willing. Occasionally in a sandy stretch he would just lie down, but allowed himself to be lifted inertly to his legs, till next time.

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

TOWARDS GILGIT

133 Thus mounted, we rode sorrily to Chalt, a wind-swept
361 open plateau at the meeting of three gorges. Here we were able to procure slightly better ponies, and thankfully paid off the two Gilgit toys. From the Chalt rest-house through lovely fields, round a bold spur, over a fine suspension bridge into the Hunza Nagir gorge, where a magnificent view of Rakaposhi greeted us and a terrific *peri* led us into the large Nagir settlement of Sikandarábád. This had grown out of recognition in the intervening years, a fine oasis that owes its development to the enterprise of the present Mir of Nagir, Sir Sikandar Khan, after whom it is appropriately called.

High above the rocky river-bed the alluvial fans on our side (we were now in Nagir on the left bank of the river) are dotted by the green oases of Nagir, watered by the inexhaustible glaciers of Rakaposhi. On the opposite, sun-scorched, south-facing, waterless Hunza cliffs there is not a blade of grass to be seen. We passed through occasional villages, separated by roads slung between heaven and earth, fearlessly grazing the face of nightmare precipices, saw again the chorten at Thol, reminder of ancient Buddhist days, rode over the Nilt gorge, famous in frontier history, and dismounted as always to pass on foot at Ghulmit the ultra-sacred shrine of Saiyyid Shah Wali, making the halt an opportunity for tea under a magnificent chenar. The villagers gathered round us, goitrous, friendly, not too intelligent, and grinned broadly at David's chaff about the mean way in which they had stolen the holy relics from their neighbours. He thus made his first public appearance as a Burushaski speaker, only to find after this mental and moral effort that though they understood Burushaski we were still in the Shina-speaking area. His change-over to Shina caused further merriment. Between Sikandarábád and Nilt we recognized a jolly little orchard with grass and apricot trees and running streams and enclosed by low stone walls. We had drunk tea there ten years ago, when we never hoped to see this country again except in dreams. We *had* to get down and drink tea in it once more, as a sort of thanksgiving. This time the trees were laden with golden fruit. On we rode to our next halting-place at the fertile oasis of Minapin.

Chapter 11

THE LAST LAP

ALLÁBÁD REST HOUSE, HUNZA
July 17, 1934

133 MINAPIN was delightfully cool—we had, of course, been
361 climbing steadily since Gilgit—and we were able to sleep indoors with comfort. After we had said "Start at five," we almost thought it was foolish and unnecessary to be quite so early—for a mere eleven miles. When Dádo came at quarter to four and we were drunk with sleep, we thought so more than ever. We remembered, however, that the road is vertical rather than horizontal most of the way, and once we were off we were thankful to have made an early start. You can't imagine anything quite like it. I wish I had kept the aneroid at hand to verify how high the various climbs were. (I always vowed to take it next time, only my pockets were already so full of filters and exposure notebooks, penknife, and bits of string, spare hairpins and what not.) So I am frankly only guessing, but I think I am minimizing rather than exaggerating, for with these stupendous mountains all round, cliffs look small that would create a sensation at Dover.

Like most human habitations in the Karakoram, Minapin is on a fertile shelf some hundreds of feet above the river. We plunged straight over the lip of a cliff and down a steeply-graduated slope from the Minapin fan to the "beach" of the river—700 or 800 feet. Since our last visit the treacherous cliffs had suffered many landslides. High above us we could see the shattered revetments of the road we used to ride, and
133 several of its predecessors. Our new track scrambled painfully through and over masses of new-fallen boulders, or through miles of loose soft sea-sand. For one short stretch the rocks

were all a dark sinister crimson and gave out a suffocating 133
smell of sulphurous gas. Our men urged us to "press the pace," for the friable, forbidding cliff face above looked as if it were not nearly done with shedding boulders. There is assuredly no myth more misleading than that of the "everlasting hills."

From river[1] level we could see the pin-scratch along the 487
cliffs on our right, some 600 or 800 feet above the river, and, often as we had ridden the road before, it seemed incredible that it could be possible to round it. The cliffs on our left bore similar scratches, representing the Hunza road between the two oases of Mayun and Hindi. Poor starved-looking little places they seem in contrast to the rich Nagir ones. We chaffed our Hunzukuts that obviously the Nagir road up the gorge was the better one since Government had chosen it for the regular route. They rose at once to the bait: the Hunza road was really the better and well kept up—which we could quite believe since the Mir always travels it himself, not to trespass on Nagir territory more than he can help—it had only one slight drawback: there were seventeen places between the two oases where "shoots" were apt to carry it away.

As we scrambled our way along through the riverside 252
boulders we noticed dozens of discarded millstones, some 324
broken, some apparently perfect. Not that people bring their old millstones here to cast away! The opposing cliffs at this point happen to provide the best type of stone for mills, and, oddly, those on the Hunza side make the better nether millstones and those on the Nagir side the better upper ones (or it may be *vice versa*. David will have it accurately noted). When you want a new millstone you travel your ten or twenty miles or more to these cliffs, choose what seems the most promising boulder for your purpose, and with a rough bit of iron hack and chip it into a circle of the radius and depth required. You then bowl it home your ten or twenty or more miles like a child's hoop, up ravines and across gorges to your mill. If it hasn't broken as you fashioned it, which it frequently does—this explains the number of discarded millstones that here strew the countryside—it may very likely break on the rude road home. If so, you just go back and carve yourself another.

1 [The Hunza River. Analysis]

186 A note of bitterness crept into the Hunza voices. Whereas
324 Hunza permits the Nagirkuts to cross the river and help
798 themselves free to Hunza stones, the Nagir people levy a tax
563 on all stones taken from their side. So our folk averred; but
578 very probably we should hear the tale reversed if we spoke to Nagir millers on the subject. For the Burusho of Hunza and Nagir, though they speak the same language, are of different race and mentality, and understand each other as little as the Saxon and the so-called Celt, and the rivalry of centuries divides them. At one point they both professed the Shiah faith, but since the Hunzukuts some four or five generations ago adopted the Ismaili (or "Maulai") heresy religious differences have added to their ever-wakeful mutual hostility.

000 Quitting these contentious subjects, we essayed some photographs by the water's edge and turned sharp to mount a side-gorge and reach the level of the cliff road above, by the steepest thing calling itself a path you ever saw. The new Minapin ponies were happily sturdier than the rocking-horses, and managed to climb almost vertically for 600 feet or so. A
342 brisk torrent, which is most of the time a waterfall, pours
361 down the gorge[1] the sides of which are lined with trees and grass, and the track runs right through a most picturesque little village called Tishót. The stone houses are almost indistinguishable from the rocks against which they are built, one here, one 20 feet above, just wherever they can be got to stick.
000 The ponies took the four-foot steps from boulder to boulder as if they had been taught circus riding up and down the Great Pyramid. I never professed to be a horsewoman, and I don't know the orthodox way of staying in the saddle when my pony's back is perpendicular, so I shamelessly wound my right hand in his flowing mane, pressed the stirrups back, and lurched triumphantly to the top. When we emerged on to the fan above we felt so virtuous after the climb that we halted to drink tea, though we had only done four miles and had not really deserved it. Our usual routine on these slow marches was to divide the day's ride into three: have thermos tea at one-third and lunch at two-thirds the distance, and thus let Shafi get well ahead to be preparing the evening meal.

1 [of the Hunza River -- Analyst]

THE LAST LAP

From here we saw the fine granite piers of the old Tishót 491
Bridge, the one we always used to cross by. It had stood for 133
thirty years, and then was wrecked one day by a hurricane; wind can be fierce and powerful in these gorges. But the fact that it *had* stood thirty years proved that the chosen site was a good one. There was firm rock (not the crumbly kind of everlasting hill) on both sides at a considerable height above the river, well out of reach of summer floods. The obvious thing would have been to replace the bridge and use again the unharmed granite piers; but some engineer decided otherwise, and we had to stay on the Nagir side and ride on to the new bridge. The cliffs on each side here rise anything from 2,000 to 3,000 feet, and the road round them is a little ledge a few feet wide, some 800 feet above the river-bed. When it is a ledge of firm rock all is well, but, as I have already said, the mountain sides are mainly crumbly masses of stones, boulders, and sand, and there often seems no good reason why the road should not just slide down to join the other debris (and so often it does, especially after rain). Sometimes even where there is a firm rock ledge it isn't wide enough for a laden pony. Then if the inhabitants can find a couple of firm rock spikes below they throw a tree trunk across and build up a loose wall of unmortared stones on that till they get it to road level. If there are no natural spikes, they bore holes in the rock, and drive in a few pegs to take their tree trunks.

This is the method they have to use to revet the faces of [3/2]
their fields and the sides of their aqueducts, which are often carried eight or twelve miles round the face of the most impossible-looking precipices, so they are experts in the art. Accidents happen often enough to the road-makers, but are almost unheard-of amongst road-users. The look of the road might make your hair stand on end, but it is far safer than our murderous motor roads at home.

At last we got off this gallery business and out on to another fan, and we saw the new bridge on our left, quite fairly near, but the cliffs were steep and high and crumbly and there was no direct way of reaching it, so we had to overshoot it by a mile or two before the road turned down. And such a road!

491 It was the steepest spiral you can conceive, about 2 feet wide
133 and just one welter of soft dust like flour or french polish. There seemed nothing on earth to keep the path in place except a tiny wall of stones that rested on the dust. Still it did stay. Of course you could not ride it, so we slithered down on foot, over ankles in flour-like dust, and opposite, across the river, we saw the famous hot springs of Murtazábád. They say you can cook a chicken in them or wash your clothes, but clothes or chicken smell ever after of sulphur. We saw only dark red splashes on the face of the cliff. Having got down some hundreds of feet or so of floury slide, we had to ride back to the wretched bridge through tiring sea-sand. The bridge was the usual handsome steel-cable suspension bridge, but only a few feet above the summer water level; I wonder will it last the thirty years of its predecessor? I doubt it. Having crossed it, we set foot on Hunza soil (July 16th). The ascent from the river to Murtazábád was steeper and higher than the spiral we had just come down, but a shade firmer and less dusty, and the zigzag was better graduated; but we rose 1,000 feet as steeply as it was humanly possible, and I again had to take refuge in my pony's mane.

000 The view was magnificent: the tiny bridge, the gorge, and Ráka—looking her very best. We never normally dismount in awkward places (which makes you ride many a time when you would feel happier on foot), for it gives trouble to the men behind, who for courtesy must dismount too and have to take charge of two loose horses. But it was the chance of a lifetime to register this view; you might ride the same stretch a hundred times and never again get the same lighting and the freedom from cloud. So I hopped off and had a shot. DL was too far ahead for me to ask him kindly to read his "wonder-working" exposure meter (one of these glorious electric cell things which we had gratefully bought from the Leverhulme grant); so I blazed away by guesswork, and remembering that the amateur always tends to under-expose, I gave it a 25th at F8. It should have been about a 200th! The result is not too bad, but the negative is as black as ink and it takes hours to print, and is, of course, not nearly so delicate in tone as

it should have been. With heartfelt apologies to Dádo and Co., imperturbably good-tempered as they steadied the ponies on their hind legs on that criminal slope, I hurried to catch up the advance party. As we got higher and higher we began to meet fields and trees. Never were there such "fields." There would be a stone wall 15 or 20 feet high, beautifully built of loose stones packed most skilfully like pieces of a jigsaw puzzle, so that though no mortar or mud is used to bind the walls they are nevertheless perfectly firm. On top of this a strip of ground not 3 feet wide and perhaps only 10 or 12 feet long, holding a tiny ditch for water and outside that a row of of poplar saplings and inside a strip of grass not as wide as a stair-carpet. There are staircases and staircases of "fields" like this with willows, apricots, poplars, grass, lucerne, and even barley or wheat. But they don't usually plant the two latter unless the field is at least the size of a hearthrug! Silly that in English we have only one word for "field." Burushaski, of course, has a dozen, to differentiate the various sizes and the steepness of the hillside on which they are and the height of the revetting walls.

There was water trickling carefully from one staircase to the next, not a drop being wasted, for it is a great deal more precious than gold. At last we got out on to a bleak, hot, sunny bluff, where we were met by two grandsons of the Mir, who apologized that their elder brother (the heir after his father) was not with them, but he was down in Gilgit training with his Hunza Scouts. I ought to have said sooner that we were met in Minapin by a son of the Mir of Nagir, a pleasant, gracious lad, whom we had known long ago as a small boy. He rode with us to the top of the Nagir cliff and there bade us good-bye, conveying polite messages of welcome from his father.

The two Hunza princes were very charming, the younger a little shy; it was, I fancy, his first serious grown-up appearance on one of these ceremonial meeting-parties. We dismounted to rest the animals after the long pull up, and sat for a few moments in some rather inadequate willow shade beside a tiny stream. The Mir had sent the kindest messages, and we

Cliff Road with three horsemen. (See p. 69)

[Facing p. 72]

enquired after all the Royal Family and exchanged the usual compliments. Then I remarked hopefully: "Aliábád is quite near now, only four miles isn't it?" "Oh yes, only four miles." I noticed David quietly smiling. We rode about ten yards when I saw (what he remembered but I had quite forgotten) that the great torrent from the Hasanábád glacier cuts in here to join the Hunza River, and we had to go down some 500 or 600 feet to cross it and then up again to get out on to the Aliábád fan. It was exactly the same sort of business as crossing the main river all over again, except that the Hunza roads, however steep and difficult, are better designed and better kept than Nagir ones. Hasanábád village lies on both banks of the torrent, and climbs up the farther side to its own excellent polo-ground. The fields were being reaped, and I marvelled at the neat, tidy rows in which the cut barley was laid out. Everything the Hunzukuts do is beautifully done, and their methods are in the greatest contrast to the slovenliness of Nagir; you notice this everywhere, down to the tinest detail; it may be merely because water is scarcer and life harder that their fields are more scrupulously level, their walls more ingeniously perfect, their cut swathes more exactly aligned, but I incline to think that the cause lies deeper; in the difference of race and temperament already suggested.

Just beyond the wooden bridge which took us over the torrent, we were met by a good-looking elderly man whom we both remembered but could not immediately identify. He was almost in tears as he greeted us. I was puzzled to think why he was so moved. As soon, however, as he had paid full tribute of politeness to us, he bolted on and flung himself on Qudrat Ullah's neck. The whole cavalcade, about forty of us by this time, burst into sympathetic laughter, and poor Qudrat Ullah looked radiant but sheepish as he returned his father's embraces. Going up the steep hillside with so large a following was, as usual, not at all funny. You dare not stop to let your pony breathe without holding up the rest whose horses would be at some most inconvenient turn.

We got up at last, however, and found a fine deputation of all the Hasanábád elders drawn up to greet us on the polo-ground

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burushо AV7

outside the House of Assembly (the Maulai kind of meeting-house that has superseded the Shiah mosque). As we neared Aliábád, riding through rich, flat, large fields, and past walled orchards we heard the local band burst into the familiar "welcome music." Presently we came to an open steeply sloping space near the half-ruined Sarkari Fort, and here was a whole party from the capital (four miles away), including Prince Ghazan Khán, the eldest son, and heir of the Mir,[1] and father of the two young princes who had met us earlier. The band changed the time to the "arrival tune," and we all walked on together to this bungalow. We passed a smart set of new little buildings which are the dispensary, built by the Mir. There is a resident Assistant Surgeon here, an Indian with a certain amount of medical training, who is able to render first aid and keeps a stock of simple drugs.

We found chairs set out in the rest-house verandah, and while we and Ghazan Khán talked of old times and the latest Hunza news, the rest of our train grouped themselves on the steps, and all the small boys of Aliábád gathered under the trees along the neighbouring watercourse to see any fun that might be going: a jolly, cheery, intelligent crowd they looked, not a moron or cretin among them; again in a marked contrast to Nagir, where both abound. Presently a tray with teapot was brought, and we thankfully turned to the "doctor" (the aforementioned compounder) whose gift it was. Tea was what we were just dying for after the hot climb; but when I poured it out I found it was a tepid mixture of tea, milk, sugar—and cinnamon. David and Ghazan Khán dealt bravely with it; I unobtrusively hid my cup.

[1] He succeeded our good friend his father, Sir Muhammad Nazim Khán, in July 1938.

PART 3

Life in Hunza

[Pp. 74 and 76 contain no textual material]

000

Ill fares the land, to hast'ning ills a prey,
Where wealth accumulates and men decay:
Princes and lords may flourish, or may fade;
A breath can make them, as a breath has made;
But a bold peasantry, their country's pride,
When once destroyed, can never be supplied.

A time there was, ere England's griefs began,
When every rood of ground maintained its man;
For him light labour spread her wholesome store,
Just gave what life required, but gave no more;
His best companions, innocence and health;
And his best riches, ignorance of wealth.

(GOLDSMITH, *The Deserted Village*.)

Chapter 12

SETTLING IN

July 1934.

THE Aliábád bungalow is a good deal bigger than the ordinary rest-house, for it was enlarged to make room for a resident Assistant Political Agent (whose post after a year was found unnecessary), and then two further rooms were added on to accommodate on occasion the Political Agent himself (who never stays there). There is a good-sized dining-room, with pantry behind; a double bedroom with a bow window; two single bedrooms; three bathrooms of the primitive dak-bungalow variety of course (one of which we at once earmarked for a "dark-room"), and a really handsome sitting-room with another bow window; finally—an unexpected and welcome luxury—a store-room with plenty of good shelves where we could stack our modest supply of stores and all our spare stationery. At the back there are the usual kitchen, servants' quarters, "stables," and what not. Everything was most scrupulously clean when we arrived, and for this we had to thank the forethought of our good friend the Mir. It happened that our old "head-boy," Nazar (already mentioned), was up from Gilgit on leave at his home in Aliábád, and the Mir bade him take charge and get the house ready as he thought we should like it.

He gladly took over for a few days from Dádo, whom we sent off to see his people. The poor boy came back to find that his mother and his grandmother had died during his absence. This hit him hard, and when we stammered our sympathy he murmured: "It is God's will." We were glad to hear that he has a wife and baby boy to cheer him. To show how much we appreciated his devotion on the journey up—which had far

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

exceeded any normal "duty"—David gave him a good silver watch. (Our equipment, of course, had to include suitable objects for various presentations.) As a special testimonial from myself—for without his constant kindness I doubt if I should ever have got here—I added my own Guide knife, with its corkscrews, awls, etc. I missed it dreadfully, so I was glad I gave it; but I often had to borrow it back for a moment when doing odd jobs about the house.

We then got down to the business of making the house habitable for a longish stay. We unpacked and arranged things as well as we could; David went round with his carpenter's tools and in a short time made a wonderful difference to our comfort (yet some women marry men who can't drive a nail or turn a screw!); he assembled the Aladdin lamps and fixed up the brackets to hold them and got them into working order, and lovely things they are. Meantime I fished out cheap curtain materials picked up in Gilgit, the cuphooks and spring rods brought from home, and quickly ran up curtains to give us some privacy. Most of the doors and windows are wired against flies, but not, of course, the two big bow windows that are most needed. Whoever designed them had put bolts, etc., in the most inconvenient places and made them open *out* instead of *in*, so that it wasn't easy to drawing-pin mosquito netting over them; still with a little ingenuity it was contrived, though the job didn't look as neat as it should have done. Rings on a few travelling rugs let us sling up heavy curtains when necessary against the sun (which poured unfortunately straight into our bedroom all the afternoon so as to stoke it up for the night). Then we put our two kitchen tables in position, and with dark rugs to hide their ugly surfaces they served excellently to work at. Our own four camp easy chairs had come through unbroken, and soon with books and papers strewn about, the room looked extremely homely and Lorimer-ish; I think any friend would have guessed it was ours if he had come in without knowing we were there.

Two or three days got all this done, and the household routine working smoothly, and our next duty was to ride over to Baltit and make our formal call on the Mir, our host.

SETTLING IN

Our chief lack at first was shelves and cupboards, but as soon as we had seen what was most needed and what could be accommodated David got busy with rulers and squared paper and drew up detailed specifications, which he sent to the Divisional Engineer's office in Gilgit. They were able to make us the skeletons and send them up in such form that we needed only to screw them together. I then nailed cloth over the back of the cupboards and hung curtains over the front so that we no longer needed to live in the misery of half-unpacked boxes. 000

The bow window of the study where we sat to smoke and take tea looked out on to a jolly little watercourse (about 2 feet wide) which chattered merrily along. On its farther bank is a row of apricot and mulberry trees which, if they break the view a bit, also provide some welcome shade. From the foot of the trees terraced fields fall away, down, down, down to the top of the great cliff—some 500 feet or so—that forms the right bank of the river. We looked right across the gorge (the river, of course, is entirely out of sight, and nothing would lead you to guess its existence if you hadn't just had to cross it) to stark, magnificently seamed mountains, with tiny fans of green here and there, which are other villages similar to Aliábád on the Nagir side.

The nearer side of our little stream was one of the main highways; and all the life of the place went on in full view of our window. People passed by all day, laden with green fodder for their beasts, or carrying baskets of ripe apricots to dry. The nearest field of lucerne had just been reaped, and then below it the barley field, and we watched them stack the barley and make a circular threshing floor on which to deal with it. They flooded a patch of the newly reaped field, built a little circular wall of mud about four inches high round it, then flooded it twice more, and then when it was nearly dry a whole family, from grandfather down to the small boys and girls, systematically tramped it down with their bare feet till the surface was as smooth and level as a hard tennis court. 487 243

Jolly youngsters of all sizes romped in the new-cut fields, snowballed each other with clods of dry earth, tripped each 857

[Facing P. 80]

857 other up, chivvied their lambs and kids about by chucking stones skilfully to turn but not to hit them, and half a dozen noisy scamps would jump to and fro over the watercourse in competition.

361 Between us and the river bank were groups of poplars,
133 willows, and fruit trees with quaint cube-like stone houses dotted about in between, and right above this delightfully restful patch of green (which you could not properly appreciate if you had not had days and days of barren bleakness before you reached it), in the great triangular space between the barren mountains of Nagir and those of Hunza which rose around and behind us, there towered up the great mass of far the loveliest mountain on earth: RAKAPOSHI.

133 She is 25,550 feet high, and the top 10,000 feet which we saw from our window is a conical series of triangles, cliffs, precipices and peaks all covered in dazzling frozen snow—a never-ending joy to watch. At this time of year she was usually clear, escaping the skirts of the monsoon which are apt to catch on Nanga Parbat; and the clear sky behind changes from the palest blue at dawn to the brilliant burning blue of midday and then to delicate shades of pink, green, violet, and orange towards sunset. Ruskin could write volumes on the ever-changing shadows and colours that delighted us: I must leave them to the imagination. From our beds we could see Raka when we first woke and bid her good-night before we fell asleep. It is a wonderful thing when beauty such as this becomes part and parcel of your daily life.

132 It was still pretty hot in Hunza in July, in spite of our 7,600 feet. We had it up to 95° in the shade of the verandah outside, but were able to keep the study ten degrees cooler by closing doors and windows in the morning before the sun got up. Out in the sun the heat is all the fiercer for the altitude, a point stay-at-home travellers seldom realize. Another odd point is that in cloudless, dustless air like this, granted equal apparent brightness, photographic exposures need to be *longer* than lower down—at least this is David's experience.

157 The people round were from the first unbelievably friendly; we could run out quite informally at any moment and join

157 them in the fields and ask what they were at, and why, and what their various implements were called. They were quick to understand what we tried to say, and except when several of them talked at once we could usually make out most of their replies. They often started amusing arguments among themselves, not agreeing about certain words, just as at home you can set a discussion going in any company about "apple dumplings" or "pies."

243 I had a most entertaining half-hour my second afternoon.
123 Some women and little girls were beating a pile of green stuff on the threshing-floor just below, whacking it with a sort of wooden mallet. So I ran out (with pencil and notebook), greeted them, and sat down beside them on the nice dry ground and watched the whole performance. The crop was a small lentil or purple pea, and the heap was a pile of plants, stalks, roots, pods and all. They just beat and beat till all the pods had burst open, then piled pods and seeds into a big sieve and tossed it till most of the seeds were shaken out. Next they transferred it into a big flat tray and shook it to and fro till they could skim the pods off the top. Everyone was taking a hand, and after I had jotted down all the words I could conveniently collect, I took the various articles in turn and caused much amusement by saying carefully: "This is a sieve, I toss the lentils," "This is a tray, I shake it to and fro," etc. I felt rather like a star turn at a variety show, and brought down the house at the end with: "This is a little thorn bush, I sweep up the threshing-floor."

123 It is a sort of improved Berlitz method of teaching yourself. I found that when my Burushaski ran out I could still delight them by chattering on in English in a friendly way. They felt the goodwill, and they didn't know I was saying: "You're a nice-looking little minx, but you'll look better when you wash your face." I got most of their names written down, and then when they began to get ready to go home I had a romp with the small ones, who ran off squealing when I tried to catch them, just like English kiddies of the same age. I hadn't had such fun since our own youngster was small enough to romp with.

SETTLING IN

123 It was at once clear that there was not going to be any initial
609 hostility or distrust to overcome, even amongst the women.
771 This is rather remarkable when you think that not one of them has ever been more than five or six miles away from her home village, and that they have never seen a white woman at close quarters before. They are a fine, healthy, good-looking crowd, and always appear cheery and good-tempered. Undoubtedly the short-cut to the women's hearts was to make much of their youngsters. In a superstitious place this would be dangerous; they would be terrified of the Evil Eye; but we noted with thankfulness that these entirely non-Oriental people were as free from inhibiting superstitions as we ourselves. This promised to make our work immensely easier.

Chapter 13

HOUSEKEEPING PROBLEMS

BEFORE we could really settle down to the business of life 312
there were several practical problems to clear up. Water was 401
naturally the first item. The jolly little stream just in front of our rest-house did not run by any means all the time. It brings water from the great glacier behind Báltít; the actual aqueduct channel is some twelve miles long, and represents an amazing feat of engineering. It was made about three generations ago—before which the "New Settlements" of Aliábád and her outliers did not exist—when iron was still practically unknown in Hunza. The excavations and the galleries on which it is piloted so skilfully over gorges and along impossible cliff faces were all made with wooden shovels and picks tipped with ibex horn. The people had—and have—no instruments of precision, no [413]
theodolites, nor levels. Against this they have some hereditary instinct that we lack, and an inherited or traditional common sense that enables them to adjust the necessary downward gradients exactly right. You never hear of anyone making a false shot in laying out a water channel, and you never hear of any "labour" difficulties. When a new work is undertaken for 312
the public good it is supervised by the Mir, or his Wazir acting 653
for him, and it is carried out by communal labour, of which 476
everyone recognizes the justice and necessity. The Dála, which will frequently recur in my story, is the main aqueduct that supplies Aliábád, but it has to feed other villages *en route*, and our stream, which was its last section, was therefore only in action at certain times. These are, however, known to everyone, and our people drew water enough when they could get it to carry on for the day or half-day when it would be cut off.

HOUSEKEEPING PROBLEMS

312 It[1] was beautiful, soft, pure water which gave delightful baths,
271 but heavily silt-laden and supposed not to be fit to drink. We were luckily able to get half a dozen big petrol drums from Gilgit (left behind empty by the R.A.F.), and we stored it in these and let the silt settle. This water served us for washing and for photography.

312 About two miles away there was a spring of clear but hard water that issues from the foot of a cliff down near river level. This was recommended for drinking. So we took on a special man, Sagi by name, as water-carrier and general washer-up, to help in pantry and kitchen. He was a nephew of our old friend Nazar and a good fellow, though for some reason a little less cheery in appearance than our other men. Twice a day he would walk the two miles, climb down and up the 500 or more feet, and bring water for our tea, etc., and for making up the photographic solutions. We paid him the princely sum of about a pound a month, and he was delighted, while his brothers divided amongst them the extra work at home.

Considering the labour involved, it made us feel rather pigs to drink tea half a dozen times a day and expect a daily bath. When two of us were photographing hard and perpetually wanting to wash negatives and prints in eight or ten changes of water, my heart rather bled for Sagi. One day that had been particularly severe I said as he appeared with more and more water buckets at the door of the dark-room: "Poor man, I'm afraid our photographs give you a lot of extra work and trouble." His usually quiet face lit up with a peculiarly charming smile: "Nay, Mother dear, it is a pleasure, not a trouble. The work and trouble are yours."

262 The next thing in importance was food, and we found that
235 we could, without apparent hardship to the people, buy a
[624] daily hen. There are a couple of officials whose job it is to see about supplies for travellers, and they arranged to get the fowls now from one village and now from another, so that our demands might not press too heavily on anyone. The Hunza hen is an athletic bird. You may see her fly like a lumbering, over-weighted pigeon 15 or 20 feet across a gully, and so we were not surprised to find her wing muscles well-developed.

1 [The water in the Dala, the aqueduct--Analyst]

HOUSEKEEPING PROBLEMS

Still she provided us with hen-water soup, and we varied our 262
diet by having the wings for lunch and the legs for dinner, or 235
vice versa. When the cold weather came and the flocks had returned from the mountain grazing grounds, we were sometimes able to vary her with mutton—athletic mutton.

Shafi, the camp cook, had one major fault—he could not 000
cook for nuts. A minor one was that when anything went wrong he lost his head completely (as in the crossing of the Devil's Ford) and immediately did the wrongest thing that was possible. But he was willing, and no doubt did his best. Soon after we got in he went sick and we committed him to the care of the Compounder, who soon got him round. But we did not feel that we could face his food again. While he was ill, one Zaidu was announced who had come to pay his respects. Who was it but an old friend of Gilgit days who had been with us for four years as general underling! He had helped the cook and used often to cook for the nursery, so he was not without some elementary ideas. We offered to try him and he accepted with joy. His family could gladly manage the extra work at home, and hailed with pleasure the prospect of sharing his wages. We never thought of these jolly men as "servants" in any ordinary sense of the word. They were peasant proprietors in a tiny way, but though they had enough to eat and to wear, they were absolutely without cash, and were willing to do any honest work to get some. Zaidu looked much more flourishing and fitter than in Gilgit days. He was then rather young, and I suspect that the older servants put upon him a good deal, but now he had been living an independent life again and had got back his natural dignity and self-respect. His pleasure at the thought of working for us again was disarming. So we took him on, and though he was no chef he did us well. He was ingenious in devising new ways of cooking the half hen, and his scones were light and eatable, a pleasant change from Shafi's paper-weights. Moreover, he was willing to learn.

We were able to get white flour up from Gilgit for cakes 252
and biscuits, but we found that native bread-flaps made from the local stone-ground wholemeal wheat were more appetizing than white bread in any form. They are made without

252 yeast and cooked on a griddle, like small, thin pancakes. Zaidu made them as of course, since they are the normal local food, and we had a few fresh for every meal (they are horrid stale). Their great merit is that they can be eaten without butter or 262 jam. This was a great advantage, for butter was a problem. 234 The tinned butter we brought with us for the road all went bad—you could not blame it in that heat—and butter in our sense of the word is unknown in Hunza.

There was fortunately a little cow's milk to be had, but the cows get so little to eat that their milk has not much butter-content. A really good Hunza cow yields at most a quart of milk a day after she has fed her calf, and she only gives milk at all for a month or two after the calf is born. So [415] milk is no part of the regular local diet. The people normally milk into a gourd, which makes an excellent jug, but has the [372] drawback that there is no ready way of cleaning it. Where fuel is so scarce no one could boil water merely to scald milk-vessels, and the method is to hold the gourd over the smoke of the fire. This seems to be perfectly wholesome, but it gives a gruesome taste to the milk, already sufficiently tainted with memories of yesterday, last week, last year. So we would send one of our people with a clean aluminium bucket and get the cow milked straight into that. In this way we procured as much as we needed for tea and coffee and puddings, but of course not enough to make butter from, as we had been accustomed to do in Gilgit. Fresh butter proved to be an unattainable luxury. The local butter, which they call *maltash*, is much prized; there is so little of it that it is kept strictly for feast days and great occasions. Their chief chance of making it is from the goats' milk when the men have the animals up at the summer pastures. They make it day by day, a little at a time, and when they have collected about two pounds they shape it into a ball, wrap it in birch-bark, tie it up with strips torn from the roots of juniper, and then bring it home to [251] store. With luck one good she-goat will provide two balls of *maltash* per season. It is then stored in a tiny stone larder under the nearest water-channel to keep it damp and cool, and thence produced when wanted. Even when quite fresh it tastes very

"high" from the unwashed smoky gourds, and it gets more and more tasty the longer it is kept. The tastier it grows the more they value it, "nice and peppery" they say. But the taste for *maltash* must be acquired, and it was too late for us to acquire it.

When Dádo was going off for his few days' leave, his last words were: "I'll bring you back some nice fresh butter; I'll bring enough for a month; it shall be my gift, and you shall be my guests." He was only away two days, and he must have drained all the cows in the countryside and kept his womenfolk busy all the time, for he brought a glass bottle full of really lovely looking, clean butter—that was, alas! already thoroughly rancid. "I had new vessels, and I didn't let them use gourds, and I got it made your way," he boasted. It was really tragic. We had to eat a little for a day or two, not to hurt his feelings; but it nearly made us sick. The pantry stank of it, and the dining-room stank of it, and the stink was steadily creeping into the study! Then I had to break it to him that though his butter was beautifully clean and perfectly lovely, we ate so little at a time that it could not keep in this heat, and so he must please take it away and store it as *maltash* for his family. A few days later he brought just a couple of ounces, made as nearly European-wise as possible, and David was just able to eat it smothered under marmalade for a couple of days. We then pleaded for only an ounce or two now and again, and gave Dádo some salt to blend into it. I renounced my share of this luxury with pleasure (I really could not eat it), but David, who has had longer practice in non-faddiness, could manage a little and even preferred it to eternal dry bread.

Dádo would not hear of payment; but at last I persuaded him, since this exotic butter-making must give trouble to his people and deprive them of *maltash*, to allow me to pay him three rupees a month or so—"for the baby boy." He adored the little boy—a rather ugly mite of about eighteen months whom he brought from time to time to show us—and he ultimately accepted this compromise and solemnly took "Akíl Sháh's butter-money" with his own wages. No payment, however, could repay the goodwill and kind thought that he used to put into procuring butter for us before it had become

maltash. We had had many native servants of many races and shades of colour in our time—including a French-speaking negro in Kerman long ago—whom we have grown fond of and who, I think, have been fond of us, but never anyone so entirely lovable as Dádo of Hunza.

While the summer lasted we were able to have as much fresh fruit, green vegetables, and potatoes as we could use, so that we were really very well off.

Several other problems that had threatened in advance to be serious solved themselves more easily than we had feared. The Political Agent's office in Gilgit has to send a post bag up to Hunza three times a week and they allowed our letters and parcels to come along in a separate bag to be dropped at Aliábád without payment of any extra postage. This was a great luxury, and we were amazed to find letters and newspapers coming through to us in exactly a calendar month from home. They could also send up in the mail-bag small quantities of white flour, sugar, raisins, rice, salt, matches, and cigarettes from the Gilgit bazaar—all unobtainable locally.

We needed money only to pay the wages and the daily milk, vegetables, etc. We had a strong suspicion that Shafi, for the few days he spent in charge of things, was gravely over-charging on the petty account, as well as making away with tea and sugar—having learnt, as I have said, more than his prayers in India. All the real Hunza men are so scrupulously straight that this distressed us. So we were doubly glad to have exchanged him for honest Zaidu.

At first all sorts of people kept bringing us gifts of fruit—apricots, pears, melons, peaches, apples, tomatoes (introduced like the potato by the British and much appreciated because they can be dried for winter use). This gift-business, however, is expensive for the recipient. If the Mir or any of the princes or any person of importance sent things, we must of course tip the people who brought them—not in proportion to the actual value of the articles, but to the dignity of the sender and ourselves. If a humbler person brought them we obviously must tip him also. As we could in season buy as much fruit and vegetables as we could use for about a half-

431 penny a day (even when Shafi was profiteering!), and as you can't well tip anyone, even the humblest, less than about sixpence (and if there are several big man's retainers it may run into many shillings), the getting of gifts is very costly! We were glad when the flow of gifts presently dried up a bit. There was always great rejoicing in our back quarters when *mahash* was presented, for as we could not possibly use it ourselves (not even for cooking) it was solemnly passed on (as soon as the donor was out of sight) to the servants to divide. I called them all up and handed it over publicly to ensure that all should get a fair share. They never seemed to quarrel about the division, but effected it on some well-understood principle of their own, so perhaps my precaution was unnecessary; but it's unfair to lead such generous-hearted people into temptation, and *mahash* is dearer to their hearts than much fine gold.

296 The only other major problem was the washing. I had quite expected that we might have to get the things washed in the house, and do with rough-dried sheets and towels, occasionally sending shirts and collars down to Gilgit. I do wish men could wear silk undies that only need a rinse. But we heard that there was in Báltít a "merchant" who had at one time been washerman to some British officer, so we made enquiries and asked him to come and see me. He didn't seem at all keen; he wasn't really a *dhobi*, he said, and he hadn't a "proper iron," and he could not starch or "get up" evening shirts. (I could not myself imagine David wilfully wearing "boiled shirts" in camp.) But we turned Qudrat Ullah on to have a talk with him as knowing all the local conditions and people, and so friend Baráto of Báltít agreed to take a small "wash" and see what he could do with it. To my delight he brought everything back clean and beautifully pressed with whatever "improper" iron he had. We had another chat, and if that was all I wanted done he was more than willing to do all our washing for 15s. a month—less than half my laundry bill at home, where we only send the larger things out! In theory he was going to earn his money. He was to carry the wash to the springs at Murtazábád, by the big river. You will remember it is a good five or six miles away, across the Hasanábád gorge and

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

296 down some 1,500 feet on the other side. He was to provide his own native Indian soap and heat his own iron somehow. In fact, however, I saw him unashamedly spreading out the things to dry on the grass behind the bungalow, having coaxed hot water out of Zaidu. And as Indian soap is made with ghee or some odious, smelly fat which we had no mind to breathe in off our sheets and pillows at night, I agreed to give him one cake of Sunlight soap per week (one of the few supplies I had prudently brought with me). Presently I found that he would much prefer to iron in the kitchen, "it would be so much better for the clothes than being carried to and fro to Baltit," and that he would take it kindly if I would supply the charcoal for his iron. You will deduce that Barato, like Shafi, had learnt a thing or two in India besides his *dhobing*. However, from my point of view the bargain was a good one, and I was glad it should be a good one from his side too. I don't doubt that my "merchant" saved one bar of soap in four, or perhaps one in two, to stock his "shop" in Baltit; but our clothes were nicely washed and he had no competitor within sixty-four miles and deserved to profit by his own enterprise.

He was an entertaining fellow, the *dhobi*, with a humorous kink in his face, and a quaint, half-defiant, half-amusing way of talking that made his calls rather pleasant episodes. His air implied: "Of course you can't afford to lose me; there's no one else in Hunza you could get instead. On the other hand, of course, 15s. a month for your little scrap of work is money for jam, and I like coming over for a chat with your people, so it suits us to be friends."

565 There is something very winning about the complete lack
576 of servility in Hunza. The people are hospitable, courteous, and polite, and too self-respecting to omit the deference due to "The Great," but they own their soil and live their own lives and can look the whole world in the face. They serve you faithfully and ungrudgingly and more than earn what you pay, but they are servants of none. For which reason I wish we had some other word for these lovable peasants who worked for us.

Two other points remained: heat and light. The Hunza

HOUSEKEEPING PROBLEMS

Two other points remained: heat and light. The Hunza mountains face south, and in contrast to the north-facing Nagir heights where pines are plentiful, are absolutely bare of trees. So fuel is a serious problem; each household has to manage on such wood as they can spare from their own gardens and orchards. If a tree has to be felled or pruned, or an old vine rooted up, they may be in relative luxury for a time, or if they have to cut down poplars for a house the trimmings will keep them going, but normally they must do with an occasional fallen branch or a few twigs. Even in the depth of winter no one can afford a fire merely to warm the house; they cook their bread and vegetables as economically as possible, and just sit round the ashes of the tiny fire till it is time to blow it into life again for the next meal. We feared we might therefore have to import wood from Nagir or even farther off, which would have been serious, for we needed a good deal for cooking, baths, etc., and would need more when it came to trying to heat the large and draughty sitting-room. We consulted our people about it, and presently one day they brought a charming man to see us. He had been dabbling in commerce and had contrived to contract a debt in Gilgit and was going to be forced to cut down some of his fruit trees to pay it. It would suit him far better to sell the lot to one buyer than to peddle it about amongst his fellow countrymen, who rarely had money to spend. So we easily made a bargain with him, and he delivered into one of the outhouses (with a rickety door which could be padlocked) a fine supply which with care lasted out our time for all purposes. What was more he was delighted to take notes in payment. We had brought up some ten and five rupee notes with us before we realized that only small silver would be any use. So that was that. I had no further trouble but the usual routine job of weighing out the day's wood.

In the old days in Gilgit, though oil was expensive, there was never any trouble in getting it. The S. and T. carried an ample supply both of the finer Snowflake and of the everyday kerosene. Remembering this, we had not brought any up with us from Kashmir. But the S. and T. was about to disappear, in consequence of various political developments which are not necessary to explain, and their supplies were almost done. We

[13] 354

21 [i.e., housekeeping problems --Analy]

354 hastily earmarked all the Snowflake they could possibly spare; for our treasured Aladdin lamps would have been little use to us if we had had nothing to feed them on and they can't digest the coarser oil. Snowflake worked out at 4s. 6d. a gallon plus carriage from Gilgit! But it was one of the absolute essentials to work. We bought also as much of the ordinary kerosene, as we could, so as to have oil for hurricane lanterns for bedrooms and bathrooms. But all through the winter we had to ration ourselves to *one* Aladdin lamp. It was annoying to think that we could have brought as many extra pony-loads as necessary up with us if we had realized the need. It was by July too late to order from down-country; the passes would be closed before a consignment could get through.

Chapter 14

FIRST WALKS ABROAD

THE very day after our arrival we went out for a stroll to take 487
stock of our immediate surroundings. Along the Dála, the little stream which ran in front of our house, there is a tiny footpath, just wide enough for one. On our right was the channel in its carefully made bed with a stone revetting wall above it holding up the field above; on our left a fine hedge of quickthorn to keep passing beasts from jumping into the field 4 or
5 feet below. We could hear a merry sound of drums and 527
pipes coming from somewhere downhill, and asked what was 624
on. It seemed that just before we arrived the first barley- [534]
cutting had been celebrated with various ceremonies, which we could only hope to see in detail next year, and some of the jollification was still being kept up. Qudrat Ullah was with us, and a "levy." I must explain the levies. In most villages 624
Government chooses, no doubt on the Mir's advice, one or 124
two of the most respected peasant-farmers who are not headmen or officials of the Mir himself, and pays them a small (very small) monthly wage so that they may be ready to do any little Government jobs that are wanted. There are three in Aliábád, which is relatively a large place with about two hundred scattered houses, and the Political Agent had kindly instructed them that one of their jobs was to be useful to us. I may as well at once introduce the two first: Kalbi is a fine upstanding man, rather darker in colour than the average; and Hurmat, a younger, very cheery fellow with dashing moustaches. They are both intelligent and extremely friendly and eager to help. We didn't see why they should waste time on us for nothing, so David at once agreed with them that he

624 would pay them a small retaining fee if they would take it in
124 turns to be "on duty" with him in their spare time. They would obviously be useful informants.

487 We had to walk along in single file. There is no "road" in
312 Hunza where two people can walk abreast, or along which you can ride, except the "Great North Road" running through from Kashmir to Kashgar, and even it is never more than 4 to 6 feet wide. The other tracks run mostly beside small water-channels to enable people to get from one sluice to another to juggle the water now off, now on. Even when you have a neat little track fairly horizontal (there are only three of these possible for ordinary walking) it is broken every few yards by a sluice which you must jump or step over carefully so as not to interfere with the water arrangements or, alternatively, break your leg. The sluices are the simplest things imaginable—just a gap in the side wall of the channel which can be closed with a couple of convenient, slab-like stones and plastered up with mud from the watercourse. Occasionally there is a little wooden shutter which can be raised or lowered in wooden slots at the side.

As we went along David asked the names of the various kinds of water-channels, fields, etc., that we saw (the *names* he already knew, but not at first hand which kind was which), and presently we had a train of bright-eyed boys in the fields on each side, full of amusement at this new game. One would cry: "This stone is a flint; this is a stink-stone," whereupon he would crack it and give it to us to notice the faint smell of sulphur it gave out. Another would run up: "Here's a poppy and a poppy-head"—so we were not going to lack for willing teachers.

After a little we turned down a narrow "lane," less like an English lane than anything else on earth. It plunged downhill pretty steeply, sometimes just a rocky slope, sometimes just one boulder below another making a very crude flight of steps varying from 18 inches to 3 feet or so. Beside the "path" ran the inevitable water-gutter in which you could walk, as it happened at the moment to be dry.

417 On each side, a bare 3 feet apart, were the usual walls of
323

loose stone. It is amazing how they get these walls to stand up, 6, 7, 10 feet high, without an ounce of mortar or mud. At the bottom they put huge stones like portmanteaux, then smaller ones like bandboxes, then others the size of quartern loaves, till as you get towards the top they have come down to the size of penny buns. Each is carefully chosen to fit as neatly as possible into the space left by the last, and wherever there is a gap left they choose a small stone that will just fit and wedge it in tight. The walls are really a beautiful sight. These side ones they build partly because they want a boundary to their field, but much more, I think, because if you didn't pile the stones somewhere there would be no field at all. There are no gates. Wood is scarce and very precious and, besides, at different seasons and for different purposes you might want the gate now in one place, now in another. So when you want to get in, you just pull down as much of the wall as necessary and build it up again when your work is done.

Presently we came to a large garden with handsome walnut trees, its long wall broken by a wooden door now open. Hurmat told us that this was the semi-royal domain, where the Mir's first wife and what the German royalties would call his morganatic family were settled. Festivities were going on inside, and we were assured that anyone might enter. Fortified by this we went in and were made welcome by two semi-royal grandsons, one a lad of seventeen or eighteen and one a jolly little boy of perhaps ten, who were sitting on a carpet spread on a raised piece of ground below some trees. Our hosts made us immediately at home, and a chair was fetched for me.

There was a little grass under the trees, and just inside the wall an open earthen space like a bit of a school playground. The band was sitting against the wall, while men and boys were dancing and a largish audience was clapping and hurrahing at intervals. Baskets and dishes of ripe apricots were lying about everywhere, and everyone helped himself as inclined. Fruit was brought for us and the merry-making went on as before. It was delightfully gay and informal and our young hosts did not allow us to feel out of things. We took care not to stay too

593

[Facing p. 96]

000 long, for fear we were in any way spoiling the fun. We took another route home, where a tiny 2-foot track at the base of a high wall led us past a fine reservoir of water and out on to the main road.

312 The whole countryside is dotted with these deep open-air reservoirs, their sides built of stone walls. They are drained from a hole at one side of the floor, and this can be plugged by a skilfully shaped wooden stopper mounted on a long slim poplar pole. It may happen that your turn for water comes at a moment when you don't immediately want to use it. In that case you store it till wanted and draw it off as required. When one of these *pferis* is full in summer time the men and boys use them as swimming pools. In winter everyone fills his *pferi* before the water ceases to flow, and this gives him a reserve of water for his animals and for washing purposes. The drinking water is carefully stored in smaller similar dugout pits which are scrupulously roofed over almost at ground level and approached down several rude steep steps, so that there is no fear of their being polluted by the animals. The Hunzukuts are most fastidious in their habits, and do not allow any of their water to be fouled.

000 Next evening David and I went out for another walk alone. We had no intention of being dogged by our retainers, however helpful, for we knew we could not hope to get into touch with the people themselves if any third parties were present. We pursued the Dála as before but without turning downhill. In the very first empty field (just reaped) there was a nice little girl about eight, whose name she told us was Kaníza—she will turn up again frequently, for she lives in one of the very nearest houses. She was carrying a small youngster on her back and wasn't in the very least shy. The small child was a girl and was her married sister's and had come over from Báltít to spend the day. The baby was two and would walk and talk, she said, and her house was just along there in front and she was going home. She came along behind us chattering away. These single-file paths are unsociable, and the fact that no one can ever walk beside you does not make it easier to talk Burushaski. Kaníza had evidently heard the boys yesterday telling us the

600 names of things, so she took up the good work: "That's our roof; that thing sticking out is a cross rafter," and "That's our ladder." Presently we came to the corner of her square, stone house, the wall of which rose straight from the water-channel, and there we found her father and a couple of small boys. We crossed a tiny two-trunk bridge to talk to them at the door, and papa was evidently much pleased that we had taken notice
251 of the two small girls. Mother and an auntie were sitting a little farther back under some fine mulberry trees splitting apricots, which they were going to spread presently on a big boulder or on the roof to dry. Everywhere we looked boulders and roofs were decorated with glorious golden-pink pools of drying apricots.

252 I slipped over to the women while David continued to chat
354 to the master of the house. With luck the dried apricots would
302 last them all through the winter, for this had been a good year. The apricot stones they were keeping carefully as they worked. Presently the children would crack them between stones and the kernels would be hoarded. Eaten with dried apricots they make a delicious almond-and-raisin dessert for feast days or offerings to guests, while a good proportion of them must be pounded by the women till the oil is squeezed out that will give their sole indoor light. If by good luck there is any oil to spare, it makes a prized unguent for the hair and most families contrive to have enough to sleek their plaits or fringes for
296 great occasions. This cheery family bade us a friendly good-bye as we moved on, and a little farther along the channel, which was now making a curved sweep round, we saw a man standing in a reaped field below us. This crop had been lucerne, he said; he gets two crops of it off one field each season. David told him how they get seven or eight crops in Persia, but consider the first crop bad for the animals (for some reason which we never discovered). He was much interested, and said they did not notice any difference in the wholesomeness of their first and second crop: Hunza animals are not encouraged to be
000 faddy. Presently we came to a fine, walled-in mulberry orchard on our left and climbed up into a sloping field where a slight crop of grass was growing between boulders. We sat down to

1 [of Kaniza, a Burusho child--Analyst]

000 admire the view with a fine stretch of terraced fields below us, quaint little stone houses with groups of trees dotted here and there, and behind all, in every direction, the great mountains. On our way back there was a small boy, of perhaps thirteen, in the ex-lucerne field: "Who does this field belong to?" Just in the boastful way of small boys at home, he answered: "Oh, this is my field and that's my mulberry orchard you passed just now, and here's my house with the big mulberry tree over it, and this is my apricot tree and that is my father over there," pointing to our earlier friend who had moved some distance off. "I'm going home now," and he came along with us chattering away. "That's one of our lambs, and that's a kid." He passed his own door and walked all the way back with us. When we came to the bungalow David imitated his way of speaking: "And this is our house, and that's our chair in the verandah, and now we are going in to eat bread." The boy burst out laughing, evidently quite aware that we were chaffing him, waved his hand in farewell, and ran home at the double to tell his family all about it.

We had quite expected that the people would be friendly, but we had no idea they would be so spontaneously forthcoming and so quick to guess what we were driving at. Already by our second day we had made two sets of friends in the two nearest houses, and were sure of a welcome as we passed.

285 I asked Levy Kalbi next morning whether there was anyone who could make us a wastepaper basket. Within an hour or two he came along with an armful of willow twigs, squatted in the verandah: "If the Sahib will show what shape he would like, I'll make it now." So David made him a rough sketch, and in an hour or two he had finished a capacious basket that only needed to dry for a day or two in the sun. We asked what it should cost. He was almost hurt: "You shall not pay me for
281 it. I am already eating your salt. And a basket is nothing,
462 anyway." The day after he came along with a bunch of goat's hair under his arm which he was going to spin, and he thought we might like to watch. Oddly, the men spin the goat's hair
181 and the women the wool. All these Hunza people are refresh-

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

ingly competent. There's nothing connected with their every- 181
day life that they cannot all do, and do well.

I saw a couple of pretty young women sitting together in a 283
little orchard spinning, as they watched a few sheep grazing on some odd blades of grass that grew between the trees. I scrambled over the wall and sat beside them to watch. They showed me what they were doing, and as we talked a fine old greybeard passed by driving a few goats and sheep downhill. "What are you doing there, Mother?" "Najit and Zaida are showing me how to spin." "But don't you *know*?" Half shamefaced, wholly amused, I tried to explain that unfortunately in our country most of the spinning was done with "wheels" (a general sort of word for machinery of any kind—a thing which, of course, they have never seen), and quite a lot of women besides myself did not know how to spin. He shook his head sadly as if to say, "What is the world coming to?" and stood a moment to watch us. Then sympathetically but firmly he said: "You'll never learn now, I'm afraid. You should have begun as a child; it takes a lot of practice. Good-bye." And as he went after his animals I saw him still gently shaking his head over my lost youth—which he could not regret more than I.

Wherever she is going, whether to the orchard to gather 283
twigs for firewood, or to the mill with a small sack of grain to 415
be ground, the woman carries under her arm a quaint little kidney-shaped receptacle for her well-washed wool. It is usually made of wild rowan bark. The menfolk when up at the summer pastures cut a strip of bark and bend the two ends towards the centre, forming two circular chambers. They then bury it for a year or two till it has taken the required shape. Then they lash on a thin wooden base and lash the two circular chambers together, and the wife's *pfurúkus* is ready for her. In one side she puts the clean wool which she teases by hand, removing any lumps or bits of straw, which she puts into the odd-shaped cavity between the two circles. She then coaxes bits of the cleaned lump into a neat ribbon of wool about 6 inches long and 1½ inches wide, and beats it well on her knee till it is perfectly flat and even and coheres together, and this little

283 strip is folded and placed in the second chamber. When she
415 has enough of these *dapping* prepared, she takes out her little spindle, also shaped at home, puts the point of it into a little dish like a small ash-tray, which prevents it from wandering about while she rotates it. Then with a *dap* of wool in her left hand and the spindle in her right, she conjures somehow a fine even thread on to the whirring spindle. So many *dapping* make a spindleful, so many spindlefuls make a ball, so many balls suffice for a winter cloak. Undoubtedly you must learn as a child. The shape of the *pfurúkus* makes it most convenient to carry; even if you have a child on your shoulders and a basket on your back, it sits under your arm and stays there of itself, one circular chamber projecting back and front. The little ash-tray is cleverly moulded by the women from the malleable mush left when they have squeezed every drop of oil from their apricot kernels. It dries in a day or two and serves for many a year.

243 There was a jolly family party who worked the fields just below our house. I used to wish the fields didn't slope down and down and we could then have watched them better from the windows. When we arrived they had just reaped two fields of wheat (which ripens a fortnight later than the barley) and piled the sheaves in two big stacks. Then they made their threshing-floor as earlier described.[1] When the floor was dry they spread the entire circle 2 or 3 feet deep with cut wheat and got a team of five cows, tied their muzzles loosely together with a soft rope round each and then drove them round to
[462] tread out the grain. It is usually a woman or girl who drives the team, but sometimes a man or boy will take a hand. The outside beast has, of course, to make the biggest circle, while the centre one just buzzes round as nearly as possible in the
[46] same spot. As the driver gently touches them with her switch she keeps shouting "Hai, hai, hai!" to encourage them. When she gets tired one of the others comes on duty and she goes and sits down in the shade of the stack. As you can imagine, it is pretty hot in the noonday sun. I joined the women in the shade where they sat spinning away and keeping an eye on
000 the toddlers. There were two dear little girls, Shamúli and

1 [See p. 77, Cat. 116 or 243. — Analyst]

FIRST WALKS ABROAD

There were two dear little girls, Shamúli and 524
Banu, about six and four, who played with me and let me 177
tickle them with straws and play "One little pig went to market . . ." with their dusty little toes. This game proved such a success that I roughly translated it into "One little sheep went to drink. . . ." They would never have seen a pig, and if they had they *ought* to think it unclean, so I thought a lamb was safer. My first version gave one little lamb bread to eat, "bread" being a general word for "food." This caused great laughter: "Lambs wouldn't like bread, Mother dear." "Well, what do you think they'd like best?" "Oh, grass or leaves." "One little lamb had grass to eat and one little lamb had none." Thus amended, my little rhyme was approved, and other youngsters turned up to play "little lambs" till the game grew so popular that whenever I sat down on anyone's threshing-floor baby feet would be stretched out towards me: "One little lamb, Mother . . ." till I got quite tired of ". . . baa, baa, baa, all the way home," but it never palled on them. Centuries hence, when we shall have long been sleeping in the Garden of Rest at Golders Green, some anthropologist will come along and wonder what process of "diffusion" took "one little pig" to Hunza, or whether Hunza spontaneously generated the jingle for itself.

My pencil and little notebook were a great source of amuse- 124
ment, and the youngsters would crowd round: "Have you put 476
my name in? I'm Shamúli." "So you are; but whose Shamúli are you? I've got two Shamúlis already. Who's your Daddy? How many brothers have you got; how many sisters, are they bigger or smaller, what are *their* names? And which house is yours?" Thus gradually I got to know most of our immediate neighbours, but it was no easy matter to sort the families out, for groups would gather on each other's threshing-floors, and anyone whose own immediate work was done would join in to help the workers. I finally gave numbers of my own to all the nearest houses, and tried bit by bit to plot out the various relationships.

Meantime the threshing went steadily on, and I noticed that 243
the driver carried always a flat bowl shoulder high in her left 237
hand. "Now what's that for?" asked I. "Why, that's the dung-

243 dish," and right enough the driver quickly anticipated her cows'
237 needs, and when her dish was full went off and emptied it on a little heap of manure. You thus keep your grain uncontaminated and salvage your manure—most priceless of products. If the driver lapses into a daydream a warning yell from the onlookers would call her attention back in time. I don't know whether the dung-dish is in use elsewhere, but it is at any rate one more symbol of Hunza fastidiousness. You *plough* with oxen, but you thresh with *cows*, whose slighter needs can
[412] also be forestalled. When all the wheat is thoroughly trampled the men take great wooden five-pronged forks, most gracefully shaped things (made, of course, at home), and towards evening when there comes a little breeze they toss the broken
243 wheat up into the air to winnow it. The broken straw is blown to one side while the heavier grain falls into a heap. Then they take wooden, home-made spades and toss the grain again to get rid of any remaining straw. These processes take many hours' hard work, and will not be completed in one day; but they have no rain to fear and can leave their stacks of straw and
[674] heaps of grain from one day till the next. They leave their threshing-floors unguarded when they go home at night; pilfering a neighbour's food is simply "not done."

When the winnowing is over the women take a big sieve, made of thin strips of leather criss-crossed over a round frame. This is coarse enough to let the grain through but to catch any scraps of straw. When this first sieving is over, they take a finer sieve (with, of course, a totally different name) which keeps the grain and lets the dust fall through. But even then they don't consider the job quite finished. The women turn the pile over with their hands, carefully picking out any sliver of straw that may have previously escaped. When at last it is ready, the grain is filled into large skin sacks, which will take up to 160 lb. or so, and the men carry these off to the storeroom while the broken straw is loaded into huge open-ribbed baskets that can also be carried only by a man. The straw is taken up on to the flat roof and poured down through a central hole into the straw shed.

There is no hard and fast rule about what is woman's work

FIRST WALKS ABROAD

There is no hard and fast rule about what is women's work and what is man's except that, for obvious reasons, the extra-heavy loads are handled by the men; but a man will gladly take a turn at driving the threshing team or carrying the baby, and a woman will readily do a spell with the winnowing fork or shovel. No job is taboo for anyone able to tackle it, and the result is the pleasantest possible family co-operation. The great thing is to get this particular work polished off as soon as possible for there are other urgent things waiting to be done. 462

2: Lorimer T-3 (1929-4; 1934-5) 1939 AV7 Burusho AV7

Chapter 15

ILLNESS CALLS A HALT

WHEN after three days we had got the house habitable, cupboards and bookshelves ordered, lamps burning, water and food routine running smoothly, and the first friendly contacts with our neighbours established, we asked leave to pay our first call on the Mir, the king of the country and our host.

Two horses were found for us—it was a welcome let-off that the nature of the country made it useless to keep our own horses—and we started early, while it was still cool, on the four-mile ride to Báltít, his capital. The Great North Road from Kashmir to Central Asia is here some four to five feet wide; the only rideable road in the country. For the first couple of miles it runs fairly level between high field walls, just dipping 50 feet now and again to cross a stony gully, down which pour at times irresistible floods of mud and boulders; then it staggers almost perpendicularly up some hundreds of feet till it reaches the level of the Dála and runs along with the water channel (which is perhaps 4 feet wide and 2 feet deep) on its left and a steep drop on the right into the first fields below. High above us towered staircases of narrow fields and behind them great serrated snow peaks, the most interesting of which culminates in a 2,000-foot needle of sheer granite too steep ever to hold the snow.

This is Princess Búbuli's Peak, and the story goes that when the hero Kiser (the Gesar of Tibetan myth[1] and an

[1] For original Tibetan versions of his story, see Madame Alexandra David-Neel, *Gesar of Ling*; for the Burushaski version, see D. L. R. L., in *Folklore*, XLII, June 2, 1931.

incarnate deity) conquered Hai Hai Yúl (= Hunza) he took to wife the Princess Búbuli. He had not been long in the country till he saw in a dream Tibet invaded and his earlier queen carried into captivity, so he determined to return and deal with his enemies. Even in the Tibetan versions of the Gesar Saga it is difficult to avoid thinking him an ugly type of hero, a still more unpleasant manifestation of the divine, and the absolute limit in undesirable husbands. Princess Búbuli asked when she might look for his return: "I'll go to-morrow and return yesterday"; he said, "when donkeys grow horns, when millstones grow beards, when the river flows uphill, I shall come back." Lest she should get into trouble during this brief grass-widowhood he seated her on this granite spike with a 200-lb. bag of millet-seed and a cock: "Give him one grain a year, and when the grain is done, I shall return." And there the luckless princess sits, and you can hear her wailing in the winter storm.

The road commands a fine view of the junction of the Nagir with the Hunza River, and the rugged, savage valley which leads to the Nagir capital, tucked away out of sight amongst its sunless mountains near the great Hispar glacier. On our Hunza side the ground falls steeply with fertile bays of terraced fields and groves of apricots, all still in late July laden with their golden fruit. The road winds round various bluffs, following of course the contours of the mountain-side, and you can see several villages below, including Ganesh, clustered on the very edge of the river cliffs. High above the field-terraces on our left we presently espied the white front of the fortress-palace that has looked down over the fields of Hunza for at least six hundred years—surely the most dominating seat of kings in the wide world. It is built on the cliff edge of a projecting promontory that falls perpendicularly—but from the road invisibly—behind it; and behind that again lies the mighty ravine of the Ulter Ber, up which, far out of sight, is the almost inaccessible glacier that supplies all the waters of Hunza, from Áltít (two miles beyond and some hundreds of feet below Báltít) to Aliábád, feeding five or six different aqueducts, including, of course, the Dála.

ILLNESS CALLS A HALT

175 Some time in the days of our earliest Edwards, a princess of
361 Baltistán married the reigning prince of Hunza. For the last
712 hundred years or so the direct route to Baltistán has been completely blocked by advancing glaciers, but for centuries before, the two countries had been in communication with each other. Hunza consisted then of three small villages only: Áltít and Ganesh on the river cliffs, and Báltít high above. The princess's father sent with the bride an army of Balti masons, carpenters, and craftsmen, who built the two forts of Áltít and Báltít as part of the royal dowry, and to-day they still stand proudly on their cliffs, impregnable to assault,
[171] centres of ancient ceremonial. To this day, too, the Hunzukuts modestly attribute all their simple arts to Balti influence.

173 The original inhabitants of Hunza proper are said to be
643 descended from three soldiers of Alexander the Great, who were left behind sick, presumably plus their womenfolk, and thus while their comrades marched on became the founders of the three first villages in this inhospitable region. Like so many royal houses in Central Asia, the family that has ruled for more than six centuries in Hunza and Nagir likes to claim descent from Alexander himself. But while the Mir of Nagir, Sir Sikander (= Alexander) Khan still upholds this tradition, we noticed that the shrewder Mir of Hunza—who must have seen many a courteously-veiled smile greet this familiar genealogy—shied off the topic.

What seems probable is that the royal family is not in origin of the same stock as the people, and that it may well—as tradition asserts—have come from Persia at some prehistoric date. What is certain is that it can trace its authentic ancestry as far back as can the House of Windsor.

173 There may well be truth in the legend of the European
144 descent of the Hunza Burusho, for in temperament and looks our Hunza friends have nothing of the "Oriental" about them. Take from them the very lightly bronzed complexion, "the shadow'd livery of the burnished sun," to which at this altitude they are "neighbour and near bred," and you could transplant them without incongruity to the moors of Yorkshire or the Scottish lowlands.

ILLNESS CALLS A HALT

Above and below us as we rode the barley harvest was being 243
speedily gathered in; family groups were reaping, threshing, winnowing, while the more advanced were already hastily reploughing their land for various kinds of millet. Though the [132]
Hunza summer is short, the sun at these heights is hot, and with luck each hard-worked field will bear two crops a season. The barley field which is soonest clear will ripen a later crop of millet; the wheat field, ready a fortnight or three weeks later, will still be in time for one or other type of buckwheat. Barley must in olden days have been the standard crop, for all the sowing and harvest festivals centre round it. But the Hunzukuts[1] of to-day vastly prefers wheaten bread and sows as much wheat as he dares. Even the winter-sown wheat, however, ripens later than the spring barley, and since every ingenious device of agriculture only "just gives what life requires, but gives no more," he cannot afford to concentrate on wheat alone. Each year the peasant farmer makes his calcu- [242]
lations afresh; experience has taught him much about the rotation of crops, the different varieties of grain that each field —according to soil, water, and aspect—can most profitably bear, and his gamble with nature is a highly intelligent one. In the opener fields of Aliábád we reckoned that the proportion of wheat to barley was roughly two to one, nearer Báltít one to two.

If later in the year you point to a field and ask "What crop is that?" the answer will not be "Such and such a millet, or such and such a buckwheat," but the name of the growing crop with the additional information "On top of wheat" or "On top of barley," which will give you the difference of some weeks in the date of sowing and probably also indicate some subtle difference in the quality of the soil if you have learnt enough basic agriculture to interpret the facts aright.

Our narrow mountain track skirted the face of a magnificent 644
amphitheatre of storeyed cultivation, plunging every now and then into welcome belts of fruit trees, willows and poplars, crossing foaming mountain torrents in cracks of the hillside, none too easy to ford in July, though only rock-strewn gullies

[1] Hunzukuts is both singular and plural.

2: Lorimer T-3 (1929-4; 1934-5) 1939 AV7 Burnho AV7

644 in winter. Rounding the last bend of the road, we saw before us, below the Fort, the park-like promontory on which the Mir has laid out royal gardens and orchards and built himself roomy summer quarters with two or three European guest-houses. As soon as we were sighted, the band broke out into the hospitable welcome music, and at the gate of the park a young prince stood to greet us, the loveliest boy of thirteen I have ever seen. He was Shah Khán, one of the Mir's youngest sons, but I christened him forthwith Lord Fauntleroy. Short dark curls framed his homespun cap, and with him were two playmates armed with wooden rifles, whom he calls his "bodyguard." They laughingly presented arms in fine style, and we rode on through the trees to a row of hospitable mangers where we left our ponies and saw Prince Ghazan Khan (the "Prince of Wales"[1]) advancing on foot to meet us.

On our right we left the large open courtyard banked up on to the hillside with verandahs on two sides, where the Mir sits daily in public to dispense justice in the final court of appeal. A steep flight of irregular stone steps is fitted to the contour of the hill; above them on a large granite boulder is picturesquely and ingeniously perched one of the Mir's new guest-houses ornamented outside with ibex horns and stuffed game animals. Then the stairs turned abruptly left through a fine gateway of cut granite with two heraldic monsters couchant on the lintel, where the Mir himself was standing to await us.

643 Though nearly seventy, he was still a fine figure of a man, every inch a king, as befitted one of the few true, hereditary autocrats left in a topsy-turvy world. He led us through into a lovely English-looking orchard with apple trees bending laden boughs above the grass, to where carpets were spread on the turf beside a miniature playing fountain. A gaily decked tea-table had been set out. Our meeting was one of genuine happiness on both sides. He laughed as he shouted for the tea. "I haven't forgotten, Colonel Sahib," he said, "any hour of the day or night is tea-time, isn't it?" This dear old chestnut-

[1] Now the Mir, 1938.

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

joke recalled a journey he and David had made in company 643
twelve or thirteen years before to meet the Commander-in-Chief, Lord Rawlinson, on the Thui Pass as he entered Hunza from Chitral. Mir and Political Agent had messed together, and their shared passion for tea at any hour had strengthened the less frivolous bonds between them.

We noticed that our old friend was wearing coloured glasses and heard that his eyes were giving trouble. They looked as keen and shrewd and kindly as ever when he doffed his glasses, but he was awaiting an operation for cataract. It should have been performed in May, but Major Ledger, the Agency Surgeon, had himself gone down with typhus and was now recuperating in Kashmir, so the operation had been postponed until September. The Mir was also having to diet himself carefully to keep diabetes at bay, but despite these trifles he looked extremely well and very cheerful as he talked with expert knowledge of Central Asian politics and the tangled interactions of "Bolsheviki," Chinese, Turkis, and Tungans, and the mysterious disappearance into Russia of Ma Chung-yin.

We all enjoyed our tea, which was served by Mirza Hasan, a valued old retainer, sometime cook to a British officer, who is summoned to act as chef whenever European guests are expected. In the delightful informality of the Mir's intimate circle, Mirza Hasan stepped forward presently to welcome us and was gratified when I congratulated him on his cakes and biscuits (as I was conscientiously able to do). After a pleasant hour of interchanging news, we took our leave of the royal party, augmented meanwhile by the royal grandsons and a tiny son of two or three, and were seen out of the park with great solemnity by Lord Fauntleroy and bodyguard.

All initial duties were now performed and we could begin 000
our work in Aliábád in all seriousness. The Gods thought otherwise.

The ride home through noonday heat was hot and wearying; towards evening David felt feverish, before morning his temperature was close on 105°. There followed four anxious weeks. Five times his temperature ran up like this; five times after a spell of high fever it plunged down in five or six hours to 95°

008 or a shade below, leaving him swimming in sweat and weaker than a new-born kitten. As everyone knows who has lived in the East, these acute subnormal spells are almost more alarming than raging fever, and are more exhausting to the patient. Slowly, slowly he would regain strength on Zaidu's "chicken broth," on milk and custard, and creep, decimal by decimal, towards 98·4, and each time as we congratulated ourselves that he was nearly well, and he was sitting out on the verandah, observing the life about him and chatting to the passers-by—whizz bang—he was up to 105° once more.

Nothing like our people's devotion was ever seen. Dádo would carry off soaking sheets and drenched pyjamas, wash them and dry them in the sun. Zaidu would devise and cook such invalid dishes as our scanty resources permitted. Everyone, including Sagi and the levies, wanted to sit up all night, but this I would not allow; they had their fields to till and their harvest to gather in. I had a little Meta stove and could heat milk or soup or Ovaltine during the night myself; but always Dádo slept near the bedroom door, and no admonition would drive him from it.

Again and again those many nights I listened in vain for a sound of breathing, and often I feared my patient would be too exhausted to wake to see another dawn creep up on Rakaposhi.

When the fever fiend had played his last card and lost the trick, there started a fortnight of the most gruesome headache. All his life DL has been liable to an occasional bad headache, but they usually wear out their violence in twenty-four hours. This brute went on day and night for fourteen days so that he could neither read nor write nor sleep. That seems, however, to have been the last frantic struggle of the evil spirit before being exorcised.

759 It wasn't till nine weeks of illness and convalescence were past that I realized that I had never for a moment felt lonely or given a thought to the absence of a doctor. The servants had been such trumps, the neighbours so sympathetic and kindly, that I was never consciously aware that the nearest white person was not even four days off in Gilgit, but 150 miles off in Rama or 300 in Kashmir (for no one stays in Gilgit

ILLNESS CALLS A HALT

in the summer), or that with luck we might see a doctor in a 759
month or two. In our little home-town there are indignation meetings because we have to travel seven miles in a motor ambulance to reach our nearest hospital.

Another pleasant thing had been the presence of the Indian sub-assistant surgeon in charge of the local dispensary. True when you were sick you would echo George the What-ever-it-was: "Give the doctor my compliments and say I am too ill to see him," but he had a store of any simple drugs absent from our own medicine chest and he kindly acted as sanitary inspector and supervised the disposal of the kitchen refuse, etc., and directed the activities of the sweeper. This removed a source of possible anxiety.

Altogether things might have been a lot worse. It was per- 000
fectly maddening for David to have missed all these interesting weeks of the harvest; but he had seen something of it from his window, and from the verandah, and if he was pretty fit again by mid-September we still had an entire year's cycle ahead of us. And I had sat about a good deal in the fields (within sight of the house and within earshot of his whistle—though he never blew it), and made lots of friends and taken what notes I could with as much of my mind as was on the spot. It wasn't a lot, for I was often anxious and always rather underslept. But with luck we should fill in the missing bits next year.

The September weather was delightful; the "bitter" heat 132
had gone, and it was like the best days of an early English summer, but with perfect dryness and the security we never have at home that to-morrow and the day after would equally be fine.

Before coming we had been afraid that further knowledge 114
might reveal all sorts of mistakes in the Grammar and the Texts (now finally in print and about to appear). We were immensely relieved to find as we worked that there was *nothing* incorrect. It seemed almost incredible. A few difficult points could be further cleared up, but there was nothing to retract. The Vocabulary proofs were beginning to come—and a hideous fag it was correcting them!—but this gave opportunity to eliminate a few question marks and occasionally to

114 add a new meaning without disturbing the main text. DL did not attempt to incorporate new material. It would be better not to tinker with the existing work but to wait till our work here was done and put new facts into shape for a supplementary volume.

The anthropological material would in any case be an entirely separate business.

194 One very tiresome task connected with the Vocabulary was to achieve what certainty was possible about aspirates and cerebrals. Neither David nor I had when young any scientific training in phonetics—the modern science of phonetics simply did not then exist—and perhaps our ears are not naturally acute. Anyhow, neither of us can distinguish these finer shades of sound with any certainty. Burushaski has, for instance, four different t's: a dental t and a cerebral t (= t and ṭ) and the same two sounds plus a light aspiration (= th and ṭh). It is practically convenient and scientifically lamentable that the English t holds an intermediate position between them. Our ordinary t does quite beautifully for conversational use. No doubt in all cases it sounds slightly "foreign" to a Hunza ear, but it seems to be perfectly acceptable. This, however, isn't good enough for accurate recording. Fortunately Qudrat Ullah was intelligent enough to detect the difference, and David has taught him to be on the *qui vive*; so they set to work through the whole Vocabulary to check every single spelling authoritatively. The scientist and phonetician will therefore be able to get the accurate spellings there and the more casual spellings of the Grammar and Texts will be good enough for the ordinary student.

If it was only the t's! But there are a dozen other sounds afflicted with cerebral and aspirate doubles. It was a long and weary business to register them all, but one at least which could only have been tackled on the spot. The ordinary speaker is of course unaware of these refinements of his own pronunciation. An odd point is that the aspiration is frequently dropped in Hunza speech in derived forms, whereas Nagir Burushaski is more logical in the matter; with them apparently "once an aspirate, always an aspirate" is the usual rule.

ILLNESS CALLS A HALT

194 Personally I felt at times impatient of the time that had to be "wasted" on these subtleties; but my better self acknowledges their importance—or potential importance—for comparative philology. I am, I fear, a curious mixture of a shameless philistine and a scholar *manquée*!

Chapter 16

HOME LIFE AT No. 1

293 WHEN the women are working in the fields through the heat
[132] of the day—and it is very, very hot at 7,800 feet with a tem-
854 perature of 105° in the shade—they usually have a large square
482 of cotton cloth with them, which they sometimes throw over their heads for protection. This cloth turns in for all sorts of purposes; if you are carrying a small quantity of flour home from the mill you can wrap it up and tie it across from one shoulder to the other armpit and so keep both hands free. If the baby is too small to sit safely on your back or shoulders, you treat it in the same way. In fact, if you see a woman with this kind of bundle that appears to have two lumps in it you may safely guess that it's a baby.

342 I made great friends with the family who worked just below us (I have named them in my notebook Household No. 1), and I felt quite sad when their wheat harvest was over—it was so convenient just to run down and join them in sight of our own windows. They asked me, however: "Won't you come home and sit in our shade?" Of course I accepted with delight. It was just a few steps along the Dála and down one of the little lanes, half path, half watercourse. We came to a slightly taller, mud-plastered wall on the left with a wooden door in it. Through this I stepped in to a tiny courtyard with a shed on each side, one for straw and one for the lambs and kids. The
[333] house itself is just a rough cube of stones plastered with mud, and it has a flat roof with a smoke-hole in it above the central hearth. You go up by a ladder, and the roof makes a nice place for sitting out, watching the neighbours go by, spinning, and drying apricots. It has a second store-room built on a part of

342 it, exactly over the main store-room below. There is no parapet, only a tiny raised rim to direct the rain into a small gutter-hole, on the rare occasions when there is rain; but it has a fringe of cut thorn bushes arranged round the edge to prevent an enterprising goat jumping across from the next-
351 door roof not many feet away. I didn't, however, go up on to
296 the roof, but on into a larger courtyard where there was a pool in the corner at which their washing is done. They would not dream of polluting the running water by washing themselves or their clothes in it as it flows by; they draw off what they want for these purposes into a separate pond of their own.
351 Then under a large shady tree there was a raised stone plat-
513 form which acts as a "sofa" by day and as a double or treble or quadruple bed by night—for, except in the depth of winter, nobody sleeps indoors. There was another raised platform, with a wall at the back and open in front and sides, roofed in for another sleeping place. It had a railing along under the roof, and over this were hung all sorts of padded quilts, homespun
[136] blankets, sheepskins, etc.—the family bedding. All the bedding is taken out and hung up every day, which helps to account for the complete lack of vermin—which I confess came to us as a happy surprise. In all our year in Hunza we saw only *one* flea, and that, as David said, was emphatically our own!

245 Round the corner from these sleeping places I got into a
312 walled-in shady garden full of fruit trees—apples, mulberries, peaches, apricots, and vines. It is incredible how luxurious mere *shade* is at such a temperature. It wasn't remotely like a garden in our sense. The earth was bare without one blade of grass or green, and was all cut up into little beds round each precious tree, with banks between them, so that the water could be directed to each tree as desired, when it was No. 1's
514 turn to have water at all. In the far corner of the garden was
343 a neat little circular "open-air pulpit." We had seen these pulpits dotted about, but—stupidly—did not at once guess what they were for. Coming straight from Kashmir, where the approach to each homestead is ankle deep in filth, or remembering Arab habits in Iráq, we never expected that we should find in Hunza a people as scrupulously decent as ourselves in

2: Lorimer T-3 (1927-4; 1934-5) 1939 AV7 Burusho AV7

514 matters of sanitation. The lower chamber of their little
343 pulpits is closed with one large slab, which makes them easy to clean; the upper is well supplied with nice clean sand, and has a small hole in the floor. The entrance opening to the upper part is narrow, and anyone inside is completely hidden; even so we never saw man, woman, or child disappear into one. The most prudish maiden aunt would never need to blush as she would in the streets of Paris or by the creeks of Basrah; and whatever Islám may recommend, the Hunzukuts does not dream of allowing his running water or his drinking tanks to be fouled by man or beast.

The pulpits must be regularly and frequently cleaned out, for, though they often stand beside the path, you never get a whiff from them to suggest their necessary purpose, yet I have never seen one being emptied; that also is a job they evidently prefer to do in the privacy of darkness.

252 A red felt carpet was quickly brought and spread for me, and soon the entire family was sitting round, making conversation. I went back another day soon after, also by invitation, and was allowed to watch Bibi Gímo cook the greens and bread for the mid-day meal. In the summer they cook in the open, in the garden or on the roof, which often has a roofed verandah or even a lightly enclosed upper room added on in front of the upper store-room. She had a little hearth of big stones to hold her tiny fire, and over it sat the big stone cooking pot of vegetables. In olden days the bread was cooked on hot stones, but nowadays everyone has a convex iron griddle which can rest either on the stones or on a tiny iron trivet. They have a neat, shallow wooden tray in which they knead their flour, adding a little water till it has become a flaky dough. Then they take the lid and on that roll out small lumps of the dough with the most ridiculous-looking toy rolling-pin hardly half an inch in diameter. They roll the dough into thin, thin pancakes, lift these with a wooden spatula on to the griddle, and turn them with a skilful twitch. Each takes only a second or so to cook, and is then twitched off on to a big
264 flat wicket platter till there is a sufficient pile. When mealtime comes the family gather round, squatting just anywhere that

is convenient. Each person has his own wooden bowl and 264
wooden spoon. They roll up their pancakes and dip them in [415]
their bowl of thick vegetable soup or take up the soup with
the spoon. The head woman of the house apportions a fair 262
share to each, and I fear there is rarely enough to allow of
second helpings.

The art of rationing the family all through the year is recognized as a difficult one; each able-bodied man is entitled to double a woman's ration, but the expectant or nursing mother gets a larger share than the other women; each child after weaning gets a certain ration according to its age.

If a *rúli gus* (housewife-in-chief) is over-generous with her 262
rationing during the post-harvest months of plenty the whole 586
family may starve before next year; so a "competent woman"
is highly valued, and incompetence is a fair ground for divorce.
No ill-will is felt or expressed, but back she goes to the father
and mother who bred her.

The No. 1 Household consists of grandfather, a charming 592
old man, who proudly boasts that he built the house they live in and himself laid out the fruit garden; his two sons, who now do all the heavy work and who both are lucky enough to have small jobs connected with the hospital—this accounts for the family's relative well-to-do-ness; the elder son's wife is my friend Bibi Gímo, the *rúli gus*; the younger son's wife is a beautiful girl Naját, who became one of our best friends. In a community where all faces are happy and kindly, she has the happiest face I have ever seen, and a natural grace of bearing and manner that would adorn any station in any country. Naját so far has no children, but Bibi Gímo's married daughter was staying with her at the moment. There is also an adolescent daughter, Shukuru, who is already growing her hair, and will no doubt presently be married; two nice boys of perhaps thirteen and nine, and the two little girls I have mentioned already, Shamúli, say six, and Banu of three or four, and I imagined there would ere long be another child.

On my second visit, since they had all been so kind to me, 526
I took a tiny rubber ball for Banu. It was a great success. Not only she and Shamúli played with it, but the grown-ups

243

PLATE XI

Hunza fields. Background, Raka in cloud. (*See p.* 211)

[Facing P. 118]

526 "stotted" it far more skilfully than I. They say the women and girls play a lot of ball, and in autumn the women sweep a smooth place under a willow tree, choose teams, and play matches! They *are* a sporting, jolly crowd. It is no use at all merely to bounce the ball and hit it down again as I did; you must spin round on your own axis between each stroke if it is to count. I didn't find this at all easy to learn at my age, and my feeble attempts gave much amusement. They laugh so openly and heartily that there is no offence in their merriment at your expense; even so, they are sensitive lest you might feel hurt, and Naját hastened to console me: "But, you see, you can read and write, and none of us can do that." So they saved my face for me, if it needed saving.

302 I had also brought a small coloured comb and offered it to Bibi Gímo for the children's fringes. All the youngsters, boys and girls alike, have their heads shaven—which makes for cleanliness—with just a neat fringe showing all round under their little caps. Banu at once appropriated the comb and started on her front hair, to the amusement of the congregation—which by now included many neighbours. She is the dearest little devil, and not a bit more grubby than any English child would be who played barefoot in a garden which is mostly half wet.

000 Whichever way I turned on my walks everyone was full of friendliness and welcome, and boys and girls ran along with me telling me all about their animals and naming anything I wanted; but I was longing to have David's company again, and felt rather mean to have been stealing marches on him and making friends in advance. I determined, however, that even after he was well enough to come out for walks I should still go back sometimes to sit with my women friends by myself. It would take too long to tell you about the other families I met and the people I made friends with: there were literally dozens. I solemnly entered their names in my little book and tried to memorize them all and assign them as well as I could to the different houses, but for a long time they all looked rather alike to me and all their dresses are much the same so that it was easy to confuse those I saw less often. Happily this

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

000 only made them laugh, and luckily they all kept forgetting my name, so that I could laugh *tu quoque*. "Larimair memsahib, they would say laboriously, but they had forgotten again before the morrow, and from the first day I was just "Mother dear" to everyone, and sometimes "Granny dear" to the kiddies. It was a delight to be quit of the formal "Memsahib" of India.

857 Meantime David would be seated in his chair in the big study window or out in the verandah, and everyone who passed by would try to catch his eye and wave a salaam, men and women alike. It was a joy to get away from the furtive, veiled womenfolk of India and Kashmir. When little batches of kids and lambs or an occasional cow passed by, the children in charge waved and showed off with an occasional hullabaloo as one beast broke away, leapt a wall, and started tucking in to the new green crop or the vegetable patch. The children dashed after it, chucking well-directed stones, and drove it out in double quick time, and the animals seemed to think it as much fun as the youngsters. After one of these asides they would run past David again to see whether he had noticed the little adventure and were greatly pleased if he shouted out "Well done!" or "Was that the 'bad goat' again?"

Chapter 17

LAND AND HOUSES IN HUNZA

423 By far the majority of the peasant families in Hunza are freeholders. The land passes from generation to generation without tax during life or duty after death. In olden days the Mirs owned a certain amount of land in every settlement, and the custom was to have this farmed by forced labour, spread, in theory, justly over the villagers. The Yerpa, or Steward, in charge of such royal demesnes, was obviously in the pleasant position of being able on the one side to cheat his royal master of a large proportion of the produce, and on the other to oppress and squeeze the luckless peasant-labourers. He extorted bribes in kind from anyone able thus to evade the communal work, and he could impose more than a fair share of the labour on anyone who incurred his dislike. When the present Mir (Sir Muhammad Nazím Khán)[1] was a boy he had seen this system at its ugly work under his father, Mir Ghazan Khan, and his elder brother, Mir Safdar Ali, and as he would tell you with a smile: "I knew just how much peculation and bribery went on—had I not acted as Yerpa myself!"

643 To secure the throne for himself, Safdar Ali, as may be
648 remembered, murdered his father and several brothers in traditional Karakoram style, and ultimately fell foul of the British Government of India by breaking promises and treaties and trying to play off the Chinese and Russian Governments against the Indian. After the brilliant little frontier campaign of 1891–92 he fled—unregretted—to Central Asia, leaving vacant the throne of his ancestors. The British had no wish to annex the country, but it was highly important for the security

[1] Now, alas! the late Mir.—E. O. L., 1938.

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

of India that it should not be taken over by Russia. It was 643
decided to put on the throne a younger brother of the fugitive 648
Safdar Ali's—who by good luck had escaped murder. This young man, Muhammad Nazím Khán, had had an unusually wide political education. As a boy of only nine or ten he had been sent down by his father as a hostage to Gilgit, and had there met British officers for the first time and gained many new ideas. Later he had acted as ambassador and negotiator for his father and his brother on missions to Chinese Turkestan and Afghanistan, and he could talk Wakhi, Turki, Khowar, and Hindustani, as well as his own Burushaski. Above all, he was an extremely able youth, and had drawn his own deductions from his varied adventures. In 1892[1] he was therefore made king, with the able Humayun Beg as his Wazir, and since that time he has been our trusty and faithful ally, guarding for us the lofty passes that are the extreme northern gates to India on the west. For four and forty years he has now ruled his people with firmness, sympathy, and kindness, maintaining security, dispensing justice in accordance with local custom and public opinion, keeping up and encouraging the traditional festivals that punctuate the year with joust and dance, music and merriment.

During his reign there have been only two murders on 674
Hunza soil, serious crime is unknown, and even theft and 625
petty pilfering are non-existent, though there are in the 697
country no prisons and no police. On rare occasions when
some mischief-maker threatens serious trouble, the Mir, with 671
the concurrence of his subjects, may deport the would-be disturber of the peace to the distant valleys of Shimshál to tend the royal flocks that pasture there or to spend his energy on roads or aqueducts. Food and pasturage are plentiful, and life in some respects more luxurious than in lower Hunza; but the Hunzukuts loves his home, his family, his apricots, and after a couple of years' exile the malcontent returns a wiser man. It is amusing to see a recent book indicting the Mir of Hunza for the "tyranny" that imposes so humane and so useful a punish-

[1] A popular account of these high matters may be found in Algernon 113
Durand's *Making of a Frontier*, and in E. F. Knight's *Where Three Empires Meet*.

681 ment. A few years' exile in Shimshál is incomparably preferable to three years' penal servitude in Wormwood Scrubs, yet Hunza delinquents do not become recidivists.

643 423 Young Muhammad Nazím Khán took up his job determined, in the light of his travels and experience, to alter much that had been traditional under his ancestors, and within three years of his accession he had completely abolished the Yerpa system of cultivating the royal lands. Such as lay immediately under his own eye he retained, but all the rest are leased out on easy terms to tenants. For the first years a tenant pays no rent at all for new ground that he brings under the plough; he has to get his fields carved out, his water-channels made, and the soil worked. After the land begins to bear he pays a small fixed rent in kind, and if at any point he finds the bargain unprofitable he is free to resign his holding. A large part of the "new settlements" of Aliábád, including all the district immediately round our house, was *kutúkal* land (viz. royal land leased out), and there was no question that the system was working to everyone's satisfaction. The extra fields available had been eagerly taken up by families in the older settlements who were finding their freehold land too cramped, and many of our neighbours were sons who had hived off from the family freehold and whose relations were still living in Báltít, Haidarábád, or Dorkhan.

556 842 We once enquired, *à propos* of the meaning of the words "rich" and "poor": "Now what would you people consider a rich man?" "One who had, say, a hundred animals." (The ordinary peasant household has twenty or so sheep, goats, and cows.) "And is there any rich man in Aliábád?" "Only one, the Yerpa." This struck us as highly significant; the one rich man still bore by courtesy his grandfather's title of "Steward"! He was no doubt still enjoying his grandfather's ill-gotten gains. Our Yerpa was, in fact, a genial, kindly man, reputed generous. He was not envied: "Poor chap, he has no sons; he has to hire herd-boys to mind his flocks, and labourers to work his fields." In Hunza a man's true wealth is in his sons; they work the farm with him; if there are several, some can go abroad and earn. Not that a woman or a woman's work is

under-valued, but a boy will bring a wife to the house and 556
children to the hearth, while a daughter will take her labour 842
and her children to her husband's home.

In pre-British days the Hunza men bore a bad name in 579
Central Asia as daring raiders. They are a hardy, fearless race, 175
and they would strike a track through uninhabited and un- 721
inhabitable mountain country, leaving dumps of food at intervals as they went, fall on a rich caravan travelling from Leh to Yarqand, carry off the spoil, and return—via their food dumps—to divide the proceeds, the lion's share of which fell, of course, to their brigand chief. Any prisoners captured were sold as slaves into Afghanistan or Central Asia. Alternatively they would raid across the river into Nagir and come back with slaves and cattle.

Since such a form of life invites reprisals the Hunza people 361
lived walled in in tight-packed villages close under their forts. 712
We had in Aliábád the old fort-village, built on a promontory, 202
with ravines protecting it on both sides, surrounded by a wall 175
whose twelve beacon towers could send warning of a raid up and down the river—"and the red glare on Skiddaw roused the burghers of Carlisle." Only one of these beacon towers now remains and the crowded hovels are falling to decay. Since the *Pax Britannica* has come, the peasant builds his house and stores his crops out amongst his fields and orchards—without even a watchdog. A few conservative families move into their old "town house" in winter time perhaps for warmth and companionship, perhaps merely to make a change.

These famous raids were primarily the sport of chieftains, 175
and the peasants of to-day find adventure enough, and danger 579
enough, in their daily life not to regret them. The profits of such raids, which welcomely supplemented the scanty produce
of the fields, are nowadays more than compensated by the 643
money which the British put into circulation. The Mir draws 648
a small and well-earned salary for his services as guardian of the frontier, a grant for keeping up the road through his territory, and a subsidy for his bodyguard of twenty-four men or so. Any sons the peasant can temporarily spare take service 463
with the Gilgit Scouts, in the Public Works or other Govern-

463 ment departments, act as postal runners or dispensary assistants, do part-time jobs as "levies," or enter the private employment of British officers. Travel where you will in the Agency, some enterprising Hunza man is there before you, as carpenter or washerman, as touring merchant or in Government employ. You may even meet an old Hunza taxi-driver in Bombay or a Hunza *chaprassi* in Lahore.

177 At first the Mir rather discouraged these farther-afield
167 adventures, and not unwisely. New ideas, new customs, new dress, imported from abroad might well upset the happy balance of the home civilization; but the increasing pressure of population—a dubious benefit the *Pax Britannica* is wont to bring—makes some outlet necessary for ambitious youth, and some supplement necessary for home support, and the Mir's policy has been modified accordingly. With rare exceptions the travellers' hearts remain in their Hunza highlands; they go for a few years and return with newly acquired skill, with a set of carpenter's tools it may be, with a smoothing-iron or a sewing machine, to resume work on the family farm and earn a little "on the side."

593 We heard that a new house was being built by a certain
342 Kalbi (not the Levy; one of another clan) and were invited to go down—some hundreds of feet—and see it in its half-finished state. "It must cost a lot to build a new house," we said. "How did you come to have money enough to spare?" "Well, you see, I have two sons away working—thank God." And, in fact, except in the few cases where the Hunza man goes over-far afield to Bombay or the Panjab, and needs his own earnings to support a down-country family, the Hunza son remits home every spare anna, knowing well that it will be spent on the home he himself will presently enjoy and share. When he comes back on leave he brings his mother an aluminium cooking-pot or basin to jostle the stone *balosh* and wooden bowl, or an iron bucket which incongruously companions the local gourd when his sisters go to draw the drinking water.

342 In theory there are any number of sizes and patterns of house which you can build in Hunza: the cow-pattern, the ant-pattern, and half a dozen more, but in actual fact there are

exactly two—the old Hunza pattern and the new so-called 342
Wakhi pattern. Most of the Áltít and Báltít houses are, for obvious reasons, of the older type—that designed no doubt by the three original Greeks!—most of the Aliábád houses are of the second, for Aliábád is a new place. Water was only coaxed on to it three or four generations ago; before which it was just barren mountain side with a light sprinkling of thorn jungle.

Having decided on the pattern and proportions of a new house, every peasant family is capable of tracing the foundations and rearing the walls and roof; neighbours will lend a hand, at this as at any other job, asking no fee but a meal when they are working and some return of help another day. In olden days the family, wielding the invaluable adze (when this succeeded the earlier ibex-horn), was competent to rough-hew its doors and cupboards, its posts and rafters. But in more recent years the "standard of living" has risen, and this shows distinctly in indoor architecture. If he can at all afford it, the house-builder will now call in a carpenter-neighbour to put finishing touches of superior excellence. The rough doors of the byres are still picturesquely home-made of adze-hewn poplar slices, threaded on two wooden cross rods and revolving on a spiked wooden post which turns in two rough sockets, but the house doors and cupboards are sawn and panelled, planed and hinged and fitted, to the increased comfort of the inhabitants—and the sorrow of the antiquarian. When we had reached Kalbi's house a cheery carpenter was hard at work sitting on the floor with shavings and sawdust round him, fashioning the elaborate, quadruple frame that forms the smoke-hole. We stayed a while and David wrote up notes about the various woods preferred, and dimensions of the various parts, and took photographs of the interior.

A little later one Mírbán offered to let us inspect his newly finished house before the family moved in. We rode a mile or so along the Báltít road, then turned up a steep, twisting, boulder-strewn lane till a new-fangled wooden door gave entrance to a short of irregular compound with three or four houses in it. The new one looked exactly like the others, for

342 after a day or two the stone-and-mud walls have dried to the same appearance of timeless indestructibility as those of fifty or one hundred years ago. We passed first, as always, through a small byre, not yet inhabited by its cow; then at right angles through a dark, narrow passage 5 or 6 feet long, and then through the low hall-door into the house itself. Your main object in building a house at all is to be as warm and free from draughts as possible during the "Great Cold," and no one in his senses would let his hall-door open straight on to the wind-swept mountain side. Hence the byre ante-room, which not only defeats the direct outside air, but contributes something of animal warmth to the human warmth within.

291 When we emerged into the living-room (the *atrium*, as it
281 were), beautifully bright with light from the smoke-hole, we
352 were standing in a shallow trough below the floor level where the newcomer kicks off his muddy boots in winter. Most people at all well-to-do wear soft home-made boots up to their knees in winter-time. But skins are precious and, however cold the weather, they take their boots *off* to save them when they come to an extra rough bit of ground. This entrance place has in it the "musicians' bench," under which are stored the family basin and similar utensils and on which is piled a store of firewood.

342 The floor of the room is a small square of hard-beaten earth
[352] which in this gloriously dry climate remains admirably clean; and roughly in the centre of it is a shallow hole, edged with four stone kerbs, which is the hearth. Behind the hearth is a low bench sacred to the lady of the house, the presiding genius
343 of indoors. Beside it she sits to do or superintend the cooking
251 and behind her is a low wooden door opening into the store-
[414] room; the home-made wooden key of which hangs always on her person. The store-room runs the whole width and height of the house. It has need to be a roomy place, for here stand the skin sacks of grain, the heaped baskets of potatoes, apples, dried mulberries and apricots, the kernels, the wool, the stone wine-jars, the jars of apricot oil, the basket of savoury herbs—all the family's supplies for a twelvemonth, which it is her duty to guard and to apportion.

LAND AND HOUSES IN HUNZA

As you enter, you turn your eyes left and with your free 342
right hand salute the master of the house and wish him peace. [576]
You will find him seated on a spacious dais raised well above 352
the earthen floor and comfortably carpeted with goats' hair rugs of his own weaving, or it may be with felt carpets from Kashgar. The left-hand wall of the dark passage through which you have entered screens the end of this recessed dais, and is lined with a capacious cupboard reaching to the ceiling. At the head of the dais is a gigantic wooden bin, divided into chambers each with its separate lid, in which the various kinds of flour are stored as they are ground for use: barley, wheat, millets, and buckwheats. The dais itself is 6 or 7 feet wide and 10 or 12 feet long, the men's sitting place by day and the major sleeping bench by night. Each person has his own set of 352
bedding—padded quilts or homespun blankets—in which he 513
rolls himself like a sausage. The sleepers lie crosswise on the bench, which is wide enough to let them stretch full length, and when neatly packed for the night eight or ten can be comfortably accommodated. On the opposite side of the room is 352
the minor bench, equally roomy, but an inch or two less raised, which is the women's sitting place by day, and at night the sleeping bench for women and children. It also has a built-up cupboard at the foot, and at the head, corresponding to the large flour bin, the housewife's spacious "yeast-cupboard" in which she keeps her kneading trough and rolling-pin, her cooking-pots and what not. Its door is at her left hand as she sits on her cross-bench, and the top of it serves as general shelf, table, and "dresser." A more admirable scheme of 342
architecture, better suited to the family's needs, would be 352
difficult to devise. The complete absence of windows gives a sense of security and cosiness; the complete absence of senseless "furniture" gives a delightful feeling of space and peace and leisure, and makes you want to go home and make a bonfire of your tables and chairs. How much more we have lost than gained by learning to sit on chairs and losing the pliability of joint that makes squatting natural. How much unnecessary domestic slavery goes to our "housework." Every 356
morning the Hunza women take the family rugs and bedding

356 and hang them in sun and air. Five minutes with a broom and the whole house is effectively cleaned!

576 The hospitality and goodwill of these people is beyond belief. We had never met or heard of the proud owner of this new house, yet he had spread his benches with rugs and carpets for us, had raised some glass bottles (incredibly precious things these) and filled them with flowers to do us honour. So we sat in comfort and asked innumerable questions, supplementing all we had learned from Kalbi's house and proudly showing off how much we knew. Qudrat Ullah and I worked the measuring tape and sang out various dimensions which David entered on the rough plan he had sketched. And as we worked we chatted about all sorts of things, and found our host most interesting, as indeed all people are who are close in touch with real life—the bore is a pernicious product of 'civilization. Before we went away they brought two huge dishes of peaches and lovely grapes and bunches of flowers for us to take home. We said all the nice things we could think of and wished the family happiness and long life in the new house and plenty of children to fill it, though to judge by the dozens of merry little faces crowding in the background and peering round the entrance, there was no shortage of these in
858 the neighbourhood. The Hunza children (as I have said more than once) are delightful: bright-eyed and eager, yet perfectly mannered. They never interrupt, they never bother you, they disappear like magic if bidden to go, but they love to see and
000 hear all that is going on. While the men were purposefully, gravely talking, I would keep one half my mind at leisure, smile and nod across at the womenfolk, wordlessly implying: "Yes, we know what men are, don't we, you and I?" I would wag a finger in greeting to one or another of the small boys and girls, and then find another catching my eye and demanding an equal attention; I would tickle an adjacent toddler, who responded with a judiciously muffled squeal, and the whole group of households were our friends.

When finally we said good-bye, we could not insult our host by offering money in return for his kindness and the fruit. So next day I plundered my store-room and took out a small

000 boulder of rock-salt, filled two empty cigarette tins (very valuable these) with sugar, and then wondered how to get them surely conveyed to our friends of yesterday. For sugar and salt are indescribably precious, and an ordinary messenger might be tempted. I consulted Dádo. He fell on them with delight: "Oh, do let me take them. Mírbán is a clansman of mine, and a relation by marriage." That settled it, for you could trust Dádo with untold gold—or salt. An hour or two later he was back with radiant face and messages of thanks and blessing.

159 Our next experience with a house was when we found that our dear old neighbour, Ustád Nadíro, was planning one for the marriage of his son. The Ustád (master-craftsman) is a wonderful old man. He spent some years in Gilgit in his youth working in the "barrack-cháp" (= workshop) of the divisional engineer, and came back with a fine set of saws, planes, and chisels, so that he is one of the most famous of the carpenters and is frequently employed by the Mir to embellish his quarters in Báltít. He is, in fact, Carpenter to the King by royal letters patent. But he has not scorned to perfect himself also in the local crafts; he is a famous weaver and bootmaker as well. His wife, a sporting old lady of about my own age, with a game leg and toothless gums, indefatigable energy, a priceless sense of humour and an unfailing smile, is his worthy consort. We made friends with this delightful couple, who lived quite near on the water-channel above us, very early in our stay, and none of our neighbours were so thoughtful as they to call us to their house when anything interesting was going on. They had tragically lost their two elder sons, and the courage with which the two old folk carried on all the work which by now ought to have been shared by two sons and two daughters-in-law, awoke our constant admiration. One married daughter came over sometimes to lend a hand, but otherwise the pair at No. 8 had only Kamber, a lad of perhaps fourteen, and Hérul Nisa, a small girl of ten or so, to help them. With his varied crafts the Ustád must have accumulated some considerable wealth, and he had now betrothed his only surviving son to a girl a shade "above" them in rank,

159 belonging to a family in which Prince Ghazan Khán had been fostered, and who had thus acquired the extra land, etc., which is the recognized recompense for fostering royalty. We supposed that it was a desire to live up to this distinguished new connection (possibly it was a stipulation of the bride's people) that prompted his intention to set the young son, Kamber, up in a house of his own instead of bringing the new wife to share the parents' home.

342 Whatever lay behind this departure from custom, Nadíro sent his Hérul Nisa one day to tell me that he was setting out to "smite his poplars" if I would care to come. It was a *very* hot morning and I was deep in something else, but of course you'd never see anything if you weren't ready to take chances as they turn up. So I shouldered my camera and tripod, seized my long walking-stick (which is a great aid to climbing walls or leaping down them), on which I had made notches every foot to serve for measuring distances, and set off with Hérul Nisa. [423] "Where is father's poplar garden?" I asked. The Aliábád people have a bewildering way of possessing odd scraps of ground dotted about all over the place, just according as they have taken up one plot or another of the sometime royal land. "Oh, quite near," she said. Everything is "quite near" to these active people, who think less of a 500-foot climb than we think of running a hundred yards to the pillar-box at the corner. It was, in fact, a hot, vertical half-mile over the 342 roughest ground without even a track. Here on a rugged patch 313 of stony, steep-sloping ground, carefully walled in, I found the whole of No. 8 and several neighbours busily setting about the felling job. One man scrambled up and attached a rope near the top of the fated tree. Two or three laid hold of the rope and stood at some distance to pull in the right direction, while the old Ustád himself skilfully hacked a triangular bite out of the trunk near to the ground and then axed away. It was only a few minutes till the slender poplar crashed down. Then 314 Kamber and his friends hacked off the few remaining upper- 415 most branches—the lower ones had been cut long ago—and 313 the womenfolk and young people all clustered along the trunk to peel off the bark, taking care to get it off in strips as long

and wide as possible; for bark strips are useful for many 314
things. Some of the flakes were 3 or 4 feet long and 8 or 9 415
inches wide. They would be kept to make large drum-like con- 313
tainers for storage purposes. While the men proceeded to deal with the next tree, the women and young people filled shoulder baskets with chips and twigs and branches and carried them home to store. "Lots of firewood for a long time to come," smiled Bibi Anjir to me gleefully as she limped away as fast and as surefooted as a girl, despite the stiff leg.

I helped, of course, with gathering up the firewood and the 000
bark, but I was never allowed to shoulder a basket. I would have done it gladly enough many a time, but what with silly shoes (which always provoked my companions' sympathy: "It would be so much easier for you to walk safely barefoot, Mother"; I wondered, seeing that my incompetent, soft feet had been for half a century encased in foolish footgear!) and unpractised muscles a cross-country scramble unladen required all my attention. In any case, however, they would never hear of my carrying anything—"the Great must not do that," they said, and as we were enjoying so many privileges of "the Great," we had to pay the recognized penalties.

When the trees were all prostrate, I measured the effective 342
poles that remained and found they ran from 50 to 60 feet: 137
the original trees must have stood 60 or 70 feet high. The Ustád had put the saplings in himself when he walled and planted the "garden" twenty years or so before. Good timber like this is a sound investment. Sixteen good poplars go to the making of a house; up to twenty may be needed if they are smaller. If people are definitely quitting an old house for a new they will dismantle the former for the sake of rafters and cupboards, and you will occasionally see the shell of an old house standing derelict. But the cases of house-building which we actually came across were the hiving-off of son or brother and required new wood. A man who has no trees of his own to cut must, of course, buy them from some neighbour, and this, with the carpentry, will be the major expense.

The Ustád had already levelled the ground for the new house 342
beside his own, and soon the trenches were dug for the foun-

342 dations, and the walls erected, every stone for which old Nadíro totted down the mountain side on his own back.

531 We often said to each other: "These Hunza people are no artists; that's one reason perhaps why they are so sensible and so like ourselves." But when we looked at the millions and myriads of stones that held their fields, each one in its place, and all fitted as neatly as a jigsaw puzzle, when we examined the lovely curves and tapering points of their five-pronged winnowing forks and the lashings of gut or sinew that bound them, we agreed that they were artists after all—in their own medium.

531 For many months we saw Nadíro spending every spare
342 moment on the site, squaring and planing and trimming the posts and rafters, door-frames and cupboards that will be the pride of his posterity. He was lavishing great care on capitals, and ornamenting them and the lintels with fancy carvings. Except in the house of a special carpenter, carving is not indulged in in Hunza (a great contrast in this respect to Chitral, or even Yasin, where the Chitral tradition has penetrated). The few carved doors and windows that you see in the old forts and mosques at Áltít and Báltít probably date back to
[346] the Balti craftsmen who built them. There is a little old mosque in Aliábád attractively carved, but no one could tell us for certain whether some foreign craftsman had done the work or local men. The ordinary peasant house, at any rate, has none—Hunza peasant architecture is essentially "functional."

Chapter 18

SEPTEMBER HARVEST

SUMMER is a breathless time in the Hunza fields. No sooner 243
does the ripening grain show a fine "fox-brown" than a line 516
of five or six men and women attack it in unison. They do 592
not "reap" in our sense of the word. They squat in that inimitably convenient way that the East has preserved for working—no backs bent with stooping, no knees worn out with kneeling—and grasp a full handful of the ripe stalks and pull up roots and all; first right, then left; clap the two together to shake off the all-too-valuable earth; lay the bundle behind them; shuffle on a pace and repeat. The fields are small and in an incredibly short space of time a golden field is prostrate and the ground carpeted with neatly aligned rows of swathes. It is beautiful to see a party at work: father and mother, daughters, sons, and wives; they space themselves and keep their line as exactly as soldiers on parade, yet each works individually, each at his own pace and in his own way—without haste and without pause. They possess rude iron sickles, but 412
when these are used at all they are not used to *cut*, but merely to pull against, if the crop is more than usually deep-rooted.

When the *shandiming* (cut crops) have lain a little and been 243
turned over once or twice they are tied into sheaves and 482
gathered into piles, some as big as a man can carry, others smaller to suit a boy—according to the "man-power" available. A double goat's hair rope is slipped round the waist of the pile and ingeniously knotted so as to leave two shoulder loops. The man or boy flings himself down backwards on to it, slips his arms through the loops and hitches the rope fast. Then some kindly bystander gives a touch to the load from behind,

243 and by a gymnastic miracle the bearer staggers to his feet,
482 almost invisible under his tossing burden, and sets off at a trot up a steep flight of rough stones, or a boulder track, or a rude wooden ladder laid against a high field wall, to the thresh-
243 ing-floor. Beside this, a stack is built by other workers as the loads come in. A core of several upright sheaves forms the centre; layers of other sheaves are laid symmetrically round these, heads to centre, roots out, till the stack is 5 or 6 feet high. The priceless grain is thus beyond the greed of passing goats, and if rain threatens a carpet flung on top suffices to keep the whole erection dry. The moment the *shandiming* are off the ground the children drive their tiny flocks, one minute cow, a couple of sheep and goats, on to the empty field, and the hungry beasts greedily snatch at every green blade of grass or weed they chance to sight. There is cruelly little. In the early days the crop is diligently and systematically weeded, and even after the grain has reached some height the field is invaded every few days by the women and children in the hopes that some further weeds may be detected and carried off for fodder. The two stages of weeding are quite distinct. I was much laughed at one day, when the second stage had set in, for asking a party of crouching women whether they were "weeding." "Oh, no," they said, "weeding time is long since over; we are just fetching some green stuff for the cow." Both weedings are done so thoroughly that the expectant beasts who invade the new-reaped field have quickly cleared the few remaining stalks.

857 When the fields are temporarily empty a great feeling of freedom pervades the land. The boys rejoice in the rare luxury of flat open spaces for foot polo, tip-cat, races, rounders, and a dozen other games; the weavers seize the chance to lay out their warp and the girls romp and play ball—"the fields are free" is joyfully remarked on every side. DL and I rejoiced no less in being able to walk side by side on the flat—an experience foregone these many months—and take short-cuts from one farmstead to another without the usual boulder-jumping scramble.

But the freedom of the fields is short-lived.

SEPTEMBER HARVEST

While one party is busy on the threshing floor, the empty 243
field is watered, ploughed, and sown again, and before the barley and wheat are well in store the bare fields are green again with the second crops, which seem to understand that they must grow at the double or be doomed.

There are two major kinds of millet grown: the one (called *bay*) has graceful feathery heads not unlike rice, but that the grain is smaller; the other (*cha*) has a tight-packed ear, also with tiny grains like what we call "canary seed." There are many varieties of each. When we arrived in mid-July the barley had all been reaped, and we just saw the wheat come in, but we were happily in time to see the second crops sprout, ripen, and fall. There are also two kinds of buckwheat sown. The sweet buckwheat is a lovely plant with fine dark leaves (something the shape of lilac leaves) and a glorious head of pink feathery blossom; the bitter is a smaller plant with lighter yellower leaves and a minute, unimpressive yellow flower. Neither of the buckwheats is really *liked* as food, and 243
the bitter is definitely *dis*liked, but *they are food*, and a skilful 262
housewife contrives to mix her flour so as to eke out the wheat and barley with a proportion of the buckwheats that is not too unappetizing and not inflict more "bitter buckwheat scones" on her family than she can help. The only reason that the bitter buckwheat is grown at all is that it can better stand the onset of winter, and, if the first crop is delayed, or if winter sets in untimely soon, it is a safer thing to gamble on.

When the terraced fields of Hunza are full again, with 243
waving *bay* and stately *cha* and seas of pink blossom send their delicate perfume drifting over the mountain side; when the trim field walls are vertical rock-gardens with wild thyme and the like crowding their crevices; when the fruit trees are still in full leaf, each variety of apricot turning a different shade of gold and red and flame; and bunches of green and red grapes are ripening under the pergolas of vines, while over all the barren mountain sides glare down and the snow peaks tower into a sky of burning blue—there are no words to tell the country's loveliness.

By the beginning of October the proud millets are laid low.

243 They are treated differently from the two first crops. You do not throw the whole stalks with roots and ear on to the threshing-floor. You tie a bundle up with one of its own stalks, then cut the ears off and thresh them by themselves, stacking the straw separately. I would scramble up when the millet was being beheaded, sit down with the workers, take out my penknife and ask leave to help. It was the greatest fun. Of course I could not work nearly as fast as others, but in itself the work is light and it makes opportunity for easy conversation. When I first turned up at one or other of several threshing floors—there were a dozen or so within comparatively easy reach—there would be only a couple of women who always made me enthusiastically welcome, but in a few minutes the mad Englishwomen (as I presume I must have appeared) was spotted from afar and quite a crowd soon gathered round; most would come and join in; a few would just politely stare. I always found it far harder to talk when there were a lot. The youngsters all crowded in behind me, and the elder ones constituted an informal advisory committee, for "Mother" was curiously thick-headed and not always sure whether an odd-looking ear was diseased and ought to be thrown away or was merely a little unripe but quite good. I consulted them in doubtful cases till I got to know; then I found that the young monkeys were beginning to think it a joke to pull my leg by misadvising. Fortunately I had learnt the difference before this bright idea struck them, and so I could turn the tables—"a beautiful farmer you'll make if you don't know a bad ear when you see it," said I; "I'm sorry for your poor wife, but perhaps you'll never get one!" and the joker slunk back a pace amid the titters of his friends. At first all my offers to "help" were met by considerate remonstrances—"You'll spoil your hands; it would be a pity." But I laughed and said "They'll wash!" I have always loathed to see a woman with milk-white hands, massaged and creamed and manicured and obviously useless, and have taken a—probably perverse—pride in my own square, ugly, little-cared-for, useful paws. In what odd ways one's snobbishness will out! But I must confess that even the mildest field work tears your skin most uncommonly.

SEPTEMBER HARVEST

When the threshing floor is heaped with ears, some people 243
turn cows on to trample them; some people prefer to beat the heap with sticks. It depends, I expect, how many cows you have without borrowing, or how many stout arms to wield the flail. It is rather fun to see a family beating, even the children hammering away with tiny poles. The Hunzukuts are kind to 593
their kiddies and fond of them, but have happily no time to 857
spoil them, and as the children have always something new and 861
interesting to do they are very rarely troublesome. If they are, some grown-up will give them a mild smack on the head (the little cap prevents its hurting much) and all is well again. If a child is sick they carry it out with them to the fields (no one can be spared to stay at home to mind it) and chuck a cloth over it to keep the flies off, and let it lie there in peace till it feels better. The youngsters work just as long as they feel interested, then fade away and play for a bit, and join another group and work a while again. There seems to be no attempt to force them or even overtly to encourage them. Their own instinct is to copy the grown-ups or next-older brother. Yet the sense of responsibility wakes early; a five- or six-year-old is often in charge of the two-year-old toddler, rejoices in steadying him as he tries to walk or in mounting him on the shoulders to cross a water-channel or climb a wall. We used sometimes to feel a little anxious about the baby's fate, but its mother never did. I have never heard a Hunza mother shout "Don't do that, darling," or "Take care, you'll drop the baby," or "Don't go so near the edge, you'll fall." Hunza consists of "edges"—the house-roof, the field, the reservoir, the cliff—and no doubt Nature in the course of centuries has weeded out the stocks that lose their balance. Our occasional solicitude was the cause of much merriment; we could not always suppress a "Take care, you'll slip," and this became a standing joke amongst our smaller friends. If all other conversation failed a jesting cry from someone of "Take care, Mother, you'll fall" would set the ball rolling again. Jolly little 000
scamps they are, and pleasant companions for a walk. I counted seven in front and three behind me one day, all between five and seven, with two or three babies mounted on the others'

000 backs. They all thought it rather a thrill to come along and see me safe home and hang about for a salaam to David before they dashed off to some fresh amusement.

487 As soon as DL was better I began exploring further afield. At first I used to be a little shy of just barging down any rocky track that seemed to end up in someone's back yard. But these tracks are all public ways, and just when you think you have reached a cul-de-sac and are about to plunge into a house, the path gives a sudden twist and leads you on.

576 No matter how far I strayed from home and my well-known families, the people came up to their garden walls or out on to their flat roofs—crowds of them sometimes—to shout a welcome and good wishes, and to ask where I was going to and what I was doing. This is the recognized Hunza greeting, not a fatuous, unanswered "How do you do?" countered by another. The answer is : "I'm going to fetch firewood from the orchard," or "I'm getting some green stuff for the cow," or "I've been taking the beasts to water," or "I'm off to get some grain ground at the mill," or "I've been spending the day with mother's people." No one "goes for a walk" to get exercise after a futile day of sitting still. So I was driven to reply that I had come "to see the country." "And a good idea, too," they would respond politely; "and do you like it?" Then I could truthfully say how beautiful it was, and how much I admired their walls, and what lovely air and water and fruit they have, but that most of all I liked the friendly people. Then they grinned with pleasure. When I sometimes risked a short cut and found myself at the top of a huge wall with no visible means of getting further, a kindly man or boy would leave his work to come and point out the almost invisible flight of projecting stones or pull down a side wall to let me out into a tiny lane, and always he would offer his hand to help me. I duly thanked him and perhaps added apologetically: "We haven't walls like yours in our country, and I'm not very good at climbing them." "No, and of course you've got shoes on," he would say sympathetically, "and you're not young."

133 Twice I found my way down to the very edge of the river bank. The river itself, grey and rock-tossed it looked, dashing

capriciously from side to side between its beaches, was 500 or 133
600 feet sheer below, and the great crumbly earthen cliffs on each side were most ominous-looking precipices. There are no paths down them except where a side gorge comes in at intervals. At the spot where I struck the bank there had been a 133
great fall of cliff not long before which had completely carried 312
away a new aqueduct they were—rather too hopefully—trying to engineer across the face of it. If the aqueduct had been successful it would have coaxed some water from the Hasanábád glacier on to a jutting promontory, potentially fertile, but at the moment as bare as the palm of your hand. Six men went over and two of them were killed. Risks like this are all in the day's work in Hunza. People were still prospecting for a more hopeful alignment, but my amateur eyes could see no earthly possibility of getting anything to cling to the friable face of those terrifying cliffs. Meantime I stood well back from the edge! It was pathetic to see gardens and trees within two inches of the treacherous brink and to realize that the farmer on whose land I stood had lost a fertile field or two and half his orchard. I noted that I must go back some day when the light was right and see whether (without committing suicide) I could get a photograph right down the gorge with Raka, of course, rearing herself up in the background. When [132]
the light was good it was still very hot in the sun (88° in the shade on an October afternoon), and rocky scrambles over shadeless boulders with a climb of some hundreds of feet to get home were not exactly restful, and I'm not so young!

One autumn morning when I was on the prowl I found a 243
man just about to turn on a small team of cows to thresh a pile of millet heads. He and his children were busy with this in the centre of the floor, while a neighbour and *his* family were beheading another variety at one side. Two or even three neighbours seem amicably to share one threshing floor so as not to waste valuable ground. So I squatted down as usual with my penknife and joined the beheading family and watched the threshing. Only three cows were in the team this time—the millet-heads make a very small heap in comparison with the

2: Lorimer T-3 (1922-4; 1924-5) 1939 AV7 Burusho AV7

243 wheat—the usual "Ha! Ha! Ha!" encouraging them and the usual dung-dish unostentatiously circulating behind. It was an interesting, very typical scene, and not a hundred yards below
000 our house. I sent a message up to David (there is always a small candidate to act proudly as messenger) to tell him that he might care to bring his camera. In a few minutes he was picking his way cautiously down the breakneck track while a great cheer of welcome rang from the little crowd. They had all been genuinely concerned about his illness, and were delighted to see that he was better and able to come down and watch things himself. It was his first visit to one of the field working parties. He sat on a low wall in a tiny speck of shade, made friendly chat all round, and was a great social success.

601 While I pottered each morning in the fields, enjoying myself
124 among the people, he was usually hard at work indoors with Qudrat Ullah, taking notes of how the irrigation is managed and the system on which the water is distributed by clans and families, and working out genealogical trees. This latter is a weary affair but most useful, for it gives you insight into all their marriage alliances, how many children each family has, how many boys and how many girls, who is allowed to marry whom, and what the relationship terms are, both in the vocative between the various members of a family group, and in the third person when others are talking of them—a highly com-
601 plicated but most instructive subject. An elder brother will address the younger by one method, while the younger will use a more respectful term towards the elder; all the younger boys of a family will use to their *eldest* sister the same respectful form of address as to their eldest brother, though to the uninitiated it would seem to imply that she was a male. A man addresses his wife's father and mother in precisely the same terms and with the same respect as his own. A child's "uncle" is a mother's brother only; the father's brother is "Little Father" or "Big Father" according as the speaker's own father (about whom there is no ambiguity) is older or younger than the uncle concerned. The children of brothers who all share the one home speak of each other as brother and sister, unless there is need to be more explicit, in which case they will

elaborate the statement: "She is my sister, at least: the 601
daughter of my Little Father."

David sadly bemoaned the hideous "waste" of nine weeks 126
spent in illness and convalescence; but in fact he managed to put in a lot of most valuable spade work. Even in the periods of weakness between the fever attacks he got a good deal done—including the Introduction to his first volume of the Burushaski—and during his convalescence he worked steadily and increasingly long hours every day, though he was not able to move freely about the countryside. Qudrat Ullah proved extremely intelligent. David suggested a subject he would like to go into—the rotation of crops; the clans; marriage or funeral rites, etc., etc.—and Qudrat Ullah went home to ponder and collect fuller information than he himself could give offhand, from his entire family, including the elders. Then he wrote out the facts in Burushaski (using still the inadequate and unsatisfactory Arabic script) and came a day or two later to read his "essay." This David took down verbatim—thus getting at least all the relevant technical vocabulary, asked further details, and suggested further lines of enquiry, drawing by this means on a far larger range of informants than he could hope to get into touch with single-handed. As soon as he was able to get about he was able to discuss matters on the spot with a background of knowledge that made it easier for him to understand the less sophisticated speakers, and from their talk and his own observation to check and supplement the
information Qudrat Ullah had supplied. This method worked 115
admirably. Nor was Qudrat Ullah his only sedentary informant: the levies and others took their turn in the study.

It proved immensely valuable to have the carefully dictated 000
manuscripts from Qudrat Ullah, with supplementary notes and comments. As soon as these had been worked through, I took them one by one and typed them out in triplicate, so that even if all our manuscript notebooks were to perish by fire or flood or avalanche—which heaven forfend!—we should still have *some* written record to supplement our memory. The two spare copies were posted home to the Bank in separate batches at longish intervals for safe custody till our return. In some ways

000 the typing seemed waste of time that ought preferably to be spent out among the people themselves, but there is a limit to the amount of "field work" you can usefully put into one day, and it was invaluable for me to have to work carefully through the information David had assembled in the study while I was more frivolously employed outside.

243 I seem to have wandered from the harvest! There is not much more to mention. When the sweet buckwheat was ripe and the gay, sweet-smelling flowers succeeded in due course by small black seeds, when the plants are "covered with black flies" as they picturesquely put it, they are gathered to the threshing floor and beaten with sticks till the seeds fall off and the straw can be stooked to dry. The less romantic bitter buckwheat follows suit, and last of all the potatoes are dug just as at [177] home. The potato crop is much valued, and due credit is given to the British who introduced it: "We can't imagine how we used to manage without potatoes," they say.

After this the fields were bare again—for good. It almost brought tears to my eyes to see the jolly little threshing-floors, where I had spent so many happy hours, flooded with the rest of the fields and ploughed up for the winter. About half the fields round us were left fallow till the spring, the other half were hastily resown with winter wheat, whose early shoots were the first green to greet our eyes next year.

Chapter 19

HARVEST THANKSGIVING

THERE are a couple of minor items of the autumn harvest I 312
have omitted to mention. In Aliabád, the widest and most 233
gently sloping bay of the Hunza mountain side, there is for one short stretch of perhaps a mile a patch of ground above the level of possible fields before the steep cliff face begins. Through and above this run the third and fourth of our horizontal watercourses, offshoots from the Berber Channel that waters the higher levels of Báltit and derives also from the great glacier of the Ulter Ber, but takes off much higher up than the Dála. Sufficient water can occasionally be spared from these two channels (which in the main are needed to irrigate high-lying "gardens" of trees) to flood these rocky slopes, which then bring forth that rarest of Hunza products, natural grass. These *toqs*, as they are called, are divided into strips by loose stone walls and used as grazing grounds by whoever leases them. Two or even four families often combine to share 857
a *toq*, and on your walks you will find children of various sizes 526
in charge of a few animals; a small girl may be sitting gravely alone practising embroidery stitches on a strip of calico, a boy may be twisting the string of horse-gut for his catapult bow, a group may be romping together or playing a game like rounders with a home-spun cap for ball, or "horses" where half the players are mounted on the others' backs and the pairs charge each other to a fall, and any rider thrown becomes in turn a horse. When these livelier games begin to pall, a couple 524
will withdraw to the edge of the little channel and scratch a draught-board on a level patch of ground and play with pebbles white and grey as men. The board is formed of triangles whose

(See p. 144)

524 apexes (apices? no, no!) are the "squares" and any man can move and take in any direction. It requires quite as much skill and provides quite as much fun as draughts played in our way. There are half a dozen other games of the sort, roughly variants of "marbles," all played with pebbles and governed by complicated rules which we only partially mastered.

857 We used to watch Nimo, of No. 7, a jolly, bright-eyed mite of eight or nine, pass our window every morning about half-past six, sturdily carrying an empty shoulder basket as she herded her two or three small cows off to the *toq*; sometimes she was taking charge of a small brother or sister as well. Just before nightfall, after a whole summer day on the mountain side, she would return, driving her animals and stooping
237 slightly under her load. One evening in the very early days I
857 stopped her to ask *whose* Nimo she was (their names duplicate
241 each other like our Joans, Anns, and Dorises), and "What have you got in your basket there?" With courteous surprise at being asked a question to which there could be only one answer: "Why, to-day's cow-dung." Sure enough I soon discovered that every little cowherd conscientiously gathers every scrap of the cow's daily output and brings it home to the manure store in the barn—there are no untidy outdoor middens to spoil the landscape or defile the air.

Another day we met Khano of No. 3, one of our first boyfriends, breathlessly chivvying a cow uphill to a spot where he had safely dumped his baby sister Guláb, in charge of his basket. "Hullo, did she run away from you?" "She did, the villain, but I've got her back, and look, Mother, I've lost nothing," he said, as he proudly displayed the contents of his looped-up cloak. He threw his treasure into the basket and resumed his attentions to Guláb, while the cow resigned herself to orthodox grazing. He was playing with the little girl, patiently coaxing her to totter a step or two and flop into his waiting arms, and throwing up little stones for her to catch.

857 The tenderness of the bigger children to the babies is a
[593] beautiful thing to watch. I never saw boy or girl out of temper with a baby brother, sister, or cousin, or resentful of having one in charge. When the bigger ones are busy in some momen-

857 tarily empty field, playing team games of tipcat or chucking stones at a mark—they have dozens of admirable games, with rules strictly adhered to—the small ones sit about and look on or amuse themselves dabbling in water if there is any or making mud-pies. A group of youngsters were playing round me one day when a tiny girl unaccountably took fright and set up a terrified howl. A big boy stooped to comfort her: "There, there, don't cry, don't be afraid," he said soothingly, and wrapped his cloak round her to shut out whatever was the disturbing sight (I rather think it was I), and patted her reassuringly. "That will be your little sister?" said I. "No, no," was the answer, "I don't know really whose kid it is."

246 As autumn approaches and no further growth can be hoped
241 from the grass, these mountain meadows are painstakingly reaped, *cut* this time, with the blunt iron sickles—for the roots must be left for next year—and the tiny bunches of grass tied up. There will be a few longer, tougher stalks in each double handful, and these are doubled back over the shorter ones and the bundle tied twice, once at the base where it is fattest, and once near the top where the bent heads are caught. These bundles are then laid out in the sun—a benevolent accessory to harvest that never faileth—and gathered in to form part of the winter fodder. Then follows an incredible sight: every inch of the mountain side is painstakingly swept by the Nímos and Shamúlis, whose besoms are minute thorn bushes. Every pellet of sheep or goat, every half inch of stubbly grass above the root is garnered into the tiny shoulder baskets and added to the manure. When you have seen one strip of ground thus treated you might think the job was done; not a bit of it. A few days later Nímo and Shamúli are at it again and yet again, till not one speck of animal or vegetable matter remains. You can imagine that there is no need when walking round Hunza to "pick your steps" as in an English meadow.

233 Every individual leaf, from garden or orchard, from watercourse or steep hill-garden, is similarly swept up and stored; these dry leaves are the staple winter food for the stalled beasts —no wonder the milk lacks cream-content and the sheep is bare of fat! No wonder that I shudder now to see our autumn

223 bonfires recklessly consuming grass-cuttings and leaves that would be worth gold in Nimo's home.

511 Burushaski is an amazingly rich language, but it has evolved no word for "litter-lout." Go where you will in lane or courtyard, over field or bare hillside, you will not see an eggshell or a fleck of wool or a nutshell lying about. Hunza must be, bar none, the cleanest and the tidiest spot on earth. If a child is lucky enough to be given a few apricot stones he will crack them on a rock, eat the kernels with gusto, and gather up the shells for mother's fire. Only in a couple of the narrow lanes of the deserted fort did we stumble on a cast-away rag or two. When a homespun cloak has served father for three years' hard work, it will descend to a son, or be handed on to an orphan relation; when it is torn and tattered past repair it is carefully plucked to pieces, washed, beaten, and re-spun to make a girl's cloak, for her work is less strenuous than the boy's, and the re-spun cloak is stout enough for her and quite as warm.

771 Whatever the theoretical tenets of the Maulai (Ismaili) dissenters may be—and of these Professor Ivanow can best speak—the simple Hunzukuts has evolved for himself quite the most practical and admirable modification of Islam that 562 I have ever seen or heard of. He does not veil his womenfolk nor banish them to separate quarters, but treats them as equal partners in field and home. His standard of morals is so high that when a young husband goes abroad, he trusts his young wife to the care of his father and brothers without misgiving. 582 We heard no case of such a trust being abused. He retains his 515 own custom of exogamic marriage between the clans and the normal first-cousin marriage of Islam (though recognized as religiously allowable and occasionally practised by the upper families) savours to the ordinary peasant of incest, and is in fact avoided, though not in principle taboo; he also, as we have noted, preserves his own fastidious and wholesome ideas about sanitation, and keeps his running water scrupulously 793 pure. No archbishops or bishops (whom he would term *pirs*), and no professional priests or *mullas* reside in his territories, for which no doubt he has to thank some tacit concordat between his wise ruler and His Highness the Aga Khan, the spiritual head of the Ismailis.

spiritual head of the Ismailis. A few of the peasant farmers have learned to read—as some have learned to carpenter—and they have copied out such essential passages of their sacred Persian books as enable them to preside with due solemnity at a name-giving, a burial, or a betrothal. The Mir appoints a sufficient number of these modestly literate men to be khalifas, and lend a dignity to such ceremonies. When you need their services you send for one—as we send for the plumber when our pipes have burst. He performs his duty, shares with honour in the ensuing family feasting, accepts some small gift in kind according to the family's resources, and goes his way to resume his normal work in his own fields.

We knew Afiato of No. 6, for three months or more, as an obliging neighbour and father of a large batch of our child friends; we admired his skill in ploughing and threshing, and the hard work he had put into levelling an intractable patch of hill within a stone's throw of our house and converting it into a vegetable garden before we realized that he was a khalifa or lay-priest. There was nothing in dress or manner to distinguish him from his fellows; he offered no unsought advice and censored no one's morals but his own. If Hunza is, as I believe, the tidiest corner of God's earth, it is also the least priest-ridden, and the absence of fanaticism and superstition is as remarkable and refreshing as the absence of litter. There is an atmosphere of mental independence that makes the air of Hunza spiritually bracing.

What the pre-Islamic cults of Hunza were—and traces of them are slight though DL may have some conjectures to offer about them later—the Hunzukuts of to-day are extraordinarily enlightened.[1] Their folk-lore (very probably borrowed) may tell of apparitions and miracles, but they look for no marvels in their life of everyday, they see no ghosts and fear no Evil Eye. They indulge in no gymnastic prayers, they keep no Fast of Ramazan, they travel on no Hajj. I saw only one man turn Mecca-wards to pray, and that was our Kashmiri

[1] In astounding contrast to their magic- and witch-ridden Shin neighbours in Gilgit (V. *J.R.A.S.*, July, 1929, *The Supernatural in the Folklore of the Gilgit Region*).

771 sweeper; I heard only one muezzin sound the Call to Prayer—
788 and saw no one pay heed to it. He was chanting from a cliff in the Mir's garden, and the Mir gathers round him craftsmen of
778 every sort. There are a few shrines in the country reputed
796 holy—including two burial places of Moses within a few
788 hundred yards of each other on one mountain side—where a few rags on sticks flutter unconvincingly in the wind; and one, the shrine of Baba Ghundi in Chupursan, some seven days' march above Báltít, is the object of an occasional pilgrimage. On Tuesdays and Fridays there are said to be services in the House of Assembly, which has supplanted the older Shiah mosque, but I never observed one of our servants or neighbours absent himself from work to go to them.

771 Yet the people are by no means without faith. It is difficult
181 to know exactly what even church-going Christians of our own
775 country effectively believe—it is impossible to be sure what one effectively believes oneself—so I can offer only a tentative guess as to the average person's simple credo. The Hunzukuts hold, I think, a comforting, unquestioning faith in a good and kindly God, whose ways they cannot profess to understand. They meet bereavement with a murmur that "there is no remedy against the will of God"; they bury their loved ones with genuine sorrow, but without anxiety. They feel that "it is well with the child," and vaguely trust that some day, somewhere, somehow, they will meet again. They assume as axiomatic that God asks of them diligence and truth, fair-dealing and goodwill. They are hard-working and thrifty, tolerant to others; kind and affectionate in the home, gentle to children and the aged; generous beyond their means to the orphan; truthful and just; and they go about their daily work in the happy confidence that God is well pleased. If they din no perfunctory prayers into His ears, there are occasions when they heartily and humbly pray, as will presently be seen.

771 The Hunzukuts is no mystic, no poet, no artist. This life
181 claims his full attention if he is to live at all; philosophic speculation about "fixed fate, freewill, fore-knowledge absolute" does not line his brow or disturb his rest, nor does he "keep in duty through the toilsome day, because of praise

or blame that comes at night." I may be misinterpreting his 771
attitude of mind. These are not subjects you can thresh out as 181
easily as the wheat, and neither his vocabulary nor mine would have sufficed to tackle them. But this I can vouch for, that every face you see looks restfully content, breaks readily into a happy smile; that there are in Hunza no nervous gestures and no haunted eyes, and in normal life no irritable words. There is little amiss with a faith which spells happiness and high-principled living without debasing fear of Hell or over-conscious hope of Heaven.

When the final crops of every kind are safely in, the first 651
duty of the paterfamilias is to take stock of the year's yield. 262
So much is set aside for seed-grain, and not the direst shortage 792
will tempt him to violate the sanctity of this; so much is set aside for rent (if he is a tenant) or for the tax due on any craft he pursues—the miller pays a very small tax on his mill, the weaver on his loom-pit, the khalifa on his learning; and all pay (alas!) a sum as "Peter's pence" to their spiritual head, the Agha Khan. Next he calculates the "emergency reserve" that may be needed for hospitality or charity during the coming year; this also is scrupulously put aside unground. On the rest he and his family must live till next harvest, under the careful rationing of the senior housewife, the importance of whose rôle I have already stressed.

The period of comparative—well-earned and welcome—rest 796
that ensues, is inaugurated by a solemn watch-night service of prayer and thanksgiving in the House of Assembly. One of our main difficulties in the early days was to get due notice of such events beforehand. Our people were slow to realize that the normal routine of their affairs could really interest us. The first news we had of this Harvest Thanksgiving Service was one late evening in October when Dádo casually said as he bade us good-night: "I'm off now to the all-night prayer." In [779]
answer to our questions he told us that the Assembly Hall and the women's annex would be packed with the entire population, and that the khalifas in rotation would keep up all night a reading of the sacred Persian books and of the Qur'an. "And shall you be able to understand all that they read?" "Oh no,

2: Lorimer T-3 (1922-4; 1934-5) 1939 AV7 Burusho AV7

796 of course not; but we shall hear the names of God and the Imams, and we shall pray."

Further, it appeared that while the non-stop worship went on inside the Hall, a great communal feast would be prepared outside to be enjoyed at daybreak. We sent Dádo off with our good wishes; when he was gone I raided his pantry, assembled materials for early morning tea, and set the alarm-clock. Up we hopped before dawn and made our way, rather sleepy and unwashed, down to the open space "At the Gate" of the old fort, to see whether we could without offence look on at the morning feast. As we drew near I wondered whether it was altogether wise. If you think of the fanaticism of Pathans or Arabs towards Unbelievers . . . we were still new to the country and had not sounded the depths of Hunza tolerance. Already, however, we had considerable trust in it, and this trust was not misplaced. As we were seen coming round the corner, two headmen of the clans came out to greet us, and a chorus of spontaneous, evidently gratified greeting went up from the crowd. Every inch of the open space was packed with boys and men, while women and girls crowded in the background and round every corner, but the most of them had already hurried home to get their houses ready.

796 In the centre on a large carpet was a pile of cooked beasts
262 presented by the more well-to-do—two oxen, fifteen sheep, and goats. Round this six men were crouching with a log in front of each, disjointing limbs and chopping off chunks of meat and bone with an adze. Beside the carpet were ranged ten or a dozen immense iron cauldrons, quite 3 feet 6 inches across and 2 feet deep or more. Each of these was full to the very brim of a rich porridge that looked like soft dripping. There were two kinds: one called *sherbet* (but not remotely like the sherbet of Persia) was made of flour and butter well cooked and stirred; the other, of unground wheat similarly blent with butter, was called *harísa*. The humbler families according to their means had contributed these ingredients. Some of the great cooking-pots were still standing on
796 large iron tripods over the ashes of the night's fire. Most of the audience had wooden basins in their hands, a few had

aluminium ones, a few had even iron buckets. Several people 796
were busy serving, while the headmen acted as masters of the
ceremonies. Every household—there are two hundred all told [592]
in Aliábád—was entitled to carry off one chunk of meat and
one ladleful each of *sherbet* and *harisa* for each mouth at home.

As always in this happy place, the company was full of jokes, laughter, and good temper. There was no hustling, no jostling, no attempt by anyone to secure more than his due share. Any person who had lent one of the big cauldrons (they are costly vessels brought up from down country) was granted an extra "mouthful" as hire, and anyone who had lent a penknife for cutting up was given an extra chunk of meat impaled on it. The people who had lent the tripods were not entitled to anything extra; this apparent injustice was thus explained: "You are fond of your cooking-cauldron; you are fond of your penknife; but no one could possibly be fond of a tripod."

We moved about for some time among the crowd, greeting 000
old acquaintances and making new ones, then the people insisted that we must sit down, cleared one of the stone sofas, dashed into the Assembly Hall and brought out a carpet and spread it for us, while one of the headmen came and sat by explaining the procedure of the festival and naming the various utensils. As the light grew David took a few photographs, but by that time most of the carcases had been hacked to bits and a large number of households, having got their share, had gone home to celebrate a sort of family Christmas dinner with it. Nor for the first time, still less for the last, I regretted my lack of enterprise in sticking to my old familiar quarter-plate camera with its lens working only to F.6.3. David with his 3.5's could get photographs in much weaker light than I.

They insisted on pressing on us a "share" for each of our 431
servants. How can you assess, how hope to repay, the generosity of these hospitable people? Remember that hardly any house has more than *just enough* to eat for the year; yet they must share their feast with our relatively pampered retainers! We could only gratefully accept and as a poor return offer the headman some money for distribution as they thought best "to the orphans and the poor." Hunza has, of course, no charitable 000

746 Hunza has, of course, no charitable societies, but everyone is related distantly or immediately to other families, and no one, however poor or orphaned, is allowed to starve.

123 It was sad to think that when this harvest thanksgiving came round again next year we should no longer be in Hunza. If we had been we should, I am certain, have been allowed to attend the all-night prayer. But, so soon after our arrival, to have suggested this might have been bad policy or doubtful taste even if we had had sufficient notice to sound the feeling of headmen and khalifas. We were in every detail most scrupulously careful to give rise to no anxieties by prematurely taking liberties, even such as would be gladly accorded. The slightest breath of resentment or suspicion roused in even one household might have spoiled all our future relations with our neighbours or given trouble to the Mir. It was wiser to forgo an occasional experience, however interesting and unique, than to take risks.

Chapter 20

HUNZA BABIES

EARLY one October morning I saw Naját going off to the mill 846
with a little sheepskin bag on her shoulder. She looked even more radiant than usual as she stopped to talk. After the usual interchanges: "Have you heard our news? Bibi Gímo's baby boy has been born!" This was splendid. No. 1 already pos- [302]
sessed four girls, one married, Shukuru almost marriageable and already growing her hair as a preliminary, and our two special friends, Shamúli and Bano, and two boys, Derwish and Man Ali Shah; a third son was the wanted thing. Mother and baby were doing well, and the household was overjoyed.

I took pains to ascertain how soon I might call to offer my congratulations—the eighth day was best. So I set Zaidu to bake biscuits with butter and treacle, which he was sure would be acceptable, and I borrowed Qudrat Ullah for half an hour to coach me in the correct phraseology. When the great day came I threaded my rough way down the lane and turned in at the hospitable door in the wall, through which I had several times entered their garden but never yet their house. Here I was greeted by the four youngest, all looking as pleased as if they had by themselves conjured the baby into being. They led me through the byre, past the cow, who also had a festive air on her bed of nice clean straw, and into the living-room. It was beautifully bright with sunshine pouring through the smokehole, and as neat and clean as a new pin. The chief sleeping bench had a red felt carpet on it and had been left empty for me. On the other dais, also gaily carpeted, Bibi Gímo sat in state beside the cradle. She was looking so fresh and young and tidy that I hardly knew her. Hitherto I had seen

846 her a little dusty as she worked in the fields and somewhat tired perhaps as her time drew on. To-day she had on a gay, green cap, new cotton dress and trousers of bright chintz, and her hair was beautifully brushed and braided. I gave her hearty greetings before accepting the seat of honour left for me. On the cross-bench sat old grandfather, looking very handsome with his grey beard neatly trimmed, and by him stood the proud father and uncle (all ousted by my presence from their normal sitting bench), while an old woman—Bibi Gímo's mother—crouched with the proprietary air of the *accoucheuse* on the ground beside the mother's dais. Derwish and Man Ali Shah joined the menfolk, the two small girls sat round the fireplace with Naját and Shukuru, while the married sister and other women formed a group behind. Dádo came in with me as a matter of course and sat at my feet, though neither a neighbour nor a relative. (I had fully expected him to fade out at the threshold.)

846 I took a long breath, summoned all my wits and—a little
576 self-consciously because of so large an audience—started carefully firing off one by one the fine phrases with which Qudrat Ullah had furnished me: "God grant your son long life and happiness! May he live to be a comfort to you! May he take your beasts in summer to the mountain pastures! May he bring you gifts when he comes home from his travels! May he give you a good daughter-in-law and children to brighten your age! May he prove a worthy son of worthy parents!" and so forth till I stopped from sheer exhaustion. These admirable sentiments, couched in the best traditional form, sounded so absurdly different from my usual, halting, extempore speech that they provoked giggles of delight from Naját and her companions. They fully realized that these pretty speeches must have been carefully prepared, and they told me afterwards that everyone had been much gratified at my having taken the trouble to learn the right things to say. But, after all, you may as well say the right things as the wrong, and even amid the simplicities of Hunza, ceremonial phrases are valued on ceremonial occasions.

846 Then, having recovered breath, I consulted Dádo in a whis-

per as to whether it would be in order to ask to see the baby, 846
who was entirely hidden by a doubled homespun blanket flung over the ridge-pole of his cradle. "Quite the right thing." I made my request and approached the cradle. They turned back the cloth for me, and there was a very handsome baby (for seven days old) in beautifully clean kit, very carefully [302] bolstered in, his eyes painted black all round, which gave his face a comical look of maturest wisdom. This black stuff is supposed to be "cooling" to the eyes, and is quite probably a disinfectant of some kind. I said what a fine baby he was, and how big for his age, and so forth, then wished them all the best of luck, repeated my congratulations, and turned to come away. But they called me back to receive two heaped dishes of grapes and apples. I protested as well as I could against robbing their store-room, especially at such a moment when hordes of hungry guests would come well-wishing—it is for similar occasions that the "emergency reserve" is set apart—but I protested in vain. Derwish and Man Ali Shah followed us up the hill bearing the fruit, and I could only resort to the contemptible expedient of small silver.

Anyone who knows life in the East will realize how in- 562
credible it seems that a woman should sit in state to receive visitors of both sexes while her menfolk look proudly on. No wonder the Hunza women have this happy fearlessness, this dignified gait, these courtly manners.

I was typing text next morning when I heard piping voices 000
in the verandah outside my window: "Mother, Mother, Mother, *dear*, do come at once; we are threshing buckwheat on our floor." I went out to find seven of my smallest friends, boys and girls from the Middle Channel above, led by Nímo, dancing with excitement and impatience: "Do come and take photographs! Father and mother say you are *please* to come." I wasn't very keen to go, for we were expecting some Swedish missionaries to lunch. They were passing through on their way to Kashgar—another month's march—and they might arrive at any moment. Still . . . I had asked all our neighbours to send for me when anything was going on, and if I showed reluctance such summonses might stop. I scrambled up to the

600 floor of No. 7 and found a large group of neighbours flailing buckwheat. They made me welcome, and I tried some photographs. "It was very kind of you to send Nímo for me," said I. "But we never sent for you." Then I repeated what the children had said, and we all laughed heartily—the young monkeys had fetched me out on their own account! A few moments later riders were seen approaching. I sped down to welcome them.

Nice folk they proved. The Swedes used to reach Kashgar through Russia in twenty-four days, but Russian travel being uncertain they had been forced to make the long detour via India and our Gilgit road—a matter of at least three months.

593 Some weeks after my last call on Bibi Gímo I was passing by her home again and was hailed by the children from the roof: "Do come in and see the baby!" I was always chary of too readily accepting such impulsive invitations. "Run down and ask mother if she would like to see me." In a moment Naját came out bearing an authorized welcome. It proved that I had come at a fortunate time, for Baby Faqér had just been lifted for a meal and was kicking and crowing in his mother's arms with wonderful vigour for so small an infant. She took
593 off the kerchief that bound his head—it was a large linen hand-
854 kerchief I had purloined from David's store for him, and I
751 gathered that its size and quality were prized—and ran her
291 hand lovingly through his fine crop of dark hair, keeping a watchful eye for possible inhabitants which she gladly failed to find. I was laughed at for admiring his head of hair so much. The kerchief had a funny little needlebook affair attached by bright-coloured threads which had a verse from the Qur'an stitched into it to serve as amulet. Most small children's caps are decorated with several of these gaily coloured, dangling charms, but I should guess that they are merely "the thing," and are not taken more seriously than a charm on a girl's bracelet at home or the mascot on her father's car. Grown-ups rarely display them, but Dádo used to sport a string of them underneath his waistcoat when we travelled.

593 I sat down for a chat while the ceremony proceeded, and I observed that baby-worship is as thorough in Hunza as amongst

ourselves. Naját and Shukuru and all the children were 593
gathered round, but the men were out at work and the house
was (relatively) empty. So while the mother fed the child I
learned all I could about orthodox baby management. Until 852
the baby cuts his first tooth his mother will not take him to 562
any house where there is another infant. Possibly it is felt that 574
with one tooth he will be armed for self-defence against his
contemporary; possibly the rival mothers might be tempted
into tactless comparisons. Up till this point, too, no male of
the house may handle him. An amusing little ceremony heralds
the cutting of this all-important tooth. Some elderly man—
usually the grandfather—"well skilled with children," takes
the baby in his arms and out into the open. After that his
father and brothers are free to play with him and carry him
about.

Until the child is two or thereabouts he lives the life of a 854
recluse, strapped into his cradle night and day except at meal-
times, or when taken out for an airing in grown-up arms.

When the moment came for replacing Faqér in his cradle, Naját and Shukuru bestirred themselves and fetched some dry, finely powdered earth which they gently warmed over the ashes of the fire. Bibo Gímo produced a large square of strong cloth, sweet and clean but dark with use, and spread it on the dais, lying the baby down on it with a tiny cushion under his head. Then plenty of the earth—it proved to be pounded sun-dried cow-dung, as clean and inoffensive to handle as the fibre in which we plant our bulbs—was packed round him above and below, and he was carefully parcelled up, arms, legs, and feet, into the stout cloth, bandaged into it with a long binder, and laid in the cradle. When he is "changed" the last lot of packing is thrown on to the fields for their enrichment—and that's that. Very cleanly and ingenious it all is and vastly preferable to the eternal washing of "nappies," which, indeed, would be a grim task with insufficiency of cloths, cold water, and no soap.

The bottom of the cradle was full of nice clean straw with a padded mattress on top, and by the time baby's cushion was adjusted and a red quilt laid up to his chin and well tucked in

854 round him, he looked extremely comfortable and well-protected. Next, a piece of wide cloth was threaded by its hem on a rod fastened along the side of the cradle, and passed several times over his tummy and under the wooden cot, being finally lashed to the ridge pole. If the cradle had then been knocked over or rolled down hill baby could neither fall out nor get bumped. Finally a thick blanket was thrown over like a tent, and he was safe from dust or smoke or flies—or fresh air. Mother gave a few gentle rocks and he settled into sleep.

854 The use of the cradle in Hunza is said to be relatively recent,
352 and the pattern of it, wherever it was introduced from, includes the prescription that it shall be made from a special sort of hard wood that grows wild on certain mountain spots and is supposed to possess magical properties. The ridge-pole forms a convenient carrying handle, and wherever you see a group of women working and chatting together, spinning in the shade or on the roof, beating out new-washed wool on a sandy patch beside a stream, pounding kernels, washing clothes, or busy on the threshing floor, you will usually see a cradle or two beside them. Truby King might disapprove of so much infant seclusion; but the flat roof offers a drop of 12 or 14 feet on to boulders, and even the living-room a gentle roll into the open
855 hearth, so that Hunza is no place for crawlers. By the time
593 baby is ripe for toddling, he is old enough to be entrusted to
857 the next-older children, who take him pick-a-back or on their shoulders, scaling walls and leaping streams with him as sure-footed as young goats, and as fearless. They carry him to some flat spot and guard him with the most scrupulous care and proudly watch over his first steps.

163 Babies in Hunza are spaced at intervals of three and four
866 years, so no mother is worn out with child-bearing or embarrassed in her daily work by ex-babies clinging to her skirts and jealous of the infant in her arms. Banu, for instance, was four, sturdy and ripe for independence, before Faqér came to claim the family's attention. Soon after his arrival we used to see her stalking about, proudly taking her first walks alone, and obviously savouring the new freedom from older supervision. One day she had passed twice or three times up and

down on the far side of our Dála. It had gently sloping banks 163
where it passed our door, and was both narrow and shallow, 866
having been divided a mile or so away to give Aliábád the "Middle Channel" that ran 30 or 40 feet above our level and watered the fields between. She looked long at it and pondered. She wanted to come over, but had always before leaped the little stream on Naját's or Derwish's back. Presently she made her decision and her first jump and fell spread-eagled into 18 inches or so of water. She gave a cry, wholly of vexation, not at all of fright, and scrambled safely out. Someone ran up laughing, took off her little shift and spread it for her in the sun to dry. She played about cheerfully on a sunny patch of sand till it was ready, and later we saw her jumping triumphantly to and fro, again and yet again, as if she could never jump enough. By the time Faqér emerges from his cradle she will be leaping the Dála with him astride her back.

Our very first girl friend, Kaníza of No. 3, has a younger 865
sister, Gúlo, a sporting little imp, who had just cut her second teeth. One day she had a difference of opinion with her family, and we met her striding away from home. "Where are you off to?" "I'm annoyed," she said. "I'm going to mother's folk in Báltít," and off she set on a solitary four-mile mountain walk and a climb of hundreds of feet to her grandparents' home. No one tried to call her back or reason with her. She was wisely left to work off her waywardness her own way. She must have tramped home again the same day, for on the morrow we saw her happily busy with her own people again. After that our usual greeting to her was: "Hullo, Gúlo, off to Báltít?" "Not to-day!" she would say with a mischievous twinkle in her eye. Thus the Hunza youngsters learn independence.

The only drawback—from my point of view—about the shel- 866
tered life of the Hunza infants, was that when they were out for a walk in someone's arms, they were distinctly world-shy and were apt to set up a howl if I approached too near. The [326]
three-year olds were seldom frightened—though you must remember that a pale-faced woman with horrible blue eyes ("cat's eyes" they call them amongst themselves), and an

[Facing P. 160]

866 outrageous hat, must be a terrifying sight when it advances on you for the first time—but I learned cautiously to admire the babies from afar, though the father or mother always wanted to show them off. Only little Faqér, initiated so young, was always unafraid, and would stretch out his little hands and gurgle at me and let me take him in my arms or tickle him.

123 Soni, of the next house to Bibi Gímo's (I had to call it
866 No. 1A, because in my first notes I had confused the two households) had a little girl Afrots—quite the ugliest and brightest atom of three years old in Hunza. She had cried the first day on seeing me but immediately made friends, and ever after if I were sighted would run up to me and put out an abnormally grubby little paw and say "How do you do?" in imitation English fashion. On general principles we resisted all temptation to teach the children English ways or words or tales. This was almost my one lapse from grace, but Afrots was by general consent a special case, and her old grandfather, Aliko, was extraordinarily proud when he was witness to our meetings.

123 In the very first days of romping with the children of No. 1
535 and 1A on the threshing floor I had—stupidly—thought it might
562 be fun to teach Shamúli, Bano, and Afrots to dance. So I stood
273 up and started on a Highland schottische, and endeavoured, with little success, to coax them to join in. I was puzzled by something a little frigid in the air and soon gave up the attempt. When I climbed home for breakfast Dádo gravely and kindly said: "Excuse me, Mother, but Hunza women do not dance. It is thought unseemly." I thanked him for the warning; I wasn't sure whether the fear was that I should corrupt the girls or merely make an unseemly exhibition of myself. Either danger was to be avoided, so that began and ended my dancing lessons. Later Qudrat Ullah explained that in the olden days, when the Hunzukuts distilled a powerful *araq* from their mulberries, men and women used to dance together in drunken orgies that had untoward consequences. The Mir had long since forbidden the spirit, which provoked quarrels as well as dances, and "mixed dancing" fell under the same ban. This was the only man-made restriction on woman's freedom that I encountered in Hunza, and it did not seem to worry anyone.

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

HUNZA BABIES

846 A couple of months after Bibi Gímo's, Soni's baby son was born—the first grandson of No. 1A—and his arrival was the cause of great rejoicing. I had heard nothing of it till I commented one day to Aliko, whose handsome white beard had suddenly turned orange, on the fact that I had not lately seen Afrots. "She's been staying over with her mother's people in Haiderabad," he said, "but she's coming back to-day." When I next saw her she raced up to me breathless: "How do you do (in English), I've got a baby brother, I've got a baby brother, I've got a BABY BROTHER!" The opportunity of an eighth-day formal visit had passed, so I clambered over a boulder or two into their orchard-garden and called up the [364] blank, unresponsive-looking wall of the house. Soni was busy in the store-room, and put her head out of the one tiny wooden window—the only "window" of a Hunza house is a square, shuttered, ventilation hole in the store-room—inviting me to join her on the roof. I climbed the primitive ladder with caution—a camera and other impedimenta always made me even less agile than need have been—and there she was spinning away and occasionally giving a rock to the cradle beside her. I utilized as many suitable phrases as I could remember without rehearsal, and was rewarded with a peep at a fine little fellow of a fortnight whom any mother might have been 846 proud to own. Soni was gaily dressed, and had dotted her face 302 all over with unsightly brown spots which I learned were 752 supposed to be "good for the complexion" after childbirth. The custom used, it seems, to be universal, but it must be dying out, for I saw only a few young mothers so decorated. Anywhere else one might suppose it a charm against the Evil Eye, but the Burusho of Hunza are so free from any taint of this baleful superstition—so hard-lived where it has once had root—that I think there must be some other explanation. We later found that among the Burushaski speakers of Yasin, all the younger women lived under a permanent coating of similar brown cosmetic, washed off only for feast days, in the belief that it protected their skin against the cold winds of their harsher climate.

000 Afrots, joining devoutly in the admiration of her baby

baby

291 Afrots, joining devoutly in the admiration of her
358 brother, volunteered: "And now I put on my tunic right side out!" I looked up at Soni, mystified. She laughed and explained that the last-born of a family always wore its little shift inside out until the next baby came. She could not tell me *why*. It just was "done." If no further child is born, the youngest on reaching seven, is promoted to the right side of its clothes.

291 Up till six or seven the young children of both sexes wear no garment but the one cotton shift and cap (with a homespun cloak for the cold); after that they are outfitted with baggy trousers of but slightly different cut, the boys' held in at the ankle by a plain, straight band, the girls' by a more elaborate "cuff," something like our spats. There is no rigid rule about the kind of cotton cloth used—it depends, no doubt, primarily on what happens to be available when the family is able to buy—but the men and boys mainly affect plain striped shirtings and the women bright-patterned chintz. Since a whole "piece" will be bought at a time, if often happens that all the women and girls of one household will be dressed at the same time in the same stuff. You often see women in plain stripes, however, and more rarely some boy-Benjamin in an amazing chintz shirt.

Chapter 21

HUNZA CRAFTS

ONE of the most refreshing things about Hunza is the absence 402
of machinery. Every essential tool and utensil can be made and
mended at home, and every individual enjoys the self-respect 415
that comes from the exercise of necessary craftsmanship. The 412
picturesquely asymmetrical stone cooking-pots, oil-jars, and 463
crusie-lamps have each been fashioned by father or grand- 286
father, or it may be great-grandfather. Each has its own indi- 283
viduality and its own history. The ladles and wooden spoons
of delightful and often fantastic shape have been cut out from
suitable branched bough or root—handle and bowl in one piece,
no two alike. Your own carefully planted and tended willows
supply the flexible withies for a dozen kinds of basket, and the
man or woman who could not construct the one required
would be hard to find. Reels and spindles for spinning, bobbins
and shuttles for weaving, wooden hoes and shovels, two-
prong forks cut in one piece from the tree or the graceful
five-pronged winnowing forks with neat and skilful lashings of
gut holding their curved teeth in place, the plough, the frame
and heddles of the loom, the treadles and framework of the
lathe that turns the wooden bowl, are all home-made. You [281]
cure the skins of your own beasts for sacks and bags and boots.
When the women want more wool for spinning, any man at
any moment will shear another sheep while the women and
children hold its legs.

The only work that the home cannot itself tackle is the 326
ironwork—a very recent substitute for stone and bone and 177
horn. An occasional iron pick or shovel, fork or crowbar is 412
brought up "from below" (India or Kashmir) by a returning 563

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

326 son, and is accounted a rare treasure; but for the most part
177 local Béricho make such simple iron goods as are wanted: the
412 slightly convex baking-griddle, the tripod, the simple shears,
563 the sickle blade, the iron tip which shoes the wooden plough-share, the unpretentious iron razor, the rough tongs, the horse-shoe, the spatula for turning bread. The Béricho form the only "caste" in Hunza in anything like the Indian sense.

173 The story goes that long ago—two hundred years or so,
563 perhaps—some prince of Hunza rendered a service to the ruler of Baltistan, and was duly asked to name his recompense. He coveted neither gold nor horses, but begged for a few families of artisans. These were presented to him and allotted land in Hunza where they settled and multiplied, supplying the Burusho with blacksmiths for such rare iron as they could obtain, and with musicians to enliven their feasts and games of polo. These strangers in the midst are treated with courtesy and kindness, but remain "foreigners" and social inferiors. The Burusho will not intermarry with them. A threat to a troublesome daughter is said to be: "If you don't behave, I'll marry you to a Bérits"; but we never heard the threat employed,
[651] still less a case of its being carried out. Each Burusho household pays a small yearly tax to the Béricho community, and in return the blacksmiths tour the villages once or twice a year and make or mend whatever is required. You will see a little crowd gathered in the corner of someone's garden and in the centre the blacksmith crouching beside his simple forge—a few stones ingeniously built up to contain his charcoal fire, with a neat, hollow tube of soapstone below it, into which the bellows play; a stone anvil sunk in the ground; these accessories are provided on the spot and the blacksmith's outfit consists of his hammer and his skill. The bellows is a double one; two goat-skin bags are fitted with a nozzle at one end; at the other, two wooden lips that open as you raise your hand and meet tightly in your fist as you press down. They are worked with the right and left hand alternately, and the peasant whose job is in hand is expected to do the blowing.

565 The Béricho preserve their own customs, and though the
197 menfolk all talk Bitrushaski, Dumákī is the language of their

homes, and the women know no other. The existence of 563
this interesting language-island, within the language-island of 197
Burushaski, had been unsuspected by European scholars till DL set about investigating it. He could not devote much time to it, but gleaned enough to establish the fact—inherently probable—that it is of Indian origin, and that it has (less predictably) interesting affinities with the Gypsy of Europe, which survives even in South Wales. It is a curious fact that the Doms of Gilgit (who conjecturally are of the same stock as the Doms of India and the Béricho of Hunza) have abandoned their own language in favour of Shina. This may well be because Shina has a close relationship to Sanskrit and the modern Indian vernaculars, which Burushaski lacks, and is incomparably easier to learn.

While every Hunza family plies its own essential crafts, there 463
are a few specially expert folk—like the master-carpenters of whom I have spoken—who undertake the weaving, turning, and milling for their neighbours. Amongst the two hundred families of Aliábád there were perhaps seven or eight recognized weavers, twice as many millers, and at least one lathe-master.

We were fortunate in having, on the Middle Channel above 286
us within a few minutes' climb, two master-weavers, old Dádo 487
of No. 7 and Ustád Nadíro of No. 8. The narrow road-plus-water-channel that passed their houses was barely 3 feet wide, and was one of the main internal thoroughfares; but this had not prevented them from digging themselves a loom-pit under the shelter of the house wall, leaving an effective track of scarcely a foot for passers-by to squeeze along, cows, sheep, goats, or people. No one seemed to resent the encroachment. At a pinch you could always step down into the water-channel, full or empty as it might chance. During the pressure of harvest these pits had stood untenanted, and I wondered when the weaving was going to begin.

One day I had been sitting with one of Afiato's daughters- 531
in-law, who was embroidering a festive cap for herself, asking 192
the names of the various stitches and patterns and studying her style of sewing. There is a huge vocabulary connected with

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

[192] embroidering, and I had filled several pages of my notebook
531 when her attention was diverted by the cow she was minding. It had plunged down a 6-foot wall and was enjoying itself in a
000 neighbour's ripening crop. "Excuse me," said Gohir Nimo, "having smitten the cow I shall come back." She did, and we resumed the lesson. I took the needle and ventured on a few stitches. "Oh, you can sew like us!" she exclaimed with surprise. There were so many everyday things I could not do just like them that her surprise was justified. Soon I noticed her growing restive: "I haven't yet had my morning bread; I
286 expect you had yours before you came out. Good-bye." As she left me, chivvying her cow homewards, I looked round for new occupation, and saw old grandfather of No. 7 climbing cautiously down a field wall with a shapeless bundle under his arm. I worked my way across country to the empty field he had made for, to see what was toward and found to my delight that he was getting his loom into order. Moth had played some havoc with his heddle threads and a finicky job he had to replace them. When this was done he called a son or two to help him to lay out the warp. They set up and steadied the loom with stones, then drove a peg into the ground so many cubits off. One of the assistants made fast one end and then paid out the wool from a fat ball of doubled thread, slung it round the peg, and brought it back to grandfather, who attached it with an ingenious knot that defied my analysis, and off went another loop round the distant peg. When these preliminaries were over, for which the flat space of the open field was necessary, the old man assembled his loom again and climbed up the wall to set it up in his pit and get to work. Hunza homespun is of a most beautiful thick quality, as unlike as possible to the loose, semi-transparent cloth that hand-weavers at home achieve, a stuff that would not withstand the hard wear of Hunza fields for an instant. Two hundred and forty warp threads go to the width of 9 or 10 inches of cloth.

The tiny pit is almost square—2 feet by 2 feet 9 inches—and just 2 feet deep; the sides of it are revetted inside with small stones on the model of the field walls and edged at the top with a wooden kerb, fitted with holes into which pegs can be in-

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

serted as required. Outside, at the corners, stand four small stone piers, sometimes monoliths, sometimes just cairns of stones, and on these rest the two poles on which two pairs of heddles ride. Four treadles, threaded on a rod, are connected with the heddles by leather thongs. A stone shelf at the back of the pit accommodates the weaver, who hugs to his tummy the wooden bar on which the *pattoo* is rolled up as completed. There is no room in the cramped space of the twisting road to fling out the warp at length as had been done in the field. It is passed round a peg in the front of the pit and then carried in a loosely twisted rope to a second peg at the side within easy reach of the weaver's right hand, who can thus pay it out to himself as wanted.

As the weaver works, some of his family sit by and wind his bobbins, neat little hollow rods which revolve on the pin of his boat-like shuttle. There is an extraordinary fascination about the extreme simplicity and extreme efficiency of all the home-made gadgets of pegs and pins and thongs on which the working of the loom depends. Like lightning the old man works his feet and flings his shuttle to and fro, while with the heavy sliding comb he bangs each new cross thread into its place, as the thick cloth grows under his fingers in the characteristic herring-bone pattern. As the roll grows fatter, the bar is moved out to the next pair of pegs. Grandfather was delighted to hold forth about the details of his craft and explain the uses of his various contraptions, showing the ingenious loops in the vertical heddle-threads that lifted the warp threads in two's to produce the pattern. By his side stood a little rod fitted with a tiny hook. "What on earth is this for?" "Well, you see, sometimes the shuttle falls down into the pit. I have bored a hole in each side of it, and I can hook it up with this."

He would have welcomed photographs, but unfortunately his pitch was heavily and unevenly shaded by a tree in Afiato's garden opposite.

A few days later we were lucky enough to find Ustád Nadíro at work a few hundred yards farther along the road in full sunshine. Even then, in the narrow gangway it was difficult to get room to work a camera at a convenient distance. The

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

286 Ustád was wisely initiating two disciples into his art: one his son-in-law and one his next-door neighbour of No. 9. As he stood by, superintending and advising, he was busily twiddling a special spindle for doubling the single woollen thread ready for a new warp. Passers-by halted for a chat, children squatted
286 round watching and taking in all that was said. We learnt that
#65 nine yards of *pattoo* go to the making of a man's cloak and seven to a woman's, and that a skilled weaver can complete a nine-yard piece in two full days' work; a real master in a day and a half. If neighbours enlist his services they supply the wool and also the attendant men, women, or children to wind his bobbins. They may likely have a loom-pit near their house, even if none of them weave themselves; in that case he will go and weave in theirs, otherwise they bring their wool to his. His chief fee for weaving is three ample meals a day while he works, and a gift in kind (or cash if they have any) equal to about tenpence of our money.

286 The autumn is a favourite time for weaving; the harvest work is nearly over, and the weather is still warm enough for sitting out of doors. On our afternoon walks at this season we saw many other weavers dotted about not only in Aliábád, but in the neighbouring hamlets between us and Báltít, and we found looms and pits in all cases substantially identical. In only one house was there an innovator who had set up his loom on the roof, and was seated on a raised bench instead of a sunk one. Nadíro kindly promised that when his season's work was over he would bring his whole apparatus down, let us measure it in detail, and take a studio portrait of it. David devoted every Sunday forenoon to taking quarter-plate photographs in an improvised studio with a proper stand camera, thus obtaining exact records of the various vessels and implements that were most characteristic of the country.

One day Levy Kalbi called us out to see him preparing goats'-hair warp. This was a most entertaining performance. He had a large ball of single goats'-hair thread, ingeniously wound so that one end could be drawn out from the centre of the ball (many knitters at home are familiar with this device). He then took the two ends, one from the centre and one from the cir-

cumference, twisted them with his fingers till he had a small 286
nucleus of double thread. With a wooden peg he fastened this tiny ball so that it could not unroll, and started swinging it round his head, letting it touch the ground now and again to increase the spin. It travelled in wider and wider circles till the connecting thread became of unmanageable length and began to kink. Then he hauled it in and wound the beautifully twisted length of doubled thread on to the little ball and again pegged it down. Thus he continued till the original ball was exhausted.

Not long after, the Ustád's Hérul Nisa came to say that they were setting up a goats'-hair loom at their house if we would care to see it. We found that this time a large vertical frame standing on the roof of No. 8, lashed to the rafter of the balcony, and in course of being strung with just such a warp thread as Kalbi had shown us in the making. While Hunza sheep [233]
are uniformly white, three kinds of goat are kept: white, brown, and black. Black hair is used for the warp, while the bobbins are wound with white and brown. The bobbins in this case are long, needle-like rods the full width of the cloth, 2 feet or so, with the hair wound round notches in each end. There are only two heddles, thrown backwards and forwards by a forked peg like a boy's catapult. Goats'-hair weaving is a slower job and heavier than wool-weaving, but the Ustád is master of it, too, and was again initiating two younger men. The different coloured hair allows of pattern-weaving, and they enjoy devising new stripes and squares of brown and white. A very heavy comb is needed to beat down the intractable material, and in order to prevent the cloth being drawn too tight by the cross threads, two "bows" of flexible wood were spiked across it to keep it flat and taut. These are inserted as near as possible to the working edge and moved up 352
as work progresses. The goats'-hair strips are used as rugs, or 415
doubled and sewn together to form sacks and saddle-bags.

One day we were exploring the half-ruined village of the 346
old fort, threading the narrow switchback alleys between 345
deserted houses—so narrow that in places you could only edge along sideways—looking for points of vantage from which to

take photographs of the picturesque, abandoned Shiah mosque. It has been superseded by the New Assembly Hall in cut granite with pointed roof—an amazing achievement for local architects and masons, and one of which they are justly proud, but a dreadful eyesore in these surroundings and as uninspiring to an artistic eye as a Methodist chapel in a London suburb. Unfortunately it jostles the picturesque old mosque (whose entrance flight of steps is a delightful notched tree-trunk and whose flat roof bristles with a parapet of ibex horns), so that you can only see the older building squint-eye up or down a 3-foot lane. We pushed on and found ourselves emerging on a bluff covered with handsome graves. The Hunzukuts are too necessarily frugal to bury their dead on any ground that can be cultivated, so their graves usually stand on some barren hump that rises above the reach of irrigation water. Ordinary graves are just covered by flat slabs of concrete-like beaten earth, but more important folk have picturesque erections of varied shape to mark their last resting place. In theory all should no doubt be oriented in relation to Mecca, but in fact the graves face in whichever direction the site makes most convenient. We skirted round God's acre, re-entering the unappetizing labyrinth of desolate lanes, and presently came on a debris-strewn patch of ground whose houses had been dismantled (probably for their timber), and had fallen in. Here old Ferrájo had made a lathe-pit outside a rather handsome wooden door with a carved lintel. This had once led to his family's "town house," but now they lived out in Jamu, a suburb, as it were, of Aliábád. In its day, the warren of buildings to which he proudly pointed had boasted fifty-two "smokes." (A smoke represents a hearth-fire, and a hearth represents a household. In enquiring of a hamlet how many families it shelters, the correct phrase is: "How many smokes have you here?")

We begged Ferrájo to let us see him at work. He had, however, no wood in hand at the moment; chunks of root or cross-sections of willow trunks are the raw material of his bowls. But he let us inspect his pit—very similar in size and shape to a loom-pit—with the treadles and a leather belt passing three

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

times round a circular bar. The bar fits at one side into an iron socket, and at the other rests on the edge of the pit, held in place by one of the invaluable forked pegs that serve so many purposes in Hunza. The projecting end of the bar is furnished with three fierce iron spikes, which are driven into the lump of wood that is the future bowl. An ingenious wooden tripod stands beside the turner as he squats to work. It has one very long leg with deep notches, in one of which he rests his rude curved chisel to steady his hand. He had another pit at his country home in Jamu, and he promised he would let us know when he was working. We photographed him and his apparatus at the door of his ex-town house.

In due course we were invited to Jamu and welcomed with a broad grin that lit up his tanned and weather-beaten face. A large crowd was already gathered, some merely to watch, and some bringing lumps of wood and waiting their turn for his attention. He had a small bowl on the lathe, nearly finished. Its owner was seated in the pit, pedalling away for all he was worth, while Ferrájo gave a few final touches to his handiwork. The bowl was hollowed out as thin as fine cardboard, a few lines were added on the outside for ornament, and the bowl was gently levered off the three pegs on which it was impaled. Then with his adze—while we needlessly held our breath—Ferrájo boldly hacked off the rough base in which the pegs had held. A fraction of an inch miscalculated would have shattered the fragile thing. But eye and hand were as true as fearless, and in a moment he held it up for us to handle and admire. A rub with sand and a polish with oil would make it ready for use. While he had been at work an assistant or apprentice had been busy with an adze rough-hewing the next block into a solid hemisphere. It was then rudely but skilfully pounded on to the pegs with a big stone—Hunza has little need of hammers with so many stones of every size to hand—and we saw the new bowl carved out from first to last. When this was finished and we had taken as many photographs as we wished, the old man, with courteous hospitality, left his work to show us his house and fields and bring us out into the nearest lane—paved wholly with broken, wobbling boulders—that

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

322 would lead us home. A happy man he looked, though he told us that his back ached nowadays at work with lathe or plough, as it never used to do, and perhaps we had English medicines that would meet the case. We could only offer the sad tidings that we too, when we walked or rode or worked, were subject to fatigue and aches undreamt of in younger days, and that even in England the doctors knew no medicines to defeat on-coming age. This, oddly, seemed to comfort him a lot: "We're all ageing together then," he said, and we all three laughed a vain defiance at the years, "and we old ones have more skill and experience than the others, haven't we?"

462 Apart from their never-ending spinning the women have
241 many valuable crafts, though they are less spectacular than the
252 men's. They all bake a large variety of bread and scones from their blent flour—not only grains being pressed into the service, but pounded mulberries, walnuts, peas and beans, and semi-wild berries—and when *maltash* is available they make cakes and pastries of a dozen kinds. The vegetable patches are in their care, and amongst their many greens, their gourds, cucumbers and marrows, they tend a lot of plants whose seeds or leaves or flowers are valued as flavourings, and grow a little flax and mustard to supplement their apricot oil. In spring their plots are lit with the large blossoms of many-coloured poppies, whose seeds are not wasted on opium but scattered into the vegetable pot. They also grow small quantities of maize as a vegetable, but they do not consider it profitable as a major
249 crop. The kinder-hearted find a corner for tobacco for the
534 men's pipes, which circulate of an evening in the shade when
563 the day's work is done and someone tinkles a zither or tootles on a flute. These instruments are home-made like everything else, and are often very beautifully finished; we were neither of us qualified to judge of the music the players conjured up. To our unskilled ears it sounded amateurish, but eminently cheerful and pleasing. Serious music of drum and pipe and
262 kettledrum is the monopoly of the Béricho. When the women weed their crops they sort out the dandelion, stitchwort, and sorrel for their own brews before throwing the residue to
000 the cow. And they have a varied repertoire of berries, roots,

And they have a varied repertoire of berries, roots, and herbs from which they prepare simple medicines for their needs. Nowadays they are able to attend the Government dispensary in Aliábád, but its nostrums have not yet undermined their faith in their own home-made remedies. We very much wished that we had possessed some knowledge of medical botany and could have brought home records of their medicine; but like so many other branches of knowledge which we regretfully ignored, it would have been a specialist's job, and we had out hands full enough with our own work and all too little time at our disposal. 278 757

During the imprisonment of winter the women cut and stitch the winter cloaks, adorning each long seam with a double row of backstitching, which is not only seemly to the eye but serves to hold the raw edges in place. The stiff, shaped collar is decorated with varied designs, diamonds, triangles, and straight lines in the same backstitch. Happily few of them can yet afford to let Dirzi Nazir replace their time-honoured skill with the soulless, cotton stitchery of his sewing machine. We noted with grief that the beautifully hand-embroidered *chogas* with which the Mir presented us this time all had their seams Singer-sewn, and had thus lost (for us) much of their charm. 294 531 [177]

With prudent foresight the woman makes the *choga* six good inches too long for its destined wearer, and introduces a deep tuck above its lower edge. It will last at least three years and will shrink in successive washings. You can tell at a glance whether a man is wearing his best, or medium, or oldest *choga* by the depth—or absence—of the tuck. In former days embroidery was the monopoly of the few royal ladies who beguiled the tedium of their too-sheltered life by decorating *chogas* with bold designs in bright-coloured silks, or working raised patterns of gold and silver on velvet saddle-cloths, and above all in elaborating delicate designs in cross-stitch for the crown and border of their lovely little caps. Where we clumsily work cross-stitch with wool on canvas, they painstakingly cross-stitch the individual threads of calico with bright, gay silks. The patterns are infinitely varied—we possess dozens of specimens of this fine work, no two are alike—but

[The Burusho women -- Analyst]

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

all appeared to us to suggest Persian inspiration. I heard one lady say with regret for a golden past: "What is the world coming to? Why nowadays the very peasant girls embroider silken caps for themselves!"

True enough; now that a little money filters into almost every home the women can get hold of coloured silk from India or Kashgar, and it was a common sight to see girls and women open a tiny home-made bag that hung on their tunic, and take out a strip or circle of calico, a needle, and a bunch of silk, and continue work on a dainty cap. The threads of the cloth were carefully counted and the design traced out in black thread. The silks they used were unspun, clinging masses that I found impossible to handle, and how they manipulated them so skilfully with fingers roughened, you would have thought, by field work, I could not divine. For about 1s. 6d. they can buy enough silk to cover one cap with minute embroidery, and they blend their colours, red, blue, green, orange, purple, yellow, and black, with unerring taste. We laid in a store of their favourite shades so that on occasion we could make an acceptable gift to a bride preparing her trousseau.

After a first experience of trifling gifts of balls and combs we had decided that it would be a crime to spoil the simple, spontaneous kindness of the children or their parents by indiscriminate giving. So we restrained a longing to distribute even sweets and pins, and only made an occasional present on very special occasions or for very definite services rendered. On the other hand, we made a note of such things as would be useful and acceptable, and gathered a hoard of them for our ultimate visits of farewell.

Amongst the women's crafts I have already mentioned the neat little "ashtrays" they conjure from the residual mush of apricot kernels after they have extracted the oil. Washing is amongst them a simple matter. Having no fat, they can make no soap, but there is a plant, called *híman*, which they grow amongst their vegetables, the seeds of which when pounded yield a delightful soapy lather. This is used for special washings only. Every-day cotton clothes are simply rinsed in cold water, flung on a flat stone and beaten with a wooden mallet. When

a *choga* is being washed, a man's greater strength is called into 296
play—nine yards of wet homespun is no joke. He dips it likewise into cold water, lays it on a stone, and tramples it with his full weight. There is, of course, no fuel to spare for washing 372
clothes or persons in hot water.

From our very first days in Hunza the mills had been a [133]
source of interest, and we constantly passed them and peeped 256
in as we traced out all the water-channels on our walks. When [312]
the water was in flow (no stream, not even the Dála, was continuously in action in any one stretch) the mills were the centre of social gatherings. The miller and his family would be inside superintending operations, while the women with their babies and their work quietly awaited their turn. They had brought small sacks or bags of grain to be ground and would squat in and round the doorway happily gossiping. Occasionally a man would come along, bent double under a huge sack of 80 lb. or so.

We struck a particularly interesting group one day, where 000
the water was plunging steeply down the hillside and turning three mills in succession, one below the other. David was photographing the busy crowd at the door, and I climbed up a little to join two old women busily spinning among the rocks above. "Father won't want to take pictures of us," they said, in a matter-of-fact tone quite free from bitterness, "we are old and wrinkled." As well as my halting speech permitted, I assured them that older people were our best friends, that we liked faces wrinkled like our own, and that if they would allow it, "Father" would much like their photographs. So I scrambled down the hill again to explain to DL where his next duty lay. He came and engaged the old dames in chat, but it was no easy matter to get a photograph for they were shy and self-conscious beyond the ordinary. The picture turned out at least recognizable, but when it came to delivering their copies we found that their houses were "quite near" of course, but down 500 or 600 feet of highly precipitous gorge, rather more of a rock-climbing feat than we were prepared to tackle in the course of an afternoon's walk. Enquiry revealed, however, that old Pfírúz's son was married to Ustád Nadíro's daughter, so

we were able to leave the photo for her at No. 8. It was a constantly renewed pleasure to find how our photographs were welcomed and a constantly renewed surprise that these illiterate people, who had never seen a picture in their lives, were able at once to recognize and name the tiny reproductions of themselves. This was the one point in favour of my quarter-plate camera that it yielded larger prints than David's smaller ones. Only one woman in all our experience refused to take any interest in photographs, and that was, oddly enough, my special friend Bibi Gímo, of No. 1. "Take it away; I can't understand it," she would say to the others eagerly crowding round to see the latest of grandfather or baby Faqér. Quite possibly, unsuspected by herself, her eyesight was below par. But for the most part quite old people like the various grandfathers seemed as sharp-sighted as ever. On one occasion a man was studying a group of field-builders, the figures in which were very small, and he mis-identified himself: "Hullo, that's me all right, but *where* is my moustache?" He looked again more carefully, and found himself, moustache and all.

It was no negligible tax on our time to make spare prints for everyone, but we felt it was one small return we could make—without corrupting our friends—for the unstinted kindness we met on every hand.

We visited all the mills within range, studying them critically with future photographs in mind, for they were dark little hovels without smoke-holes, and lit only by the door and a small gap, representing one missing stone in the wall opposite, and we had to make elaborate calculations as to the aspect of doors and light-holes and sun and times of day to decide which offered the best hope of an interior photograph (we had unfortunately brought no flashlight apparatus with us).

When the water was not "on" we made an effort to master their complicatedly simple mechanism. The water is led from some height by a wooden shoot consisting of a hollowed-out log and falls on to the wings of a rude "wheel" below the floor. The central hub is a rough sphere or cylinder hacked out of a root or tree trunk in which the "wings," eight or ten of them, are obliquely set. The axis of this wheel passes up

256 through a central hole in the lower mill-stone and engages in an iron socket in the centre of the upper stone which it turns. The other end of the axis is shod with a pointed stone which revolves in a horizontal log. The lower mill-stone is firmly embedded in the floor of the mill, but an ingenious lever arrangement, which can be adjusted by wedges of convenient stones, enables you slightly to raise or lower the log below and thus to graduate the fineness of the flour. From side to side of the little hut runs a horizontal pole, whose ends are built into the walls, and from this the hopper is slung by two of the usual forked pegs. The hopper itself is most frequently a length of solid tree trunk shaped and hollowed out. Levy Kalbi's mill, in other respects highly suitable because better lit than most, was struck off our list of desirables because it had a horrible, carpentered hopper of planed planks—incongruously modern for our taste, though a source of natural pride to its owner. The narrow opening at the base of the hopper lets the grain trickle into a little sloping tray to which a wooden clapper is attached, ingeniously balanced by a thong so as to tap-tap on the revolving stone and gently shake the grain down to its fate. Another hollowed log acts as trough to receive the flour as it whirls out from between the stones. When the trough is full the flour is scooped up in double handfuls into its owner's bag. Beside the hopper lies a small wooden trowel of standard size, and the miller's fee for grinding the contents of an 80-lb. sack is one trowelful of flour. Another indispensable adjunct of the mill is a doubled piece of woolly sheepskin, which serves to sweep up any straying grain or flour.

Having calculated as best we might the most propitious lighting and a day when the Dála was not flowing we betook ourselves to our chosen Double Mill a mile or two away on the boundary between Aliábád and Dorkhan, where the Dála divides to give us our Middle Channel. There is a picturesque Mesopotamia here, with the mill-race and the mill-escape on one side and the divided stream on the other, and a fine grouping of trees above and below the Double Mill. We were armed with tripods and DL with his bigger camera, for at best ex-

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

256 posures would have to run into several minutes. For an hour and a half we crawled about the interior of the amusing little mill—the roof was not high enough for us to stand upright—trying points of view and focuses to suit, and then propping our tripods steady with stones for each lengthy exposure. Our faithful escort was immensely amused by our clumsy antics, recking nothing of our aching legs and backs, and we could overhear them answering questions of this sort from the occasional passers-by: "What are you hanging about here for? The mill's not working. There's no water to-day!" "Of course not; we're waiting for Father and Mother." "Where are they?" "Inside here." "What on earth are they doing?" "Taking photographs." "What *of*?" "Oh, the hoppers and the mill-stones." Shouts of laughter! Our eccentricities were a never-failing delight to the populace, and our retainers loved acting as showmen. When at last we crawled out, half crippled with stooping and covered with dust and flour, we were greeted by a large crowd, friendly and mystified, to whom we had to explain how much better we liked their mills than our own at home. This of course pleased them, and they perhaps had visions of our attaining fame—perchance even riches—by erecting Hunza water-mills on the Isis or the Cam.

2; Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

Chapter 22

MARRIAGE IN HUNZA

THE Burusho population of Hunza is divided into four major 614
clans, centred in Báltít, and several minor clans scattered over 621
other villages. Aliábád, being a "new settlement," contained 582
amongst its two hundred houses representatives of almost all the clans. Marriage outside the race is rare, but (as I have already said) exogamous marriage between the clans is the rule.

On the whole the Burusho cling to their settlements along 361
the eight or nine-mile stretch of river below Áltít (two or 563
three miles up-river of Báltít), at a height of 6,000 to 8,000 feet above sea-level. They are not eager to colonize higher-lying districts, for they say their womenfolk refuse to live where the apricot will not ripen. If this is so the women show [263]
sound sense, for the dried apricot is one of their staple foods and almost their only source of sugar. The favourite winter breakfast is a hot porridge of these *batéring*. It thus happens that the higher river-stretches above Báltít are mainly settled (if at all) by Wakhi immigrants from Afghanistan. These are a quiet, peaceable folk, markedly less intelligent than the Burusho, loyal subjects of the Mir, well content with their good pasturages and crops of barley and not missing the wheat and the apricot to which they are unaccustomed. A few Burusho colonies are scattered among the Wakhi ones, but, though friendly relations exist, the two learn little of each other's language; and intermarriage, though it would not be taboo, is very rare.

Similarly a couple of the lower Hunza villages are in- 563
habited by Shins, of the same stock as the Gilgit people, but 582
again intermarriage is the exception. We had fully expected to

find much more of it, and David had hoped to get some interesting notes on the bi-lingualism of children whose parents were of different stocks, but we came across no household among the Burusho we met where the wife was a foreigner.

Social intercourse with Nagir is virtually non-existent. The Hunza menfolk occasionally cross the river to barter Hunza wool for Nagir grain, for the former is much valued, though why, with far more extensive pasturage, the Nagir sheep should yield inferior wool was a mystery we never solved. But though a common language might appear to unite the two people, a difference of religion sunders them, and profoundly different social customs. Centuries of rivalry have left strong, latent feelings of hostility and distrust, probably reinforced—though this is a point on which possibly neither side has consciously reflected—by a difference of race. The Nagir women enjoy no such freedom and equality as the Hunza women do. They still wear unbecoming, dark homespun bonnets concealing all their hair while in Aliábád only one such bonnet had survived the comparatively recent coming of the merry cotton cap. Nagir sheep are predominantly dark brown, and in consequence Nagir caps and *chogas* are of a sombre hue that fittingly symbolizes the less genial temperament. Their Shi'ah mosques are called "Houses of Mourning" (*ma'tim sera*), and their interpretation of Islam seems to be as cheerless as would be a form of Christianity that concentrated all its devotion on the sorrows of Good Friday, and spared no thought for the rejoicings of Easter and Christmas. Now it happens that the Arabic word for mourning (*ma'tim*) sounds very similar to the Burushaski *matum* (black). As we rode through Nagir and noted the dour looks of the Nagirkuts, the crouching, face-averted women, the absence of spontaneous "good days" which brighten every Hunza chance encounter, the fact that when a Nagir prince was riding with us his passage was unmarked by any welcome or salute, our Hunza men would murmur with a grim satisfaction: "Their caps are black, and their cloaks are black, and their mosques are black, and by Allah their hearts are black!" All travellers who have passed through the two adjacent states have noted the relative gloom of Nagir, and some

have attributed it to the north-facing mountains which though richer in grass and timber are sorely stinted of the sun. 157

Whatever the difference is—racial, temperamental, religious, political, or climatic—it is too deep-seated to favour intermarriage. Only the royal houses, sprung from a common ancester—Alexander or another—frequently exchange princesses across the water. 582 643

Within Hunza the clans are all reckoned of equal status, but the clan of the Diramiting enjoys a considerable measure of prestige, and at communal ceremonies a Diramiting sets the pace or leads the dance. The story of their origin is interesting. There was once a clan of Tapkients who grew so bold and arrogant that their offences cried to heaven. They were reported to put bread to ignoble uses, they were known to address their mothers by the term *zizi*, which is the exclusive privilege of royal or saiyyid families, and they were haughty and stiff-necked towards their Mir. In vain the eldest royal son implored his father to "do something about it," and when the Mir refused to take suitable measures, the young prince impatiently laid his own schemes. A great gathering of all the clans was to be held on a nameless space of open desert where Aliábád now stands, and the Tapkients attended in full force. The prince plied them with strong *'araq*, and when they had well drunk fell upon them with his retainers and slew every man, boy, and male infant. He did not know that one of the Tapkients had allowed his wife to return to her own people for the birth of her first child. The posthumous infant was called Diram, and from him are sprung the Diramiting of to-day, who carry themselves without arrogance and do not call their mothers *zizi*. 614 173

Child marriages do not take place in Hunza, but a girl will rarely pass sixteen or a boy eighteen unwed. The parents seek out a house among some other clan—frequently a house with which marriage relationships already exist—where there is a potential mate of suitable age and standing, and negotiations proceed between the families. In theory the young folk are not consulted; but in practice, where children have romped and played and worked together there is no doubt that per- 584

584 sonal preferences carry weight. The business preliminaries include a small payment from the bridegroom's people in recognition of the fact that the bride's family have had the expense of rearing her and are about to lose her services, an interchange of gifts between the houses, and the provision
585 by the bride's father of an outfit for his daughter. In average peasant families a girl will bring to her new home three sets of every-day cotton clothes and caps, a winter cloak, a set of bedding, and for feast days an embroidered cap or two and a coloured scarf; possibly in addition an aluminium pot or iron bucket; details will vary in every individual case.

428 The laws of inheritance in Hunza show the same equitable
585 common sense as distinguishes the Burusho's other customs. A woman cannot inherit land, since only a man can tackle irrigation work, field making, and so forth. But if a girl is still unmarried when her father dies, it is her brothers' duty to see her adequately outfitted, dowried, and settled. Among the gifts that may accompany a girl are apricot trees; her father or brothers may settle on her the right to the fruit of one or more of the family trees. Our friends of No. 3, who were very straitened and possessed only mulberry trees, had fortunately the right to an apricot tree in Zénába's home garden. We saw Kaníza and her sisters coming home one day, all carrying shoulder-baskets piled high with golden apricots: "We've been to Báltít to gather the fruit of mother's tree," they told us, "and this isn't nearly all. There's shaking-down for two or three days more." When the father dies the family property is fairly divided between the sons, who either work it in common or if they prefer divide it up. Questions then arise as to how many poplars equal an apricot tree, or how many willow trees a wheat field, but the distribution rarely gives rise to quarrels, for the people are just-minded and at need will call in neighbours to adjudicate over knotty points.

428 One of their customs is particularly sane: if a father of
587 grown sons elects to marry again, he is free to do so, but in that case he must share the property as if he were himself a son; and a son by the second wife will only inherit a grandson's
587 share. If a woman is widowed young, she will in the natural

course marry again, taking with her to her new home any un- 587
weaned child, but leaving older children with her first husband's parents. If, however, she has grown sons, it is considered not obligatory but more honourable of her "to guard her husband's grave" as they phrase it; the sons will either retain her at home as still the *rúli gus* of the joint house, or they may give her an adjacent home of her own with her still unmarried girls. In either case they will maintain her with all deference and respect.

When a woman marries she by no means loses her identity. 585
She becomes a "wife of the Diramiting" without ceasing to 614
be "a daughter of the Burong," and when in due course she dies, her own tribal brothers will assist her husband's in performing the last rites. She pays frequent visits to her parents' house, joining when she comes in whatever work is going on; if her family can afford to receive her, she may even go to stay for a lengthy period; it is not unusual for her to take her first baby home and stay for a year after its birth. This does not mean neglect of her husband, for he will still have his mother and sisters-in-law to fend for him. We used to chaff Bibo Gímo's married daughter, whose husband lived in Dorkhan, and ask what he would say to her long absence; but she had, in fact, come to help her mother before and after baby Faqér's birth.

Marriage-related families continually exchange small gifts of 607
fruit or vegetables in season, for at different levels fruit will 431
ripen earlier or later by several weeks; we would see Kaniza, for instance, carrying a small basket of early mulberries to her mother's people or to her married sister in Báltít, who would no doubt send in return some late fruit from Báltít when ours in Aliábád was over. In rush times of harvest, too, relations-in-law are quick to help each other, and a man owes the same courtesies of speech to his wife's parents as to his own.

Except for the physical difficulties of moving about it, Hunza 561
is distinctly a place for the old. No detestable scientific inno- 888
vations have come to create a gulf between the generations; long after he is unable to help with the heavy work the old man's experience is of value to his great-grandchildren. Levy

561 Hurmat was telling me about his home affairs one day: "Our
888 father and mother are fortunately still with us; they can't *do* very much nowadays, of course; but they are still able to give us orders, thank God." And he meant the "thank God." In the same way the uncanny skill of the old *rúli gus* in husbanding the year's supplies is fully appreciated, and her skill with wool and spindle still puts her daughters-in-law to shame.

888 Old Aliko of No. 1A was past all serious work, though he
159 kept up a plucky effort to preserve his youth by the constant dyeing of his fine white beard; but he was a renowned sower and could spread the seed more advantageously on the prepared
243 field than younger men. There is no reckless wastage of precious seed-grain in Hunza; it is never flung where thorns could spring up and choke it, nor by the wayside to be trodden by the feet of men. And the neighbours would call Aliko in to sow for them. A real centenarian is a family treasure. Old Aliko's father was still living at the old homestead in Dorkhan with the other brothers (Aliko had hived off to Aliábád), and we made a special journey by request to see him and take his photograph. He was seated on a roof commanding a magnificent view of a steep hillside on which the farmstead straggled downhill in several storeys, as Hunza houses often do where the ground is steep. He had put on his best silk robe to receive us, and as we climbed the ladder and popped up over the roof brink, he apologized that he could not rise to greet us. Mentally he was as bright as ever and not even slightly deaf, and while David was busy with the portraiture I sat beside him and heard how he had lived through the reigns of four Mirs and four Maharajahs of Kashmir (the Mir, it should not be forgotten, had already reigned forty-five years); how proud he was that his son, Sangi Khan, was one of the headmen of Dorkhan, and how he had three sons and twelve grandsons still living at home (not to mention daughters and their children elsewhere). Before we reached the tale of his great-grandchildren, the photography and our visit were drawing to a close. He counted himself at least a hundred, and was certainly well on in the nineties, but still seemed full of the joy of life.

MARRIAGE IN HUNZA

888 One day when we were visiting a wine-press, far below the old fort and its graveyards, I made friends with a dear little boy of five who seemed exceptionally active and intelligent, even in a country where all children are peculiarly alive and bright. A beautiful old woman joined us, her handsome face framed by two becoming silver plaits. "Tawálut must be your grandson," I ventured. "'Deed then and he's not," she retorted, "he's my great-grandson. His father was my favourite grandson, and when the poor wife died at this baby's birth, I took and suckled him myself"—a feat with which not many of our great-grandmothers could compete. But of course if you marry at sixteen, you may with luck be a great-grandmother by fifty. Still, it was a good effort, and the boy was an excellent witness to her vitality.

[162] 147 The Burusho population is not large, ten thousand or so at most, and the ramification of well-remembered pedigrees—the humblest can record his genealogy for an astounding number of generations back—brings it about that all families seem ultimately related to one another. It may be this racial purity, judiciously combined with avoidance of close in-breeding, that has produced a stock so markedly fit and healthy. Travelling up through Astor, Gilgit, and Nagir to Hunza, the strong contrast in physical fitness and general intelligence is apparent to the most casual observer; and anyone who knows the races of the Agency will engage a Hunza servant in preference to any other.

585 Marriages normally take place in winter when the people have leisure to give thought to new alliances. The solemn betrothal, presided over by a khalifa, is the effective part of the ceremony. It is usually performed in the bride's house in a semi-private gathering attended only by the members of the families concerned. We were most anxious to be allowed to see one, but by no means hopeful of securing the privilege, to which of course we had not the slightest claim. The servants promised to negotiate matters if possible, and at last Dádo brought us word one day that a girl-relation of Sagi's was about to be betrothed and her people were willing to invite us, but said: "We are poor folk, and our house is humble and we feel

2; Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

585 ashamed." We sent Sagi off with all the reassuring messages we could devise and a couple of bottles of our hoarded kerosene to help to light the feasting. The house lay near our own, down one steep lane and across some now open fields. We were met some yards outside the door and escorted in. The kind people had vacated one entire dais for us, which drove some of the younger folk on to the roof, and we could see bright eyes peeping in through the smoke-hole. The whole house was clean and swept and gay with rugs and carpets; the fire was bright, and over it capacious cooking-pots were [302] simmering. On the major dais, opposite us, four people only were in evidence: the khalifa, whose badge of office was a huge pair of spectacles; the bridegroom in a bright silk overdress, a new *chogo*, and cap of spotless white homespun (his eyes were blackened and a row of tiny dots of black becomingly distributed on his cheek bones); the "best man" and an equivalent representative of the bride, probably a maternal uncle. Every available inch of other space was gradually filled with members of the two families who, as they arrived at the door, were ceremonially sprinkled on cap and left shoulder with flour. The bride's father was standing near the store-room door, the mother modestly just inside it. Probably but for our space-consuming presence—which filled us with some compunction—they would have been seated on the second dais.

After we had taken our places and had exchanged greetings and congratulations all round, the simple but impressive ceremony began. The khalifa, with his open manuscript, sat at the outer edge of the dais, the bridegroom squatting beside him on his left, while the two best men stood gravely facing them. A railing, hung with a silk curtain, screened the further section of the dais, where the bride was temporarily concealed, supported by her brothers and maternal uncles. The service was in Persian, with a strong admixture of Arabic, and was read—or repeated from memory—clearly and reverently in a pleasant sing-song recitative, which rose to a beautiful intoning when rehearsing the names of God, the Merciful, the Compassionate, the Forgiver of Sins.

When the religious exercise was over, the khalifa reverted

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

to the Burushaski of everyday, and enquired of the father whether the milk-money had been duly agreed on. "Yes," he replied, "500 rupees (about £35)." This left us fairly gasping till the colloquy went on: "And are you willing to remit 20 rupees in the name of Allah?" "Assuredly." "And 20 rupees in the name of the Prophet, on whom be peace?" "Agreed." "And 40 rupees in the name of the Imáms?"—and so on. The khalifa eventually thus worked the sum down to 40 rupees (£3). We afterwards heard criticisms of what was otherwise acknowledged to have been a fine performance of the khalifa's: he should have persevered till he got the milk-money down to 5 rupees (= 7s. 6d.); "but it doesn't matter, they won't in any case pay more; seven and sixpence is the current rate."

Then the embers of the fire were blown upon and some Syrian Rue thrown in, which filled the house with a delightful smell of incense. The khalifa now turned to the bridegroom: "I now ask of you, So and So, the son of So and So, Barataling, are you willing to take this girl, Rahil, daughter of So and So, Khurukuts, to be your wedded wife?" The question was put three times, and three times the bridegroom answered clearly: "Yes, willing." Then the girl's uncle, acting as her best man, stepped to the screen and looking over proposed to her the complementary question, and her voice answered: "Yes, willing, willing, willing."

The bridegroom's best man now lifted a silken handkerchief off a small wooden cup of water which the uncle had been holding all the while and passed the cup to the priest, who breathed over it in blessing, and gave it to the bridegroom, who solemnly—and audibly—sipped three times. The uncle now took the cup and passed it under the silken curtain to the bride, who did likewise. The two were now man and wife; the silk curtain was withdrawn and the bride tenderly led out. This courtesy might have been performed by the officiating uncle, but it seemed that he had been twice married, so another male relative, "the husband of one wife," gave her his arm. Bride and groom then seated themselves with linked arms side by side in the centre of the dais while a flat platter of

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

585 very thin wheaten pancakes was brought and presented to them. The bridegroom broke a piece of bread and, before eating, ceremonially touched with it his lips and forehead. The gesture was not unlike that with which a devout Roman Catholic crosses himself before meat. The bride followed suit, and then [292] retired again to her corner now unscreened. She was dressed in red silk and wore a pair of red-dyed soft leather boots; a tinsel scarf shot with gold and orange had been flung over her cap.

The ceremony was now complete, so we said good-bye to our host and hostess, thanking them most warmly for having allowed strangers to come, and pressing into their hands a modest gift of silver for the young husband and a bundle of embroidery silks wrapped in silver paper for the bride. With all-round greetings and best wishes we then withdrew, winning a special smile from the bride, leaving the two families to get down unembarrassed to their feast.

The silken handkerchief which covers the ceremonial drinking-cup is one of the perquisites of the khalifa, and we heard that—having no use for it himself—he usually trades it off to the next clients who summon him for a betrothal, and so it goes the rounds.

It had for a time looked as if we should altogether fail to witness a betrothal, but the ice having now been broken, we were honoured by several further invitations. We accepted one other in which the bridegroom was a relative of Qudrat Ullah's. It more or less duplicated the first; the khalifa recited somewhat less well, and the whole proceedings seemed to us a trifle less well organized. When the milk-money discussion was proceeding Qudrat Ullah suddenly broke in: "Oh, cut the cackle, and get down to five rupees at once!" The suggestion was duly acted on amid much laughter. The fictitious figure first quoted is a compliment to the bride, and in Nagir it is the custom, we were told, to start at thousands of imaginary rupees. This second bride was unusually plain, poor girl—scarcely worth 7s. 6d. at prevailing rates, we thought.

David was pressed to take photographs, which he duly tried to do. It was no easy task in a smoke-darkened, crowded room,

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

with a shaft of bright sunlight striking obliquely through the 585
smoke-hole, and innumerable youngsters in continuous movement. Still, he got some records, if not exhibition photographs, of the event.

In many ways Hunza marriage customs are more enlightened than our own. The newly wedded pair are permitted the privacy of some barn or outhouse for their early days, but the two are not abandoned to their own inexperience to make or mar their future physical relations; no terrified bride is forcibly raped on her wedding night by the clumsy impetuosity of her mate, no diffident and chivalrous boy left agape in ignorance of acceptable advances. The bridegroom's mother stays with them, and teaches him to woo and win in such fashion that both may have the maximum joy of their new experience. 585
In cases where the bride is over-fearful or over-young, the boy's
mother will sleep between them to protect her till the couple 586
are ripe for mating, and should the bride conceive an unconquerable aversion for her husband the marriage is tolerantly annulled by consent. Her own mother will reason with her and endeavour to persuade her, but the girl will not be coerced against her will.

When the instructional honeymoon is over the young people 591
take their place with the other married pairs in the common living-room, where kindly darkness gives privacy at night to all.

As soon as a woman is aware that she has conceived, she 843
quits her husband's side and joins the other women on their 833
sleeping bench, while he rejoins the group of bachelors, and 513
not until their child is weaned will the couple mate again. A 853
husband who babbled of marital rights as overriding the rights of wife and child would be an outcast amongst his kin. If a father by impatience robs his child of the full period of its mother's nursing—usually three years for a boy and two for a girl—the pirate baby that ensues is stigmatized by a name more opprobrious than "bastard." This enforced continence appears 842
to inflict no hardship on the husband; he is not asked to 163
exercise it in a *solitude à deux* or the provocative proximity of a barbaric double bed. Moreover, he has known from babyhood that such a forbearance forms an integral part of the scheme of

842 married life; he has been married early and has no arrears of
163 sex-starvation to make up, and he lives a healthy, active, outdoor life with no unwholesomely suggestive literature or cinema shows to stir his blood to rebellion. This admirable convention automatically spaces Hunza infants at decent intervals without artificial birth-control.

837 Unfaithfulness on either side is extremely rare, and I venture to assert without fear of contradiction that in Hunza morals
[548] are higher than in any other country in the world. There is no
[164] prostitute in the country, and no venereal disease. We may, I think, fairly ascribe this to high principle and a strongly developed tradition of fine practice, but we need not overlook the fact that circumstances conspire to reinforce principle. DL and I used sometimes to amuse ourselves speculating on the possible ways in which a pair of errant lovers, if such existed, could gratify their guilty passion, and we decided that the way of transgressors would be exceptionally hard.

No man or woman could be absent from the usual sleeping place without immediate comment, and by day each person's duties and destinations and occupations are common knowledge. The countryside lies sloping and open to view, and every corner and cranny of it, even the desolate rocky mountain sides where large boulders or ravines or semi-caves might seem to offer privacy, is subject to invasion at any moment by a herd-child with his goats. One tale was told us of an intriguing pair. The woman lover went to the edge of the river cliff, left some identifiable articles on the brink, and staged an accident. She then hid herself with the mother's connivance in the locked store-room of her lover's house. No search was made for the body, for these mountain rivers reveal no secrets, but it was, of course, not long before her presence in her lover's house was discovered. The unusual case came up before the Mir, whose sane judgment was that the guilty pair had better be divorced from their lawful partners and married to each other. Public opinion would have none of it, and while discussion was proceeding the disgraced woman drowned herself in earnest. I don't remember what the man's fate was, but general odium would certainly compel him to seek voluntary exile.

MARRIAGE IN HUNZA

Where a couple are definitely ill-matched, or the daughter- 586
in-law fails to fit into the family scheme, the regrettable fact 592
is faced, the two families meet to arrange a divorce, and each party is free to remarry and hope for better luck. Nothing, however, in our Hunza observations amazed us more than the amicable relations that normally prevailed among the women of a household. There would be a mother-in-law with three or four sons' wives, all perhaps with growing families about them, an adolescent girl or two, and the herd of youngsters. They work together from dawn to dusk without argument or recrimination, and apparently without anyone's attempting to shirk her fair share of the common tasks.

An expectant mother works on in house and field till the 843
very last, but by common consent the heavier tasks are divided 262
amongst the others, and an extra-nourishing ration is assigned to her both before and after the baby's birth. There is no 844
sentimental pampering of the mother, but her immediate job is the baby, and she is expected naturally to concentrate on that. When a woman's monthly affliction overtakes her, she 841
dresses in her oldest clothes and lies immobile by the fire till [262]
she is well again. The others make *daudo* for her, a porridge of flour well boiled in water, which is reputed very sustaining, and bring it to her, saying, "Sister, eat." After two days she is herself again, takes a bath, washes her clothes, and sweeps the house; but she is not banished as a pariah nor subject to any degrading superstitions nor to any taboo not imposed by nature.

Shyly one day my friend Zénába asked me was it true that white women were immune from monthly trouble. "We notice that English ladies seem to ride and camp at all times; we have never heard of one of you having to lie up." I explained our habits and conventions, and that we made it our pride to carry on outwardly unruffled. "But surely it can't be good for you?" "I don't believe it is; but there you are; it is our custom, and we should think it shame if the household noticed any difference in our behaviour. It sometimes makes us cross and fretful perhaps, and then our menfolk just think how unreasonable women are." She laughed heartily: "So that's how it is; we've always wondered; but I think our way is better."

841 "I'm sure it is," said I, "and you are well again in two days, whereas our discomfort lasts twice as long."

680 So I betrayed to them some of our minor secrets, but I could not bear to reveal to these innocent, clean-minded people the cankers of our vaunted civilization: the dark, unanswered questions that cloud our childhood (in this matter there is nowadays, thank God, much more, though still only sporadic enlightenment); the too-long postponed marriage; the widespread sex-starvation; the so-called wild oats of so many young men; prostitution, unmarried motherhood, or the unwanted celibacy of so many young women; the secret, second establishments of so many respectable fathers of families; the sordid adulteries that lead to the divorce court—all the tangled maladjustments of our modern life in the West, where insane economics have trampled the humanities in the dust.

One of my gravest disappointments in Hunza was that for all my free and easy intercourse with the womenfolk I was not able to glean much of the more intimate detail of their married life: of their pregnancies and child-bearing and the like, from the woman's point of view. I had hoped to be able in such matters to offer a useful complement to David's masculine researches, but in fact he learned far more than I did. I rarely or never got a chance to speak to an older woman alone, or quietly, for any length of time; friends, relations, children, and babies were always buzzing round. There is no 864 false prudery in Hunza, and children know the basic facts of life from infancy and hear grown-up discussion on any topic under heaven; but there is great fastidiousness and decency in speech, and it would have required far more subtle knowledge of their conventions than I possessed to have framed my questions inoffensively, even if I had mustered the nerve to frame them at all.

000 This mattered the less that DL in his quiet *tête-à-tête* in the study, with his various informants, was able to go into all such matters with unembarrassed freedom. I had also hoped to be perhaps allowed to be present at the birth of a child, and to this end had taken a superficial course of study at Queen Charlotte's Hospital, which, as things turned out, I had no

opportunity of utilizing. I should not, of course, have dreamt 000
of offering advice or help—the reckless courage with which some travellers ply their medical ignorance has always horrified me—but I thought that some knowledge of birth-rites at home might enable me to follow Hunza procedure with more intelligence. But if an Englishman's house is his castle, the fortress-like home of the Hunzukuts is no less inviolable, and in the event I could no more have proposed to a Hunza woman to let me attend her confinement for mere scientific curiosity than I could make the same proposal to an English friend.

Like women in many other parts of the East, the Hunza 844
woman bears her child in a crouching posture, which gives full 846
play to her muscles—admirably developed by varied exercise and unatrophied by chair-sitting—and speeds up the period of labour. An experienced woman, usually her own mother, acts as midwife, while her husband guards the threshold and her brother the smoke-hole to prevent the instrusion of evil man or evil spirit. Within a week, as has been related, she is ready to receive visitors, and within a fortnight she is out of doors again doing light work in the fields.

There are, of course, no vital statistics available for infant 165
or maternal mortality, but as far as my enquiries and observations extended, casualties are rare. This is not to be wondered at, since for countless generations Nature has here been at her beneficent work of weeding out inferior stocks, uninterrupted by soppy sentiment or misguided philanthropy. No C_3 girl baby can be reared in an incubator to die in childbirth or burden the community with D_4 offspring.

Chapter 23

WINTER AND THE "GREAT COLD"

132 No climate could be more delightful than the autumn and early winter of Hunza, from October till far on in December, and the Burusho make the most of these bracing, genial days, hurrying to get through every sort of outdoor job before the six or eight weeks of the "Great Cold."

245 Not by any means every household can spare water, manure, or space for a vineyard, but those who can value not only the fresh grapes which ripen later than all other fruits, but also the home-made wine which helps to brighten the cheerless [251] winter days. Unfortunately, by the time the grapes are ripe, the sun has already lost its heat and raisin-drying is impossible. At least this was the only plausible explanation we could get for the fact that the Hunzukuts who dry their mulberries and apricots do not make raisins.

The vines are trained over low pergolas only 3 or 4 feet high, less frequently allowed to climb up living trees. Since the Hunzukuts greatly value shady sitting places we wondered why they did not go in for loftier pergolas like those the Persians love. The explanation is cruelly simple—they cannot spare the extra length of poles.

There were not many vineyards in Aliábád, but we located two favourably situated ones and paid several visits to each. One was many hundred feet down, at Gulkhan, below the old fort. Though the vine leaves were still green, every bunch of 273 fruit had been already cut when we came down to see the wine-making. Under the roof of an open-faced shed were three "mangers," as it were, set side by side, the two end ones stacked high with ripe grapes. There must have been 3 or 4 cwt. at least in each. The centre one was only partially full.

WINTER AND THE "GREAT COLD"

The central compartment—not unlike a kitchen sink—had 273
a stone floor slightly sloping towards a hole in front which was fitted with a neat little spout of birchbark, below which a great iron cauldron stood. One of the young men of the family (having doubtless washed his feet) leapt into the sink, rested his hands on the sides of it, and tramped, tramped, tramped, with all his weight. It looked very like hard work. Another man crouched alongside the spout, holding a large-meshed basket which filtered the juice as it ran out into the cauldron. The skins thus trapped were thrown back for another trampling. As required, further supplies of grapes were taken from the side compartments and thrown into the wine-press. After seeing our fill of this process and taking what photographs were possible in the patchwork of light and shade, we climbed steeply uphill to a flattish spot where other even more interesting activities were afoot.

Under a big boulder a flat stone had been converted into a trough by little "concrete" walls made of sand mixed with fat. The slimy mush of skins, stalks, and stones left after yesterday's pressing had been brought up here. In the trough they laid a wicker ring 9 or 10 inches across and a couple of inches thick. Into this they dumped as much of the green stuff as it would hold; then they laid another ring on the top of the first and filled it till they had a pile a foot high or so. On top they now placed a flat slab of stone, and across it a stout pole for lever, which they wedged firmly under the boulder as a fulcrum. The pole projected like one half of a see-saw. On to it a man leapt, thus pressing down the stone slab on to the articulated basket, and out gushed the juice into a vessel below. Then the stone was lifted, the top ring of the ingenious basket thrown aside, and the squeezing process repeated till nothing was left but a wet round cake of skins, seeds, and stalks. This is then [233] put in the sun to dry, and is much valued as a cattle food. Our wine-friends told us that the wine made from this second pressing is counted superior to the first.

When the receiving vessels are full, the juice is transferred through a wooden funnel into a skin sack and set aside to ferment. It is not allowed to stand overlong, for October's

273 brew will all be finished by the end of December, but a man is looked on as over-impetuous who does not keep it for at least a month. Old vintages are luxuries for wealthier lands. The Hunzukuts do not profess to be expert vintners or connoisseurs of wine. They consider it rather a gamble how the wine turns out: "Sometimes it is sweet and sometimes sour. Either is good to drink. But if we have enough manure and if the season has been hot enough fully to ripen the grapes, then the wine is sweet."

The wine and weaving having been disposed of and the winter-wheat sown, the year's serious work is over, and little remains but to fumigate the empty manure shed. We had come in from our walk one evening and were settling down to work after tea when I heard a modest little "Mother dear!" outside the window, and found Hérul Nisa had been sent down to tell us that Ustád Nadíro and Bibi Anjír were going to fumigate their byre in the good old style, if we would care to come. So we flung on our coats, seized a lantern, and scrambled up the particularly rocky track that led to No. 8. Bibi Anjír and her married daughter were watching proceedings from the roof of the byre which also forms the landing at the top of the ladder that leads to their verandah and summer living-room. The couple at No. 8 are old-fashioned and scrupulously keep up the ancient fumigating ceremony which many of their younger neighbours neglect.

The wall of their manure byre sticks out at right angles into the lane, and the door of it is sideways on. In the angle formed between it and the house, Nadíro had a little fire of dry sticks already burning. He took an iron ladle with a long handle and filled it full of precious apricot-kernel oil and heated it over the fire. There was a cold circular wind whizzing round which delayed the oil's getting warm and catching fire. We and a lot of interested neighbours pressed in round him as closely as we could to shelter the flame, which at last blazed up like the brandy in our tablespoons to light the Christmas pudding. Then the old man went into the byre and Hérul Nisa followed him with a bowl of cold water. He took a little of the water and flung it into the ladle four times, causing a lovely flare

addressed to each of the four corners of the shed. To our 788
amazement we saw by the light of the flames that the shed was chock full of goats (we had imagined that they would have been cleared out for the ceremony) who seemed not in the least perturbed. Nadíro then came out again and lit a torch of juniper twigs at the fire and went in to wave it similarly into each of the four corners. Bibi Anjír then handed [262]
down a big wooden basin of *múl* which looked like a rather slushy brown pudding with pinkish trimming on top. This festive dish is made only on special occasions, such as a child's birth or the like. Before starting in to eat the *múl* or hand it round, the old man took his stand in the door of the byre and with great dignity and reverence lifted his eyes to heaven and recited the fumigating prayer. Bits of it ran something like this: "O Moses, Holy Prophet, grant that one hundred milking vessels may be required, and that our shears may be used on a hundred sheep! May kid follow after kid and lamb after lamb! May there be rams with curly horns and he-goats with short horns turned in! May milk flow in floods and may the butter pit be filled with butter!"

Happily DL had already got the prayer written down so [233]
we were able to follow it better than if we had been hearing it for the first time, and were even able to note that the Ustád got it a bit mixed in parts. We ascertained what was the point of the "short horns turned in." It is simply a question of packing. The byres are small and the beasts have all got to live crowded together in them throughout the winter, so that a princely he-goat with spreading horns is a disaster to his owner and a danger to his fellows.

Now came the moment when the family and friends would tuck into the *múl*, and we thanked our kind hosts most warmly for letting us see the little ceremony, and fled to the warmth of our own fire and our butterless tea. I was in terror lest we should be pressed to partake of the *múl* which is so special a dish that it was sure to be reeking of priceless *maltash*—of which we had no wish to rob them.

The next item on the Hunza communal programme is the 585
Great Wedding Day, which falls about mid-December on some 787
Thursday fixed by the Mir in consultation with the diviners.

585 Thursday fixed by the Mir in consultation with the diviners. The sensible plan prevails of having all weddings celebrated on the same day throughout the country. This avoids all cross-entertaining and much reduces expense. The hungriest guest cannot attend more than one big feed at a time. All betrothals have taken place quietly a few weeks earlier at each family's own convenience. The Wedding Day is only the jollification which sets the seal of publicity on the existing private contract.

All the morning feasting is in progress at the bridegroom's house, attended by the menfolk of both families and by twelve of the bridegroom's tribal brothers who act as his "best men." In the early afternoon the bridegrooms and their guests all repair to "The Gate" of their village where every spare space is already packed with spectators. The women and children are collected roughly at one side, the men and boys at the other, but there is no taboo about this, and no offence is given if one or another happens to stray into or wishes to pass through a crowd of the other sex, nor was it thought odd or unseemly that I usually sat beside DL amongst the men.

585 Before we arrived, the tops of walls, the branches of the
292 nearest trees, and all the adjacent roofs were packed (till we feared the slight rafters were bound to give). Everybody had turned out in their best and brightest clothes, our little boy and girl friends almost unrecognizable, their jolly little fringes soaked in oil and plastered down into most unwonted and unbecoming tidiness. The women and girls were very gay with bright-coloured scarves flung over their prettiest caps; poor ones might have only a piece of chintz or muslin, but by far the greater number sported lengths of Bukhara silk in daring blendings of bright green, yellow, red, blue, or purple. The general effect was delightful, and the bunches of womenfolk on the roofs would have needed colour photography to do them justice. Not to be wholly outdone, the men had coloured cotton shirts of marvellous hues and gay silken embroidery trimming their woollen *chogas*.

The Bérichó band, with big drum, pipe, and kettledrums,

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

squatted at the base of a big tree, and the tribal brothers of 585
each bridegroom led him to the dance. The Diramiting led off 292
and the other clans followed in their recognized order of precedence. Each unhappy bridegroom was amazingly got up. Instead of his ordinary homespun cap he was coiffed with an exotic white or coloured turban with a tuft of feathers at one side held in place by a fancy brooch and a dangling string of beads looped on to it. A brightly coloured silk shirt floated out over a startlingly white pair of baggy cotton trousers and (if he could afford it) a loose silk robe replaced his normal homespun *choga*. He carried in his right hand an old-fashioned 293
battle-axe tied with silken ribbons, and in this gaudy attire he looked as ill at ease as bridegrooms the world over.

The picturesqueness of the Hunza dancing, which is the 535
mainstay of every form of merry-making, is nowadays much 585
impaired by dancers who have acquired short-sleeved, would- [177]
be European shooting-jackets or tight trousers, or—worse still—have adopted tennis shoes or ammunition boots or some other form of horrible non-local footgear instead of the orthodox bare feet or soft leather boot. When carried out in the correct dress of the country Hunza dancing is amusing and interesting. Most of the footwork is merely a variant of a sort of polka-step—now short, now long, now in great leaps, now in fierce stamps, now on the toe, now on the flat foot. There is one characteristic step which would require a lot of practice: with one knee bent very deep, you rotate on that foot giving regular little taps on the ground with the other till the circle is complete; then you reverse and repeat in the opposite direction.

Each dancer dances independently, but the five or ten in the ring at any one moment all try to synchronize their steps in time to the music. The footwork, however, is but a small part of the dance; what is most admired is the action of the body and of the arms; these are waved and flung about and bent in a hundred different patterns. The long *choga* sleeves which dangle 6 or 8 inches below the hand give a most fantastic effect to these gestures.

When the second bridegroom's group came to dance they

2: Larimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

when the second bridegroom's group came to dance they
535 were joined by a young princeling (a morganatic grandson of
585 the Mir's) and a small friend of his, both in lovely silken
[643] gowns. They were a picturesque wee pair. The younger was about six, and his fond mother had got him up as a bridegroom, complete to the blackened eyes and fantastic dots on the cheek bones. The two boys polkaed round, stamping their bare feet and waving their tiny arms in perfect imitation of the grown-ups, and whenever they were in danger of being danced down, some kind hand would gently shove them to a safer place in the centre, where they went on gyrating. It was a jolly scene. Whenever there was room other small boys would join in; each normally venturing to do so only when his own clansmen were dancing. Once or twice some little dare-devil would intrude into the wrong group, and another small boy would try to punch his head. At once good-humoured bystanders would collar the pair and dump them out of mischief at some distance from each other.

All the spectators were very merry in their orderly way, and there were bursts of applause at frequent intervals. No small share of the fun was contributed by the bandsmen, who varied the time and pace and worked the dancers up to a fine climax. The big drummer of Aliábád is an old humorist called Húko. He waves his body and his arms about as he lustily attacks his drum and chaffs the dancers: "Go it, man! Leap, can't you, leap! Do you call that *dancing*? What are your legs for? Let your body swing, man! Get a move on there! Wave your arms, can't you? Oh, come alive!" etc., etc. The kettle-drummer flaunts his two sticks and wags his head, but being a younger and less privileged person than Húko does not venture on any verbal chaff. The poor piper who has mouth and hands glued to his funny-looking instrument that is half flute half trumpet just flings his body about and looks volumes. All three are so very much alive and on the spot that they imply that nothing else in life is quite such fun as playing while other men dance and marry. Their special efforts on such occasions are rewarded by extra gifts of bread, flour, and butter.

After about an hour and a half we came away, but for long after we could still hear the dance-music going on.

after we could still hear the dance-music going on. When 585
dusk begins to fall the bridegroom betakes himself with his train of tribal brothers to his bride's house, where feasting is resumed. When the guests can eat no more or the food is finished—which ever happens first—the bridegroom's party carry off the bride to her new home. In theory they carry her all the way, but as that may be for some miles across rough country they frankly admit that they soon set her down and let her walk herself, but carry her again when near their goal. On arrival the bridegroom's family welcome her at the door with incense and thin bread. Then the pair take hands and step over the threshold together putting their feet down simultaneously. The bride then advances to the hearth which is henceforth to be her own. She touches the hearth-stones with her fingers which she then kisses. She is then led to the seat of honour by the main pillar of the house and food is brought for her party, who presently return home. A brother or maternal uncle and a bridesmaid remain with her that first night.

Next morning the mother-in-law leads the bride to the flour bin and sets her to bake thin wheaten bread. She kneads the flour, rolls out the thin pancake, and flings it on the griddle for the waiting bridegroom to turn. If she spoils the bread he is entitled to tap her with the bread-turner; if, on the other hand, he botches the baking she is entitled to smack him with the rolling-pin.

The last public episode before the Great Cold is the 796
Tumushelling, the Midnight Bonfire of the Winter Solstice, a ceremony which, so far as anyone could tell us, had never before been witnessed in Hunza by a European, and small wonder, for late December is no time for a Political Agent to be on tour nor for globe-trotters to trot. We owed our chance of seeing it to our temerity in wintering on the spot. The [805]
Hunzukuts have long since adopted the Muslim Nauroz (the vernal equinox) as their official New Year, but not improbably their earlier custom was to reckon the turn of the year from mid-winter.

We had been told that we should be awakened in the small

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

796 hours by the loud drumming of a warning drum; then after an interval we should hear two outbursts and soon after, three, at which point we should set out. We could not ascertain how long the intervals would be between the summonses, but Dádo promised to waken us at the sound of the first. He was so fearful of oversleeping that he lay awake all night, and with characteristic zeal brought us morning tea two hours too soon. The third drumming was not, in fact, heard till about 5 a.m. It called us out into the inkiest night I ever saw, but it was windless and not unduly cold. Thick snow clouds over the whole sky hid every suspicion of a star, so that though the great mountains all round were white with snow to within a few feet of our level there was not even a glimmer from them.

All over the hillsides we could see tiny points of light converging on the rendezvous and hear the lively chatter of men [372] and boys from every homestead. Their torches were faggots of juniper held high on a long pole. From the polo-ground came the sound of music punctuated by unison cheers of Ha-Ha-Ha that echoed up the hill to hurry stragglers. By the time we got down there was already a goodly group of men thronging three deep round a princely bonfire, and each new party as it came flung in its torch over the heads of the crowd sending a shower of rocket sparks into the darkness of the night. Our arrival was greeted by a cheer and a lane was made for us to a stone sofa, where we speedily obliterated ourselves not to interfere with the progress of events, regretting only that our people had not thought to provide us with torches instead of the prosaic hurricane lamps which they doubtless thought more dignified.

796 The bonfire leapt, the band played, the jolly Ha-Ha-Ha
535 sounded at intervals, and still the velvet darkness was starred by points of oncoming light. As soon as a sufficient congregation had assembled, the band struck up in earnest and dancing began. In the flickering firelight the scene looked extraordinarily romantic. Prominent among the dancers were the bridegrooms of a few days ago, who thus made their re-entry into public life, clad happily once more in caps and woollen *chogas*. The dancers sprang and capered, their long sleeves

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

dangling fantastically as they waved their arms; now you saw 796
them in inky silhouette, now full-lit by the flames; and behind 535
the serried rows of eager laughing faces was nothing but the impenetrable blackness of the starless night.

After a short spell of ordinary dancing, more spirited and vigorous in the darkness than by day, swords and shields were brought and two men stepped into the ring. They threw their arms up into the air with sword and shield, leaped several times as high as they could with both feet together, and then staged a splendid duel: the one pursuing, the other fleeing, now this way, now that, and all the time the great curved swords flashed in the firelight and cut the air. When one fighter overtook the other, sometimes by a daring leap across the fire, they slashed and hacked till you felt sure that at any moment an ear or nose would go. When one pair was exhausted, they would suddenly fling up their weaponed arms again, turn sharply about, and bang their backs together in the oddest gesture imaginable, then lay down sword and shield and merge into the crowd as another pair stepped forward. Now and again the crowd would call by name on some favourite champions, who came forth with modest reluctance to take the challenge.

The variety of their poses and feints and gestures was astonishing; each couple improvised at will but kept in perfect time to the music. It was the best display of sword dancing I have ever seen, and the duels were more real than any I have witnessed on a stage at home: just as safe and incomparably more convincing. All the while the crowd shouted and cheered and bandied jests about, the band banged indefatigably, and every now and then in would whizz yet another blazing torch with its attendant shower of sparks.

We watched the ever-changing pageant for a couple of hours 796
without the slightest boredom. Still there was not the faintest streak of dawn, and the pessimists were whispering anxiously: "Great Scott, we must have started too soon, the wood will never last out!" And in truth the apparently inexhaustible mound of firewood was waning fast. At last the eastern sky above the mighty mountain rampart of the Nagir side showed faintly pale. With a cry of delight willing hands flung on all

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

796 the remaining wood for a final flare up; there was one last uproarious scamper of many dancers: and all was still. Then
796 up stood a pair of men, reverent, solemn, sword in hand, and
788 recited a moving litany:

> May the New Year be blessed!
> May the seed bring forth an hundredfold!
> May every ear be filled with golden grain!
> May the mountain side be piebald with goats!
> May the pastures be piebald with sheep!
> May kid follow after kid and lamb after lamb!
> May our houses be filled with children and empty of sickness!

and to each clause the congregation fervently shouted "Yá! Yá!" as an earnest Amen.

After some time the older man who was leading began to repeat himself somewhat, and a good-humoured protest went up: "Enough, Uncle, enough!" which brought the litany to a speedy conclusion. (What a useful innovation this would be in Church and Parliament!)

Then half a dozen grey-bearded men formed a semi-circle to face the rising but still long invisible sun, and struck up a delightful solemn chant that sounded not unlike a Te Deum. In contrast to the litany which was in wholesome, rhythmic Burushaski prose, the chant was in so-called Shina, mangled by generations of Burusho singers into an almost unintelligible, though impressive anthem. David later took it down verbatim, but could only very partially reconstruct or divine the Shina original, and so far he has not been able to trace the ungarbled Shina text, which is quite possibly no longer known in its country of origin.

Then, while drum and kettledrum and pipe still played and the old men still chanted, we all moved slowly downhill in the growing daylight to "The Gate," where dancing was resumed by those who wished it, and a faint lamp burning in the Assembly Hall silently summoned the pious to morning prayer, and the ice-bound pond invited them less cordially to the preliminary ablutions. Few seemed to accept the chilly invitation.

Except myself, no woman had attended the Midnight Bon-

fire, but the usual gaily dressed crowd were at "The Gate," 796
just as on the recent Wedding Day. I slipped across to join the 788
women and got a warm reception from many whom I knew and more whom I did not. Then an old crone came along, bearing a huge dish of flour and sprinkled a pinch on every woman's cap and left shoulder, saying as she did so: "Ya Ali!" All seemed pleased when I said: "Nay, mother, would you forget me?" and as she duly sprinkled me too I slipped a few pence into her hand. Then I extricated myself from the women's throng, scattering good wishes as I went, to rejoin David, whom I found similarly be-floured.

We thankfully toiled uphill home, too hot now in our 796
midnight wrappings, and very shortly faithful Zaidu and Dádo produced a hot breakfast, after which we turned in and slept. There must be some magic in the Hunza air. You would hardly contemplate sitting out of doors to watch an open-air show at home at 7,600 feet from 5 to 8 a.m. on December 21st (or even on December 16th, for the Hunza calendar has got its Solstice slightly "fast") with the thermometer reading 22° Fahrenheit.

There was to be more dancing that p.m., but we felt we had seen enough for one day, and the headmen seemed relieved when we said we would not come. They confessed that after the bonfire people went home and made merry with their wine, and that there might be some mild rowdyism—and since they have no other drink but water, who shall blame them? Not we, dissolute bibbers of hot tea! We did not want to spoil our impression of the astounding orderliness of the night's merry-making. Though everyone was in the highest spirits and the youngsters full of excitement, the crowd's behaviour was perfect. Even when one torch flew right across the circle into the faces of half a dozen spectators, there was only a laughing stampede, and when the circle drew in too close and threatened to impede the dancing, some responsible grown-up simply snatched a brand from the fire and swept it round the front ranks, driving the children back amidst fun 796
and laughter. Considering that there are no police in the 625
country, and that the headmen have no authority except their 622

[625] personal influence, we found the lack of even minor mis-
[622] demeanours among the Hunnukuts perennially astonishing.

796 The Tumushelling Bonfire would seem to have originated
773 amongst the Shins, but the Hunza Burusho, with their delight in pageantry, have lifted it and made it the central item in whatever were their own original Solstice rites. The oft-told story of the Bonfire is this: Once upon a time there lived a tyrant King of Gilgit, Shiri Badat by name, who exacted the tribute of one lamb or kid daily from his people. The custom was that each house in turn should pay the tribute. One day the turn fell to a poor old woman who possessed nothing in the world but one well-beloved pet lamb. Shiri Badat ate the lamb as usual, but remarked that it had a peculiarly delicate flavour, and asked its history. The old woman was summoned to the presence and cross-questioned. Yes, it was rather a special lamb. The ewe, its mother, had died when it was born, and the old woman had given it to her daughter-in-law to suckle; so the lamb had been reared on human milk.

This proved an unfortunate revelation, for from that day forward Shiri Badat demanded a human infant per day, and would not be gainsaid. The country groaned in misery, but the people were helpless, for Shiri Badat was no mortal man to be easily murdered; he was of Peri stock, and bore a charmed life.

Now it happened that a young prince from a neighbouring country had fled in disguise to Gilgit to escape intriguers seeking his life at home. He had taken sanctuary in the Wazir's house, and there he met Princess Nur Bakht, who was a foster-child of the Wazir's. The two young people fell in love, and when the Princess found she was with child she was filled with fear lest her baby should fall a victim to her father's unnatural appetite. So the Wazir, the Prince, and she hatched out a plot in which Nur Bakht was to play the rôle of Delilah to the cannibal Samson, Shiri Badat.

"Father," she said one day, "your subjects are full of wrath and hate because of the baby-tax you levy on them; I fear me they will find some means to slay you. Now if I knew the secret of your life I could the better protect you against harm."

WINTER AND THE "GREAT COLD"

The old simpleton thereupon revealed to her that while he was 773
invulnerable to spear or arrow, axe or sword, his heart was 796
made of butter and he could be destroyed by fire.

The conspirators thereupon, working privily by night, dug a trench close under the walls of the King's fort and filled it with dry wood, and on a given night at a given signal every Gilgit household poured forth its menfolk armed with blazing torches which they flung into the trench with a great cry: "The enemy is upon you!" The butter-hearted tyrant ran forth and perished miserably in the circle of fierce heat, and the Prince and Princess reigned in his stead.

While Gilgit itself has long since ceased to celebrate its deliverance, the Tumushelling Bonfire in Hunza keeps aflame the memory of Shiri Badat and his heart of butter. In olden days it seems that every Hunza household let its fire die out and rekindled the hearth by a brand from the Tumushelling Fire, but this practice had lapsed before any of our informants could remember.

One winter day, after a gruelling forenoon of solid hard 420
note-taking, DL said: "I'm just about half dead. We must 311
take a quiet walk this afternoon. We'll go up to the Mir's Stables; we can't meet anyone up there. I positively could not talk or listen any more."

The "Mir's Stables" bear no relation to a stable as we understand it. Above the line of terraced fields that sweep round the bay of Aliabad there are 200 or 300 feet of sloping mountain side, forming rude pasture grounds: the *taqs*. Above them rise the steep sand and rock slopes that flow down from the towering crags above. A little farther down the valley from us there is a kind of shelf above the *taqs*, a small roughly level plateau, scattered thick with huge boulders, which is called the "Mir's Stables." It isn't irrigated from any channel; it lies above the highest one, which in any case has petered completely out before it gets so far; but as it is fairly flat it catches any rain or snow there is, and it gets a certain amount of snow and rain drainage from the rocks above, and so in between the boulders and rocks there are patches of coarse, natural grass and thorn bushes. This bit of ground

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

423 belongs to the Mir, and once or twice a year he sends people to
311 cut the grass, such as it is, and bring it in for his horses. It was rather a favourite walk of ours when we felt inclined for an upward scramble, for there is a fine view from it over the whole of the Aliábád Bay and the smaller Bay of Jamu, before the ground falls sheer away into the great Hasanabad gorge with the glacier at the top that waters the village of Hasanabad, our next neighbour downstream. Moreover, it is one of the rare places where, once you have got there, you can walk a little on the level, dodging about between the boulders. We were about halfway up to the Stables when Khano overtook us, desperately out of breath: "I've parked my animals in that garden over there, and I'm coming with you," he said. The "garden" was a desert of stones and rocks, with a rough, loose-stone wall about it and a few miserable stunted trees. "But we know the way quite well, thanks." "Oh no, you don't, not half so well as I do," he retorted. (This, of course, was true enough.) "I'll come with you."

857 So along he came, chattering away nineteen to the dozen, and most entertaining he was. "Do you see the Red Rock?" "There are heaps of red rocks." "Yes, but there's only the one big red boulder, that's the Red Rock. There's a cave under it where we boys shelter when it rains, and on top there are cracks in the rock that hold rain water where we can drink." Right enough, the great boulder—50 or 60 feet high, I suppose—overhung a hollow (you could hardly call it a cave) and the youngsters had built themselves a rude wall and made a very cosy nest that would hold several dozen animals. We scrambled up on to the top and found as he had said that there were several deep cracks which would evidently make neat little drinking troughs when they weren't dry. Then Khano took us round in and out of the boulders and showed us all the boys' pet places. In one they had improved a natural stone sofa and built a sheltering wall and rigged up a fireplace with a few stones, and there they cook potatoes for themselves (when they can get any). They have a very merry life out all day on the hillside in every sort of weather instead of crouching indoors over lessons. The goats climb for miles and miles,

up and up amongst the stones till they look like mites in a cheese. What they find to eat is a mystery, for there is not one visible blade of grass and not one inch of thorn. But they "feed" there all day with the boys in the offing to see that they do not stray too far.

The Hunza sheep have prudently established the tradition that they cannot climb so high without breaking their legs, so they stay farther down where there is a small amount of very scanty grass (a home sheep would not recognize it as such) and an occasional dead leaf to gorge on.

Khano pointed out the "lizards' apricots"; patches of yellow, green, grey, and white lichen, which he says the lizards live on. He showed us the spoor of a fox and the tracks of his friends and a host of other interesting things. He's an amusing little play-actor. "Oh, I've got a thorn in my foot!" and he pretended to cry and limp helplessly about. Then with a laugh he clutched his foot, stooped to meet it, and whisked the thorn out with his teeth—a huge thing it was. Next he pulled a *mindak* out of some unexpected recess in his clothing and tried to teach us to play shuttlecock. The *mindak* is a most attractive toy. You get a small flat central button of lead and somehow contrive to attach to it a horizontal frill of kids' hair, black or white preferred. You then throw it in the air and try to kick it up with your foot, counting how often you succeed before letting it fall to the ground. You may kick it with your instep in an amateurish way, but the stylish thing is to strike it with the sole of your bare foot. The boys are extraordinarily adept, but the art is one not easily acquired in leather-shod middle age. Our indifferent attempts reduced us all three to helpless laughter. We were much amused to note that just as with the girls stotting their balls, the reckoning started at three and your first successful stroke was counted "four." In return for this demonstration lesson I tried to teach Khano to do handstands and cart-wheels, but my attempts to demonstrate these arts were somewhat unconvincing.

On the way home we met Kamber (Ustád Nadíro's boy) driving his herd of goats helter-skelter downhill. DL had

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

recently burnt a hole in one of his pockets and a cigarette mouthpiece was sticking out (this was the first I had heard of the catastrophe). "Shame, shame! Mother dear!" the boys shrieked with delight. "Why won't you mend it for him?" and the imp Khano officiously produced a needle from his woollen cap and offered it me with a bow worthy of Sir Walter Raleigh.

It was one of the most amusing of many delightful afternoons I remember with our boy companions, if not the entirely quiet and restful one we had set out to seek. Khano asked me to take a photograph of him. "But, my dear boy, I took a beauty of you the other day with your shoulder basket on your back." (His mother had been delighted with this.) "Yes, I know, but a basket is disgusting. I'd like one of just me." I could not resist the plea, and took a snapshot of him seated on a boulder, his merry, handsome face a-grin and a magnificent background of mighty mountains and eternal snow. Alas and alas! amidst our merriment I was careless and slightly shook the camera, and that photographic masterpiece was one of my most bitterly regretted duds. I took him many times again, but never hit off the "just him" that I missed that afternoon.

237 I have mentioned more than once the utter pricelessness of manure in Hunza. Every child out in charge of even only one cow or calf carries a shoulder basket on its back and scrupulously collects every ounce as it emerges. This keeps fields and lanes, courtyards and mountain sides as clean as a drawing-room floor (if only people would do this sort of thing at home!). As we were making our way home Khano spotted a few scraps that some careless herd had left behind, and hastily gathered them into the skirt of his *choga*. "Ah, ha," said I, "if you'd had your 'disgusting' basket with you, you would not have had to soil your *choga*." "That's no matter," he grinned as he carried his treasure trove along. Presently he saw a nice little hidey-hole under a rock and threw his find in there: "I'll come back and fetch it to-morrow."

If you have a decent cow she will yield you a basketful in two days, and it takes sixty baskets to manure a fair-sized field properly for the winter wheat. Very few people have more

than two cows. . . . You can work it out yourself. I'd like 237
to give our litter louts a few years' training in Hunza.

Salt is a crying need in Hunza, and while down-country rock- 135
salt can be obtained on payment from Gilgit, few families can 263
afford to buy. Hence in the relatively idle days of early winter you will see parties of women and girls and boys scouring the mountain side high up, and tasting as they go, till they find a patch of ground that seems to have a trace of saltiness in it. They scoop up the full of their baskets and carry this earth home. When salt is wanted they mount a conical basket filled with the saline earth over some receiving vessel. By pouring water through, they get a discoloured fluid, containing heaven alone knows what (probably a minimum of sodium chloride), which they pour straight into the vegetable pot.

Another job which is kept for winter days is the making of 241
new fields. It is all too true that the Hunzukuts have not enough water to serve their existing fields. But there are optimists who cannot resist the attraction of making a new field wherever they see a patch of ground that might with luck be irrigated in a good year. It's a serious business tackling a rocky bit of mountain side. You roughly plan your field and then start hacking out a great triangular gash at the upper side. It is full of stones and boulders which have to be removed; the smaller ones are set aside for the revetting walls; the larger ones are laboriously broken up with sledge-hammers (or blasted if you can get hold of a little gunpowder); the stony earth is carefully sifted into separate piles of varying degrees of fineness. Then the lower supporting wall is built to the level required, stones are thrown in for a foundation, next the coarser earth, and the surface is dressed with the finer. Field- 344
making is the only occasion on which a barrow of any kind is 493
of use. These barrows, of which in our whole time we only saw four, are the only wheeled vehicles known in Hunza. Whether the Hunzukuts invented them themselves or whether someone once saw a wheelbarrow in use elsewhere and imported the idea, who shall say? Anyhow, the Hunza wheelbarrow is a delightful affair. A sort of rude ladder with four or five rungs is made. A thick section of a tree trunk about

241 493 9 to 12 inches in diameter is impaled on one of the rungs to form the wheel. Axis and wheel rotate together in the two side holes of the frame, and to reduce the friction a tough ring of wicker work is placed between the wheel and the side of the ladder-frame. One of the usual shoulder baskets is then lashed between a pair of the rungs, and *voilà* . . . your apparatus is complete.

There were several batches of field-making enthusiasts whom we used to visit on our afternoon excursions—cold work it must have been with the snow lying to within a few feet of where they were working, but they did not seem to feel it, or perhaps the vision of future crops helped to keep them warm.

132 When once the Great Cold lays its icy hand on the country all outdoor human activity ceases as suddenly and completely as the sound of flowing water, and no one voluntarily stirs abroad. Occasionally you may see a woman, wrapped in the warmest *choga* available, dash with a gourd or bucket to the nearest drinking tank, break the thick crust of ice re-formed since yesterday and bring home the needed water. The steep, irregular stone steps were glassy with frozen water; it would have been easy to fall in and difficult to scramble out, but we heard of no casualties. Once again we noted that families prone to accident are weeded out by beneficent Mother Nature when her ways are not interfered with.

Once a day some man or boy drives out the beasts to the nearest open reservoir to drink, breaking the ice anew for them. As the water level sinks the ice crust cracks like pastry, the centre falls in, leaving stratum after stratum 6 or 8 inches thick adhering shelf-wise to the stone walls of the reservoir.

The winter was in many ways a disappointment to us. We had hoped for bright days and clear air and magnificent photographs. In fact, all the great mountains round were wrapped day after day in swathes of dark, snow-depositing cloud, and the floor of heaven, impenetrably grey, seemed suspended menacingly just a few inches above our heads. The immediate visible landscape was the dreariest it is possible to conceive; not an evergreen tree or bush, not a square inch of green grass to break the grim monotony of sepia-grey-khaki rocks, cliffs,

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

boulders, and gaunt tree-skeletons amidst which the cubes of 132
stone-and-mud houses were indistinguishable save for the thin spiral of blue smoke that rose from their flat roofs at feeding time.

We were able to work on indoors, for informants were glad enough to come and sit by our fire and tell all they knew about any question asked, but we sorely missed the cheering chance encounters, the casual wayside chats that normally brightened our walks.

Indoors during the Great Cold the family is merry and happy 502
enough. The recurrent tiny fire, whose ashes never quite grow 861
cold and which is stirred into life at baking time, reinforced 538
by human heat and not squandered by wanton draughts, keeps sufficient warmth alive for comfort, and the weeks of enforced leisure from outdoor work are thoroughly enjoyed. The women spin and sew and bake and tend the babies; the men mend and make their various implements; the children eagerly demand the right to help in every job for which they are ripe, while the old people come into their own and entertain the company by telling tales of every kind; not only nor even mainly tales of heroes and of kings, of raiding chiefs and bandit exploits from the good old days before the Serkár brought peace and security at the cost of adventure, nor folklore yarns borrowed from other times and climes—though they have good store of these; but the history of their country and its clans and anecdotes of every day. In this homely school the Hunza child learns all that it needs to know, the elements of ethics, morals, and religion, the accepted codes of decent behaviour, and all the accumulated wisdom of the land.

The Hunzukuts have no artistic gift of story-telling, and no 538
professional story-tellers; they have no oral literature to match the Sagas of the North or the Persian wealth of the Thousand and One Nights, but they can tell a straightforward story simply and well and with considerable humour, and the phrases in which their yarns are couched have become sanctified and semi-stereotyped by frequent repetition. Some of these DL had recorded in 1923–24, and they were already in print when we returned to Hunza ten years later. We were surprised and

538 delighted to find that if he read a paragraph aloud from his massive Volume II, it was not only understood by the hearer but would be continued verbatim to the end.

539 Many of the anecdotes of daily life are amusing and delightful; a few are tragic. DL has made a large and representative collection of them. I shall only summarize a couple here which particularly took my fancy. A certain Alipo (let us call him) had married Nuri, whose home was several miles away. As wives not seldom do, she had gone home to spend the day at her parents' house, and her mother baked a rich cake with butter, walnuts, and what not for the girl to take back with her to her husband's home. Now though she had undoubtedly been hospitably fed by her own people, Nuri on the homeward way could not resist taking the cake out from under her arm and eyeing it covetously, and from looking she advanced to tasting, and from tasting to eating, till quite half of the cake was gone. On arriving, she presented what was left of it to her mother-in-law with suitable expressions of goodwill. Her husband, jealous of his wife's reputation, looked at it in dismay. "What hungry person did you meet on the way?" he tactfully enquired. "I met no one." "Who, then, has been eating at the cake?" "Nobody. My Mother baked only half a cake." Next morning Alipo restored Nuri to her family for keeps, saying: "She is not only a greedy-guts but a liar; and not only a liar but a fool as well."

There is a sadder story of a young wife: Nimo's job was to shut the kids and lambs into a byre at some distance from the house before coming home at night. One evening she had left the task over long and was afraid of reproof if she were late returning. "They will come to no harm," she thought, "if I leave them out for once." By bad luck, however, there was a fox or wolf about, and when she returned to round up her charges next morning she found only their torn and scattered corpses. In grief and remorse she fled home to her own people. No undue reproach was levelled at her, but there was no disguising the gravity of the catastrophe. She brooded over the calamity her carelessness had caused, and one day her father found her dead in the byre, where she had hanged herself.

WINTER AND THE "GREAT COLD"

I had expressed a wish to see what winter life "By the Lamp" was like, and one day Levy Kalbi brought an invitation from his womenfolk to join them some evening in their house. I was warmly welcomed into the living-room, where twenty people were at home and many guests besides myself had been invited. The guests included all our own household except the Kashmiri sweeper. I made my way over to the women's side of the house and murmured such compliments as I could improvise, on the skill and diligence with which they stitched and teazed and span. It was amazing. I could only hope that their zeal was perhaps a little extra on my account. Presently, when all had settled down after my incursion, a princely dish of potatoes cooked in *maltash* (producing a sort of Irish stew effect) was set on the floor in the centre and a wicker platter heaped with bread and another piled with grapes. Kalbi had most thoughtfully asked me to have my own dinner before coming, for he feared that I might not be able to enjoy their food (as *maltash* is an inevitable ingredient in any food set before a guest, this was both tactful and humane). Another large dish of grapes was set near me, and the children who clustered round shared them with me without reluctance.

Again I marvelled at the spaciousness and freedom gained by an absence of furniture. We must have been thirty or forty in that tiny-seeming room, yet there was no sense of crowding, and there was perfect ease of movement. And again I marvelled at the natural graciousness and instinctive good manners of these unsophisticated folk. My hosts and hostesses, who had never had a European in their house before, made me feel welcome and at home, and were evidently not conscious of the slightest embarrassment themselves. In a few minutes two or three prostrate sausage-rolls of bedding came to life, bright eyes peeped out and the respective mothers' exhortations, "Go to sleep again, darling!" were just as successful as their equivalents in similar circumstances at home.

Only a couple of the very senior men of the family shared the extra feast, but the guests were warmly pressed to fall to. Each folded a flap of bread round his potato and ate it neatly as from an egg-cup. Then Kalbi's old father, the patriarch of

2: Lorimer T-3 (1920-4; 1934+5) 1939 AV7 Burusho AV7

the twenty, whose great-grandchildren were present in the room, a fine old greybeard, active and handsome still despite his years, set out to tell us his memories of the siege of Chitral and Kelly's famous march to its relief, in which he himself had taken part. That was only four or five years after "the downfall of Hunza," as he phrased it, but numbers of Hunza men enlisted in the British relieving force. (Another neighbour of ours in No. 6 was also one of Kelly's volunteers.) He showed me the sword he had carried and the handsome muzzle-loader with its forked rest, both carefully greased and kept in good condition as befits heirlooms of the kind. He discoursed with a tinge of unconcealed regret on the olden days when men were men and fighting was toward, "though of course peace is best," he added with incomplete conviction in his voice. The others broke in with questions, and led him on to talk of this episode and that, rehearsed no doubt many a time before, and to cap the tale he proudly put his finger through his jaw and out under his ear tracing the path of a Chitrali bullet. This honourable wound he wore more proudly than his medal, though this also was displayed with pride.

While he talked away with ease and modesty even the little children listened with intelligent attention, and you could easily picture them in years to come telling their great-grandchildren: "My great-grandfather used to say . . ." Their tastes uncorrupted by the sensational gossip of the daily press and the melodramatic improbabilities of the screen, their memories not undermined by second-hand book learning, these humble Hunza folk are immensely better educated than the products of our costly schools; not one of them but can tell you all the details of his own lineage for eight or nine generations back on either side. Outside Debrettites, how many of us British folk can do as much?

A youngster who has a taste that way or who covets the position of a priest in the future, can easily learn to read and write a little Persian and Urdu at the feet of one of the local khalifas. Burushaski has no script and is never written; nor would it carry anywhere outside the Hunza and Yasin valleys if it were. If he is more ambitious of letters, he can foot the four

miles daily to Báltít, as Yaman and a couple of our other young 793
friends did, and attend the Government-supported school 874
with the sons and grandsons of the Mir and the Wazir. Promising children of the more well-to-do can attend a more advanced school at Gilgit, and the really studious may even make their way down to Srinagar.

Ninety-nine per cent of the population, however, happily 212
still remain illiterate, and have not fallen victims to com- 871
pulsory education. When the people would question me about conditions in England, they were horrified to learn of such things as rates and income-tax, but even more aghast at the tyranny that compels both boys and girls to spend the years from five to fourteen at school. "But that's the time when they ought to be *learning things*," they said.

When my pleasant evening "By the Lamp" was ended and I 000
had said good-bye, cautiously descended the ladder and mounted my waiting horse, I was shocked to see my host accompanying us carrying a tray of food. I had expressly stipulated that I would only accept his kind invitation on condition of not being laden with food gifts to take home. To my protests Kalbi said: "Yes, yes, Mother dear, it's all right. I'm not forgetting. I'm only taking up his supper to the sweeper."

With honourable simplicity the Hunzukuts abide by the 771
fundamentals of Islam as they understand them. They may not 788
be strong on ostentatious prayer and fasting, they rack their brains over no theological subtleties, but a Believer is a man and a brother, be he a Kashmiri, be he twenty times a sweeper. Here was a man of substance, a Levy, a grandfather, a much respected citizen in his small community, climbing a mile uphill to carry with his own hands a share of the evening's feast to his absentee guest. That the man was absent was no doubt a tactful concession to any caste-prejudice with which India might have infected me.

The boys lighten the monotony of the indoor weeks of the 857
Great Cold by occasionally dashing out for a hasty game of 526
foot polo or tipcat with their friends or keeping themselves warm with *mindak* matches. Such young men as are real dance

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

526 enthusiasts may dance every afternoon at The Gate, but they
857 do not draw a large circle of spectators.

On one of the rare bright days that we were blessed with,
541 word was sent us that a special show was being got up for that
536 evening if we would care to come. We reached "The Gate" just before dusk and found a stone sofa duly carpeted for us. As the evening grew darker, the crowd became larger and the general feeling of infectious excitement increased, till at last the organizers of the show went round the crowd using their long sleeves as conductors' batons to mark time for the magnificent Ha-Ha-Ha and the unison clapping they so much enjoy which now announced the arrival of the performers. A lot of young men had got themselves up in various disguises, pairs of them stooping under a blanket with a horse's head fixed in front, pranced about most realistically under two boy-riders. Two other pairs were got up as markhor with real horns in front, while a fantastic huntsman with an aged muzzle-loading matchlock stalked them with exaggerated caution. Five or six were dressed up as women with silken veils to hide their moustaches. The best of all were two bent old men with flowing white beards; they were dressed in sheepskins with huge humps on their backs, and tottered very effectively on stout sticks. They contrived to look very aged and very frail. Then they got up a sham quarrel about the wife of one whom the other was supposed to have stolen. Thereupon they laid about each other with their cudgels—very carefully smiting only each other's well-padded humps—and did amazing leaps with their staves as jumping poles, the one lighting on the other's back and rolling him in the dust. This excellent horseplay was wildly applauded.

There were two absurd little boys with tiny besoms who made admirable clowns. They fussed about, sweeping the ground just in front of the dancers and choking everyone with dust, getting kicked out of the way and looking innocently pained at being so misunderstood. When anyone was knocked down in the rough and tumble they would officiously dash up to brush him down and get cuffed for their pains.

Altogether it was an extremely clever rag, mostly nonsense

and horseplay, of course, but with both humour and first-class 541
mimicry. A lot of the witticisms were lost on us, being in the 536
nature of "family jokes" only to be understood by the initiate, but they must have hit the mark, for they brought down the house. At one point one of the humped old men produced a mysterious black box from under his sheepskin and flung himself into a skilful caricature of DL taking photographs, pacing distances, peeping through view-finders, jotting things in notebooks, etc., etc. This was the star turn, and had been kept for the end. It was greeted with roars and howls of laughter, in which we joined till our sides ached.

After about half an hour, when everybody had been beaten and banged and rolled about enough to be tired out, we scattered home, surprised afresh at the magic in the air that made a show like this possible at 19° F. on a winter evening.

As we climbed home the great mountains of Nagir across the 132
river were looking their best in the evening light with massed patches of fresh-fallen snow and Raka resplendent in a new silver satin coat. But in many ways the winter snows—on the rare occasions when you can see them at all—are disappointing. We had pictured the whole land above, say, 10,000 feet one mass of snow; but in fact most of the cliffs and slopes are far too steep to *hold* snow, however much may fall, and while you do get magnificent stretches of pure white these are spoiled artistically by intervening scars of black and brown, khaki or dull grey. The topmost peak of Raka herself is a sheer rock-face of some thousands of feet whose grey austerity renders it almost invisible above the eternal snows beneath.

We had now reached the month which the people call "Crazy January," with its sudden and erratic storms of wind, and when the wind chooses to roar down these gorges from the glaciers then, by Jove! you do feel a temperature of 19°. We personally were lucky, for our bungalow was in a kind of sheltered pocket—a fact we regretted during the hot weather —and even when a wild wind was hurtling round it seemed just to miss our windows.

Our sponges had been frozen solid for weeks and our bathrooms were not places to linger in, but it was cosy near

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

132 the fire—less cosy at our working-tables near the light—and when mealtimes came we would carry in a couple of blazing logs from the study to thaw the air of the dining-room. Lucky as we were about fuel, we could not afford a continuous fire in a second room. But wood is gracious stuff, and a quick blaze just for meals was better than nothing.

Chapter 24

BARLEY SOWING AND "STARVATION SPRINGTIME"

AFTER weeks and weeks of dismal weather, which except for 132
absence of rain or damp was about as cheerful as Fleet Street in December, we woke on February 1st to a white world, a glorious clear sky and SUNSHINE, so we downed tools and went out with our cameras to enjoy life again. When it snows here —a very rare phenomenon at this level, 7,600 to 8,000 feet— it is a disappointing sight. There are no "flakes" at all. It is as if Someone were very half-heartedly shaking the finest castor sugar out of one of those inefficient sugar-casters that people exchange as wedding presents. Even when it had snowed all night there was only a tiny sprinkling on the ground, and long before it was light enough to take a photograph with a Christmas-card foreground the stuff had evaporated, leaving you with the dark, empty fields.

It was delightful to see the whole place full of people again as if by magic. The old folk out on their roofs "taking the sun," and the whole place a-twitter with kiddies of every size. The little ones had been invisible for three months, and even 291
the bigger ones rarely seen and in small numbers: partly because they really haven't enough clothes. They wear no under-things at all, and in the bitterest weather, though they may be huddled in a tattered *choga* or two, you see their bare chests peeping through their cotton shirts. Oddly, though they cuddle their *chogas* over their heads, they never dream of crossing them in front. If Papa happens to possess a padded coat from Yarqand or a skin coat with its own wool inside, the family is well off, and anyone who has to go out will take the

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

291 loan of it. In Kanízah's house (No. 3), though they are very, very poor, they are lucky enough to possess a woman's cloak of feather-wool. It looks extremely cosy and furry—though very old and greasy—with feathers sticking out all over it. When you can get enough down you spin the feathers in with the wool [136] before you weave it. You can only use the breast feathers of the wild duck for the purpose, and it must take a lot of wild duck, which are seasonal and rare, to yield enough for seven yards of feather cloth. This cloak of No. 3 is the only one we have seen. So we watch "the cloak" go out for walks—now on Zenába, the cheery old mother, who is one of the few really ugly women here but who always wears a happy grin that would redeem any face, now on Apicho, the eldest unmarried daughter who seems to be always on the point of getting wed but always just failing for some reason to pull it off.

511 We eventually discovered the reason for No. 3's extreme and obvious poverty. Poor Zenába had produced five girls, including a pair of twins, and only one boy, the second youngest child. Yaman (in full Ali Aman Shah) was one of our best boy friends, a bright, intelligent boy full of life and fun and knowledge, and good at all boys' games, but he was only ten or thereabouts, and not yet able to help his father in the heavier work of irrigating, wall building, ploughing, etc., and poor Ali Akbar looked worn and frail with six to provide for single-handed—not to mention the rare extravagance of the cat. Yaman manfully did all he could, and in addition when he could be spared from home trudged four mountain miles to Báltít to attend the school there with the Mir's grandsons and a few other ambitious boys. A great little fellow, with (as far as we could see) a hard enough life before him.

Yet No. 3 was one of the most cheerful and most hospitable houses round.

511 We supposed that Apicho's prospective bridegroom was as
585 poor as she, and when the two families came to tot up the
302 necessary wedding feasts they just couldn't face it. Certainly it had missed fire twice after we had heard that the date was fixed (you can in certain circumstances get from the Mir a special

licence to marry at irregular dates). Meantime no one seemed 511
unduly cast down, and Apicho continued to grow her hair so 585
as to be ready. Sometimes it stuck out all round her head in 302
about a hundred tiny plaits, on other days she had a wonderful, if somewhat shaggy, mane of frizzy hair about 5 inches long. She was a dear.

The small boys and girls have the centre of their heads 302
close shaven (a cleanly and sensible arrangement) with just a neat fringe left all round to show below their caps; married women wear, hanging down beside their faces, two plaits which are knotted up into two balls to be well out of the way. It is a most becoming style of hair-dressing. The plaits softly frame the face and the two balls dance merrily about. When a girl reaches thirteen or fourteen and marriage beings to loom ahead, she starts growing her hair in some variety of bob as a practical preparation for the state of matrimony.

We went off to one of the deep open reservoirs hoping in 296
the good light to get a photograph of the cattle being watered at the usual time. But, alas! the nice bright day must have modified their time-table, for not the ghost of a beast turned up. On the way we saw a pretty young woman whom we knew, doing some washing. She was squatting in the sun on a stone sofa beside a pool which was still covered with thick ice and dipping the clothes in through a hole she had broken for the purpose. She then laid the wet garment on the stone and whacked it with a thick wooden beater. Further on, Najat of No. 1 was washing some tattered pieces of felt, probably to pluck down for shoddy. She had flung them into shallow water and was vigorously trampling them while chunks of ice clattered round her ankles. A hardy folk the Hunzukuts.

As we came back we found a large group of women and 524
children on the main road, and one of the wee girls had a "doll." This consisted simply of one piece of stick with some rags hung round it and two cross sticks for arms which were jointed on and neatly attached to a piece of string so that they waved about when you pulled. They made it "dance" for us with much amusement and laughter, but we could not detach the doll and its owner from the crowd to get a decent photograph.

[Facing P.224]

000 the doll and its owner from the crowd to get a decent photograph.

The snowfall, skimpy as it was, broke the Great Cold, and the milder weather made photographic work a good deal less painful: giving films and prints ten changes of water when there are large icebergs floating in your buckets and there is no means of heating the dark-room is not enticing. I basely sent some of my own off to Kashmir to be dealt with there, but nothing would induce DL to risk the perils of the road for his. It takes weeks and weeks to get them back so that my lazy method had its own drawbacks, and anyhow no D. and P. people, however good, give your photos the same affectionate attention as you do yourself.

The breaking of the cold while we still had a good hoard of firewood left, meant that we could now afford to be more luxurious and keep a fire going in the dining-room. This also meant that I had a room to click the typewriter in even when DL was working with an informant in the study, and that he could have another big table to spread out maps on.

A minor advantage of the cold weather was the possibility of hanging meat and so gaining respite from the daily hen, which as an article of diet is a thing you can get tired of. The sheep are lean and minute, but tender enough when sufficiently hung. Without being great meat-eaters, DL and I could polish off a leg of mutton in one sitting.

252 As we were slaying sheep for home consumption we thought it would be instructive to study the local methods of butchering, so Levy Kalbi, who was on the job, was instructed to call us before cutting up the next beast. I didn't specially crave to see the killing, but our folk evidently thought there was no good shirking any part of the rite, and when we went out there was the luckless animal with its legs tied and its neck nicely arranged on a stone.

They did the job neatly and humanely. I don't think the poor beast had an idea what was going to happen. He probably thought, if a sheep thinks at all, that he was merely going to be shorn. Anyhow, they sliced his throat expeditiously with a cry of "Bismillâh, ar Rahmán ar Rahím"—in the name of

252 God, the Merciful, the Compassionate—then they let the blood drain out, washed the neck carefully, and got busy with the skinning. Kalbi is a clever, neat-fingered fellow, as indeed all Hunzukuts seem to be, and in ten minutes had coaxed the skin off whole (without slitting it down the tummy) as easily as you peel off a pair of silk stockings. There were only the 415 holes at the neck and at the four "elbows" and a little slit at the tail, so that with a stitch at the tail and four ties at the legs the skin would serve as a water bucket or a bag for flour.

252 He then hung up the carcase and cleaned it—a wonderfully unmessy business—while we noted down all the words for its various innards. It would have been much more instructive and enlightening if either of us had ever seen a sheep killed at home or had known the English words for all the curious things it has inside it. There was not, even round the kidneys, one ounce of fat.

465 As usual out here, you do not pay a person in cash for performing a service of this kind; there is some recognized per-
237 quisite. In this case Kalbi considered that he would be handsomely remunerated if he might have the guts. We did not covet them ourselves, and gladly acquiesced. They are much
[534] valued. They will give you strings for your zither (many people, including Kalbi, make beautiful zithers for themselves), and for your bow; they serve as thread to sew your long boots and your skin sack, and you put them to a hundred other uses. Others of our retainers laid claim to the wool, the skin, and various other items. Later Kalbi gave us a demonstration of skin-curing and -kneading.

291 The long native boots are extremely comfortable-looking, like long-legged moccasins, and their construction is an elabo-
[281] rate art. Ibex skins are preferred, but ibex have nearly been killed off and other leather has to be substituted. The soles may be made of cow-hide. Boots are precious things, so however cold it is you take them off when you come to a very rough piece of ground or want to walk through water. At best the unlined boot is not over-warm, and really luxurious people wear woollen socks or stockings inside if they have them. The women can knit excellently well, but it is very rare for anyone

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

to have enough wool to spare for superfluities. The preciousness of boots accounts, I think, for a fact which puzzled us at first: you never see children, sporting as they are in every possible respect, sliding on the ice for fun. Boots are too valuable, and barefoot sliding would be a bit severe. Also, as David remarked, sliding and snowballing are games for such as can go home and change their clothes and get warm beside a nice big fire. These poor mites have at most one warm *choga* (and possibly a share of Father's on occasion) and a tiny fire at mealtimes only. Anyhow, they don't slide.

The bright weather of February 1st did not last, and though the cold was broken we reverted to gloomy grey weather and the ceiling of snow-cloud overhead. We knew that a week or two would bring the great festival of the Bopfau, or Barley Seed-Sowing, and we feared that it was going to take place in semi-darkness. But everyone assured us: "Oh no, it will be bright for the Bopfau." The great week drew near and we had heard no word from the Mir confirming his earlier invitation to come and stay at Kerimabad (his garden and rest-house in the park below the Fort at Báltít) for the occasion. We were beginning to fear that he had forgotten us and were wondering whether we could without offence remind him. Just as we were nearly in desperation and terribly afraid that we should wake some morning to be told that everything was over, a kind message came from him to say that he hoped we would come over on Wednesday afternoon. He himself would be away at Áltít, engaged with the preliminary ceremonies, but everything would be ready for us and we need only bring our own bedding. Now we knew that the GREAT DANCE was bound to take place on the Wednesday afternoon, and we feared that this meant that he did not specially want us at it—in which case, of course, there was nothing to be done.

We had a glorious ride over to Báltít on the Wednesday afternoon (of February 6th) in perfect weather, exactly as predicted. Various grandees had been told off to welcome us, a nice fire blazed in "our" beautifully furnished sitting-room, and the Mir's pet cook-for-European-guests, Mirza Hasan, was waiting with his best bedside manner to offer us tea. It was

then about three-thirty. We were gratefully drinking tea and 000
thinking that after all if we were not to see the dance, there were compensations in a quiet afternoon, when Mirza Hasan came in with a most courtly grin to say that if we had finished we ought to mount at once as the Mir had sent word that all was ready and they were waiting our arrival to begin.

So we gulped the rest of our tea, leaped into the saddle again, and set off for Áltít, only a mile and a half away. As someone else has already remarked, however, mere miles in this sort of country are a misleading form of reckoning, since they all stand on their hind legs. Kerimabad and Báltít Fort are perched on the brink of a great cliff about 600 and 1,000 feet respectively above the Áltít level. The ground on which they stand appears to be the ancient outpouring of the mighty ravine behind, whose glacier provides all the water for the central part of Hunza. The ground that forms the Báltít spur is not honest rock but finely powdered crumbly earth well strewn with boulders, and the zig-zag road that leads down it is not the kind of thing you would choose for a brisk canter. We scrambled down it with such reasonable caution as haste permitted, forded the torrent at the bottom—very small, of course, at this season—and made towards Áltít Fort. A fine stretch of open and (relatively) level ground lies on the landward side of the Fort, which in its turn is perched on a mighty rock cliff that falls a sheer 500 feet or more into the Hunza river, presenting a most inhospitable face to the Nagir enemy across the water. This open stretch of country explains the fact that Áltít was inhabited long before Báltít, and still remains the ceremonial centre for old-time festivals.

A lovely long polo-ground—the biggest in the Agency, 506
except perhaps the one at Gilgit itself—flanked on both sides by a row of poplars and, of course, by low stone walls (you can no more have a polo-ground in these regions without walls than you could have a billiard table without cushions), leads towards the Fort. Even from the landward side the Fort rises up most impressively from the great rock on which it is built, and the village huddles round it close and tight. We skirted 644
the polo-ground by a narrow path with high field walls rising 796

on our left and passed the field in which to-morrow the Bopfau ceremonies were to take place. As we drew near, the various princes and princelings came out courteously to welcome us, the less important ones, of course, coming farthest, then the grandsons in reverse age-order, and lastly Ghazan Khán himself, the heir and "Prince of Wales." Just outside the Fort there is a fine pond outlined with poplars, the main "road" (say 4 feet wide) on the left of it. The hall-doors of the houses open straight on to this track, their front-door steps being tree trunks with notches cut in them in which the foot is planted sideways as you mount.

Prince Ghazan Khan led us through a narrow alley between the town houses to where the Mir himself was standing to greet us. As always he made us feel more than welcome, and took us to a nicely carpeted balcony where chairs stood ready. The balcony was only a few feet above the courtyard, and we had a perfect view. You must try to imagine a "courtyard," with no straight walls or edges, shut in by irregular tiers of houses piled on top of each other, mounting the rock to the towering Fort above, their flat roofs and roofed balconies all projecting higgledy-piggledy as the haphazard contours of the rock dictate. Every roof and point of vantage was packed with people till, as usual, you felt sure the beams were bound to crash. Everybody was in their gayest and brightest dress, and every single face just radiant. There never was a people anywhere with such a gift for looking happy as the Hunzukuts.

In the courtyard the musicians squatted at the base of the walls: three pipers, three men with pairs of kettledrums, and three big drummers, all of them clowning and play-acting vigorously as they played. Dancing of the more or less ordinary type was going on, varied by the singing of songs—all unfortunately in Shina, not Burushaski. The Hunza people say they have no songs of their own. DL conscientiously recorded the words of these songs later, but as in the case of the Tumushelling chant it is doubtful whether after centuries of being mangled they will yield any intelligent meaning.

Presently the GREAT DANCE came on. The most glorious

piece of dancing either of us has seen. Oh, for a Philip Thornton to record the music and interpret the movements! It consisted of twelve acts with twelve separate tunes, through all of which, however, the same *time* was preserved (the only thing about a tune which I am competent to recognize!). The light was too weak for my 6.3 lens, so I had to leave all thought of photography to David, and in compensation I concentrated as best I could on memorizing the various figures of the dance. It wasn't possible to make courteous conversation to our hospitable hosts and at the same time overtly take notes, and when I set myself to write down the detail immediately on our return to Kerimabad I found to my disgust that I could reconstruct only ten out of the twelve acts. 796 535

The eight pairs of dancers, all old or middle-aged men, dressed in gay shirts, homespun *chogar*, and long soft native boots, each clutched a bright strip of barbaric-looking Bukhara silk thrown behind his shoulders (over the right and under the left arm), a foot or so of the silk dangling out beyond his hands. The figures of the dance were very varied; some of the most interesting and striking were these: The dancers formed a circle, doing a dignified slow polka on their flat feet three times round, then faced inwards and danced towards the centre with their arms stiffly stretched out in front. When they had nearly met they all flung their arms suddenly over the heads with a well-synchronized shout of Ha-Ha-Ha! Then all bent slowly forward and dabbled the ends of their scarves on the ground as if dipping them in water.

Again they all circulated, waving their arms and scarf-tails gracefully, then sat down on the ground with legs stiffly out in front pointing to the centre. Then they leaned forward and again dabbled the scarf-ends on the ground beyond their toes. Then they leaned back almost to the point of losing their balance and flung their arms up with the same shout. Next they leaned slowly back till they lay flat on the ground and rolling from side to side they gently flogged the shoulder of first one and then the other neighbour with their silken scarves.

Throughout a couple of other figures the dancers crouched

796 on their hunkers and waved their arms and leapt frog-like
535 along.

A very quaint and effective act consisted of the dancers turning back to back in pairs, each leaning heavily against his partner, and dancing with all his weight on his heels. They danced round the circle three times like this (it must be particularly difficult for the ones who have to dance backwards). All were raising and flourishing their arms alternately and making great byplay with the outward-facing dancer of the other pair. The semi-final act had no small resemblance to our Sir Roger de Coverley. The circle halted facing inwards and the two leaders of the teams of eight signalled across and danced to meet each other, overshooting and passing back to back. As they passed, they halted a second, leaned heavily back against each other's shoulders and raised first one hand, then the other with their waving scarves, and each then flourished off to take the other's place. When all eight pairs had similarly changed places the dance was at an end.

The team work was admirable throughout. There was not at any point the slightest hitch, such as invariably wrecks amateur lancers or quadrilles at home. I could not extract from my adjacent prince any information as to the length of time they had spent rehearsing; he implied that they just "remembered" from one year to the next; but such faultless co-operation must have followed very strenuous rehearsal both of dancers and musicians.

Seeing so many of the dancers very elderly, I asked the Mir was there no fear that the skill and knowledge of the dance would die out. He assured me that every year a couple of younger men are drafted into the team so that the tradition may not be lost. The dance, in very much its present form, has been performed uninterruptedly for six hundred or seven hundred years, and probably immeasurably longer.

789 It seems likely that it originated in some imitative-magic
796 rites designed to benefit the crops: dabbling the ground may
535 be preparing it for seed: the cry with high-flung arms may be intended to encourage the growing ears to tower to heaven: the crouching springs may imitate the springing of the shoots:

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

the flogging may portray the threshing and the back to back 796
scene with waving arms might well represent the winnowing. 535
None of the present-day Hunzukuts attach the slightest magical 789
value to these things, and it is hard to believe that they themselves at any period ever did so, for a less superstitious people can never have existed. But they love dancing and music and *tamashas*, they love any pretext for holiday-making and dressing up, and they may well have borrowed the Bopfau Dance, minus its magic implications, from some people amongst whom the magic was still believed to be potent.

The wise Mir fully realized the psychological value of periodic festivals, and though the keeping up of all the ancient ceremonial often imposed a good deal of hard work and fatigue on himself, he devoted thought and care to preserving the old traditions and preventing the ceremonial's being curtailed or scamped.

When the dance was ended the performers turned and all 796
saluted the Mir; then one by one they came forward and took his left foot in their two hands and stooped over it with the gesture of kissing and then faded out backwards.

The next item on the programme, the Seed Sowing itself, was scheduled for noon on the following day (Thursday, February 7th). We determined to ride down to Altít bright and early, partly to avoid crowds in narrow tracks, and partly hoping for photographs in the new-found daylight. We overshot the Fort and scrambled out on to the edge of the river cliff—not without some risk to our necks—in attempts to get good pictures of Altít Fort in profile.

There is a nice little old mosque not far from the Fort where chairs had most thoughtfully been placed in case we should like to rest a while before the show began. We presently installed ourselves here to watch the crowds pouring in from miles and miles away; people on foot streamed across the countryside, all very gay and merry, and as much interested in us as we in them. When a group of horsemen arrived, men of consequence from distant villages, they did not ride straight in, but halted at the end of the polo-ground till they were observed from the Fort; then the band struck up a wild tune

796 and the party galloped hell for leather down the field, providing a fine spectacle for the pedestrian crowds.

As noon drew on we went along towards the pond and took our stand where DL thought his prospects of cine-photography were best. It was his first serious attempt to use his cine-camera, and everything seemed unpropitious. The only point of view from which it was possible to command the path of the procession faced straight into the eye of the sun while the path itself was in heavy shade. I posted myself as well as I could to try to shade his lens, and as a matter of fact the film has not turned out too badly. We were both so much preoccupied throughout the day with the unwonted problems of the cine, and the endeavour not to appear rude or ungrateful, that I realized too late that I had entirely forgotten to take ordinary snapshots of separate figures, etc., as I should normally have done. It is particularly disappointing for the chance was unique, and there would have been ample opportunity if I had not let my wits go wool-gathering.

Noontide came; music was heard inside the Fort, and out came the band in necessary single file carrying on their usual byplay with vigour and evident enjoyment. Next followed "The Great" (viz. headmen, officials, and the like) in single file on foot, but carrying "horses" in their hands. The horses were wands made of a few dark red willow twigs, bent over in a circle at the top not unlike one of the toys a bishop has to play with. A striking personage was a man bearing two huge loaves of barley bread on his back. They were about the size [262] of millstones and looked about equally digestible. Next came a sturdy fellow bearing shoulder high an ancient iron platter hung with chains, on which was piled a white cone called the *chopan*, crowned with a pear and a bunch of maidenhair. The *chopan* is concocted of several favourite Hunza foods, *maltash*, of course, a mulberry preserve called *bing*, and other ingredients kneaded together and coated thick with flour. This dish was escorted by a man drowned from head to foot in flour, whose face was like an over-pierrotted pierrot; lastly came a man carrying a dish of burning incense.

Next appeared a lot of men bearing white and red pennants

BARLEY SOWING AND "STARVATION SPRINGTIME"

Next appeared a lot of men bearing white and red pennants and one carrying the Hunza standard (rather a new invention 796
this, I fancy). The standard is a large triangle of white with 186
two pairs of horizontal red stripes, an open hand in red, and a bow and arrow in green: a handsome and effective national flag.

After the standards came the men of the Royal Family, 796
including Hari Tam of three or four (but not the new baby), 643
the younger members leading the way, and lastly Sir Muhammad 292
Nazím Khán himself, mounted on his snow-white Badakhshani stallion. The horse wore a scarlet saddle-cloth heavily embroidered in gold, and from a broad gold collar round its neck there dangled a large "feather brush" of pure white yak's hair. The Mir, looking as always every inch a king, was robed in bright green velvet cloak with massive padded gold embroidery. He had on a fine silk turban of pale blue. All the people entitled to a place in the procession, from the Mir downwards, were wearing bunches of large-leafed maidenhair in their caps. Gathering this fern, which as far as we could learn grows only in one spot in Hunza near Áltít, and collecting the willows for the "horses" provide exciting tasks for the boys for a day or two preceding the feast, while women of the Diramiting clan are busy baking the barley mill-stones and compounding the *chopan*.

Before the procession ultimately emerges many elaborate 796
traditional ceremonies take place in the ancient rooms of the Fort, which is still used for these occasions though no longer inhabited. The detail and significance of these ceremonies (which we were not invited to witness) were fully investigated by DL and I shall not here anticipate his account of them.

The procession passed along the narrow track till it reached the Bopfau field, 6 feet or so above the path and supported by the usual revetting wall. The younger and more active scaled the wall, but for the Mir himself a ladder had been placed at an angle of 45 degrees, bridging the water-channel at the base of the wall, and I followed the royal lead up the ladder. The Mir then took his seat on a chair beneath which a carpet had been spread (chair and carpet being doubtless modern

796 innovations). Chairs had been set for us also and the crowd formed a circle round. A large skin sack was then brought containing sections of a roasted ox. These were emptied out on to a skin tablecloth on the ground, while hundreds of thin bread pancakes were spread on another skin. The Master of the Ceremonies, a fine old man with a white beard dyed orange, took an adze and hacked the joints of meat into neat little chunks. A dish of bread and meat was brought to the Mir to handsel, and he duly tasted a little of each.

A piece of meat was then folded into several flaps of bread and the name of a village was called out. The little parcel was promptly passed back over the heads of the crowd to the authorized representative of that village who was present to receive it. A portion of the royal food was thus distributed to every village in Hunza. Bundles of new arrows and bundles of arrow heads wrapped in red handkerchiefs were then emptied at the Mir's feet. These he distributed to all the people about to take part in the archery.

796 The stage was now set for the essential part of the Bopfau
789 ceremony. The Mir and Royal Princes stood up and formed a semi-circle facing east, holding their joined hands out cup-wise in front of them. A small bag of seed-grain had been brought adorned at the mouth with a bunch of maidenhair. From this, grain was poured into their hands, and on top of the Mir's handful was placed a microscopic bag made from the skin of a sheep's heart and filled with gold dust. The officiating greybeard intoned a prayer of blessing, and at a given signal the Mir and Princes flung the grain back over their heads and the people crowded in to catch it in their hands. Those lucky enough to secure any, promptly rubbed it between their palms and ate it. He was doubly lucky who secured the bag of gold, but we heard that he was expected to distribute it in alms, so the concrete advantage was slight.

796 The grain-throwing was three times repeated, and we all
241 moved off to another part of the field, where a little heap of manure had been spread out. Two yoked oxen were now driven forward drawing an old-style plough (rather perfunctorily attached for it came adrift and had to be readjusted).

BARLEY SOWING AND "STARVATION SPRINGTIME"

Then the Mir, still wearing his royal robes, ploughed three parallel furrows and formally initiated the Barley Sowing of the year. In theory no true Hunzukuts will sow his barley till this ceremony has been performed, but we were told that in fact anyone who is ready earlier and thinks the time is ripe has not the slightest hesitation in going ahead with the good work. Never was a people so admirably full of common sense! 796 241

The Bopfau field was now deserted for the polo-ground; the crowd helter-skeltered down the wall, bringing the stones down on their heels in clouds of dust: the one and only time when I saw Hunza folk knock even one stone from its place without halting to replace it. We descended by the ladder with greater dignity and proceeded to the raised dais reserved for "The Great" on such occasions. Directly opposite the Grand Stand at the farther side of the ground was a little pile of earth about 2 feet high, and piled as steep as it would stand, on the side of which was fixed a target of brittle wood covered with a thin plaque of beaten silver. The mark was about 2 inches by 2½, and much the shape of an egg in profile. 796 526

Before the archery began all the Mir's horses in fine trappings were galloped down the field—the band thumping and piping as they came. Then the archers rode by carrying their immense bows of spliced wood faced with plates of ibex horn and strung with plaited leather. There were about thirty of them, including Prince Shah Khan ("Little Lord Fauntleroy") on a small pony with a full-sized bow nearly as long as himself. From the far end of the ground they came hurtling along one by one, coaxing their horses into a steadier gallop as they neared the mark, then flinging down the reins and firing as they passed. Some arrows flew a bit wide, but by far the greater number buried themselves to the feathers in the little earthen mound. A few horses sheered off, not permitting their riders to take a shot, and one fine animal, seeing the mound stuck as full of arrows as it could hold, decided that the game was a steeplechase and cleared the mound in a magnificent leap, evoking much laughter. One man, a very William Tell, split the target through the very centre to thunderous applause.

BARLEY SOWING AND "STARVATION SPRINGTIME"

796 Lord Fauntleroy came along riding full gallop as if born in the saddle and got his arrow well into the mound of earth, to 526 his father's justifiable delight: "the boy is only learning," he modestly explained.

There were three courses of archery, at each of which the mark was won. The archer who strikes the target is entitled to pocket it for his reward, but on the two last occasions it was only grazed; I suppose that William Tell was debarred from further competition. If the targets had not been hit they would have fallen as perquisites to the bandsmen. After the archery there was going to be polo, but the Mir thoughtfully suggested that this was a thing of which we had seen enough for life, and perhaps we should like to ride home before the crush. It was by now two o'clock, and we had had nothing to eat since a very early breakfast, so we gratefully made our adieux. DL was fairly weary: there are few things more exhausting than wielding a 16 mm. cine-camera in adverse circumstances at eye-level.

000 We scrambled up the crumbling cliffs to Kerimabad again and found that the invaluable Mirza Hasan was awaiting us with a welcome spread of tea and cakes. He had observed us zigzagging up the hill. You can't, of course, easily arrive anywhere in Hunza unobserved if you come by the one and only road. Dádo got busy packing up our kit, and we made ready to start back on the road to Aliábád. Before we left, the Mir himself returned, and we were able to thank him once again, and congratulate him on his royal weather. He was delighted that we had taken the whole affair so seriously and done our best to put its main features on record; as far as he can grasp what DL's work is all about, he feels proud and happy that Hunza customs are considered of so much interest and importance. He said he thought he remembered one British officer having attended the Bopfau many, many years ago, but he could not recall the name, and we have not been able to trace any record left by this predecessor. It would be extremely interesting to have an earlier account of it all.

The two glorious days of Bopfau weather were almost a miracle: a very suitable miracle for a Chief traditionally

supposed to be able to control rain and sun. It is said of the Mir's grandfather, Ghazan Khan, that he was so skilled in the art that he could cause rain to fall when wanted and ride unwetted through it! On the second afternoon, as we were riding home, the clouds and mists were darkening in again and robbed us of some superb photographs we had marked down for taking on the homeward way. Some cold days ensued—an unpleasant jar after we had begun to shed cardigans and blankets. Still . . . the Great Cold was definitely over, and the sound of flowing water was a delight to the ear after the ice-bound months. An even greater delight was the sight of people working in their fields again, and all our jolly children friends romping about. Some of the women and children living quite near we had not laid eyes on for months.

Everyone was frantically busy. When the women weren't actually carrying manure out to the fields in their baskets and dumping it at regular intervals or squatting down to spread out the heaps evenly over the surface, they were sitting in groups here and there spinning for dear life in the welcome daylight and chattering like magpies, exchanging the gossip of their homes after the long seclusion. When I came upon any little lot I hadn't seen before, they hailed me eagerly: "We *have* missed you!" they shouted. And I laughed and said: "But I have been there all the time and *I* have gone out every day; it is you who have been hiding in your houses, crouching over the fire!" "That's true," was the laconic answer, "it was winter." It was fun to be amongst them all again and find them as natural and friendly and as merry as ever, and so very much neater and cleaner than I should be if I had their work to do and only icy water to wash in.

By the third week in February we could with a microscope begin to detect the first shoots of the winter-sown wheat, and even imagine a slight flush of green on the bare white twigs of the poplars, though the leaf buds had not yet begun to swell perceptibly.

I passed Kaníza's house one day as they were all busy dumping manure and noticed a strange girl helping. I knew that the married sister in Báltít had generously taken over Kaníza's

000 twin sister. "Is that Kaníza's twin?" It was—twice as big and flourishing as our little Kaníza. By way of making conversation I asked the mother: "Isn't it strange that Anjír should be so much bigger than her twin?" "Not really strange," she said quite simply, "there is food in Báltít." Yet when my photographing was done they pressed me to come in. I made to squat just anywhere on the woman's platform, but they must needs find a rug for me to sit on. They were cooking lentils in a big stone pot on a tripod over a tiny fire, and they produced a dish of boiled potatoes and wanted to share it with me. I took a tiny taste for friendliness, but excused myself from eating more with the phrase I had found gave no offence, "I
574 came, having just eaten." These people's hospitality just left me gasping. That dish of lentils and potatoes was probably the only serious meal of the day for five or six of them. And if I had so little, should I want to stuff any of it into over-fed foreigners? I trow not. We were not conscious of being exactly over-fed in Hunza, but by contrast with what our neighbours—much better folk than we—existed on. . . .

562 Another day I met on the narrow track a perfectly strange
576 lad with a lump of dried apricots in his hand (rather like a lump of the all-glued-together dates you see in a grocer's shop) which he was eating as he walked along. We greeted each other "Jú na!" This is the old-time native greeting, still much more in use than the formal "Salam aleikum" of Islam, which the women scarcely use at all. When you do say "Salam aleikum," the correct Hunza reply is "Salam aleikum." At first, of course, we used to answer: "W'aleikum as salam!" as is usual amongst Muslims elsewhere; but it came to sound stilted and highbrow to our own ears, as I do not doubt it did to theirs. Immediately the boy held out his apricots for me to take some. I tugged a small one off the corner and popped it into my mouth, where it lasted me like chewing-gum for half an hour. These apricots are very good and most sustaining, far tastier than the dried apricots we buy at home, but for serious eating they need to be steeped overnight and then make a delicious dish.

000 A month later, by the third week of March, we were well

BARLEY SOWING AND "STARVATION SPRINGTIME"

A month later, by the third week of March, we were well 132
into the Spring. The winter wheat formed a bright green carpet on the shelf-like fields, about three-quarters of our Aliábád ground being given over to it.

The barley which the men had sown after the Bopfau, just 243
the other day it seemed, was showing green over the most of the rest, and would presently outstrip the wheat and ripen first. The only brown fields left were those that were being prepared for vegetables and potatoes. No leaves were yet showing anywhere, but fat red apricot buds looked promising.

As autumn drew in we had begun to feel a little disappointed 241
in our Hunza friends whose marvellous field-walls we had always admired so much with not one single stone out of its place. There were breaches here and there, sometimes quite big ones, and paths were often blocked by a fall of stones, and no one seemed to bother. This puzzled us as out of character, but as soon as the last fear of frost was over, every spare moment was spent by men and boys restoring the countryside to its normal state of faultless tidiness. We now saw the reason of the apparent neglect. The frost and ice simply tear the walls to pieces, and to repair them during winter would be sheer folly. We might perhaps have divined this; but now at any rate we knew.

One early day in March we saw Khano on the mountain side 233
walking slowly and with circumspection. This was so strange a sight that we went over to investigate. "What are you carrying so carefully under your *choga*?" "My first kid," he said, opening his cloak to display the tiny head with triumph. "That's the mother there. I'm expecting four to-morrow. I do hope they won't get born at night in the byre. I'd rather they came when I'm out with them alone." "How do you happen to have so many goats?" we asked. "Oh, I'm herding for the Yerpa now. He's no boys of his own, you see." How crazy it would be to call a lad like that "uneducated" because he doesn't happen to have learned to read or write! He is proudly able to act as accoucheur to his goats, which few of our youngsters at home would feel equal to. We enquired later of Dádo and the rest what sort of wages Khano was able to earn, and their view was that he was probably not given

133

Mir's Fort at Bâltit, six hundred years old. Mountains in background 23,000 ft. concealing the great glacier that waters all the oases of central Hunza. (See pp. 105, 106)

PLATE XVIII

[Facing P. 240]

233 any wage in our sense of the term, but that he would certainly be getting one or two free meals a day, and thus sensibly reducing the rationing problems of his own home. Hunza sheep lamb twice a year, but the goats have kids once only, in the Spring. Khano's promotion to wage-earning status was a little sad for us, for we saw him much more rarely after that.

242 One fine morning early in March the apricot trees that line
245 the Dála just in front of our rest-house were suddenly invaded by the whole Dastagul family armed with long sticks, to the end of which a sharpened piece of curved iron had been attached. With infinite care they inspected every branch, and wherever they detected the nest of an insect they snipped down the twig on which it rested. These nests were small, cocoon-like things only about an inch long, with a nasty little grub inside. The nests clung very tight to their hospitable perch, and it was often necessary to cut quite a biggish spray in order to secure them; each was diligently collected and borne home to the fire. We were not qualified to identify the pest on which war was being waged, but it was reported to devour both leaves and fruit if not destroyed. All through the country every single apricot tree is scrupulously examined and cleared—there must be thousands. We certainly did not later see a single one that seemed to be suffering from insect attack.

563 About this time we made another addition to our re-
167 tainers—a dear old grey-bearded man with the jolliest bright
361 eyes and a merry, happy smile, but not a tooth in his head, was roped in to work at Wakhi. The Wakhis, as I have said, are immigrants into the north of Hunza from the Wakhan districts of Afghanistan. They have settled in various places above the level at which the Burusho themselves care to live. Hunza men will tell you that they cannot induce their womenfolk to live where the apricot will not ripen. I suspect, however, that the men are just as unwilling to forgo their trees and wheat and fruit, but Adam-like prefer to blame their mates. The higher villages of Hunza are therefore inhabited almost wholly by Wakhi-speakers. Being unaccustomed to wheat, apricots, or

2; Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

trees of any kind, they do not miss them, and in compensation enjoy opener valleys and wider pastures.

Wakhi is an Iranian language, and, dearly as we both loved Burushaski, there is no denying that it was refreshing to revert to a tongue which has one form of plural instead of thirty-eight, and which cares no more about genders than English, less in fact, for it has only one word for "he" and "she." Charming old Farághat is a khalifa, or lay priest. He can read, and perhaps write a little Persian (a *very* little), but his mind is grammatically quite untrained, and one tense or case suits him for any purpose just as well as another. It is natural that at his age he is resistant to new ideas, but how resistant was almost incredible. After weeks of patient work he was no nearer appreciating the need for collecting the various tenses and participles than he was on the first day, so progress was slow. DL's patience amazed me. There would, of course, have been no use showing impatience, for it would have merely served to scatter such ideas as the nice old fellow had, and he was doing his best. There are some strange and wonderful consonant combinations in Wakhi, and Khalifa Farághat's lack of teeth did not make them any easier to diagnose: is it sh-kh-th, or th-kh-sh? It was clear that the hope of extracting any intelligible text of even the simplest form from Farághat was nil, and the Mir very kindly promised to fetch down from up-country a professional Wakhi story-teller to supplement. We awaited his arrival with eagerness. Picture our dismay when he proved to be an equally kindly, equally aged, equally toothless, equally futile old bird. Farághat had brought with him his youngest son, an extraordinarily handsome little fellow of nine or ten, so that the child might not miss his daily lessons, and as they sat about together pouring over a tattered, well-thumbed primer of some sort they made a touching picture.

It would be very unfair to generalize about Wakhi racial character from two such elderly men, but the impression these two left on us of kindly slow-wittedness confirmed DL's impressions of ten years earlier, when he had been travelling through their districts and had tried to get informants to work

with. They are the greatest possible contrast to the alert, intelligent Burusho: possibly there is more than sugar in a diet of apricots!

Quite suddenly after the first lovely rush of water the channels went silent again. Not that they were ice-bound, but it seems that the first warmth of the year melts all the recently fallen snow off the top, which gives you your first rush. After that comes a pause before the sun has gathered heat enough to melt the older, hardened snow and make an impression on the glaciers. This arrangement of Nature's suits the peasants well. The first rush waters their new planted barley and springing wheat; the pause gives them time to clear out all the silt and sand that is cluttering up their channels, and to repair the walls. They find the silt a useful top-dressing for their fields. All the menfolk worked hard to get their irrigation works into trim before the real water flow began. Meantime all the *pferis* near us were empty, and poor Sagi had to go a mile or more to draw water for baths and washing up, in addition to his usual pilgrimage for our drinking water. So we installed an assistant for him.

Among the enlivening sounds of these early Spring days was the tootle-tootle of boys' whistles. At a certain moment when they consider the degree of sap flowing in the willows is right for their purpose, they cut themselves sections of various lengths. With great ingenuity they coax off the bark in great flute-like pipes and make an extraordinary variety of whistles with many notes. The deepest notes are achieved by inserting a finer pipe into a larger one, and thus providing a lining to the latter as it were. The same procedure that yields a whistle will also supply a squirt, a pop-gun, or a pea-shooter, and these various toys diversify the day.

Despite the pleasure which water, work, and sunlight bring, the season of Spring awakes no poet's raptures in the Hunza heart. "Starvation Springtime" would have given Keats an odd title for an Ode. Many weeks before the new barley was ripe for cutting every household round us had already run out of every sort of flour, many also out of potatoes and apricots.

BARLEY SOWING AND "STARVATION SPRINGTIME"

The most cautious rationing had not been able to spread last year's supplies over the whole twelve months. Perhaps not all, but certainly many families were surviving on such edible weeds as they took from amongst the barley, and such small greens and turnip tops as were available in the women's vegetable plots. I had heard the phrase "Starvation Springtime" without fully realizing its import. One day passing along near No. 6 I saw Afiato's wife out on the roof, and shouted up: "Jú na, Bibi, the days are bright again; may I come some day and make a picture of you making bread?" "Come and welcome, Mother, but bread I cannot make till the new harvest. We have had no flour left this many a day. Have you not noticed the little children crying? They are hungry, poor mites, and they are too small to understand." Now that my attention was called to it, I did notice that we occasionally heard a wailing of small children such as had not been before. The bigger children and the grown-ups made no complaint, just tightened their belts and went on working—and smiling.

I had taken a photograph one day of Dirzi Nazar's wife, carrying a basin of greens up on to her roof to cook. It was rather a jolly photograph with Raka rising just behind Jamáli's head. When it was printed I went along as usual to give her a copy. She was nowhere about, but Nazar was on the roof doing the best he could with a dish of green stuff. He came down politely in answer to my greeting. I handed over the photograph. He was pleased. "Come along here, girl, and see what you look like!" he called to her. For a moment or two they lingered over the picture; suddenly Nazar burst out into uncontrollable laughter of so infectious a quality that it was some time before I could find voice to ask what the joke was. "Excuse me, Mother dear, but it really is so funny to have a lovely picture of the mountains and your wife and your house —with no bread in it," and off he went again in delighted appreciation of the irony of the situation. A few weeks later the mulberries ripened to vary and supplement the scanty diet of green food, and Nazar sent along a platterful for us. I could hardly *bear* to accept them; yet to refuse would have wounded

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

000 the generous givers. How petty a return was a small cash gift to the child who brought them!

245 At last, as March drew to its close, the apricot buds were reddening and swelling, and the most glorious season of the year from the scenic point of view was at hand. No one who has not seen Hunza, its fields carpeted with new green, its orchards clothed with blossom and the snow mountains towering behind, can form even a feeble picture of its loveliness. The sad thing was that we were going to have to forgo the sight.

000 The next door valley of Yasin is the home of the only extant dialect of Burushaski, and if our work on the language was to be at all complete we must go and spend some weeks there, making a study, however sketchy, of "Werchikwár." Many reasons made it advisable to devote April and May to the job, of which one was that we should thus pass through Gilgit while the annual Jalsa was on. Every year all the Chiefs and Governors of the Agency gather in Gilgit for a kind of Chiefs' Conference cum Ascot week, over which the Political Agent presides, and since Major Kirkbride had hospitably invited us, this would give DL an opportunity of meeting old friends of his official days whom he could not hope to visit in their own provinces.

When I say "next door valley" I refer to the geographical position of Yasin on the map. The great ranges that intervene between Hunza and the Yasin valleys are, however, impassable even for goats, and in order to reach Yasin—only some fifty miles distant as the crow flies, if any crows do fly over—we should be obliged to travel down the Hunza river to Gilgit (a four days' march at our modest pace) and five days' up the Gilgit river to our goal. With much reluctance we prepared to mobilize and bid Hunza a temporary farewell.

796 First, however, there were the celebrations of Nauroz to see, which, owing to the unexplained originalities of the Hunza calendar, fell some ten days before the correct date of the Spring Equinox. Again, as for the Bopfau, the Mir worked magic on the weather, and after several cloudy, gloomy days

the New Year ushered itself in with glorious sunshine and 796
bright skies.

Thanks to the good offices of the invaluable and versatile 000
Mirza Hasan, we had secured two excellent ponies for the Yasin trip, and we decided to try them for the first time on this New Year ride to Báltít. DL's was a handsome brown, guaranteed to be up to his weight, which though not considerable was nevertheless somewhat greater than that of the average Hunza rider. It was accompanied by the owner, Haiyáto of Hasanabad, one of the cheeriest-faced men I have ever laid eyes on. My white one, known as Busho (the cat), was escorted by a willing and obliging lad whose actual name I have forgotten since the temptation to christen him Ernest was immediate and irresistible, so obviously full was he of the importance of being earnest. It was a great delight to feel a real horse, in contrast to a "tat," between our knees again, and we set off in high spirits for Báltít. Instead of making for 644
Kerimabad, the Mir's hospitable gardens and European rest-houses, we mounted direct to the old Fort, which is perched on the perilous-looking brink of a great ravine with a magnificent view up and down the Hunza valley. Steep though the road is, our new mounts pluckily carried us up to the very gate. Dismounting here a rough spiral ramp led us to the "basement" of the Fort, which rises four storeys high. You enter a dark sort of hall with a square hole in the roof through which leads a rude wooden stair whose banisters are just plain poplar poles polished white by centuries of use. This lands you on an open lobby without parapet or railing, when another wooden stair (minus banister) conducts you to an open balcony, that serves as a spacious ceremonial reception-room. A low wall, not over 2 feet high, does nothing to impede the view—one of the finest views that any palace of kings can boast. At the back of this balcony is a handsomely carved pavilion under which stands a roomy "throne" covered with a purple velvet, gold-embroidered cloth. For the moment we were conducted further into a magnificent sitting-room with a fine bow window offering not only the distant scene but a more immediately amusing view of the flat roofs of the

2: Lorimer T-3 (1929-4; 1934-5) 1939 AV7 Burushe AV7

644 capital huddling as close together as they can and stepped up the steep hillside. Each, of course, with its square smoke-hole in the centre.

The Mir was dressed in khaki uniform and was wearing his K.C.I.E., lots of gold lace, etc., and a fine gold skull-cap as the foundation of a silken turban. It is only on state occasions that he abandons the native woollen head-dress of the country. He was also wearing a magnificent old sword in a gold embroidered, purple-velvet scabbard, whose name is Shihmir, "The King Slayer." After tea and smokes he adjourned with David to the outer balcony to receive his guests, all the headmen and officials of the country who had come from near and far to do homage and wish him a Happy New Year, and must be feasted with bread and meat. When the men had withdrawn the Queen and her ladies came in to join me, and we had an entertaining and amusing time. I had hoped to get some photographs of the royal group, but the indoor lighting was difficult; DL had taken the exposure meter with him, Dádo had removed my climbing stick (marked in feet) which I usually measured with, and the presence of so many grown-ups all offering good advice as to how the little princes and princesses should stand and comport themselves produced a strained atmosphere. In all the cirumstances a better photographer might have failed to get results!

Presently the outside ceremonies were over, the ladies said good-bye, and discreetly vanished before the Mir returned. After another go of tea, the Mir showed us a fine collection of old matchlock guns and swords finely damascened and overlaid with gold and silver wherever these could be got to stick. We then set off downhill to the polo-ground in advance of the Mir's party, and as we threaded our way through narrow lanes between the houses that seemed piled on each other's backs, Qudrat Ullah diverted us for a few moments to introduce us to his people. We were met at the front door by a large cow, a very nice cow, who was shooed back to her proper quarters while we were ushered up a ladder on to an open roof-balcony to meet some of the most beautiful women you can imagine, beautifully dressed, not a bit shy, and most cordial. No ladies

in Hunza affect seclusion except the immediate royal family. 649
In addition to Qudrat's mother, a delightfully gracious woman, and his pretty young wife, we met Dádo's wife—also very pretty, but a shade more embarrassed. The families are in some way inter-related. We got some photos here, the outdoor setting being more favourable, but dare not linger lest the Mir should be waiting for us.

We had only just got planted on the grand stand by the polo- 796
ground when we saw his procession winding down the hill, 643
the bodyguard in smart uniforms carrying the standard and the Mir with a white satin, gold-embroidered robe over his khaki, mounted on the Badakhshani stallion with the same handsome trappings as at the Bopfau. When he had taken his seat, up rushed a huge deputation from one village after another, shouting the equivalent of "O King, live for ever! May your New Year be blessed!" It was rather impressive. There was no mistaking the genuine affection and loyalty in voice and gesture.

After this followed the usual polo, archery, and dancing. Lord Fauntleroy again made excellent showing with his bow and arrow, and the youngest son of Ghazan Khan actually hit the mark, to his grandfather's pride and pleasure. The elder royal grandsons were not present; they were down in Gilgit doing their Scouts' training. We left about four, but the Mir settled down to see the daylight out at the sports and to preside at another bigger feed to The Great of the land. He was an amazing man for nearly seventy, and apparently entered into these shows with as much zest as the people themselves.

Chapter 25

LEARNING AN UNKNOWN LANGUAGE

124 BEFORE we quit Hunza for our trip to Yasin, I may perhaps interpolate—for language lovers only—a few notes on the more technical side of our work.

People at home, whose idea of learning a new language—if they want to do anything so eccentric and unusual—is to buy grammar and dictionary, instal a set of Linguaphone records, attend classes, or hire a teacher, often ask how you can tackle the problem of learning an unwritten language where such aids do not exist and whose speakers are what the Germans call *analphabetisch*. It may be of interest to them to know how DL has usually set about it, though other pioneer language workers have doubtless evolved other methods.

You first select a few intelligent men who speak their language well and clearly, and work with them until you light on the one best suited to your purpose. You then annex him to the household at a fixed, generous salary, so that he will always be available when wanted, whether at home or on tour. I may mention incidentally that in our life the language hobby involved a considerable regular outlay in wages, pony hire, travelling expenses, etc., for such language retainers, of whom we often had two, three, or four in tow at once, and such a post with us was much coveted.

As long as he was an official, David had, of course, to fit this private amusement of his into the nooks and crannies left by his work, which naturally took unquestioned precedence, and was often so exacting as to leave no time at all save for meals and a minimum of essential exercise, so that these costly informants might be unused for days or weeks.

Having picked a suitable and congenial man—there is no

me trying to work if it can be avoided with a person you dislike—the game begins. In our regions it was usually possible to find a man with some smattering of Hindustani, Persian, or Pashtu, which helped to speed up the preliminary stages. You get him in, squat him on the floor, and by means of your medium language get hold of a few everyday words: 124

father	mother	grandchild	good	bad
grass	tree	wheat	arm	leg, etc.

then the primary colours: *black*, *white*, *red*; the numerals, pronouns, and a few simple time-expressions.

Oddly, many non-European languages have only one word for *blue* and *green*, but you take refuge in *blue as the sky*, "*blue*" *as grass*. Again, oddly as it seems to us, many have ambiguous time-expressions that look indifferently before and after (like the French *tout à l'heure*) so that *yesterday* is the same as *tomorrow*, i.e. one day before or after to-day.

The next most urgent item is, of course, the verb. You choose the seemingly simplest verbal idea "to have" but immediately strike a snag. *I have a stick* seems straightforward enough to an English mind, but you extract only "the stick is with me," "the stick is beside me," "the stick is in my hand"; there is, in fact, no verb "to have." So you take *to go* and try to get the forms of the present tense: *I go*, *thou goest*. . . . Bearing in mind that your man has no idea of grammar, you will not be surprised or daunted by arriving at something of this sort: 124 193

I'm off	we're making a move
thou goest	you are clearing out
he's starting	they flee

You're an old hand and you guess at once that the verb is not bedevilled, but that you have got a clue to six verbs instead of one and to the future as well as to the present tense. Pursuing the past tense of a verb which lets its action be graphically illustrated you may extract something like:

Yesterday I smote	We had beaten
thou hast hit *or* banged	you thrashed
he struck	they whacked *or* belaboured

123 again with a merry assortment of different roots and a con-
123 fusion of various shades of past-ness. All these various things you ultimately succeed in pigeon-holing.

124 According to the intelligence of your man—and many of these untutored folk are quite as intelligent as the average headmaster or Oxford don—and the amount of time you have to spare and the intricacy of the language (Burushaski being at least ten times as difficult as Shina or Khowar) your rate of progress will vary. In any case, you will find that, however bright and willing your informant, he is wholly unused to sustained concentration, and must immediately be released at the first sign of weariness or boredom. Also that you must spend many hours working through and sorting your notes and tabulating your results before the next interview, if this is to be profitable.

It was DL's practice to escape at the first possible moment from the thraldom of the intermediate language. First because translation from another tongue is always liable to distort and colour the speaker's own idiom, and secondly because both your and your informant's knowledge (especially his) of the second language is imperfect and often inaccurate, and the amount you actually have in common very limited. It is therefore at best an untrustworthy crutch.

126 You then bid him think over some short narrative—a fairy tale, an anecdote of real life (a wedding, a funeral, or a raid)—and be prepared to tell it to you very slowly. It is not the affair of a day to train him to speak at a pace you can carefully record, and at first if he has outstripped you and is asked to "say that again" he will repeat himself in totally different words till your text is an agglomeration of bewildering anacolutha.

Having got a first short text on to paper phonetically—without being at all clear of its meaning or the right division of words—and having deciphered of it what you can, you read it aloud to him next day, making corrections as required, and if *he* can understand it, you have made your first step forward. The more unsophisticated he is, the more enchanted he will be to hear his own words again verbatim, and you are half way to making a philologist of him; you have, at any rate, enlisted

Ei Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burubo AV7

an interested collaborator. But you yourself have not got one 126
word in ten, perhaps not one in fifty. You then work painstakingly through the text, getting a rough translation by means of the medium language, asking plural forms and other verbal tenses and acquiring in the process a mass of extra material in your notes.

As the days go on, your man becomes more and more helpful, he gets to know something of your grammatical wants and will now volunteer the plural forms, or stop his tale to interpolate: "he went, he goes, he will go, he has gone," or the like; or he will offer an equivalent expression, no longer as an anacoluthon, or digress to tell of some native custom, the details of some cooking process or some current superstition.

It is no easy task to keep your notes in such form as to be readily available for reference; it is still less easy to keep at command—in your head and on your tongue—all that you have already learned. Here, of course, the whole-time philologist has untold advantage over the busy man who can only snatch odd moments before or after a hard day's work, and sometimes after long blank intervals, for the pursuit of this most exacting of hobbies.

I never lost my admiration of the determination with which 124
DL would give all his leisure to these exhausting séances. It might be half an hour before breakfast; it might be a pause between the reception of two official visitors; it might be a few minutes' interval while an important paper was being fetched from the office files, or a draft despatch typed for signature. Even on tour, when each day meant a mountain march of eighteen to twenty-five miles, in heat or cold, in rain or sun, over difficult and often dangerous country, plunging through banked-up sands by the river-bed, skirting precipitous cliffs along a rock-cut track eked out by the frailest of wooden bridges, or across the dreaded face of a stone shoot where the perpetual trickling of surface pebbles was an ominous reminder that any moment loose boulders might bombard the treacherous track; when each arrival at the rest-house of the day was the signal for visits of courtesy by some local headman or royalty, for the reception of petitioners and the sympathetic

§: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

(2) hearing of complaints; no sooner had these matters and a cup of tea been disposed of, than out came pen, paper, and writing-board and one informant or another was on the floor beside the Sahib's chair. If we were passing through a district whose speech might be some variant of the "classical" Shina of Gilgit, some local man would be fetched in to throw light on the local patois and its divergence from what it was convenient to take as the norm. These extra séances by the road yielded, for instance, seven different methods—all instructive and all mutually illuminating—of conjugating the transitive verb in Shina.

Whether the locality had fresh local matter to offer or not, there was always some language-informant in our train, and in defiance of fatigue or headache, work could be and was pursued.

As knowledge accumulated, the word for word translation of texts was no longer necessary, and difficult passages were explained and commented on in the language itself, so that the last shred of possible misunderstanding and obscurity arising from the intermediate language was eliminated.

The problem constantly arose at every stage, whether with limited time at your disposal and limited endurance at the informant's, it was better to linger over a seemingly insoluble riddle or to pass on. DL found that in practice, though it went against all military principle to leave a fortress untaken in your rear, this sometimes fell of itself, if you ignored it and continued your campaign. In other words, that a tangle of to-day, which seemed only to grow worse as you wrangled with it, might unravel itself by some new turn of phrase acquired to-morrow, or a week hence—or a year.

Lest all this sound too easy, let me make it more vivid by an analogy. Suppose yourself shipwrecked on the coast of France, where the community are illiterate fishermen and peasants, and there are neither books nor schoolmasters. You get down to acquiring spoken French. There may be a couple of sailors among the foreshore folk who have, like yourself, a limited knowledge of Dutch. You set to work:

u(n)	deu(x)	trui(s)	quatre	
cinq	six	se(p)t	huit	neuf

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

124

Having got the simple numerals you proceed:

u	nenfant	une	femme
deu	nenfants	deu	femmes
troi	nenfants	troi	femmes
quat	trenfants	quatre	femmes
cin	kenfants	cin	femmes
sé	tenfants	sé	femmes
hui	tenfants	hui	femmes
neu	venfants	neu	femmes

It will take a little time to work out the true initials of the nouns and the finals of the numerals, to discover the secret of the vowel—the *h* mute you will never reach for it is an orthographic fiction—and to formulate the rules of liaison.

You will not at once discover when the adjective precedes and when it follows its noun, nor which inanimate objects will be considered masculine and which feminine—why, in fact, *un couteau* but *une fourchette*, *un sofa* but *une chaise*—what principles govern the use of *du* and *de*, *beaucoup de* but *bien des*.

And when you turn to verbs it will take perseverance to disentangle the four "regular" conjugations and the handsome varieties of the "irregular." The uses of *me* and *moi* may hold you up a bit, and the idiomatic vagaries of *en*, *y* and *que*. By the time you have entirely reduced to order, say, the verb *s'en aller* and can account to your own satisfaction for n'est-ce pas? jusqu'a ce qu'il ne vienne, a moins qu'il ne soit, si j'etais que de vous, vas-y, ne voilà-t-il pas? and have recorded verbatim all the folk-lore, local history, and gossip that you can track down, your hair may well be turning somewhat grey. Yet French is a language closely allied to our own, of familiar structure, full of cognate roots and basing on Latin which we know; the Frenchman's customs and modes of thought are akin to ours; his religion and morals are variants of our own. Try Burushaski.

I am conscious that in writing of all we heard and said I may have seemed to imply—though I trust not with the unblushing disingenuousness of some travel-writers—that conversation always flowed smoothly and easily. This was not wholly the case. The worst brick I heaved was when I saw a

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

124 relatively strange woman clearing up after a day's work and breezily accosted her: "*Jú na*, sister, I see you are sweeping up the threshing floor with your little bastard." In extenuation I may remark that the words for "broom" and "bastard" differ only in ending in *s* and *sh* respectively, and that the *s*-one turns its *s* into *sh* in the plural. Any offence that might have been given was quenched in the delighted laughter of the people with me, but I was afraid to talk of brooms, whether singular or plural, for many a day.

Even at the end of fifteen months of strenuous practice in talking (and several years of preceding hard work), neither of us had acquired the skill or fluency in speaking that would have rewarded the same effort and goodwill expended on a language like Persian, German, or Shina. The most confirmed language-smatterer could not truthfully say that Burushaski is an easy language to "pick up." It may amuse the reader to know something of the snags that it holds for the unwary—and the wary, too.

193 Burushaski rejoices in four noun categories, roughly corresponding to "genders" in Greek or Latin, but not, as will be seen, based on sex-distinction. If, however, we think of the gender eccentricities of French and German we may indeed question whether grammatical gender in the European languages is really sex-linked as our terminology implies. Professor Meinhoff has other theories about its origin.

Be that as it may, Burushaski divides its nouns into names denoting human male and female—which is straightforward enough—but treats the names of all non-human, living animals as belonging to Class 3, cows and bulls, cocks and hens, mares and stallions alike, while including in the same class the names of a large number of inanimate concrete objects. Class 4 comprises the names of all abstract things—heat and cold, kindness and dreams—of all inanimate objects of indefinite shape and form (such as flour, water, cloud, and sand) besides a distressing number which might seem to belong equally well to Class 3 but just don't.

Amusing facts are that the same word in Class 3 denotes an *apple*, but in Class 4 an *apple tree*; in 3 the belly of a living

animal or person, in 4 of a dead one, and that while the 193
singular *foot* belongs to 3 the plural *feet* belongs to 4—explain this last phenomenon who can.

These categories might matter little, but that adjectives have inflected forms that must agree, and that in certain forms the verbal endings, in others the verbal prefixes, vary according to the class of the subject, or it may be of the object. The word "is," for instance, may be: *bai*, *bo*, *bi*, or *bila*, according to whether the subject is Class 1, 2, 3, or 4.

As if this were not enough, some of the commonest actions of everyday life require to be expressed by a totally different verb according to the class to which the object belongs. There is no one imperative for "Give me!" It will be *jar jao*, *jar achi*, or *jar aghun* according to what is to be given. So with *bring* and *eat*.

Nor does this exhaust the vagaries of the noun. A large number of nouns denoting relationship, parts of the body, or any object intimately associated with its owner, do not exist at all in an independent form. The attitude of mind underlying this phenomenon is not illogical. A *mother*, a *hand*, a *set of bed-clothes* cannot be conceived *in vacuo*; they must belong to somebody. A set of seven prefixes gives the clue to whose they are, and none of these "starred nouns" (as we called them for convenience) can be used without the appropriate prefix. There are therefore seven words for *mother*: mine or thine, his or hers, ours, yours or theirs. If all the prefixes conveniently ended in a consonant, or if none of the starred roots began with a vowel, the two component parts of the starred word could be simply juxtaposed. This is unfortunately not the case. All the prefixes end in a vowel, and when the hypothetical root-word has an initial *a-*, *i-*, or *u-* this blends with the vowel of the prefix to form a new combination, so that in practice you are confronted with four times seven possible pronominal prefixes for starred nouns.

Add to this the fact that there are thirty-eight possible endings for the plural, and you know most of the worst about the Burushaski noun.

It would be too much to hope that the verb would be any

712

Old Port at Ākrit, centre of ancient commercial. (See pp. xxb, 111)

PLATE XIX

[Facing P.256]

193 simpler. Nor is it. The actual conjugation shows a gratifying regularity in the final inflections for tense and person. A proportion of intransitive verbs, however, demand a set of pronominal prefixes (the same possible twenty-eight as those required by the starred nouns) which vary according to the subject; some transitives require these prefixes to denote their direct object, others again to denote their indirect object.

A very large number of verbs or verbal participles, moreover, enjoy a separable prefix of their own after which the pronominal prefixes are infixed, not without suffering phonetic modification in the process. The sort of way this works out may be shown by one example: "Having gone" is represented by:

nán	(if it is I who have gone)
nukén	(thou)
nin	(he)
nunén	(she)
ninén	(we)
nanán	(you)
nin	(they)

The perfect tense of *to come*, "I have come, etc." is:

daiyaba
dukówa
dibai, dibi, dibila
dunóbó
dimíbán
dunábán
duwán, dubien, dibitsan

paradigms displaying a logical symmetry but not to be commanded at a moment's notice. DL and I used to say that given a pencil and paper and twenty spare minutes we could say a great many things in Burushaski with commendable accuracy, but to keep a brisk dialogue going without blundering required more mental agility than perhaps we had any right to hope for in middle life.

Lest all this should seem too childishly simple: a transitive verb can be formed from almost any intransitive by a simple lengthening of the vowel in the first root syllable and the

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

193 prefixing of an *a*; a further lengthening of the vowel will convert the same transitive into a causative. If the three verbs are clearly said one after the other, the difference is easy to distinguish, but I know no form of conversation in which the speaker wants to perform this feat. When one verb is heard alone in the quick current of colloquial speech I defy the beginner to be always certain which vowel-length has been employed.

193 Another bewildering trick of Burushaski speech—the im-
194 portance of which I must confess we did not at once discern—is that almost any word may mean its exact opposite if pronounced with lengthened vowel and a different tone of voice. If you ask what sort of a horse a would-be seller has brought, the answer *yashkian* may mean either "a very suitable, satisfactory beast for you to ride," or alternatively "a miserable nag you could not be seen on." You need to know. It is best to go and look. *Caveat emptor*, anyhow! Similarly, if I asked Zaidu how much flour we had left in store and he replied *haman*, this might be interpreted "a good deal, quite enough for the present," or "just a little," or "very, very little indeed."

This playing on vowel length, quality, and tone is carried to amazing lengths. The only kind of parallel I can think of in English is a child's use of *tiny* as less small than *teeny-weeny*, or the onomatopœic *squeak* denoting a thinner, less important sound than *squawk*. The Burusho can imply admiration, ridicule, contempt, degrees of size, importance, loudness, and what not by skilful sleights of vowel play. The only mild approach we can make to this in English is when by our intonation and expression we can say: "He's a fine fellow, he is," and give it to be understood that the remark is ironical. But we use this phonetic irony with extreme economy, whereas it is lavishly employed in Burushaski.

601 A particular snare into which I was apt to fall—though on paper I could have passed a stiff examination on the facts—lay in this: prefixes apart, Burushaski has no one word for *brother* or *sister*. If said by a boy, *acho* means "my brother"; if said by a girl "my sister." This form of the word means, in fact,

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

601 "another child of my father and mother, of the same sex as I myself." A second word denotes a boy's sister; a third, a girl's brother. Just to prevent your feeling too sure of things, a boy will address a much older sister out of deference as "my brother." When chattering to my children friends I often provoked delighted chuckles by inadvertently saying the equivalent of: "is that little boy your sister?"

The same sort of differentiation is carried into several other relationships. It does not simplify the tracing out in haste of complicated family genealogies which was one of David's little tasks. My *cousin*, if our two fathers are brothers, is usually described as *my brother* or *my sister*, unless it is necessary to be more explicit; whereas a cousin not reared in the same house has a name to him- or herself. An *uncle* who is my father's brother is *big father*, *little father*, or *middle father* according to his relative age, while my mother's brother is an uncle.

607 One relationship word the Burusho have for which we might well devise an English equivalent. If young Mr. Smith marries young Miss Jones, what relationship exists between the parent Smiths and Joneses? (Amongst us, carefully dissembled hostility, of course.) Burushaski has a special and convenient term for what is amongst them this very real tie of friendship and alliance between the houses. If the Jones family are extra busy or short-handed, the Smiths will come along to lend a hand, or vice versa.

192 It is a common error of the uninitiate to take for granted that people of a primitive material culture will have a limited and easily mastered vocabulary. As all serious language-students know, the reverse is the case. Burushaski would no doubt be found to lack our large supply of terms—mostly non-English—to express philosophical ideas or aesthetic appreciation, though it would from its own rich resources be perfectly capable of creating them without borrowing at second-hand, if anyone could spare time from the urgencies of living to indulge in the futilities of philosophy or aesthetics; but it is rich beyond belief in verb-concepts and in concrete words denoting crops and buds and fruits at every stage of growth, implements of

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

every kind, fields of every shape, size, height, and aspect. 192
Domestic animals are differentiated by separate words to the nth degree. A mere *sheep* scarcely exists. A convenient word, for which there is no English equivalent, means "one head of small cattle, whether sheep or goat"; after that you must be more specific and make it clear whether you wish to designate the female lamb not yet weaned, the ewe who has not yet lambed, the ewe who has been once to the *tár*, or the ewe who has been twice, the unweaned male lamb, the one-year old castrated ram, the entire ram who has not yet sired, and so on almost *ad infinitum*. And a queer fool you seem if you fail to distinguish animals so different. Similarly with all other stock, the goats having special extra titles according to whether their horns spread out or more conveniently turn in.

There is, of course, no general *basket*: the large, open-ribbed one that carries dry leaves or straw is a totally different object from the small round basket with a handle in which you take a few eggs or apricots, or again from the shoulder-basket that serves all the purposes of our wheelbarrow. These explicit words save all need for circumlocutions like soiled-linen basket, picnic basket, wastepaper basket of ou rclumsier analytic speech.

Every peg and hook and gadget that forms a component part of loom or lathe, mill or sluice, has its own appropriate technical name for which no other name will do. The haughty armchair ignoramus who discourses about the limited vocabulary of the agriculturist would probably be surprised if he worked a while on a farm, at the manifold resources of a whole stratum of the English language that lay outside his ken and confounded his reckoning.

The rich variety of nouns in Burushaski is nothing, however, to the wealth and flexibility of its verbs. The Burusho would seem to think primarily in verbs, the precise meaning of which is a more elusive thing to grasp. Our simple adjective *cold* is, for instance, represented in Burushaski by the past participle of a verb meaning *to cool off, to become cold*. A verb that one day you pin down to meaning "to turn off" the water from a field, staggers you the next by obviously meaning "to

192 turn on," till you discover that it "diverts the flow of water" whether in one direction or another.

195 All technical terms, be they verbs or nouns, are capable of vivid metaphorical application, humorous and pointed when you are sufficiently *au courant* to appreciate the intended allusion. Such metaphorical uses are improvised as required with an originality and freshness that an American might envy.

A tiresome person may be "a wasps' nest" or "a painful disease," an over-strenuous worker "an earthquake," an only child "one torch-splinter," a loutish person "a pumpkin," an inexperienced fellow "a green apricot," a short-handled spoon "a tadpole," and so forth.

905 Clocks and watches are, of course, unknown where work is simply from dawn to dusk, yet the complicated exchanges of water at midnight or 3 a.m. are faultlessly concerted. Our day appointments would be defined "when the sun is one lance-length above the hill" or "when the first shadow falls on such and such a spot." Dido had had experience of European time in some earlier service, and was thrilled to possess the watch that DL gave him. He used to come to the study every evening to set it by our little clock. He always held it upside down, and in order to compare it with ours (which was naturally right side up) he went through the oddest neck contortions to get his head upside down. But the idea of time had enslaved him; he was more rigorously and unforgivingly punctual than any servant we ever had, and it was impossible to bear the reproach in his eyes if we waited to wind up a paragraph after dinner was on the table. When I was typing in the dining-room he would appear at the door and say politely but firmly: "I must come to lay the table in another three minutes, Mother." Sometimes, just to tease him, I would say, "Well, you can't, for I'm going to finish this, and it will take at least ten minutes." "Oh, Mother *dear*, then dinner will be late!"

192 Burushaski has no expressions for East and West or North
920 and South except the learned words of Arabic; Hunza thought runs "up river" and "down river," "uphill and downhill." One day in describing a house I said: "You know So and So's,

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burushо AV7

it is on the Dila." "No, no, it is on the Middle Channel." 192
For a moment I was puzzled, for the house, in fact, sat exactly [823]
on the upper bank of the Dila, but of course watered its fields and drew its water from the channel *above*: the essential fact to a Hunza mind.

Though their technical vocabulary is so exact, the Hunzukuts are only human, and occasionally like ourselves take refuge in "thingumabob," "what you may call it," and "bandobast." They have coined an invaluable word which for fun I wrote "Alice." I found it was quite in order to say: "We are nearly out of charcoal, tell Zaidu to do Alice," viz., to make the necessary arrangements for getting more, or "the Alices are coming, tell everyone to get the Alices," which would mean that the So and So's are coming, tell everyone to get ready whatever is necessary. I hoped to import "Alice" into my home-speech as maid of all work, but here she awakens thoughts of Wonderland and the Looking Glass and proves a plant too delicate to rear in another atmosphere.

The weather in Hunza also provides some entertaining idioms. It is natural to say "the rain is falling," but the Hunzukuts not illogically also say "the sun is falling", where we would say shining, and where we put a thing *in* the sun to dry he puts it *on* the sun, that is, on the patch of warm sunshine.

In the main, Burushaski is innocent of the elaborate cir- 195
cumlocutions of ceremonial speech in which Persian, for instance, is so rich. The humblest peasant addresses his King as "thou," but one foreign courtesy-word has crept in. One day I excused myself to the party of women amongst whom I was sitting by saying: "I must now go home. My husband will be ready to eat bread." "She has said 'my husband,'" they chuckled. "Well, isn't the Colonel Sahib my husband? What should I have said?" "You yourself should say 'my spouse' (*jama'at*) though we might say 'her husband.'"

After this I was careful in talking to man or woman, however humble, to enquire after the *jama'at* and not crudely after the wife or husband, and found that this was more acceptable. I

Ei Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

195 noticed, too, that when I asked: "Are you well?" the return question would sometimes be couched in the ungrammatical form: "Are your name well?" but this was chiefly used by the children as more respectful. I was told it would be unsuitable for me at my age to use to anyone, even to the King. Otherwise in Hunza spades are spades.

1114 DL's original vocabulary (vol. iii of the book already alluded to) comprises some 3,000–4,000 words. From our first day with the Hunzukuts to our last, we were recording new words without ceasing, or registering new meanings for words we thought we knew. Far from having "completed" a vocabulary of Hunza Burushaski after a hard year's work DL felt he was just beginning it. Ten years more could have been profitably spent on the task if we had had them to spend. At least no language enthusiast can complain that the field is bare; there are ample gleanings left for him or her. A rich harvest indeed awaits the reaper—but labourers to date are few.

P. 262

Chapter 26

DIGRESSION TO YASIN

WE had intended to start on Friday, March 20th, but after a 777
couple of hellish days packing, clearing up correspondence, developing, printing, washing photographs, and tidying the house so as to leave all in order for our absence, we found that we must postpone till Saturday. This apparently unimportant alteration in our plans caused evident jubilation amongst the servants. "Why are you all so pleased?" I asked Zaidu. "Well, you see, Mother, it is said not to be lucky to start downstream on a Friday; upstream is all right, but not down." I said that if they felt like that they should have told us and we should have gladly changed the day to oblige them. "What should you have done if we had insisted on starting on a Friday?" "Oh, we'd have managed all right. We'd have said good-bye and left our own houses and camped on Thursday night in your compound, and so we should not have had to *begin* the journey on Friday." Wonderful people! The few superstitions they half-heartedly indulge (which we suspect they have caught in this mild form from their superstition-ridden neighbours, the Shins) they are always prepared and able to outwit.

We got off at nine on March 21st in lovely weather, at once warm and cool. Quite a large crowd assembled to say good-bye and see us start, our friends shouting: "Come back soon. We shall miss you." As we rode through Murtazabad we saw the first occasional fruit blossoms and felt sad to be leaving Hunza behind in apricot time. Slight steam was rising from the sulphur springs by the river as we passed. Later, in 136
Nagir, we saw the first wasps of the year and the first butter-

[136] flies—a copper-coloured fritillary and a tiny blue. The road was a very different proposition from what it had been as we 361 travelled up the previous July. From richly watered Minapin 487 we looked across the river to the Hunza village of Hindi with new eyes, for various fields were pointed out as belonging to one or another of our acquaintances. "Hindi is a fine place," they told us; adding without conscious irony: "There's hardly any water, but otherwise . . ." From the Nagir side the Hindi road looks pretty terrifying (as, of course, the Nagir road must also look from the Hunza side), but we were assured that it was really a better road; its only drawback is that there are fifty recognized spots on it subject to rock bombardments: a mere nothing amongst these ever-crumbling hills.

000 The onward journey was uneventful. At Sikandarabad and Chalt all the apricots were in full bloom—a glorious sight. After Chalt there was one part of the road completely buried under an avalanche which we had some difficulty in coaxing our horses over, we ourselves scrambling across on foot. A good deal of intermittent rain for a couple of days and a horrid ride in driving wind and sand on the last lap rather spoiled our ride to Gilgit. Just before we reached the Gilgit river we were staggered by a magnificent view of Nanga Parbat filling a whole triangular gap in the nearer mountains. Often as we had ridden this stretch before, we had never happened to see her like this.

In Gilgit (2,000 or 3,000 feet lower than Hunza) all the apricot blossom was already over, though a few peaches and apples were still in flower. We had a delightful (but from the work point of view wholly wasted) ten days in Gilgit. Nothing could have exceeded the kindness of Major and Mrs. Kirkbride, who put us up in the Agency House. It was odd to be quartered in the guest room of what had been for four years "our" house, and odder still, but delightful, to attend the Jalsa as guests and spectators instead of responsible hosts. The British officers as new friends and our old friends the Chiefs all treated us with the utmost kindness, and the ten-day holiday was extremely pleasant.

On April 4th we resumed our pilgrimage to Yasin. We imagined we had forgotten the road. Far from it: every detail

came back afresh as we rode along, and a host of vivid memories crowded in on us. It was yet early in the season; the river flowed graciously along, clear as crystal and a miracle of blended colours, which would put a peacock's tail to shame. When we returned a few weeks later, after the first melting of of the snows, it flowed sullen, swollen and strong, the more familiar thick, opaque, grey-muddy mixture. Quickened memory set me to watch for a lovely bush of "crow's pomegranate" at the foot of a rock by the roadside. We had seen it one year covered for the 6 feet of its height from tip to toe in yellow blossom, flame- and scarlet-flecked. As we had ridden nearer half the blossoms suddenly took wing: a swarm of "painted ladies." Alas! we were now too early, the painted-lady bush was not in leaf; as we returned, her blossoming was over. It was a sight too lovely for recapture.

We made the four-day ride to Yasin in six stages, partly in order not to arrive too tired for work and partly because DL seized chances of picking up some supplementary information about Shina dialects when we halted. The river junctions on these upper reaches of the Gilgit river are great, wide, open amphitheatres, possibly once the meeting place of glaciers, anyhow the greatest contrast to our narrower, wilder, more forbidding Hunza ravines.

On April 11th we set out on the last stage from Gupis to Yasin, having given two days in Gupis to Kuhi Shina. At the great bridge over the Yasin river we were met by Rajah Khan Sahib Mir Baz Khan, one of our good old friends, and found that he had staged a ceremonial welcome for us with bands and *feux de joie*, and decorations over the gateway of the rest-house. We made enquiries for a Yasin ex-retainer, Muslim by name, with whom DL had worked in olden days. To our great joy he was still to the fore, somewhat older and maturer, now a Levy too; but he had not forgotten his earlier lessons in language work, and was immediately booked to start work on the morrow.

A couple of hundred years ago Yasin was conquered by a royal Khushwaqt family from Chitral, and since then Khowar has been the language of the upper classes. Indeed, the passing

traveller might well be unaware that the language of the people remains their original Burushaski, though most of the menfolk are of convenience or necessity bi-lingual. We had known Muslim as a Khowar speaker; it was a pleasant surprise to find that, as he put it, "Burushaski is my mother and father tongue," and that he spoke nothing else in his home and among his friends. To distinguish Yasin Burushaski from its sister speech of Hunza it is convenient to call it Werchikwar, as the Khowar-speakers do.

The Yasin country is opener and far more plentifully watered than Hunza, but higher lying with a longer, severer winter. We had snow still on the ground on April 14th. The different conditions are reflected in the architecture. All the houses are one-storeyed only, and none of them have the delightful upstair balconies that are such a cheerful and sociable feature of the Hunza house. With ample land and water the Yasinis are able to grow more wheat than they can themselves consume, and sell their surplus to Gilgit in exchange for tea and sugar, luxuries unknown to the Hunzukuts. On the other hand, their summer season is too short to allow of any second crops. We found the peasant people extremely kind and friendly, and if we could have made a longer stay among them we should have been able to feel thoroughly at home. Their women are also free and unveiled, and I think good-looking, but all the younger ones affected a dark brown face cream of some kind which was said to be protective to the skin but was extremely unsightly. As we walked about making what observations we could, we found them very ready to try to understand our exotic Burushaski. David got as far as speaking in Werchikwar, but I with less ready linguistic adaptability firmly imposed on them the speech of Aliábád and Báltít. Despite dialectal differences we could hear one party of boys shouting delightedly to another: "They speak our language!" (which was scarcely true).

It was wonderful, after the precipitous Hunza country, to be able to walk up and down gentle slopes of natural grass and skip across moss-and-fern-lined streams amidst a wealth of tiny flowers.

2; Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

DIGRESSION TO YASIN

There was no advantage in my also trying to slog at Werchikwar as we were not staying long enough to turn it to account. So we had decided beforehand that I could best employ working hours in trying to work out the major differences between Hunza and Nagir Burushaski which are perhaps too nearly identical to be styled separate dialects, but yet naturally show some distinctive variations. To this end we had borrowed from the Mir of Nagir a morganatic brother-in-law of some education, Ali Ausat by name, a young man about the same age as Qudrat Ullah, and annexed him—at a salary, of course.

The two had travelled together in our train since Aliábád with instructions to talk together about everything under heaven, and make notes of all the points, however trifling, in which their speech differed. While DL toiled away with Muslim in one room of the spacious rest-house, I set up my writing table in another, and got the two young men in to help me to set on record whatever observations they had made. Each day I suggested one set of things for them to work out together before the morrow—household utensils and field implements, irrigation terms, the vocabulary of relationship, etc., etc., and we then ran through their comparative lists with ample digressions whenever any point of interest challenged attention. It proved a most amusing game, and their good-humoured wrangles over which of two forms of expression was the more classical Burushaski were a constant amusement to all three of us. I hope it will prove that we covered most of the vital points; it is for DL to work out the material in due course.

Superficially the main items that leaped to the eye (or ear) were: first, that the Nagir vocabulary has been far more deeply interpenetrated—or corrupted—by Shina than Hunza Burushaski, but that on the other hand Nagir has been more conservative in preserving full verbal forms and un-telescoped vowel sounds. Nagir preferring, as it were, "I shall" to "I'll," "he does not" to "he doesn't," "we will not" to "we won't," and the like. The differences, however, between the Hunza and Nagir speech proved (as we already knew) to be trifling compared with those between Hunza Burushaski and

197 Werchikwar, where the two forms constitute different and independent dialects. It was, however, extremely interesting to find that in some important points Werchikwar and Nagiri were closer than Werchikwar and Hunza Burushaski. Since there are no historical records of Burushaski a hundred or two hundred years ago—what would we not give for them!—these dialectal variations are doubly valuable to anyone attempting to understand the direction in which the language has developed and is developing.

000 After strenuous mornings at these tasks, we spent the afternoons exploring the country on foot or on pony back, and getting what contacts we could with the people. Just behind the bungalow we succeeded after some hunting in re-finding the boulder on which the carved initials "W.H. '70" form a humble memorial to the luckless Hayward who was murdered by his treacherous Yasin hosts. Newbolt's fine poem "He Fell Among Thieves" gives the poetical version of his death. The prose one seems to be that by the somewhat indiscreet display of gifts which he had with him (intended for bestowal on chieftains in Chitral whither he was bound) he excited the cupidity of the Yasini Chief, who could not bear to see these treasures carried beyond his borders. Human life was held of little account in these regions before the coming of the Pax Britannica, and the obvious thing was to murder the gift-laden guest and annex the spoil. Hayward's tent was therefore quietly surrounded. He realized his danger, and sat on his camp bed, revolver in hand, and loaded rifle by his side, determined to sell his life as dear as might be. But the plunderers had no mind to take unnecessary risks. They bided their time till he grew drowsy from fatigue, cut the tent-ropes, and murdered him at their convenience like a rat caught in a trap, without speechifyings on either side. A tragic, sorry tale.

Yasin houses tend to be grouped in fives and sixes within a walled enclosure. We halted to admire some carving on a wooden lintel, and the owner of the house, Arab Khan, forthwith invited us to come straight in and see some better carvings inside. This gave us a wonderful chance to see a Yasin interior just as it is in normal life. Cows, calves, hens, and

chickens shared the one main living-room with men and women in a promiscuity unthinkable in Hunza; though it is true the large animals were in theory confined to one end of the room by a small partition a couple of feet high. None of the human occupants showed the least shyness or embarrassment. They showed us fine, well-smoked carvings on the handsome square pillars of the house. The idea of the greater ornamentation of the inside of their dwellings has probably come to them from Chitral, and possibly the longer winter with the longer spell of enforced leisure may be a factor too. I wish we could have stayed longer than the short three weeks we had allowed ourselves, learned to speak Werchikwar, and settled down really to making friends with these hardy kindly folk, less radiant that our Hunzukuts, but in many ways akin in temperament and not behind in goodwill.

We returned again another day to Arab Khan's house to try some interior photographs, and were shown an interesting collection of utensils: a wooden bucket hollowed in one piece from a tree-trunk, and provided with a square lip and a wicker handle; some delightful wooden spoons with the handle rising sharp from the side, such as Hunza calls "Wakhi spoons," wooden ladles all in one piece, etc. A nice old woman was teasing wool from a small but highly ornamented *pfurukus* beside her. The house possessed no cupboards like those roomy ones that are a feature of every house in Hunza, and all the family kit was either lying about or slung over rails above the partition.

The space seemed greater than in the Hunza house (partly owing to the lack of cupboards and the fact that the byre formed part of the room), but the general effect was much untidier and grubbier. The sleeping platforms appeared to be shared by the hens and chickens and a layer of straw was spread under the blankets. The hospitable folk kindly put out the fire to get rid of the smoke in the interest of DL's photographs. The room had two semicircular fireplaces, the one just behind and at a slightly higher level than the other. The floor similarly rose by one low step, and a door at the back of the upper compartment seemed to lead into a store-room. A

certain delicacy—to which the true anthropologist should be a stranger—prevented our intrusively examining everything in as much detail as we should have liked. While we were within we saw many pairs of bright young eyes peering at us and our strange antics through the "vulture smoke-hole" above our heads. When David pressed a rupee into the hand of the old lady who had so hospitably done the honours of the house, she received it with much pleasure and genuine surprise.

One day we devoted to the exploration of the Naz Ber, a great nullah which runs up behind the village of Yasin. At this time of year, with grass and willows and flowing water, the steeply rising valley was romantic and picturesque, but it must be bleak and desolate for the greater part of the year. Such women and children as we met were friendly and unafraid, though we may well have been the first white people they had ever seen.

As we left Yasin on April 28th heavy clouds hung over the mountain tops and robbed us of our parting view. Half way to Gupis we noticed the first house with a wicker, mud-plastered grain bin on the roof such as are common in Gilgit, but are not seen either in Yasin or Hunza. Next day we got a rarely beautiful view of the rocky promontory of Róshan towering above the river, with a ruined fort on top, like a finer, larger, and more impressive version of one of the robber castles on the Rhine, and a better sight than we had ever had of the curiously twisted vertical streaks in the mountain above that are known as "The Snake and her Babies" about which the obvious local legend runs. Below Róshan there is a huge, lofty pocket of boulders—a weary thing to toil across—reported to have been pitched there from his shoulder basket by an ill-tempered Div. The Gilgit-Yasin road has some fine old native rope bridges to show, and Haiyáto obligingly stepped down one to pose for us. We now got into the region where every large forked tree is made to serve as a store for a stack of maize-straw, a familiar Gilgit sight, unknown at higher levels.

Passing through a gorge in which wild almond trees were growing in profusion, our Hunza men fell out to cut themselves a supply of polo-sticks, for which almond wood is

reckoned the best of all. They had noted the spot on our upward march. A few "crow-pomegranates" were in flower, lovely little bunches of tiny yellow bells with yellow tongues, shading off into orange and flame and even scarlet. The painted ladies were hovering round, but the largest swarm I counted was a beggarly dozen. The blossoms are guarded by the most savage thorns.

All this downward ride to Gilgit we enjoyed perfect weather, bright and sunny but not over-hot, and indescribably lovely views. Rounding a corner on a shelf-like track I spotted the first and only live snake I have ever seen in these parts lurking in two inches of shade cast by a big boulder. Haiyáto bravely seized it by the tail for me, swinging it gingerly, but it was extremely active and sat up half its own length so that he prudently judged it better dead than alive, though I don't for a moment suppose it was a poisonous type. He lashed it so vigorously against a rock that its head was crushed beyond hope of recognition.

Near Gakuch we came upon a lot of gold-washers at work by the river-side. They turned out to be people from Yaghistan. Gold-washing is considered rather a base occupation, and gold-washers enjoy no social prestige. A whole family working hard all day in a favourable spot—that is a sandy backwater well out of the main current of the river—may salvage as much as eightpennyworth of gold. Wherever we came to habitations, the young green of crops and willows was refreshing to the eye.

The great boulder-estuaries from the side gorges that had been dry as we marched up, were now seamed with water-channels. We were still able to take short-cuts by fording these, but it was evident that in a very short time they would be impassable and travellers would have to stick to the higher, longer road and Government bridges. Amongst the boulders the tamarisks were out but not yet in blossom; instead, there were some lovely brooms with tufts of butter-golden blossom edging the fields and jolly blue clumps of small wild iris dotted here and there. Such people as we met on the roads all had sprigs of spring blossom in their caps.

Before getting into Gilgit we halted at the Wishing Boulder

[Facing P 272]

to let our followers try their luck. There is a curious mark on one side of it rather like the impression of a giant's open hand. The story runs that if you take so many paces from it with closed eyes, turn and approach again, and finally succeed in placing your hand in the mark, your accompanying wish will be fulfilled. Futile attempts to earn their wishes provoked much mirth and chaff. About four miles before Gilgit, where the Kargah and Naupor Nullahs debouch, there is a fine tongue of smooth-faced cliff, on which, a hundred feet or so above the nearest accessible ground, some unrecorded artist at some date unknown carved a handsome figure of a standing Buddha. We reckoned it must be about 30 feet in height. Having during four years in Gilgit omitted (as one does) to take particular heed of this really remarkable monument, we now took some pains to visit it. Unless the light happens to strike the figure at a certain angle it is by no means easy to descry. Later inhabitants, knowing nothing of Buddha or his history, call the figure a Yakhshini, and tell of a man-devouring ogress who had her dwelling here. A passing saint was called on for assistance, and succeeded in pinning her to the rock. He said she would be unable to escape again as long as he was alive, and that if, when he died, the people would bury him at the foot of the rock, all would be well. He was then about to resume his peregrinations. The people were grateful for their deliverance, but prudently considered that they might not know the moment of his death nor where to find his honoured and valuable carcase. To avoid future disappointment or disaster they therefore prudently slew their benefactor and buried him forthwith. The Yakhshini is still there to attest the truth of this moral tale. On the near-by spur to which we laboriously scrambled we found a lot of well-built ruined walls on a site commanding a fine view. They suggested an ancient fortification or perhaps a monastery such as abound on similar but more inaccessible heights in Tibet. On a bare mound above the adjacent village of Naupor, the ruins of an ancient stupa were unearthed a few years ago. The top, stone-built chamber in which some manuscripts were found is now exposed to view. It would be interesting to know the history of the stupa and

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

000 the ruins, but the manuscripts threw no light on the matter. So far as they have yet been examined they appear to be comparatively commonplace copies of already well-known sacred writings of latish date. They are now lodged in the Srinagar Museum, which is permanently closed.

Our return to Gilgit coincided (somewhat unfortunately we ungraciously felt) with the Jubilee celebrations and perforce we spent another very pleasant (but time-wasting) holiday with our most hospitable friends the Kirkbrides. It was May 13th before we were able to disentangle ourselves from Gilgit and its seductions and set our faces once more towards Hunza. The very horses seemed to scent that they were heading home and gave us of their best. The weather was now very
137 definitely warming up, and we marched early to avoid the greater heat. Nomal and Chalt provided us as usual with loathsome milk tasting of Tom Cat. This indescribably vile flavour is due to some wild herb that grows in these neighbourhoods at certain seasons. I am not botanist enough to know its name, and it is not a plant of which I covet seeds or slips. It is mercifully unknown in Hunza.

312 As we rode through the rich, well-watered string of Nagir villages we were escorted for part of the way by various Nagir princes sent by their father to show us courtesy. Green crops, shady walnut trees and masses of blue iris and wild rose made the road enchanting, its loveliness enhanced a thousandfold by the bleakness and barrenness of the great mountains. I confess I always covet these lovely villages for Hunza, the more so that the Nagirkuts are far more slack and slovenly in their cultivation than "our" people. All the irrigation water, coming straight from the melting glaciers of Rakaposhi, was now milky
576 and unappetizing. The Nagir people, though not actively un-
643 civil, never volunteer a greeting as you pass and never throw you a kindly smile even when they speak. We noticed, too—and how it shocked our loyal Hunza folk—that the Nagir princes also were allowed to ride past unsaluted and apparently unregarded. The Mir of Nagir had been pressing in invitations to us to visit him—as soon as he had convinced himself that no great harm seemed to be accruing to Hunza from our

presence there.

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

000 presence there. It was tantalizing to delay our return to headquarters; on the other hand, since in common courtesy the visit must some time be paid, we had promised to visit Nagir before returning to Aliábád, so we remained on the Nagir side of the river and proceeded to that gloomy, sunless capital.

At Minapin, the last stage before Hunza or Nagir, as the case might be, we were met by a laughing, bright-eyed boy, too genial to be a Nagir product: it was Haiyáto's son (one of three) who had come the fourteen miles to meet his father, explaining "I was heartsick for you and the horse, my father."

Ernest, Dádo, and Qudrat Ullah had never been in Nagir before, and were much amused at seeing Hunza from across the water. Everything *did* look odd, Aliábád beacon-tower very imposing above the empty, graveyard hill. Nagir is more
241 spacious and richer than I had remembered. The fields are all slightly sloping and the revetting walls not nearly so high or
342 so well-built as those of Hunza. The houses, like the Gilgit houses, are mainly built of sun-dried brick, and looked tidy and neat. Upper balconies are rare, and it seemed to me that the smoke-holes were much smaller and usually at one side of the roof, but the roofs appeared to have a parapet of a foot or so all round. The villages, so familiar in profile from the Hunza side, are much deeper than their appearance from the
487 distance would suggest. The path from Sumair onwards up the Nagir gorge was very narrow, crumbly, and in poor repair, but looking at the texture of the cliffs it was not easy to see how anything radical could be done to improve it unless the course of it were entirely altered and carried much higher up and over the top of various bluffs and crags: an expensive engineering feat. Presently we came to an ugly *zhingát* on a long stretch of steep, almost fluid rubbish-heap slope—a place well remembered in my nightmares—across which the track, such as it was, was a bare 18 inches wide, and not even level at that. It is a good quarter of a mile; we took it on foot at the double, and were thankful to reach comparative safety at the other side, and see our horses and men follow without mishap. There is no shame in funking these things; the natives like them as little as we, and are as frank about it. Familiarity with a

DIGRESSION TO YASIN

zhingát breeds caution, not contempt. As we rode in we saw 487
Ali Ausat at the nicely carved door of his house, rather grubby
but pleased to see us, passed the miserable apology for a [743]
hospital which contrasts ill with the well-built one at Aliábád,
though the two Mirs got the same grant from Government
for the purpose of building them, and on past a fine, large,
shallow pond. On our right was a steep green slope with jolly
poplars and a lot of grass, and then we reached the polo-
ground. Here the Mir came himself to meet us from the
shelter of a roofed summer-house where he had been waiting.
Another mile of almost perpendicular zigzag, which the ponies
could only just manage, brought us to the familiar old polo-
ground (now disused for play), with its lovely double line of
poplars. This peculiarly steep and horrible approach is new,
and the Mir is very proud of it. From the top there is a mag- 644
nificent view with the pond below looking like a lake and the 643
Mir's palace picturesquely perched on a steep hill-face with
fine windows looking out not at any view but straight into
the terraced hillside opposite. Mir Sikandar Khan looked
shrunken and frail compared with ten years ago, but very brisk,
and was apparently able to ride up his new road without a
qualm.

He himself received us most hospitably and kindly, but his [511]
people serve him ill. Immediately on our arrival a shindy broke
out with talk of grass- and fodder-shortage, though grass and
fodder are plentiful in Nagir, and we found the rest-house
dirty and unswept, bathroom and utensils uncared for, and a
general atmosphere of grudging incompetence pervading it.

We dined with the Mir that evening and duly entertained 643
him in return, while I paid a visit to the ladies and met the
numerous little princes and princesses. The Queen of Nagir,
a fine, handsome woman, not a day older than when I had last
seen her eleven years ago, is a sister of Khan Sahib Mir Baz
Khan of Yasin, and I was able to bring her first-hand news of
her brother and his family, in which it is fair to say she did not
seem over-interested. But she is a gracious motherly woman,
and very intelligent—she even followed my Burushaski (Hunza
variety) with ease. The brightest moments of my call were

643 provided by the charming little prince, Shaukat Ali, son of the Mir's eldest son, who unhappily died young during our time in Gilgit. The boy is therefore his grandfather's next heir. He is a most intelligent, well-mannered lad, and manfully upheld the conversation whenever it threatened to flag.

Two of the royal ladies were Hunza princesses married across the border, one a daughter, one a granddaughter of the Mir.

In his day the Mir of Nagir was a mighty hunter before the Lord, and one of the best polo players in the Agency. He told us he had shot three thousand head of big game in his life. He has now been forbidden by the doctors to attempt over-strenuous physical feats, and indeed it is obvious that he would no longer be able for them, but he still has the regal carriage of younger days. His sons used to tell us that they dreaded hunting expeditions with their father because he appeared impervious to fatigue, and quite indifferent to such trifles as food or sleep. His reception-room is hung with lordly trophies of the chase: local ibex, markhor, and several magnificent heads of *bara singh* bagged in Kashmir.

He is justifiably proud that his six sons form a polo-team equal to any other in the Agency.

We had feared that decency would compel us to spend at least three days in Nagir, but since *one* day easily exhausted all our conversational resources—the Mir has nothing like the wide range of interests nor the intellectual curiosity that distinguished his Hunza colleague—and since his ungracious underlings raised one difficulty after another about supplying our very modest needs (we had sent straight through to Hunza all our spare kit and animals so as not to impose any avoidable burden) though offered as of course more than adequate payment, we decided to curtail our visit and the Mir greeted our decision with unconcealed relief, though he "only wished we could stay a year." So the 18th saw us pack up and thankfully make our escape.

000 We had not been reckoning on any language work in Nagir, for we had secured as much material as we could hope for from Ali Ausat during our time in Yasin, so we lost nothing of that sort by cutting short our Nagir visit. We gained one valu-

DEGRESSION TO YASIN

We gained one valu- 291
able piece of information: the Nagir women *do* wear trousers! 562
The trousers-for-women fashion in these parts is new: that is, [77]
it has been going only for the last four or five generations, introduced we were told from Chitral, and my Hunza women friends had assured me that the Nagir women were so backwoodsy that they had not yet adopted it—which I now know to be a libel. The little girls wear cotton caps and fringes like our Hunza ones, but the women cover all their hair in black woollen Salvation Army bonnet-like caps (a type of headgear of which I saw only one specimen surviving in Hunza). What the Nagir women and older girls look like I cannot say, for when they sight a man they crouch down with their backs turned and either pull a cloth over their faces or bury their heads in their arms. Give me the Maulai variety of Islam every time!

After I got back to Hunza and the women crowded round to ask "all about everything," I got a lot of fun by demonstrating—with only a mild amount of legitimate exaggeration—how the crouching and face-hiding ought to be done; but I cleared the Nagir women's character on the trouser question. Certainly half the charm of our delightful country is the freedom of the women and girls. They come up to the roadside or out on to the roof to greet DL just as naturally and frankly as to greet me. They are not brazen-faced or forward, just unafraid and perfectly unselfconscious.

They have one charming custom which I have not heard 576
of elsewhere, and which could only exist amongst free women. 562
When the Mir or any distinguished traveller (such as we!) is passing, the women and girls crowd on to their house tops and silently wave their hands. Not in a stiff Heil Hitler salute nor with our undisciplined exuberance, but with a quiet, graceful circular motion from the wrist, the two hands moving opposite ways outwards from the breast. It is the most gracious and dignified gesture of welcome and goodwill I have seen. We knew it from official days of old, when it might well have been merely a command performance; but it warmed our hearts when it greeted us as private individuals.

To revert to our homeward journey: After descending the 600

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

487 To revert to our homeward journey: After descending the Mir's famous new road on foot (it was so steep that our people voluntarily carried the loads down and loaded the animals below) we rode as far as the perilous *zhingát*, then dismounted and scooted across it in undignified but prudent haste. It was actively streaming pebbles, and at the safer spots where a bush or an apparently well-rooted boulder sheltered the track, we halted, looked, and waited to make sure that nothing larger was coming and then ran for it. A biggish stone or boulder takes three to four seconds after it is sighted to reach the track, and you must use your judgment and gamble on your chances. We felt a little anxious till we saw that all our people and kit were safely over too. Under a small new half-built mosque we halted in the shade to drink some thermos tea. The owner of the land, an intelligent man, courteously came up and offered to spread bedding for us to sit on; there were some children about but they were shy and churlish and unresponsive to our advances. The ride through the villages was pleasant; there are lovely big trees in Nagir (such as Hunza
241 cannot afford), and lashings of water. The fact that the Nagirkuts don't level their fields completely, but allow them to be on a fairly steep slope, seems to entail a much more elaborate system of ridging and much more trampling through the crops to direct the water. We wondered whether it really saved trouble after all.

487 Presently we came to the long Shayár *zhingát* just opposite Aliábád, though so many dusty miles away by road. We had had it under observation for many months from our windows, and knew that in fact boulder bombardments down it were rare, though very thorough and impressive when they did occur. Still, it is always a nasty business. Like the other one, it was trickling actively, but the surface of the track across it was wide and fair, so we rode at it as always before. We were about half-way across when Haiyáto looked up and saw puffs of dust above us indicating the marksmanship of falling stones. He shouted "Ride for your life, Sahib!" and stupidly got so excited as to frighten the horses, who, without any additional incentive, are always nervous and jumpy on these mountain shoots. I know few feelings more unpleasant than the trembling

between your knees of a frightened horse. We put the animals into a quick trot—anything faster only invites stumbling—and got happily across without accident, though some quite nasty rocks were falling at intervals. All the rest got over safely too. We were not sorry when this bit of the road, was behind us. These two Nagir *zhingáts* are to my mind the ugliest bits of road in the Agency. They don't look nearly as sensational as the many *peris*—which can, of course, be dangerous enough at times—but a firm shelf, however high and narrow, is preferable to a shifting surface.

Somewhere below us under the cliffs on the Nagir side of the river gorge, but out of sight of the road, is the Hakúchar spring, where Hunza and Nagir royal ladies occasionally go into camp together for a few days. It was pleasant to think that the young princesses, married across the water into the related family of the hereditary foe, are able to meet their own womenfolk in privacy from time to time. When such a party is arranged five large tents are pitched there for them.

It was very hot slithering down the powdery spiral descent to river level, riding along the sea-beach to the bridge and then mounting the long Hunza zigzag to Murtazábád, but once there we came again into the welcome shade of apricots and *gindáwer* (jujube trees, I think). I very much wished that rome of our own family could have been with us to see our arrival "home." Never in the days when DL was Political Agent and was popularly believed to have money and offices in his gift did we get such a reception. Though we were forty-eight hours ahead of our programme, the news that we were coming had got all round the countryside. Our easily identifiable little procession had, of course, been seen crawling for hours along the Nagir mountain side. Four miles out from Aliábád, on the hither side of the great Hasanabad Nullah, the advance guard met us: two small boys of six or seven had pattered out on their bare feet to be the first to welcome us. A few hundred yards farther on another little pair; next the three levies, who were, of course, to a small extent in our pay (they got the princely sum of nine rupees a month every third month when they came "on duty"!), and then at the bridge at the bottom

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

312

The road-cum-waterchannel on which our nearest neighbours lived.

(See p. 214)

PLATE XXI

[Facing P. 280]

of the nullah there was a whole horde of our boy friends of every sort and size. I felt so sorry for the wee-er ones who had footed it out so far, that I hoisted them in turn on the back of my saddle to everyone's amusement. As we rode up the hill, zigzagging by the path, the whole herd scooted up by cracks in the cliffs and other impossible short-cuts and waylaid us again and again with shrieks of delight like a sort of Hengler's Circus. Every few yards new ones added themselves in with cries of greeting: "You've come back! Are you well? Had you trouble on the journey?"

I was terribly afraid that my small pillion-riders might slip off to glory—and their mothers might not have been pleased—so I clutched their fat little dusty paws round my tummy, reflecting happily that coat and jumper would in any case be going to the wash to-morrow. Suddenly at the top of the hill I missed the last little one and spun round anxiously to ask Ernest what had happened. "Oh, that one was my kid; I lifted him down and packed him home"—so that was all right, but he might have mentioned it.

As we climbed the last barren steep into the outskirts of Aliábád, everyone rushed to the door of the house or the edge of the field or the corner of the roof, men, women, and babies, to shout a welcome and enquiries after our health and the fortunes of the journey till we grew hoarse with answering and retorting with enquiries for them and theirs. Presently we descried a mob of more small boys ahead and heard bursts of cheering and laughter. The youngsters had somehow got hold of a big drum and a pair of kettledrums and set up a lusty banging in excellent imitation of the regulation "welcome tune" of the professional musicians. As we drew nearer in, our small girl friends turned up in groups of four and five, and by the time we got to the big open slope beside the Sarkári Fort we looked like a modern version of the Pied Piper of Hamelin with at least two or three hundred laughing, dancing, shouting boys and girls in front and behind and around us. We were very proud that after two months away we remembered all their faces and most of their names (and the ones whose names you didn't remember you could conveniently call

000 "grandson"), and were able to ask after the other members of their families and the sore leg or hurt finger, and congratulate Shamúli on having grown two new front teeth and been promoted to trousers in our absence. I noticed that small boys and [291] girls who in their baby days are clad merely in a shift, don their first trousers with their second teeth.

Our miniature escort swarmed into the verandahs and all round the house, and the difficulty was to coax them to run home after we had many times said a pointed "Good-bye for the present." It was the greatest fun, and we would not have missed it for anything. The luck of arriving prematurely had forestalled any formal grown-up reception, and this was a much more delightful and spontaneous welcome home. And these are the people of whom a recent traveller writes that they are "quarrelsome and grasping and out only for what they can get from the traveller." There are various types of traveller. The only comfort is that people who read a superficial travel book forget ten minutes after they have laid it down whether the author was writing of Hunza or Honolulu. The same writer says that no one in these regions cares about clean drinking water but all drink from ponds that have been fouled by the animals watering, whereas as I have already recorded the Hunzukuts most scrupulously roof in their drinking tanks and approach them down steep steps to prevent any animals possibly getting near them. It is grievously unfair to libel in print a people who have no opportunity to protest and correct mis-statements of fact.

We found the bungalow just as we had left it, but without the two months' dust we had fully expected. After tea and a rest we quickly shunted chairs back to their accustomed places, I got out tablecloths and rehung curtains, and we had our cosy camp-home looking like itself before dinner.

Chapter 27

THE FIRST OF THE HARVEST

000 THE first few days after our return we spent in picking up threads again, and very jolly it was to make the tour of the dear, familiar farmsteads and be shown the new kids and lambs, the new stone shed, etc., to comment on the progress each field was making—in some, little knobs were forming on the barley stalks, where presently the new ears would come, in some few, the ears were already taking shape—to see how far the new fields had progressed towards completion, and what jobs were now in hand. We were touched to find that it was not only our more immediate, better-known neighbours who seemed glad to see us, but even the more distant, rarely visited families flocked to the doors and came out to kiss our hands till the greetings became almost monotonous: "We have missed you. You were long away. We are glad you are back. Are you well?" Old men tottered up to talk to us, young mothers brought new babies to be introduced; Baby Faqér laughed and crowed and "knew his grandmother" (he was a very bright and intelligent little chap for only five months), and little Afrots had not forgotten how to shake hands and say "How do you do?" performing these feats to the admiration of crowds from the three adjacent house-roofs and a large passing party in the lane.

233 Bare fields that had been lying fallow were being got ready
241 and dotted with manure dumps for the independent millets, sand was being dug from the silt traps to add to the beasts' bedding, whence it would duly reach the fields, and women were fetching baskets of earth from the "Mir's Stables" to add to the banked soil round their potatoes. The whole

countryside was a hive of industry. We missed the larger 233
animals and learnt that they had already been taken up to the 241
tér for the summer, while the tiny lambs and kids who were being carefully shepherded about to get what scanty grazing they could find without trespassing into the springing crops, demanded the unceasing vigilance of their small guardians.

The most noticeable new phenomenon was the constant 137
stream of people, men or women, stooping under huge bundles 233
of greenery till they looked in truth "like trees walking." We had come back to find the poplars well clothed and bushy (for poplars), giving an unwonted air of luxury to the landscape, but now they were being ruthlessly stripped to provide fodder for the animals, half starved throughout the winter on a diet of dry leaves. Poplar, willow, and *gindówer* are all laid under contribution, but the new fodder has to be very carefully issued at first lest the poor beasts should perish of its unaccustomed succulence. I stood one day watching and photographing a minute human insect at the top of a 50 or 60 foot poplar skilfully stripping it of its spring glory and leaving only the tiniest green tuft at the top. A whole handsome row were about to be similarly shorn. In a moment of thoughtlessness I said to the peasant at my side: "They look so lovely, it does seem a pity. . . ." He turned on me almost fiercely: "What, Mother? Would you starve our beasts for the sake of a poplar tree? The leaves will come again next spring. There is no cure for a dead sheep." I stood rebuked.

No. 3 had been laying out a new vegetable plot. Apicho 244
showed me the various beds ready for beans, scarlet runners 233
(which here have yellow flowers), marrows, and greens, but confessed that manure was their great problem. They have only one cow, poor devils, and with the best will in the world one cow cannot produce enough.

The end of May is the season when new saplings of poplar, 245
willow, etc., are planted, and we occasionally met people 252
carrying off bundles of them to set in place. The mills were in action again, and such fortunate folk as had a little grain still left from their emergency store—not, after all, exhausted by weddings or funerals—were carrying pathetically small bags of
to be ground.

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

it to be ground. But "Starvation Springtime" was still ruling the land, and we noticed the children looking very thin and peaky, and a few with sores on their faces—hunger sores. We had often remarked on the complete absence of skin diseases amongst these cleanly folk, and the hunger sores rapidly disappeared with the coming of more food.

The opening of June saw weeding being very intensively carried out, not only for the sake of the growing crops, but for the weeds' own sake; those which were dubbed "crows' vegetables" were thrown to the sheep and goats, while sorrel and the like found their way into the family cooking-pot. Irrigation questions were now serious, for the crops must not be starved of water at the critical moment, and we used to meet bands of Aliábádkuts armed with shovels walking out the eight or more miles to the highest point of the Dála to guard and govern the controlling sluices. The potatoes were now beginning to flower and the mulberries to show signs of ripening, and the air was rent by shrill boy and girl noises designed to scare the birds off the mulberry trees. Every boy was armed with his catapult bow, made and strung of course by his own hands. I asked Yaman how many birds he had killed with his little stones: "Seventy-two, so far this season, Mother, but I'll get lots more." "What do you do with them?" "Oh, I take them home and put them in the pot, but there's not much meat on them." Our first impression of Hunza had been that, except for magpies, it was an entirely birdless land; this was a mistake. Migratory birds came in flocks at various seasons when any sort of likely food was going. Their various species I was not ornithologist enough to know; to me, as to A. J. Balfour, each was just "an average small bird," and the Hunza terminology was no great help to identification, for they were known as "mulberry birds," "barley birds," or the like, according to which crop they threatened. We now also for the first time saw shorn goats. Whereas the Hunza sheep are robbed of their wool just whenever wool is needed, so that you never see a really generous-looking ample fleece, the goats are shorn only once a year, in early summer. If you think of it, goat's hair would be too wiry to spin at all unless it were a decent length.

[At the end of May -- Analyst]

THE FIRST OF THE HARVEST

Windy weather was knocking down unripe mulberries in 233
alarming quantities, which were incontinently guzzled by the 245
goats and sheep.

By June 9th ripe mulberries were reported from Ganesh and Hasanabad, some hundreds of feet below us, but we had to wait another three weeks for ours.

One afternoon we were out on the hillside and stopped to 524
watch a group of boys playing a complicated game of *bada bada* with a lot of small stones cast into twelve little holes in the ground. It was roughly equivalent to some of our games of marbles, and thinking of a large consignment of these which we had brought with us for future gifts we ruefully realized how useless marbles would be in a country where there are not
six inches of smooth, level ground. As we sat trying to master 231
the rules of *bada bada* Gulo crept up alongside me and slipped her hand confidentially into mine, whispering "Our pussy cat has had a confinement," using for fun the same term as she would have applied to her mother, and not the word suitable for cats. "There are three kittens, and they opened their eyes yesterday; do come and see them!"

When the game was over we accordingly started crosswise downhill to No. 3. I halted at the door to make sure that Zénába was prepared to endorse the impulsive invitation. She was sitting crouched by the hearth boiling the greens for dinner and jumped up with delight to bring us in. We squatted down on a sleeping-bench, from the back of which the children produced a round fruit basket in which the cat was cosily curled up. She was evidently accustomed to seeing her babies tenderly handled, for she let us take them out without other comment than a loud purr. Dear little furry things they were, about the size of small mice, and Gulo bubbled over: "She made first the black one and then the white one and then the yellow one—and that was all." Meantime, in addition to Kaníza and Apícho, a strange young man had drifted in to see what was going on, and presently Father arrived and we all
chatted together very gaily. Laughing somewhat apologetically, 231
Zénába confessed that she had drawn on the emergency reserve 844
to make some *daudo* (a sort of porridge with butter) for pussy 262

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

to keep her strength up—and this in one of the poorest houses, where they have had no bread nor butter for themselves for weeks. *Daudo* is one of the nourishing dishes you make for a human mother, and the cat was such a pet that the kittens were considered as a birth in the family, one of the emergencies budgeted for. There is as little need in Hunza for an R.S.P.C.A. as for an anti-litter crusade. Everyone is devoted to his animals, and the children have pet names for every lamb and kid. You will often see a boy or girl carrying home a tired animal slung over the neck like a fashionable lady's fur. Only people who have lived in the East can realize how amazing was this affectionate care for a pet; or how still more amazing this happy family life where father could come in and find his wife and daughters entertaining two strange men and be obviously delighted to see the guests. At least, if this sort of thing is possible elsewhere in the East, I have not heard of it.

When we passed next day we heard that a strange cat, which must be the only other one in Aliábád, for in general everyone is too poor to keep either cat or dog, had come in while the mother was mouse-hunting and had killed two of the kittens. Yaman, the only brother of our most beloved young friends, and most intelligent of informants, lifted a pathetic little white body with his toes from the field to show us. The children were half horrified and half amused at the kittens' fate.

There were a few wild flowers these June days amongst the scanty grass of the *toqs*: red bladder campion, stitchwort, and an occasional starved-looking forget-me-not. The children were much amused when we told them what the English call it, and that sentimentalists amongst us use it as a love-token. After that, one or another would run up to us offering a tiny blue flower and saying, "Don't forget me!" Some future linguist, language-hunting like ourselves, may be puzzled to hear of *je til akol* growing in Hunza fields and rack his brains as to how the idea came to the Karakoram. On principle we have tried to avoid poisoning the ground for future workers by importing European ideas, legends, or phrases, and in this connection the forget-me-not, the "one little pig" and Afrot's *How do you do?* are the only sins on my conscience.

THE FIRST OF THE HARVEST

Men left at home in the village were now making pilgrimages 233
towards the *tér* to fetch down the manure that their brothers 262
up on the mountain side on the animals have been scrupulously collecting. They usually arrange to meet half way, the village brother taking up any supplies the other may need and the brother of the *tér* bringing down not only manure but butter and *brús*, a kind of preparation of dried curd not unlike cream cheese. The lads up at the *tér* have rather a jolly time. They take up only their oldest clothes, for the life is rough and the work is hard. Anywhere that there is a scrap of suitable [245] ground they plant a little barley, harnessing themselves to the plough so as not to put work on to the horses or oxen they may have with them, who are considered to have earned a holiday. Each day at dawn they loose their animals, but keep 233
a careful eye on them, and sometimes have hair-raising adventures in rescuing a beast which has fallen down a cliff. There used to be considerable danger from wild animals, but nowadays there are few of these surviving. Any family that lacks a spare son to take the animals up entrusts them to the care of some other, after a rather touching little ceremony in which the beasts are solemnly committed to the care of their new master, who is at the same time given a certain amount of grain with him as part of his fee. Milking, making butter, collecting the manure, tending the barley (if any), cooking their own food, corralling the animals at night, etc., occupy the herds the greater part of the time, but they find leisure enough for various games and feats of skill.

Every now and again they decide to supplement their scanty 262
rations—the village can spare little enough to send with them 536
—by the sacrifice of a goat and a feast of meat. The donor of 233
the beast plays for the evening the rôle of Mir, appoints another as his Wazir, and they play-act their several parts with gusto. It is frankly admitted that the animal sacrificed to make this holiday usually is one of those whose owner is not present. When eventually the boy returns, minus one of the 233
animals for which he was trustee, he formally announces the 262
regrettable "loss" to its owner. The nature of the catastrophe is fully understood but not crudely stated. A wise owner is

expected to reply: "It is God's will. Accidents will happen. After all, they are beasts of the mountain and the wild." He is reckoned a churlish fellow who institutes enquiries and demands compensation, though no one denies his right to it. The liberty to indulge in an occasional free feed is, we understood, sparingly taken and not abused.

With luck a she-goat will yield enough milk while up on the summer pastures to make two *maltash*, i.e. two birch bark parcels of butter for storage. If the goat is a trustee goat the herd is expected to hand one *maltash* to her owner and to keep the balance as his fee. Sheep's milk is poor in fat content and yields little butter, so it is usually devoted to making *brús* and *rakhpín*, a kind of hard, dried curd which has great lasting qualities and the appearance of a cake of soap.

The day that the herds return from the mountain with their charges is a festive one for the villages. Large parties go out to meet the returning absentees. Before finally leaving the *tér*, driven down by cold and the advancing autumn snows, the herds bake some special little cakes to bring back with them, and crowds of dancing, shouting boys and girls fall on their elder brothers demanding their share. Trust the Hunzukuts to stage a festival on the slightest provocation.

Our Ernest of the white horse reappeared unexpectedly from the *tér* in the middle of the season and walked over from Hasanabad to call on us and bring an offering of *brús* for DL and of wild mountain flowers for me. He had given his animals into a friend's charge, and taken a couple of days off because he was a member of the Hasanabad polo team and was wanted to play in an inter-village match. These matches rouse as much interest as Arsenal *versus* Chelsea, and a good player who is also the possessor of a good pony can ill be spared. I duly took a photo of him and The Cat, he no longer in the rôle of the humble *sais* but of the gentleman polo player. Stout fellow!

These early June days were the time for apricot and mulberry grafting. The cultivated fruit shoots are grafted on to wild trees. We watched the process, about which the Hunzukuts have little to learn. Each graft was given a double lashing of bark from mulberry root. We returned later and found them

000 all thriving. The field walls looked very jolly at this season,
241 with wild flowers of the rock-garden type growing in the
137 crannies between the stones and fostered by the seepage from
263 the irrigated fields above. Amongst them was a wild mint and a wild thyme, the flavouring qualities of which are known and appreciated.

243 On June 12th we saw some people hungrily eyeing their barley and reckoning that it would be ripe for cutting in another fifteen days. It was said to be good this year in spite of an abnormally cold, late spring. Some rain showers that we had were welcomed though they temporarily cooled the air. But as clouds and rain continued, anxiety began to be felt lest the wheat should be late and delay too long the planting of the buckwheat-on-wheat. The barley is subject to a disease called *tam*, which stripes the leaves an ugly yellow and produces a milky liquid in the ears. Few plants were attacked this year. The disease called *matèl* (rust?), which makes black ears, attacks only wheat and millet, and if the cold and rain persisted it might be expected to set in. We were doubly anxious that this year's crops should be good: unselfishly for the people's sake; selfishly lest a bad year should be attributed to the maleficent influence of two crazy people learning Burushaski—though indeed these highly rational people would be unlikely to indulge any such fantastic association of ideas.

386 We saw some people one day collecting the under-bark
314 from red willow trees; they use it for dyeing the leather of their native boots and skilfully chip it out from the living tree without injuring the willow.

262 Now that the people were really within sight of food they
[152] frankly confessed to being desperately hungry, and the strain of unremitting work—weeding, ploughing, manuring, grafting, irrigating from dawn to dusk on empty tummies—was showing in drawn, thin faces, but appeared powerless to damp their spirits or fray their tempers. It was dreadful to look on and be helpless to feed the multitude with loaves or fishes, while we lived—sparingly enough by home standards but—riotously compared with these much more deserving neighbours. We saw one day a group of men sitting pensively under a mulberry

1 [in June -- Analyst]

262 one day a group of men sitting pensively under a mulberry tree silently munching unripe fallen fruit, but the most pathetic
524 sight was groups of little girls crouched beside a water-channel scooping out sand and mud and forming it into various types of breads and cakes which they pretended to "bake like Mother." They knew nothing of modern psychology, and were unaware that we interpreted their poor little mud pies as wish-fulfilments.

136 Cuckoos and larks were now filling the air with welcome, strangely home-like sounds.

000 One day the news of the Quetta earthquake reached us by telephone and spread dismay in twenty homes which had sons in British service there. How to get news? Mercifully the suspense was not prolonged. Thanks to the humane arrangements which allowed survivors to telegraph free, a telegram was telephoned through from one of the Hunza men to say that he and all his compatriots had escaped, owing to the fact that they were all employed by officers of the Staff College. It would be blasphemy to suppose that those were all unrighteous on whom the Tower of Siloam fell, but we could hardly resist a suspicion that the God of Earthquakes shared something of our feeling for the folk of Hunza.

294 It was the very end of June before the Barley Harvest was in sight, but as the time approached nearer and nearer, by painfully slow degrees, we saw women and girls devoting all their spare time to making new caps for the jollifications of Ginání, and the men, who are not a whit less vain, were already sporting bright new shirts in anticipation. We came on Kaníza and Apícho putting the last touches on a cap made of some scraps of Tootal material which I had given to Kaníza to dress the new doll that Yaman had made for her. They were weaving the braid edging straight on to the cap, stitching it on as they wove. The method was interesting: six long coarse crimson threads are made fast by both ends to the edge of the double cap—outside, and slightly padded lining. The stitcher holds the cap inside out. The braider sits near and takes the six long loops of equal length, passing three over the fingers of the right and three over the fingers of the left hand; then she slips the left-hand loops on to the right-hand fingers, deftly lifts the

original right-hand loops off on to the left fingers carefully 294
crossing each pair of threads as she does so. Widely drawing her two hands apart Apícho then drove the set of crossed threads down on to the edge of the cap, where Kaníza secured the twelve-fold plait with a large stitch. This was repeated *ad infinitum*, the braid only showing on the right side of the cap and the long ugly stitches on the wrong. The process looks rather like cat's-cradle. I had always wondered why, when they take such infinite trouble over the minute cross-stitch embroidery of their caps and the hand-plaited twelve-ply braid, they finished the cap off with these long stitches. I also wondered why it seemed impossible to detach the braid without its ravelling out. I now saw that braid-weaving and stitching were part of one elaborate process.

By July 1st the luckier folk were already cutting their 243
barley and clearing a field for their threshing floor without waiting for the formal harvest-initiation ceremonies of the Ginání, the date of which is naturally fixed by the Mir to suit Báltít, 1,500 feet higher, and consequently some days behind Aliábád. All our potatoes were by now in full flower and our wheat was turning "fox-colour."

On July 5th we rode over to Báltít for yet another of the 487
Hunza festivals, and ye Gods! it was hot on the road—90 de- [132]
grees in the shade—and we had to start at the very hottest time of day, about 2 p.m. The Mir gave us tea in his nice shady grass-grown apple orchard before we remounted and climbed up to the Fort. It is not easy to convey how steep the road is that in Báltít corresponds to the Mall. Your pony steps from one boulder to the next with a great lurch, his spine almost vertical, and for my part I could only just stick on by my usual technique of thrusting my stirrups back to the root of his tail 487
and firmly gripping his mane with my right hand. The road 361
runs between high stone walls and zigzags wildly. The little box-like stone houses of the capital are piled on top of each other in the craziest way—town-planning has to accommodate itself to the vagaries of a precipitous mountain side. They are indescribably picturesque, but you would not think them possible to live in, yet they provide a high degree of simple com-
fort

487 fort. When you reach the courtyard the Fort towers above you like Bush House. Up the semi-spiral ramp outside and the two flights of ladder-like stairs, and out you come on to the great reception balcony with its incomparable view. The country looks its very best in July, every field green or golden with its crops and every fruit tree in full luxuriant leaf, apricots turning golden but not yet ripe.

600 There was a crowd of fifty or sixty on the balcony, and we chatted to the princes and others while DL endeavoured to find some spot from which he could command with his cine-camera the steep approach almost vertically below us up which the Harvest procession would presently be coming, without himself toppling over to certain death. The little parapet—not calculated for the convenience of camera men—just caught his shins in such a way as to encourage a fatal plunge. It is needless to mention that the sinking sun stared straight into his lens. The sun blazed relentlessly on the white mud floor of the balcony, the resultant glare alternating with inky shadows, while the table and chairs which had been hospitably provided for our convenience intruded with infernal incongruity into every foreground. If you escaped sudden death over the parapet to rocks 1,000 feet below, you might meet a less spectacular but equally fatal end by an unpremeditated dive down the trap-door. Photography in Hunza is fraught with danger and difficulty.

643 The Mir meantime had disappeared inside to robe himself before taking his seat on the throne under the carved verandah, where he would be well-nigh invisible to the camera lens. The cloth spread on the throne was the loveliest imaginable: a thick, bright sapphire-blue velvet with a border of apricot colour, or rather that delicate, yellowy, salmony pink which upholsterers call "apricot," though never was an apricot that shade. The whole border as well as a great medallion in the centre was embroidered in real gold, padded quarter of an inch thick: a barbarically lovely thing, bought, the Mir said, for Lord Curzon's visit twenty or thirty years ago, and as untarnished still as only real gold can be.

At last, when we were nearly grilled to death, we heard a

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

shout of "Here they come!" Far away, hundreds of feet below 643
us, we could just descry a pair of horsemen scrambling up the road I have described. It was two of the royal princes, one of them Lord Fauntleroy, each with an armful of ripe golden barley. Soon they disappeared into the bowels of the Fort below us and presently their heads popped up through the trap-door. Someone whisked the barley from their arms and disappeared with it to rub the ears and toast the grains. The Mir appeared from an inner door. He was wearing a loose gown of pale blue silk all embroidered in gold and a pale turban also touched with gold. He greeted his people like a king and went over to his seat, quietly kicked off his slippers, and neatly slithered himself on to the couch-like throne in photograph-defying shadow, and sat cross-legged—the perfect picture of an Oriental monarch whose authentic ancestors were ruling Hunza while our Black Prince was fighting in the fields of France. He graciously signed for us to come near, and I let my chair be brought under the verandah, but DL begged to be allowed to stay out in the balcony where he could move about more freely.

Then came a henchman with ewer and basin and the Mir 241
very sensibly spread a towel over his silken knees and velvet cloth while water was poured over his hands. Another minion then presented a priceless china bowl filled with sour milk, and the Mir taking a silver spoon lifted half a spoonful of the junket and held it out while the man sprinkled in three grains of toasted barley. This he ate—three times three grains in all—thus handselling the first fruits of the year's new harvest. Then the bowl was circulated to DL (with a fresh spoon) and then to me, and then in order of rank and precedence to the rest of the assembled company. It was a simple yet impressive little communion service. And throughout the country every family in like fashion ceremonially tastes the first grains of the new barley, and carries in the first-cut stalks solemnly to bind them round the *shiri dako*, the main pillar of the humble atrium, where they remain till in due course replaced a twelve-month later.

When the bowl and barley grains had made the rounds, in

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

was brought the largest wooden tray I ever saw, piled high with various foods: I noted a fresh cabbage, stacks of several kinds of bread, dishes of dried curds, mountains of rice with nuts and onions on top, and every sort of vegetable cooked in butter. The Mir sampled everything very sparingly, laughingly explaining that he must not tuck in now as he had to eat dinner with us presently. Then the royal tray was taken over and placed before the princes, while mountains of bread and meat were set in the centre of the balcony for everybody. The meat was hacked up as usual with an adze and the food quickly distributed and almost as quickly disposed of, no one going through the farce of having a delicate appetite. The beauty of this kind of feast is that there is no "clearing away," for in five minutes not one visible crumb was left.

Then all stood up and turned to the Mir with a bow and a curious gesture brushing down their beards or moustaches or whiskers with both hands (whether they had any such trimming on the face or not) and said in unison *mubárak manish!*—may it be blessed!—thereupon fading out one by one down the trap-door. When the road was clear we all climbed down too, and in the courtyard the Mir mounted his horse again for a sort of triumphal march home. He suggested our riding with him, but we explained that we should prefer to walk down if we might. He laughed and said: "So should I, but I must not!" The ascent of the Hunza Mall is all right, but riding down it is unattractive. We waited till he had plunged vertically out of sight and took our time to the descent on foot. There is a wonderful collection of old buildings, with balcony rooms propped on rudely carved pillars, a charming old, now disused mosque, also lavishly carved, and a wonderful old mill, all packed tight round the feet of the Fort for safety.

After we got back to the Mir's gardens we washed and changed, and dined with him in a roomy tent. The poor man had been having severe toothache for several days and no sleep at night, yet he manfully ate his way through dinner and kept the conversation going. Next morning we were awakened by a magnificent voice chanting the Call to Prayer before dawn. It was the only *muezzin* we ever heard in Hunza, but the Mir

takes a pride in having every sort of artisan and artist in his service. I peeped out through the muslin curtain of our tent, but I didn't notice any great rush of the population to pray. There was polo at 6 a.m., to which we did not turn out.

After breakfast there was a great feast in the large courtyard outside the garden at Kerimabad where the Mir sat daily to hold public court. The large open space was packed with feasters. The Mir was seated under a verandah on another throne (again in heavy shadow), and strings of people came with huge baskets on their backs, laden with food. We were seated on the vantage ground of a rocky shelf in a great boulder that commands the courtyard and at the same time forms the foundation of a splendidly sited guest-house bungalow of comparatively recent date. Yesterday's performance was repeated but without the ceremonial of the toasted barley grains. Yesterday the guests on the Fort balcony had been only "The Great," but to-day the feasters were a more representative and larger crowd. The eating did not take long, and we then adjourned to see the usual kind of dancing.

After that lunch we said good-bye and rode home: again at the very hottest time of a ninety-in-the-shade day. But we were thankful to have seen the Ginání ceremonial which was just over when we arrived the year before. We had now seen the Hunza year right through with all its festivals, and alas! packing and departure were beginning to loom large in our thoughts. We could not linger so long in Hunza as to risk having again to *walk* the Burzil—Fate and weather might not have been so kind the second time. DL had toiled with his two Wakhis through all the work he was likely to be able to extract from them, and we bade the dear old men an affectionate and thankful farewell. Khalifa Farághat was the proud possessor of a pair of "old age spectacles" we had procured for him from the Agency Surgeon in Gilgit, which he said gave his eyes a new lease of life.

We had brought the faithful Muslim back with us from Yasin, having obtained leave for him from the Rajah, and David had been spending all his leisure from Wakhi and Burushaski on rounding off his Werchikwar, but we

2 Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

000 presently dismissed him too, to concentrate on our own windings up.

There was an unbelievable lot to do: specimens of plants and grains to be labelled and packed; photographs and manuscript notes of every kind to be sorted into order and well wrapped in waterproof paper; parting gifts to be thought of; arrangements for the journey down to be made in advance; the last lot of duplicate typescript, texts, etc., to be got off by different posts to the Bank lest one lot should be lost; specimens of such utensils and implements as we could hope to carry to be collected. We had reluctantly to abandon the hope of bringing home in triumph a stone *balosh* as too heavy for any load, and breakable withal.

Chapter 28

FINALITIES

Our final weeks in Hunza were overcrowded with unavailing 132
attempts to fill all the lacunæ of over a year's work, and 133
working was not rendered easier by a temperature of 105 degrees in the shade, nor by the fact that we were both beginning to feel the strain of an intensive fifteen months at close on 8,000 feet (although we had not been consciously conscious of the altitude), and were undeniably somewhat played out.

We had to try to take all the photographs—moving or still—that had hitherto escaped us, develop and print the latter, and keep up to the end our practice of giving copies to the interested parties.

Two lines of enquiry in particular demanded attention. 126
Until faith in the purely scientific and disinterested character of DL's intentions had been firmly established, he had refrained from any attempt to map in detail the inhabited country immediately about us, or to enquire too closely into the amount of land belonging to any given household. Such activities would inevitably have given rise to the fear that he had been sent to make a survey for Government as a prelude to land taxation. Now that such fears were unlikely to arise—and would not impede us greatly if they did—we toiled up and down the steep and rocky tracks, taking sights, pacing distances, measuring fields, and making calculations. A country harder to survey, even in the rough and ready fashion which alone was possible, it would be difficult to conceive. It was impossible to find even twenty yards of level ground in a straight line to make a base from which anything else was visible; pacing distance was almost otiose when spurs jutted and angles re-

126 entered everywhere. There were no landmarks: every house was a rough replica of every other and not certainly identifiable from any distance, every poplar tree which from one point of vantage stood out in splendid isolation immediately fell into line with a dozen others when you walked a hundred yards. The whole habitable country was tilted at an angle of 45 or 50 degrees, and seamed with sunken rock-ravines; the river was perennially invisible in its gorge; tracks and water-courses were sunk between high walls, and not to be divined unless you were actually in them out of sight of everything: a heartbreaking, leg-exhausting task, the sketch map that DL coveted.

A second important task was an enquiry into matters of revenue and taxation. To have questioned the peasantry, except very casually and incidentally, would again have been to excite curiosity as to ulterior motives—the non-existence of which might well have seemed incredible—though we did manage to accumulate a good deal of information that was invaluable as corroborative material. The only way to get coherent information was to approach the Mir direct and beg permission to enlist the assistance of Prince Jamál Khán, now his grandfather's right hand in administrative matters, and then try to keep the boy's untrained attention from wandering off the point at issue.

000 All the while book-boxes had to be gradually packed and top-dressed with lighter material so as to make manageable loads, new boxes had to be conjured out of old to take the curious and unwieldy articles—from bows to winnowing forks—ultimately destined for some museum. The contents of each box had to be inventoried in detail, for Customs purposes as well as for our own reference, then strongly wired, then painted with name and numbers. Dádo and the rest helped manfully over all such tasks as they could tackle, but much could be done only by DL or by myself.

197 Finally there was one blind spot of language which cried
563 out for—and got—attention, the Dumáki spoken by the alien Béricho, that minute language-island within the larger language-island of Burushaski itself.

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

FINALITIES

During fifteen months in Hunza our solitude had been invaded only twice by a European passer-by: an inspecting engineer, Mr. Halcro Johnson of the Orkneys, had spent a night and explored some of the countryside with us, conjecturing about hydraulic pumps to lift water from the ever-changing bed of the river to the fields above, and Colonel Schomberg, ever entertaining, informative, and critical, had passed through on one of his endless wanderings in the wilds. As luck would have it, no less than two parties turned up in those last hectic days. Colonel Lang, Resident in Kashmir, made the pilgrimage to Hunza in company with Major Kirkbride, lunched with us on August 28th on the way up, and spent a night on the way down; our genuine pleasure in seeing these distinguished guests was slightly marred by pressure of work and less-even-than-usual ability adequately to entertain, for our supplies were sorely on the ebb. We gave them the one and only tin of sausages we had had!

It was many years since a Resident had found time or inclination to travel up to Hunza. Soon after the party had left us we heard the Mir's saluting gun (a new toy since our time) sending unwonted echoes through the immemorial silences, and that night the mountain side was magnificently starred with bonfires lighted high on almost inaccessible peaks and spurs. Impregnated as we were with knowledge of Hunza fuel-poverty, we could not but reckon the cost of such a gallant and loyal tribute to the King Emperor. Most probably the sheer delight in accomplishing the feat of carrying treasured juniper logs to such heights and setting them ablaze at the concerted moment, and the love of every Hunzukuts for a *tamasha*, prevented anyone but ourselves from indulging in such sordid reckonings. We wondered how much or how little Colonel Lang appreciated what those bonfires meant.

Our next visitors were of another sort. A couple of months before *The Times* had cabled me that one Peter Fleming, evidently a white-haired boy of theirs, was apparently missing somewhere in Central Asia on the way from Peking to Kashgar. They had had no news for months and were getting anxious. Could I make enquiries? Distances that look slight enough on

a map in Printing House Square are more formidable in the mountains of the Karakoram. From Báltít to Kashgar is a month's severe marching in favourable weather conditions, and in others not marchable at all. The telegraph stops at Misgar, five marches up, and there is no telegraph office between Misgar and Gilgit. So far as we knew Kashgar had no wireless; anyhow, we had not. We had, indeed, seen a party pass, bound for the north, and said to be taking up a wireless *receiving* set to Kashgar, though they themselves preserved a hush-hush silence about the contents of their massive loads, far too heavy for pony packs, and as we thought far too unwieldy to be manhandled round the cliffs and over the glaciers of the route, so that we anticipated its almost certain non-arrival.

My only chance of getting news was to indent on the kind co-operation of the Mir. He has—by Central Asian standards—an efficient if unorganized news-service, which, however, conveys its news on foot, by word of mouth. He promised to keep me informed. At length he sent me word that there was a traveller, Temmelemming or possibly Semmelemming or possibly almost any other name, reputed to be heading for Kashgar, but still about nine marches out, travelling with a lady. As to whether he was a *Times* correspondent or not, there was no word. Newspaper correspondents are parasites of modern civilization, a human type unrecognized amongst the happy dwellers in the oases of the Tarim Basin or of Hunza. We had not then heard that Peter Fleming was crossing Central Asia under the wing of the famous international ski-ing and hockey champion, Mademoiselle Ella Maillart, and the fact that Temmelemming was accompanied by an unexplained lady suggested that he was not improbably some enterprising Swedish missionary touring with his wife. I cabled, therefore, to *The Times* with caution, anxious not to raise hopes that would be distressing to Fleming's people if he should prove to have perished. News of Temmelemming under a bewildering variety of aliases continued to come at intervals, and I duly continued to forward them to *The Times*. At last I was able to cable that the traveller was indeed Fleming,

2: Lorimer T-3 (1920-4; 1934-5) 1939 AV7 Burusho AV7

and had safely reached Kashgar—a stop-press scoop that fell a little flat in London, which had had a wireless from Fleming in Kashgar some weeks before. Meantime Fleming and the lady (whoever she might prove to be) were approaching Hunza, and we sent a runner out to meet them, bid them welcome, and invite them to look in on us at Aliábád.

They turned up on the morning of August 29th at eight o'clock, sunburnt, hatless, happy, and indomitable, and we had the honour of offering them their first English breakfast on British soil after the famous journey of which all the world now knows. It wasn't much of a breakfast, but it wasn't *tsamba*. They were an engaging pair of adventurers. If Fleming might have stood for the errant knight in search of a distressed princess to rescue, Ella Maillart was obviously quite as competent to do any rescuing that might be required.

Over a merry breakfast we learned Peter Fleming's indignation at the suggestion that he was lost at all. He had reached Kashgar ahead of his scheduled time. While we were still at table our merriment was enhanced by a cable that came for me, forwarded by post, of course, from Gilgit. Dated many weeks before, it came via the Dead Letter Office in Lahore, where it had been mouldering for some reason that we never fathomed. It announced Fleming's wireless from Kashgar, and reasonably suggested that I might cease to cable Temmelemming's progress. I felt that nothing but courtesy and cable-economy combined had prevented an exasperated Foreign Editor from qualifying my cables with some forcible adjective. I was now able to close the cable-correspondence with the triumphant news that Fleming and Maillart had just breakfasted with us in excellent health and spirits, and hoped to reach Srinagar in a fortnight or three weeks. I then air-mailed a letter enclosing the Dead Letter telegram to prove that I was not really the congenital idiot I must have seemed. The explanation was, I presume, accepted, for I never received either a dressing-down or a bill for my cabled futilities.

Meantime we adjourned from table to take photographs of each other outside. I had been boasting to Miss Maillart of the friendliness of Hunza women and their lack of camera-shyness.

She had a bobbed shock of dusty brown hair, long untrimmed, a horizontally-striped jumper of navy and white, loosish navy knickers, and long boots. She made an unheralded descent on a group of Hunza women in a neighbouring field—they fled in terror from the apparition. Unfortunately there was no time for me to round them up and woo them back, for the two newspaper colleagues had to hasten back to Báltít to join in some festivities in honour of the Resident. We later had the pleasure of hearing them both lecture in London on their astounding journey, and it was hard to identify the beautiful lady in evening dress graciously displaying lantern slides to the Central Asian Society and humorously making light of the hardships and perils of those seven famous months, with the tomboy figure of the Karakoram who had left so vivid a memory behind in Aliábád.

By mid-August the last batches of drying apricots had been gathered in, withdrawing those bright pools of colour which had so gaily painted roofs and boulder surfaces. But the independently sown millets were tossing glorious golden heads (*cho*) far more challenging to the eye than wheat or barley, or graceful tassels of golden rain (*boy*) lovelier even than ripening rice; the millets-on-barley, later sown, were still a brilliant green, and the sweet buckwheat-on-wheat was bursting out into seas of beautiful, sweetly-smelling pink. We were glad not to have had to leave without seeing and scenting sweet buckwheat once again, while the yellow ill-smelling blossoms of the bitter buckwheat were too unobtrusive to spoil the delicate sheets of green amongst which they hid or taint the general air. It was going to be hard to tear ourselves away from Hunza in her summer glory.

All our last comings and goings amongst the farmsteads were clouded by "that go-ey feeling" which schoolchildren know so well, casting the shadow of the prison house over the last precious hours of holiday.

After my first ill-advised distribution of a few Woolworth balls amongst the toddlers we had firmly abstained from any form of gift-giving. Now the moment had come when self-discipline could be relaxed. We got up from Gilgit two pony-

loads of rock salt, a consignment of large, bright-coloured handkerchiefs, and a supply of the unspun, bright, Central Asian silks which go to embroider women's caps. Needles, safety-pins, thimbles, and multi-coloured beads I already had by me in large quantities, and I had the store-room full of carefully hoarded empty tins and containers, spare packing-cases and kerosene tins, while the dark-room offered rows of empty bottles and the six priceless petrol drums which had faithfully stored water for innumerable photographic washings.

Three of the petrol drums we set aside for the three headmen of Aliábád, to whose kindness we had owed carpeted stone sofas at "The Gate" for merry festivals, and many another gracefully offered courtesy. The other three we reserved for the trusty servants, Dádo, Zaidu, and Sagi. To Sagi, also, who had toiled so many weary miles and climbed so many thousand feet to fetch us never-failing supplies of drinking water, we gave a couple of spare buckets, which he had more than earned; packing-cases and kerosene tins were divided at their own discretion—and without quarrelling—between levies and servants. Since even two pony-loads of salt would go nowhere among two hundred households, we had reluctantly decided that we must confine our farewell largesse to the twenty houses of our more immediate and most intimate neighbours, which happened to stand geographically somewhat apart from the rest of the village.

With heavy heart I divided the salt into twenty equal shares, added needles, pins, and beads according to the numbers of the womenfolk, with a supply of silk for every house with a maturing bride, and supplemented all with a few empty tins or bottles. Then I tied this odd and heterogeneous offering into a coloured handkerchief, to be delivered by my own hand on our last evening.

For Ustád Nadíro, the master carpenter, to whom we owed more thanks than to any other single individual, DL had ordered from Bombay a saw and chisels, augurs and awls of Sheffield steel, and for Afiato, the peasant priest, also an outstanding benefactor, a pair of old-age spectacles to prolong his reading days. The tools came in the nick of time, and DL

[Facing P. 304]

sent up a message to No. 8 that if the Ustád could spare time after dark to come and open a packing-case for him, he would be grateful. The old man sat down to the task, and as the tools came into view he lifted them out with the loving reverence of a good craftsman. "These are the things, Sahib." "And these things are yours, Ustád, old friend, with our thanks." A moment of dumb, delighted incredulity and the old man was on his knees raining kisses on an embarrassed hand. Long may Nadíro live to wield his English steel!

There was—I regret to confess—an almost inexhaustible supply of empty cigarette tins. They were known to be considered ideal receptacles for embroidery odds and ends. I let it be known that any little girl of embroidering age who cared to come might have one on application, and for nearly half a day I stood by the verandah distributing one each, while an orderly mob of well-loved eager faces surged round me. To their honour be it said that of many hundreds only one child attempted fraudulently to secure a second tin, and she, poor kid, must nearly have perished of the unanimous scorn poured out upon her. "A grasping people, the Burusho of Hunza!" Let anyone say that in my hearing and I shall make him eat his lie.

The children's joy in possessing these valued momentoes a little eased the pain of parting.

At last, on September 2nd, everything down to our last toothbrush was packed. We started out betimes to evade as much as possible of the heat of that gruelling road. The whole of Aliábád, great and small, young and old, men and women, was gathered on the open slopes by the Sarkári Fort to see us ride away, and the air was thick with cries of "We shall miss you!" We waved as far as possible to each, and shouted our good wishes and farewells as the band played us on our way. Dozens accompanied us, running alongside through adjacent fields for a full mile or so, then slipped away to resume the insistent toil of a summer's day which must be done though the heavens fall or Sahibs ride into the blue. The road plunged, steep and narrow, into the Hasanabad ravine, the last stragglers

000 dropped off, and left us with only the immediate followers who were accompanying us to Kashmir.

As we toiled up the hot, dusty, unending zigzag out of the gorge towards the Murtazabad ridge, we espied three forlornly idle little figures under a tree ahead. Girls seldom stray so far beyond the village boundaries as their brothers. "If it weren't so far out I should guess those youngsters to be Kaníza, Shamúli, and Nigín," said I, "but they couldn't possibly . . ." But they had. As we drew near we saw that all three were crying, but bravely battling for self-control and jerkily wiping their eyes with their cuffs: "We shall remember you! May your way be blessed!" they called in chorus. "God make you grow! And may you, too, be blessed!" we answered back. And our mutual "Khudayár! God be with you!" blended, as our ponies breasted the last inch of crest and vanished over the ridge. With instinctive delicacy of feeling the children had chosen a strategic spot where there could be no looking back, no lingering of farewell.

Valete, Hunzukuts nostri gratissimi!

duwaʿsum bila.

To my dear Friend,
SIR MUHAMMAD NAZIM KHAN, K. C. I. E.,
Tham of Hunza,
A wise and humane ruler,
And a sincere and kind friend,
With great respect I present this description of
the Language of his People.

May it be a token that our old friendship still survives
After ten years of separation.

V

000 *Mr. Shaw's proposal for "An Analysis of the Scotch Celtic Language" were thus illuminated by the pen of Johnson:*

"Though the Erse Dialect of the Celtic language has, from the earliest times, been spoken in Britain, and still subsists in the northern parts and adjacent islands, yet, by the negligence of a people rather warlike than lettered, it has hitherto been left to the caprice and judgement of every speaker, and has floated in the living voice, without the steadiness of analogy, or direction of rules. An Erse Grammar is an addition to the stores of literature; and its author hopes for the indulgence always shown to those who attempt to do what was never done before. If his work shall be found defective, it is at least all his own: he is not like other grammarians, a compiler or transcriber; what he delivers, he has learned by attentive observation among his countrymen, who perhaps will be themselves surprised to see that speech reduced to principles which they have used only by imitation".

"The use of this book will, however, not be confined to the mountains and islands: it will afford a pleasing and important subject of speculation, to those whose studies lead them to trace the affinity of languages, and the migrations of the ancient races of mankind".

Boswell's Life of Samuel Johnson LL.D.
(Under date April 4, 1777).

VI

Dr Lorimer L-3 (1920-4; 1934-8) 1935 AV7 Burusho AV7

PREFACE.

The present work deals with a language which is spoken in some inaccessible mountain-valleys at the meeting-point of three great linguistic families, viz. the Indo-European (represented by Indo-Aryan Shina and Iranian Wakhi), the Tibeto-Burman (represented by the Balti dialect of Tibetan) and Turkish, but which is unconnected with any of them. 114 128

It belongs to a small and remote community, which has never played any rôle in history, nor contributed anything to the development of civilisation. Yet the Institute for Comparative Research in Human Culture has recognised the importance of assisting in saving from oblivion this relic of the past, of which, so far, only very summary descriptions have been given, and which in spite of, or perhaps just on account of, its apparent isolation may help to throw light upon the linguistic history of Asia.

The Institute has therefore undertaken to publish the first comprehensive account of Burushaski and the notes on the closely related Werchikwar dialect prepared by LA. Col. Lorimer. During his term as a political officer in Gilgit, close to the Burushaski speaking country, the author contrived to collect very ample and reliable material relating to the language, and he has since successfully carried through the difficult task of classifying and arranging it, describing in detail the highly complicated grammatical system of Burushaski. He has earned our gratitude for

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

114 the painstaking energy with which, despite many difficulties, he
128 has prosecuted this pioneer undertaking.

The writer of these prefatory pages, who has had the privilege of discussing with the author a number of questions relating to Burushaski, can testify to the accuracy and care which has been bestowed upon the work.

In scientific importance Burushaski may be classed under several categories. Each of these presents its own special problems which will require separate and detailed study, and here it is only possible to draw attention to a few points selected more or less at random.

---

193 In the first place Bu. is of interest to the student of general linguistics on account of the many peculiar features of its morphological structure. These have been described in detail in the Grammar, and I shall only mention here one or two which seem worthy of consideration.

The division of nouns, etc., into four classes[1] is, of course, one of the outstanding features of Bu. grammar. L. is, no doubt, right in considering the first two categories (m. and f.) to be subdivisions of a common class denoting human beings (h.). The plural endings, the demonstrative and interrogative pronouns, and the numerals are the same in m. and f. nouns, and it is only in 3 sg. of the prefixed pronouns and of the personal suffixes of the verb that the two classes differ. This is an interesting parallel to the Indo-European gender system, in which the distinction between m. and f. is supposed to be more recent and less fundamental than that which exists between m. and f. on the one hand and n. on the other.[2]

Of course, the Bu. x. and y. categories cannot be indentified with the I. E. n. As a matter of fact, the x. class, which among other things comprises non-human animate beings and which may, with great reserve, be defined as denoting individually conceived objects,

[1] §§ 19 sqq.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

ranges in several particulars with the h. (m. and f.) group. Thus the pl. endings to a great extent agree with those of h.; the prefixed pronoun 3 pl. is *u-* in h. and x, but *i-* in y.; and we find yanas *to take* with h. and x. objects, but ganas with y. objects[1], and in Nagiri Bu. and Werchikwar the y. form of the 3 sg. of the verb *to be* is formed from a root *d-*, while h. and x. have the usual *b-*.[2] 193

This seems to show that y. stands apart from the three first categories.

A definition of the x. and y. categories is given by L. in § 25, note. In most cases x. nouns appear, as indicated above, to denote objects conceived as separate, individual units, while y. might, perhaps, be said to designate 'amorphous substances', including what we would call abstract ideas. Cases like baγundo x. '*bread*', but y. *dough*, and the fact that the names of coarser cereals (where each single grain is considered as a separate unit) are x., while finer grains are y., give a good idea of the underlying central conception. The distinction between ba'lt x. *apple* and ba'lt y. *apple-tree*, etc. indicates a conception of the fruit-bearing tree as a kind of non-individual, common substance of which the single fruits are made.[3] But in many cases the principle of distinction seems quite obscure, cf., besides the examples given on p. 24, e.g. iγan x. *cream*.

Regarding the trace of still another category cf. § 187.

At any rate the detailed and well-considered account of the Burushaski nominal classes given in this book will be sure to prove valuable for our understanding of the complicated problems connected with the origin and nature of such classifications.

Another interesting feature of Bu. grammar is the constant use of possessive prefixes with most nouns denoting Parts of the Body., Relatives and "certain things which usually stand in close relation

[1] § 231. Cf. yalas trans. and galas intr. *to break*.

[2] V. §§ 496 and 527.

[3] Quite a different conception is found in Lat. malus f. *apple-tree*: malum n. *apple!* — Regarding Prof. Varma's theory about "x" v. p. 34.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

193 to some being".[1] This inability to consider certain objects without any relation to a possessor is shared by many languages.[2] Those of Melanesia, especially, present great similarities to Bu. in this respect.[3] But even in some Indo-Aryan dialects of the North-West, e.g. in Pashai, I have come across individuals who, when asked about the words denoting parts of the body or relatives, would preferably answer dandēm '*my* tooth', puθlem '*my* son', etc. This is certainly due to common psychological factors and not to the influence of a hypothetical Bu. substratum in Pashai.

According to Bleichsteiner[4] Leitner states in his Hunza and Nagyr Handbook that when he first heard Bu. of Nagir, every genuine Bu. noun had a pronominal prefix, but that the use of these possessives had decreased when he studied the language again 21 years later. In Leitner's 'The Languages and Races of Dardistan' embodying material collected during his first tour in 1866 and published in 1878[5], the use of the prefixes is, however, restricted to the names of parts of the body and of relatives, and the same principle prevails in Biddulph's material, which was collected in 1876.

Besides this, it is intrinsically improbable that the general use of the prefixes should have been given up in Nagir within such a short space of time, and that a parallel development should have taken place in Hunza and Yasin at a somewhat earlier date. Obviously the distinction between prefixed and nonprefixed nouns is, in its principle, very ancient and 'primitive'.

The details described in §§ 126—133 are very curious. Why, for example, is one word for "stick" used with a prefix, but another not? *Under-* and *upper-bedding* and *pillow* are conceived as belonging to a certain person, but this is not the case with articles of dress, etc.

[1] § 128.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burúsho AV7

Life can be spoken of in the abstract, but *death* only with reference to somebody. As regards the names of parts of the body those which like *blood*, *brain*, *skin* etc. denote a "substance" have no prefixes, nor are they used with recent loan-words such as muč *fist*, pini *leg*, buʿī *shoulder-blade*[1], etc. *Bone* and *horn* may be considered either as substances or as parts of the body belonging to a certain person or animal. Consequently we find both tin *bone*, tur *horn* and -ltin, -ltuʿr (y!). 193

One very curious employment of the pronominal "prefix" is as an *infixed* object in the verb ši·as, etc. *to eat*[2] This may be the last remnant of a verbal system which has been given up in modern Bu.

Among other peculiarities of the nominal inflexion I shall only draw attention to the interesting "double plural"[3] and to the circumstance that the interrogative pronoun mɛn is a plural (probably originally irrespective of number), of which the sg. is mɛn-ʌn '*who-one?*' Note also complicated formations such as eʿyɛnmur '*to a daughter of his*',[4] i-e. "i-ay-ɛn-mo-ər *his-daughter-one-f.-to*".

The temporal inflexion of the verbs is dominated by the existence of two temporal bases. From each base three tenses are formed:[5] From the Present Base present, imperfect and future, from the Past Base preterite, perfect and pluperfect. The resulting system agrees completely with that of Shina as expounded by L.,[6] and resembles to some extent the Latin one.

Of general interest are also the indiscriminate active and passive use of some verbal forms[7], the "Static Participle"[8], the addition

[1] But -phoi, L. -phoiŋ *shoulder*, which may have been borrowed at an earlier date.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

193 of the Pronominal Prefix to the Past Participle Active[1], and the use of finite verbal forms with case suffixes.[2]

601 One detail regarding the vocabulary deserves special notice. The word -ạčo denotes both '*a man's brother*' and *a woman's sister*. The German translation would be *Geschwister von demselben Geschlecht*. A similar conception is found in the word -rik *wife's brother*, *husband's sister*, (*a woman's*[3]) *brother's wife*, (*a man's*) *sister's husband* (but not *wife's sister* or *husband's brother*). Apparently this word denotes *a brother- or sister-in-law belonging to the same sex as the person in relation to whom he or she is mentioned*. Note that *woman's brother* (-ulus) and *man's sister* (-yas) are denoted by separate words.

I have not met with this curious nomenclature in other languages, and I do not know to what kind of special structure of the family group it may originally have been due.

---

197 If we turn to the important question of the genealogical relations between Bu. and other languages, we are faced by great, perhaps insurmountable difficulties, *inter alia* because we possess no ancient records of the language and have only the closely related Werchikwar dialect to compare it with.

One fact, however, seems quite certain and indisputable: Bu. is not related to any of the surrounding Indo-Iranian, Turkish or Tibetan languages.

If we exclude A. Hyde's claim that Bu.[4] has a Siberio-Nubian origin, the first attempt to determine the position of Bu. was made by Ph. L. Barbour[5] who suggested the possibility of a connection with the Muṇḍa languages (Santali etc.). In spite of the great anthropological difference between Burusho and Muṇḍas this hypo-

---

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

thesis is not *a priori* inadmissible, considering the fact that Muṇḍa influence has been traced in Tibeto-Burman dialects far towards the North-West. But the specific accordances between Bu. and Muṇḍa are so insignificant that Barbour himself concludes with a *non liquet*. 197

Trombetti's attempts to compare Bu. with Dravidian and Andamanese [1] are not accessible to me, but I have not been able to detect any similarities between Bu. and Dravidian.

It was only natural that attempts should be made to connect Bu. with the Caucasian languages, or more correctly, with one of the linguistic families belonging to Caucasia. There is nothing improbable in the idea that languages of a Caucasian type should have extended eastwards through Iran before the advent of the Aryans, and that a remnant of them should have been pushed up into the uppermost valleys of the Indus system. There can be no doubt that Bu. was formerly current over a larger territory than at present. But we must remember that in any case the connection between Bu. and Caucasian must have been cut off several thousand years ago, and that, consequently, we cannot expect the relationship, if there ever was one, to show very clearly.

Marr [2] has expressed his opinion that Bu. belongs to the "Japhetitic" group among which he includes the Caucasian languages also, but, as far as I am aware, he has not yet tried to prove this in detail, so I need not discuss his theories. Zarubin [3] simply accepts this thesis and claims a typological affinity between Bu., Dravidian, Muṇḍa and Abkhaz.

The most interesting, and I believe most recent attempt to compare Bu. and Caucasian has been made by R. Bleichsteiner [4] who,

[1] Le Origine della Lingua Basca p. 12, Elementa di Glottologia p. 63, quoted from Bleichsteiner (v. below) p. 292.

[2] Яфетический Кавказ, p. 36.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

197 accepting Marr's views, deals with the subject in some detail and enumerates a long list of Bu.-Cauc. accordances.

The great number of Cauc. languages and their extreme variety may in one way be said to render his undertaking comparatively easy. On the other hand the same circumstances undoubtedly detract considerably from the value of the conclusions drawn from a comparison between Bu. and words and forms culled from the Cauc. languages in their modern form. Possessing only a most superficial knowledge of Cauc. languages I shall not endeavour to discuss all the points raised by Bleichsteiner, but it may be useful to consider a number of the most important ones in order to gain an impression of the tenability of his thesis. I shall try to give a fair selection of his arguments and not to leave out any of his best points.

It must be remembered that the Bu. and W. material which Bleichsteiner had at his disposal was far from exhaustive and not always correct.

I shall deal with Bleichsteiner's comparisons in the same order in which he presents them.

Phonology. The similarities between the phonetic systems of Bu. (including W.) and Cauc. mentioned by Bl. are very vague and of little interest. This does not, however, disprove relationship. Nobody could find out from the phonetic systems of Modern Irish and Bengali that these languages belong to the same family.

197
194

There is, however, one apparent phonetic accordance between Bu. and certain N.E. Cauc. dialects. Acc. to L.[1] we find in Bu.-W. a curious change of 'initial voiced sounds to their voiceless counterparts when they become medial', e.g. W. buttu *day:* he-puttu *to-morrow.* Bl., p. 296, connects this change with that of a *final* media into a tenuis before a suffix, e.g. in Kürin rab *needle:* pl. rapini. I had also been struck by this parallel, but further consideration made me doubtful of its significance. In the first instance the Bu. change affects an *initial*, the Cauc. a *final* consonant. Then, as pointed out by L., Bu. often renders a foreign initial

[1] § 10.

tenuis by a media in loan-words. Thus Bu. ba
a *turban* < Shina paẓo; Bu. gu'pas, W. γu·pas (Leitner kupásya) *cotton* (*thread*) < Indo-Aryan, cf. Skr. karpāsa; Bu. gi·li *peg* < Shina ki·li, etc. Probably Bu.-W. initial surds have become voiced in certain, as yet unknown, circumstances.[1] This change has taken place late enough to affect even loan-words, and cannot go back to a common Bu.-Cauc. period. 144 197

Morphology. I. Nominal Classes. The Bu.-W. system of nominal classes is undoubtedly in general accordance with that of several N.E. Cauc. languages. I admit that I have always been impressed by the similarity in this respect between Bu. and Andi, which together with some other Daghestan languages has four classes: 1) m., 2) f., 3) animals and some dead objects, 4) all the rest.[2] 193 197

But we must not forget: a) That similar systems of classification appear in other languages as well. b) That it has not as yet been shown that the 4th class of Andi etc. is based upon the same conception as the Bu. y. class.[3] c) That other N.E. Cauc. languages have up to eight classes and that we are not in a position to assert that the four-class system in the original one. d) That the formation of the classes and their use differs, as admitted by Bl., considerably in Bu.-W. and Cauc. The similarity between the *t* in Bu. gu-tε *this* (y.) and the *t'* in Archin ya-t' *this* (4th class)[4], has very little significance in view of the great number of varying class-elements in Cauc. which differ altogether from those in Bu.

On the whole I am inclined to believe that the existence of nominal class-systems in Bu. and Cauc. cannot be taken as more than an indication of the *possibility* of relationship.

II. The parallelism between the use of possessive prefixes in Bu.-W. and N.W. Cauc. is less striking than that mentioned

[1] Cf. also ki·nε h. *this*: gu-sε x., gu-tε y. — But note tiṣči *span* < diṣti- (v. below p. XXIII!)

[2] Cf. Bl., p. 299, Dirr., Einführ. in die kauk. Spr. p. 183.

[3] Жирков, Грамматика Даргинского языка does not give any information on this point.

[4] Including, *inter alia*, sexually immature animate beings — a conception unknown to Bu.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

193
197

above[1] between Bu. and Melanesian. Bl. mentions the 'remarkable identity between Bu. 3 sg. i- and Cherkhess ji-, Abkhas j-[2] but forgets to mention Ubykh gi- which points to a different origin of the Cherkh. and Abkh. forms.

III. The number of plural suffixes in Bu.-W. is very considerable[3]. It seems reasonable to assume that many of them have been converted to this use at a comparatively recent date, and the similarity which Bl. detects between Bu. -a, -i[4], -ik, -ko, -nts, etc. and Akhwakh -a, Chechen -i, Abkhaz -k'ua, -cwa[5] is not very impressive.

IV. Declension. The use of a special Agential case for the subject of a transitive verb is common in Cauc. In Bu. it is the rule when the verb is in a past-base tense, and it is found occasionally with present-base tenses.[6] The construction of the transitive verb varies, however, very much in the Cauc. languages[7] and in most cases it is passive in contradistinction to Bu. In Shina, where the construction is very similar to that of Bu., it may be due to the influence of a Bu. substratum, but this cannot be the case with Tibetan. Moreover, we must remember that a passive construction of the past tenses with the subject in the agential case is also used in most Indo-Iranian languages. I do not think, therefore, that the partial agreement between Bu. and Cauc. in this respect affords any strong indication of relationship.

The phonetic similarity between the Bu. agential ending -e and the -ē, -iē, -a, -o etc. of certain Cauc. languages may easily be accidental.

V. The Adjective. The expression of the comparative by the formular 'x is big *from* y' is common to very many languages besides Bu. and N. E. Cauc.

[1] V. p. X.
[2] Bleichsteiner's j = our y.
[3] §§ 27 sqq.
[4] Only in hiri *men*.
[5] Only of rational beings.
[6] § 60.
[7] V. Dirr., pp. 62—76.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

I cannot perceive any striking similarity between the Bu.-W. type šika-m *grass-ish*, i.e. *green* and Mingrelian čil-am-i '*married* (*man*)' from čil-i *wife*. 193 197

VI. Numerals. The vigesimal system is used in Bu. and in most Cauc. languages, but also in a great number of other languages, e.g. in N. W. India, and it cannot be used to prove genealogical relationship. [802]

VII. Pronouns. Bl. compares the Bu. pronouns with Cauc. ones. Opening, at random, a grammar of the West African Ewe language, I cannot help thinking that one might make out as strong a case for comparing the pronouns of this language with Bu. Cf.:

	Bu.	Udic	Kürin.	Tsakhur	Awar	Ewe
I	jɛ[1]	zu	zun	zə	dun	nye
Thou	uᵊŋ, gu-[2]	un	wun	γu	mun	wo[2]
We	mi	yan	čun	:ši	nit:	miawo (Abure ame).
You	ma	wàn	k'uᵊn	šu	nuž	mía (,, ama).
He, etc.	iᵊ- (nɛ etc.)	šeno	am(a)	man(a)	doṉ	(y)e.
They	uᵊɛ	šonor	àbar	manbo	dol	wo.
Who?	amin	šu		ha-: šu-nä	amẹ	ka.

VIII. The Verb. Bl.'s comparison of the Bu. infinitive in -as, (which is a noun taking case suffixes) to the datival form in -as, -es of some Daghestan languages is not convincing.

Somewhat more striking is the accordance between Bu. n- which forms the Past Ptc. and Georgian na-, used in the same way. But we must remember, that the odds are greatly in favour of finding some elements resembling those of Bu. among the heterógenous mass of Cauc. languages, between whose different groups the relationship has yet to be established.

An objective conjugation is found both in Bu. and in S. Cauc. (Georgian). I know nothing about the history of the Georgian forms in question, but the addition of an element denoting the object is

[1] Which might easily be derived from a conjectural *njɛ. — I agree with Bl. that there is no reason to derive the Bu.-W. forms — with Zarubin — from Ir.

[2] Which might be derived from *(u)ŋu, cf. N. Chinese ŋ- > w-.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

193
197

common to so many languages that is does not prove any genealogical relationship.[1] In Bu., with its pronominal prefixes, the development of an objective conjugation is only to be expected.

The pl. forms of the Bu. pronominal prefixes are, of course, used to denote a plurality of objects. This has certainly nothing to do with the Abkhaz constructions of the type i-z-bl-ueit *I burn it* (: *it- I burn-ing*): i-z-bəl-k'-ueit *I burn several things*, where *i-* is the pronominal prefix denoting the object.[2]

An interrogative particle -a, -e is found in most Indian and Ir. languages adjoining Bu. It might, of course, be considered to be of Bu. origin, but this is by no means certain, and the similarity to the -a, -ë of some Cauc. dialects may easily be accidental.

Vocabulary. Still more dangerous than the comparison between structural and inflexional elements in Bu. and one or other of the numerous Cauc. languages is the search for lexicological correspondences at the present state of our knowledge of Cauc. If we have to reject most of the comparisons proposed by Bl., it does not mean that they are all necessarily wrong. It is quite conceivable that one may at some future date be able to sift them, and that some of them may, after all, prove to be correct.

But at any rate it will be necessary to apply other methods than those borrowed by Bl. from Marr. The derivation of Bu. huk *dog* from *hoγor in order to compare Budukh ḫor, Awar hoj, Mingrelian joγori, Sumerian ur, etc., and the association of this group of words with Bu. hal *fox* is only too typical of Bl.'s methods.

Bu. har *bull*, hare *barley*, herča *to weep*, huk *dog* are compared with Mingrelian ḫoji, k'eri, n-gara-gara and joγori, and huk *dog*, huyēs *herd of goats*, hu'äs *boy*, huṭes *foot* with Awar hoj, k'uj (*sheep*), 'oloqan (*young bull*) and ḫeṭe, without any attempt to establish any system of regular phonetic correspondences between Bu. and the Cauc. language in question.

[1] Cf. e.g. Pashai (Indo-Aryan) degg-ey-ām '*I see thee*', digg-im-aī *thou seest me*, etc.

[2] Note that the Abkhaz pron. prefix 3 pl. is r-, not k'-.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burushо AV7

Moreover several obviously Indian or Iranian loan-words in Bu. are used to demonstrate the relationship with Cauc. 197 114

On the whole, most of Bl.'s comparisons are unsatisfactory and are based on a slight and illusive similarity of sound. Cases like Bu. girkis *rat:* Karata herḳwa, Awar hinẋu, Varkua qurka; Bu. tatas *palm of the hand:* Georg. t'ot'i *paw*[1]; Bu. čumu (Shina čimu) *fish:* Mingrelian čḫomu etc. are not sufficient evidence for us to build far-reaching conclusions on. Some kind of connection is perhaps possible between Bu. bičil *pomegranate:* Georg brec'ouli[2]; Bu. tili *walnut:* Georg. t'ḫili; Bu. šoγorī *a kind of pear:* Budukh čüγür, Tabass. šeḫer[3], but such words may easily wander from one language to another.

I do not think that Bl. has succeeded in proving the probability of a relationship between Bu. and Cauc., and I very much doubt whether it is possible to prove anything of that kind at present. But the whole problem will certainly deserve a renewed and methodical consideration when the Cauc. languages and the connection between their different groups have become better known. And if we ever succeed in connecting Bu. with some other group of languages, it will be of the greatest importance for our understanding of the early history of Western Asia.

Our chances of ever being able to reconstruct older forms of Bu. either by comparisons with W. or by means of internal evidence in Bu. itself are not very promising. 197 193

Only in very rare cases is it possible to employ the latter method. We have mentioned above[4] that initial mediae may go back to older tenues.

Another case where a reconstruction seems possible is that of the pl. suffix -o.[5] Before this suffix certain consonants are palata-

[1] "Cf. Bur. *-to-to *paw*". Lorimer 2—4—1935.

[2] Acc. to Bl. himself this comparison is 'zweifelhaft'.

[3] Taken from Erckert's not very reliable material.

[4] p. XV.

[5] §§ 26 sqq.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

197
193

lised, n into y, ts into č, s into š. This seems to indicate that the original form was *-yo, which may have been preserved in γaiyo, pl. of γa *crow*.

Somewhat more doubtful is the supposition of a formative *-y- in the present base of verbs on the evidence of the change of n > y, k and s > š, ts > č, t > č, š, l > lj[1] in Bu. and W. It this is the case, the regular pres. base in -ič- must be a secondary, analogical formation.

Regarding the change of ny > y cf. Bu. ya: W. nya *bear*. But in internal position we have also W. ny > y, e.g. in žakuyu *asses* from žakun.

It is tempting to suppose that a·ltan, a·lta *two* and a·ltambo *eight*, wa·lto *four* are somehow or other related. a·ltər *twenty* must evidently be connected with a·lta, but it is quite uncertain whether it ought to be analysed as alt + tər, cf. to·r-umo *ten*. The similar ending of tsundo *five* and mıši·ndo *six* may be due to a secondary adaptation. The 'Ablaut' in hin h., hik z.: han x., y. *one*, and the 'Umlaut' in usko x., y.: i·ski z. *three*; tsundo h., x., y.: tsindı z. *five;* to·rumo: to·rimi *ten* are too isolated to render possible any explanation. Cf. also, however, ɛtimi *he made*, etc.: ɛtumo *she made*, possibly from *ɛtum-i, *ɛtum-mo.

As mentioned above, Nagir Bu. di·la *it is* (y.) di·lum it was (y.), W. du·wa, dułum are more original forms than Hunza bila, bi·lum.

Nor does the comparison between Bu. and W. carry us much further. Some of the phonetic differences between the two dialects have been pointed out by L.[2] But it appears impossible to reduce them to any fixed rules, and in most cases we cannot guess which form is the more archaic one.

This is the case with Bu. mišiндo, W. bišiндo *five*, and with the words where a long vowel appears in W.

W. isko *three*, tshendo *five* have probably got their palatal vowel

[1] V. § 210.
[2] §§ 501 sqq.

from the z. forms[1], and Bu. -susun *elbow*, bu'a[h][2] *cow* may also be more original than W. -sesen, 'bi·a'. 193 197

In some cases a group of consonants seems to have been better preserved in W.: Cf. W. ayast *my sister;* yainži *watermill;* γendeš *gold;* nya *bear* with Bu. ayas, yäiṇ, gγeniš, ya. But notice W. hučo (L. huti) *nine:* Bu. 'humčo. Bu. gγ- (acc. to my informant) may or may not be older than L.'s Bu. and W. γ-. For other details see below.

That biranč *mulberry*, W. branš derives from an older form *mranč < *mrač is proved by Kho. mrač, from which the Bu.-W. word is evidently borrowed.

But apart from such stray cases the reconstruction of older forms through internal comparison appears to have poor chances of success.

A great number of words are common to Bu. and Shina, and to some extent also to Khowar. When the vocabularies of Shina and the adjoining Indo-Aryan dialects have become better known, it may be possible to distinguish to some extent between words of Aryan and of Bu. origin, and this will be of importance for the history of the Indo-Aryan languages as well. Khowar, however, appears to contain a number of words which cannot at present be traced either to an Indian, Iranian or Bu. source. 192 197

Grierson has pointed out that the word for *iron* in the Dardic and Kafir dialects (Kho. čumur, etc.) is probably borrowed from Bu. čumar. This may very well be the case, but it is, of course, possible that the ultimate source of the word, which is probably connected also with Turkish timur, temir, may be some unknown language. Note, however, that Bu. has also an apparently genuine word for *gold* (γeniš), and it is by no means impossible that the pre-Aryan population of the Hindu Kush region, of which the Burusho are the last relic, may have known the use of some metals.[3]

[1] V. above p. XX.

[2] Acc. to Lor. (2—4—1935) bu'a(·) is the gen. of 'bua, bua.

[3] It is a curious fact that Bu. girmi- *to write* is genuine, and yet cannot be derived from any known Bu. word. The similarity to Arm. gir *writing*, Finn. kirja *book* must, however, be accidental, and it is improbable that a word with this meaning would go back to very remote antiquity.

192
197

L.[1] mentions a few Shina words which are suspected of being borrowed from Bu. Very probably Bu. has exerted a very considerable influence on the vocabulary of Shina, but at present it is in many cases impossible to tell to which of the two languages a certain word originally belongs. ǰakun, jakun *ass*, which is found only in Bu. and Shina, while derivatives of Skr. khara- and gardabha- are used in other Dardic dialects, has evidently been borrowed from Bu.[2] And Bu. γamu, gγa·mo[3] *ice* is certainly the source of Gilgit Shina gamuk, corresponding in meaning to *sor* in those Shina dialects which are further removed from the Bu. speaking territory.

Similarly the Bu. verb bisərkas *to cut corn* shows that Bu. bisarš, W. bisarč *sickle* is the source of Shina bisa·č. It is also probable that some Shina words with initial γ- have been borrowed from the corresponding Bu. ones, and the same applies to a great many other Shina words of un-Aryan appearance.

On the other hand the number of Shina words in Bu. is certainly very great, as may be seen from the Voc., and W. contains some loan-words from Khowar.

Some of these loan-words in Bu. are of special interest because they are not found in modern Shina, at any rate not in the published material, or because they have preserved older sounds, or meanings.

Such words are e.g. Bu. sinda *river:* Sh. sin[4]; aiyaš *sky:* Sh. agai < Skr. ākāśa-. Reg. Bu. gu·pas, W. γu·pas *cotton* v. above. — Bu. giram, gira·m *clan, village* is not found with this meaning in Shina[5]. Nagiri Bu. gəru·m, W. ga·rum *hot* (Hunza Bu., with a curious reduplication, gəru·rum!) seems also to have been taken over from Shina at a time when gi·rom *perspiration* had preserved a more general meaning. Bu. me·š *skin-bag* has retained the -š-

[1] P. L.

[2] Cf. Grierson, LSI. VIII. 2.

[3] With the peculiar Bu. gγ, see below.

[4] But Bu. buro·ndo *finger-ring* may be the source of Sh. baro·no, which has passed through the Sh. change of nd > n.

[5] But cf. Sh. giro·m *cow-pen*, v. Voc. s.v. gira·m[3].

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

which would have been lost in a modern Sh. word, and also a very ancient meaning of the word.[1] Bu. tiṣči, (cf. Skr. diṣṭi-), W. teṣčik, teštik *span* may have been borrowed from an older form of Sh. drṭ, cf. Kho. diṣṭ. Bu. *-phoʳi(ŋ) *shoulder* cannot have been borrowed from modern Sh. pyō·lo or Kho. phiʳu, etc.

If Bu. bada *pace, step, sole* (*of foot* or *boot*) is borrowed from a form corresponding to Skr. padá- *step, footprint foot*, etc.[2], as I think is likely, this would indicate a very early contact between Bu. and Indo-Aryan.[3]

Very curious is the relation between the initial consonants in Bu. pfəri *pond*, pfəriš *duck* and Sh. bəri, baʳuš, especially as we do not know the origin of the words.

It is noteworthy that the phonetic system of Bu. agrees so closely with that of Shina and of the Indo-Aryan languages in general — that Bu. should e.g. distinguish between aspirated and unaspirated tenues, between cerebrals[4], dentals and palatals. Did Bu. originally possess aspirates and cerebrals, or did they come into the language through the influence of Indo-Aryan?[5] Bu. *pf* as a variant of *ph* is, of course, of Shina origin.

The morphological parallels between Bu. and Shina are also numerous and important.[6] Some of them exhibit traits not shared by Shina with the adjoining I. A. dialects, and it is quite conceivable that Bu., the ancient language of at least a large part of the Shina country, influenced the speech of the invaders; in other words that Shina developed on a Bu. substratum. But, of course, morphological influence may also have worked the other way. — Cf. also the possible trace of Khowar influence on W. forms mentioned by L. § 536.

[1] Cf. Skr. meṣa- *sheep, fleece*, but Slav. měxŭ, etc. '*skin-bag*', Lith. maišas *bag*

[2] Reg. b- for p- cf. Bu. giʳl *peg* < Sh. kiʳl etc., see above.

[3] The similarity of Bu. -akin, pl. -akimiŋ *liver* to Skr. yakn- must, of course, be considered accidental.

[4] Including č and j, as in Shina.

[5] Cf. the secondary development of cerebrals in Tibetan, Wakhi, etc.

[6] V. p. LI.

192
197

L. is quite right in maintaining that Wakhi, the Iranian neighbour of Bu. has not made 'any general impression on it'[1]. Some loan-words from Wakhi do, however, occur. L. in his Voc., has noted war *ram* and ruś *Ovis Poli* from Wakhi waʳr, ruś. To these words may be added buʳi *scapula, shovel* < *puʳi, from an older(?) form of Wakhi peʳi *wooden shovel*, and ʂap *horse-shoe* (cf. Kho. ʂapuk *hoof*) from Wakhi *ʂap < Av *safa-*. As I shall try to show elsewhere Ir. *f* seems to have resulted in *p* in Wakhi I am also inclined to believe that the present base -wərč- *to become tired* is borrowed from Wakhi wərč- (< *ava-rič-), and that the past base -war is a back-formation. Wakhi watsiʳ, wuʳts agrees with W. wets *calf*, but it is doubtful whether this is a true Wakhi word. Bu. urʳk, urk *wolf* may come from Ishkashmi urk, or from a lost Wakhi form.

Several Bu. words seem to belong to some Iranian dialect which cannot be accurately determined.

Thus mɛl *wine* points to an Ir. dialect which, like Munji and Yidgha, has *l* for original *d* (cf. Av. maδu-), and the same is true of laman *skirt*, -lamat *lap, front*, (var: -laʳmat *skirt of choga*). The varying forms render it improbable that what we have here is simply Psht. laman, borrowed through Shina, which has laban, with dissimilation.

On the other hand we find W. veʳri *smell*, which it is tempting to derive from Ir. *βēδi < *baudya-. Cf. Kho. woʳr < *βōδ.

γoro *stone* may be of Ir. origin, and likewise W. xork *grass*, Bu. xurk *broken straw*, while W. deɨk *manure* is compared by Zarubin with Ishk. wūḍé]. And finally we have guʂpuʳr *a prince*, a word common to Bu. and Shina, which one would like to derive from a middle Ir. dialect form of an ancient *wisya-puδra-.

I have not been able to detect any influence of Bu. on the Iranian dialects of Pamir.

---

[1] It may be noted here that Bu. bras *rice* is probably of Tibetan origin (hbras).

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

In §§ 1 sqq. L. explains his notation of Bu. and W. sounds; and he does not claim a perfection which is unattainable when making the first serious attempt to describe a new and strange language. 194 197

The difficulty does not consist merely in recording the sounds actually heard, but also in distinguishing between essential "phonological" differences and variations within the range of a single phoneme and in detecting the system of phonemes. This is specially hard in the case of the vowels. L. has done wisely in giving his impression of the sound-varieties heard in each case, and I shall not make a premature attempt to establish the phonological system of Bu. vowels.

To a certain extent it seems possible, however, with the abundant material and the descriptions of the sounds given by L., to distinguish the vowel phonemes from the variations due to the position in the word or to the individual speaker.

Thus *a*, ʌ and *ə* seem to be variants of the *a-* phoneme, *ə* appearing especially before *r* (e.g. fər, gər, hər). The vacillation between ʌ and *ar* e.g. in giraṃ, giraʳṃ *clan, village*, gupaltiṇ, gupaʳltiṇ *trousers* and the rendering of Prs. badaʳm *almond* by badam would seem to indicate that they, too, are variants of the same phoneme. But on the other hand the difference is significant e.g. in gaʳn *a crow* (=ga+ʌn): gan, gan *road;* gaʳr *giddiness:* gər *marriage;* gaʳl *wound:* gal *juniper;* giraʳn *dear:* giraṇ *basket*, etc. It is possible that some speakers distinguish between an *a* and an *ar* phoneme, others not.

It is more doubtful whether *i* and *iʳ*, *u* and *uʳ* are to be classed as separate phonemes. Cf. e.g. hir, hiʳr *man*, hirum, hiʳrum *active*, giraṃ, giʳraṃ, etc. *village*, gili, giʳli *peg*, hurgo, huʳrgo *ascent*, hoʳlguṣ, hoʳlguʳṣ *battle*, gunts: guʳnts *day*, etc. Probably there is only one *i* and one *u* phoneme. The same applies to *e: er* and *o: or*.

Probably *e*(ʳ) and *e*(ʳ) are also variants of the same phoneme, cf. γeʳniṣ and γeʳniṣ *queen;* g(y)e, g(y)eʳ *snow;* heʳras, heʳras *to weep;* deʳk, deʳk *cooking-pot*, teʳlε, teʳlε *there*.

194
197

Apparently u and ɪ are unstressed variants of *u* and *i*, cf. e.g. gukɪ; gu·kɪ *these*. But in spite of cases like go·n, gun *dawn o* and *u* must be considered to be separate phonemes. The same is undoubtedly true also of *ai* : *e* and *e* : *ə* although we find, exceptionally, (personal?) variations such as tail, təil, te.il, te·l *such*, γai.iŋ, γe.iŋ *grapes*.

The vowel system of Bu. would thus appear to include the following phonemes; *a*, *e*, *i*, *u* and *o*. To these should probably be added *a·*, although quantity does not appear to be of phonemic significance in other parts of the system.

As regards the consonants L. is probably right in taking *ǵ*, γ, *q̣* to be variants of *g*, γ and *q* due to the proximity of *y*.[1] But the last mentioned sound is certainly a separate phoneme.

Regarding the cerebrals, aspirates, gγ and W. *ł* see below.

114
194
[115]

During my stay in Chitral in 1929 I had an opportunity to take down short lists of Bu. and W. words. My Bu. informant was a certain Abdullah[2] from Baltit. The other called his language Wə'čik·wa·r and his native valley Wərči gu·m = Ya·si·n.[3]

I worked with each of them for a couple of hours only, and I am, of course, aware of the utter insufficiency of my observations. But both of my informants had a very good and clear articulation[4] and on the whole my notations agree unexpectedly well with those of L. and Zarubin (whose material I had not at hand). It may not be devoid of interest, therefore, to compare some of my words with those given by L. for the sake of checking and corroborating his perception of the sounds.

194 Many words are identical in L.'s and my notation of Bu. E.g. to·rumo *ten;* ma·tum *black;* -ʂan *chin;* ha·γur *horse;* guš·pu·r *prince;* -'tatas *palm of the hand.* In some cases my notation of vowels differs slightly from L.'s. This may partly be due to individual latitude

[1] V. § 6. b.

[2] Brother of Ali Madat, cf. Texts, p. II.

[3] Acc. to Abdullah: Burušugum.

[4] I had less difficulty in recognizing their aspirates and cerebrals than those of some Dardic dialects which I had the opportunity of hearing for a much longer time.

194

of pronunciation, but I have no doubt that his forms are on the whole the more correct ones. Thus I have 'alto[1] (a·lto)[2] *two;* 'altar[3] (a·ltar) *twenty;* 'nanamuts (nanamuts) *eyeball;* -ltumal (-ltumal) *ear;*[4] har (har) *bull;* 'hari (hari) *barley;* gäri (gari) *pupil of the eye;* -ṣak (-ṣak) *arm;* sar (sar) *hare;* pharię (pfarię) *duck;* bi'sarę (bisarę) *sickle;* yän (yan, yen) *handle;* iski (i·ski) *three;* 'hatai·n (hatain) *thigh;* mi'tindo (mitiindo) hxy *six;* urk (u·rk) *wolf;* -'wuwum (-uwum) *elbow;* -lčumuts (-lčumuts) *eyes;* 'hunax (hunax) *arrows;* 'tsko (tsko) *three;* 'tsundo (tsundo) *five;* 'hundo (hundo) *nine;*[5] -multuräą (-multuraą) *nostrils;* joṭumuts (jo·tumuts) *small boy;* hurgätko (hurgas) *thick;*[6] -lpureą (-lpuraą) *eyebrows;* ṣal (ṣa·l) *stomach.*

As far as my material goes I heard cerebrals in all words where they are given by L.

Thus: -yäṭis (-yaṭis, etc.) *head;* -mupuṣ (mu·puṣ) *nose;* o·ṭis (-oṭis) *my foot;* aṣ (-aṣ) *my neck;* ḍoḍo (ḍo·ḍo) *throat;* 'amiṣ, 'gumiṣ (-amiṣ) *my, thy finger;* muč (=) *fist;* tiṣči (=) *open;* čiṣ (čiṣ) *hill;* bi'ranč (biranč) *mulberry(-tree);* baṣ (=) *bridge;* manč (manč) *gden;* ha'riṣ (hari·ṣ/ṣ) *spade;* ṭi'ąan (ṭiąan) *egg;* mal'taṣ (=) *clarified butter;* ṣa'pik (=) *bread:* ṣi- (ṣi-) '*to eat*'; -eṭar (-aṭar) *to.*

Besides these I heard a cerebral in čhur (čur) *knife;* ṣi'kurk (ṣikurk) *yellow, brass;* bu'ṣai (buṣai·i) *field;* peṣo (peṣo) *pear;* ju·w (ju) *apricot;* bu'ṣo·ṣo (buṣo·ṣo) *calf;* 'aṣo, go·ṣo (-aṣo) *my, thy brother;* ṣi'qam (ṣiqam) *blue;* ṭi'li (ṭi·li) *walnut.*[7]

My notation of aspirates agrees with L.'s in khan *castle;* a'phoi (for -phoriq?) *my shoulder;* -phi'niko *hair;* tham *king;* phu (phu, pfu) *fire;* phati (pfatiq) *ashes,* etc. But I heard aspirates also in thas (tas) *smoke* and thalo (talo)[8] *seven.*

On the other hand I have rarely noted čh, čh: čap (čhap) *roof;* čumo (čhumo) *fish;* čar (čhar, čar) *high hill;* čumar (čhumar, etc.) *arrow.*[9] But note the loan-word čhur (čur) *knife.*

[1] With a deep *a*.

[2] Lorimer's forms are throughout given between brackets.

[3] First *a* palatal, second *a* velar.

[4] E.g. 'altumal *my ear;* 'miltumal *our ear;* gunma 'moltumal *the women's ear;* 'eltalik ine 'hive 'iltumalig *both of this man's ears.*

[5] All three with advanced *u*.

[6] In: 'ine 'hive buṭ h° ya'yeg bi'čan *this man has very thick hair.*

[7] But cf. W. ta'le below p. XXIX. — "I now support all the forms given by you except ṭili". Lor. 2—4—1935.

[8] But cf. LSI., Bu. thalo, W. thale. — "thas thalo are said to be correct". Lor. 2-4-1935.

[9] L. W. čar, čumar. — "QUB admits that the difference between *č* and *čh* and *ć* and *ćh* are slight, and in pronouncing on them his reactions are usually much slower than in the case of other aspirates. I can hear no difference as a rule" Lor. 2—4—1935.

194

I heard, with L., ɣ in qarɣarmuta *hen;* ti'ɣam *blue;* aɣ *iron arrow-head,* aɣat (-akat, -aqat?) *my armpit,* but not in to'hak (tohaq) *oak.* My aqhat *my mouth* corresponds to L.'s xat, but in a letter L. states that a variation between *x* and qh appears in several words, e.g. in xam, qham, kham *cooked, repatable.*

Corresponding to L.'s γ, γ.[1] I distinctly heard a voiced velar affricate in my Bu. informant's pronunciation of ᵊγa'mo *ice;* ᵊγe'nii *gold;* ᵊγa'ing *grape;* ᵊγi'n *thief;* ᵊγaṭenê *sword:* L. γamu, γenii, γai.iŋ, γin (gin),[2] γaṭenê.

In words ending in a vowel I generally heard a faint final aspiration: gyth *snow;* bu'sh *ear;* ya' *bear;* as' *ass;* amt' *my teeth;* ta'mt' *bear* (L. gyt, bus, ya, as, -mt, -damt). But after an initial h I heard ha *house* (= L.).

The peculiar sound ɹ, described by L. § 6, b, I heard as a kind of fricative retroflex r, which I have noted r: bar *millet;* ara *my father;* bay, -ay. But it was, of course, impossible to determine the exact nature of this sound in the time at my disposal.

I noted a slightly palatal ʷ, ɣ in han *ear;* khan *castle;* gan *road;* and also in gaɣ'i *axe;* aɣ'i (ᵊ-ɣi) *my beard.*[3]

In bal' *apple;* ha'val' (hovalt) *cloud* the final *t* was weakened, possibly implosive. I heard no ɣ in do'um (do.yum) *right* and ya'vum (yauyum) *left.*[4]

The ɣ in čuɣudar (čuγudar) *peach* is probably due to a mistake on my part.[5]

In W., also, my notation of vowels in some cases differs slightly from that of L. or of Zarubin. E.g. yaṭes *head;* -as *heart;* sende *river;* γendeš *gold;* hare *barley,* har *bull;* ha'γoγ *horse;* huk *dog;* bui *cat;* gan *road;* bu'rum *white;* ma'tum *black;* ba'rdum *red;* ha'lanta *moon;* čar *cliff:* L. -γeṭie, -as, sind, γendiš, hare, har, haγur, huk, bui, gan, burum, matum, bardum, halanta, čar; Z. yaṭes, as, [illegible], —, hare, har, haγur, huk, bui, gan, buγum, ma'tum, bardum, halanda, —.

I heard cerebrals in yaṭes *head;* -hu'ṭes (L. hu'ṭis, hu'tis) *foot;* u'mesi (L. -amii) *my finger;* ti'ṭkin (Z. ṭin'gan) *egg;* ṭeṭo, (L. aṭo,

[1] Cf. § 6 c.
[2] "γaiŋ and sometimes 'γeiŋ'". Lor. 2—4—1935.
[3] Acc. to Lor. (2—4—1935) ᵊgai (v. Gramm. p. 136) is a slip.
[4] "When there is u's and o's about ɣ tends to sound to me as a corresponding ɣʷ". Lor. 2—4—35.
[5] "QUD. says the word is definitely only čuɣudar, but I think I have heard -γ- too. Lor. 2—4—1935.

ačo, Z. aču) *my brother;* iṭ'kark (L. ṭɪkərk, ɪṭ-, Z. iṭ'kark) *yellow,* and besides in γendeṭ *gold* (v. above): -muṣṭ (Z. muṣt) *fist;* 'teṭčik (Z. 'teštik) 'span'; pha'riṭ *duck;* branṭ *mulberry* (both with a cerebral in Bu.); uγk (Z. urk) *wolf;* čirč (Bu. čiṭ) *ladder;* 'aṇi' (Z. ni') *my beard;* haγoṣṭ (L. Bu. haγuts) *hill.* 194

'aččiṇ (Z. ačting) *waist;* barts (L. bərč, Z. barč) *bridge;* bisarč (Bu. bi'sarč) *sickle;* ṭičam ba (L. ṭičam ba, Z. ṭičam, cf. Bu. ṭɪč-) *I am eating;* is'qam (L. ṭɪkam, Z. iṭ'qam, Bu. ṭi'qam) *blue* are probably misheard or miswritten forms.

Aspirates occur in a'phenas (Z. 'penas) *my hair;* a'phoγonas (Bu. phoi) *my shoulder;* khan *fort;* tham *king;* thame'ye' *prince;* 'pha'riṭ *duck.* No aspiration was heard in 'čumu *fish;* čap (= Z.) *meat,* čumar (L. čumar, Z. čumar) *iron.*[1]

Corresponding to Bu. γ. I heard γ in γa'iṇ *grape;* γen (Z. γen) *thief;* γendeṭ (L. γendɪṭ) *gold;* γa'tenṭ (Z. γ/ya'tenṭ) *sword;* γa'mu (= Z.) *ice.*

No final [b] was noted in gye (Z. gyê') *snow;* as (= Z., L.) *sun;* a'me (Z. mä) *tooth;* nya (= L., Z.) *bear;* ha (= L. Z.) *house.* But de[b] *village* from Pre. and 'bi-a' (L. bi.a, Z. bi'ya) *cow* with glottal stop. This sound was also noted in ba' (L., Z. ba) *millet,* corresponding to Bur. *r.*

Z.'s velar *l* (l) I have only noted in a'hi'l (Z. hil) *my lip.* Not in hal (Z. ha'l) *fox;* te'le (Z. teła) *walnut;* 'ta'lo (L. talɪ, Z. ta'lu) *screw;* a'u'l (L. au.u'l, Z. awul/l) *my belly.* It is quite probable that Z.'s Russian ear was able to distinguish different kinds of *l* better than L.'s or mine. On the other hand he may have been led astray by the lack of a "neutral" *l* in his own language. Before a surd I heard a voiceless *l*[?] in aḷto (L. alto; Z. a'tan) *two;* aḷtambo (L. alɪtambe, Z. a'tambu) *eight;* 'waḷto (L. walt, Z. wa'to) '*four*'; ha'raḷt (Z. haraṭt) *cloud;* ba'ḷt (Z. baṭt)' *apple;* -ḷtumal (L. -ɪtumal, Z. 'tumal) *ear;* -ḷči (L. -ɪčin, Z. lči) *eye.* Z., too, has ordinary l in ha'lanta (L. ha'lanta, Z. halanda) *moon;* tu'l (= Z.) *snake.*

q was noted in 'paqo (L. pako, p'ha'ko $p^{h}\tilde{a}_{\circ}$, Z. 'paku) *bread;* is'qam *blue* (v. above), qar'qa'mus (Z. qa'γqamus) *hen.*

I have yut (but Bur. L., Sh. jut) *grass;* ya, ia, (L. ja, Z. ía) *I, my,* in ya 'yaṭos *my head,* y/ia' bap *my father,* y/ia 'pako 'ṭičam ba *I am eating bread.*

[1] Cf. above p. XXVII.
[2] Cf. § 468.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

194

Note also my ˈayumus (Z. ˈyungus, but Bu. -umus) *tongue*.

A few of the words given above have not been noted before, or only by Z. In order to corroborate the forms heard only by *one* previous observer I give also the other words in my list which are not included in L.'s vocabulary:

-muš *nose;* -xat *mouth:* -sesen *elbow;* ˈaken *liver;* sau *sand;* guʀ *wheat;* ˈgirkis *mouse;* sar *hare;* aˈyast *my sister;* all identical with Z.'s forms. -šak (Z. šakˈ) *arm;* -ˈuʀru (Z. ˈuru) *nail;* ˈirič (iˈrič) *kidney;* bap (Z. baʀp) *father;* yainži (ˈyanji) *water-mill;* daˈγom (Z. daˈγum) *flour*.

Göteborg, 30th November 1934.

Georg Morgenstierne.

ADDITIONAL NOTE.

In a letter from Hunza of 18th Nov. 1934 Colonel Lorimer gives some additional information about some Bu. sounds, from which I quote the following passages: "I have now heard from QUB and one or two others in Aliabad initial 1) ^{s}γ- (going also into > gʀ- > g-), medial -γ- seems to remain plain spirant. 2) ^{k}x- (or ^{q}x-?). This QUB always says is "xe", x-, but I tend to record it as kh-. Medially, to both our minds it changes into -q- (*-xəras, ixəras *to cut up*, but ppc. niqər; xəraṭas *to stick, adhere*, but cs. *-aqəraṭas).

Then there is ph-, pf-, f- which is an instance of the same phenomenon. I haven't noticed any tendency to *w-* > ^{b}*w*, and there are no dental spirants".

[Ad p. XII, l. 12. — But cf. e. g. Luganda; v. BSOS. VII, p. 917. — Corr. note].

Göteborg, 18th January 1935.

Georg Morgenstierne.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

INTRODUCTION

THE LAND and the PEOPLE.

Burushaski, the main subject of the present work, is spoken in the States of Hunza and Nagir, which give a name to that tangle of snow-crowned mountains, long-drawn glaciers and deep-cut river beds that form the western extremities of the Karakoram and Kailās ranges of the Geographers. In elevation and ruggedness the tract may compare with any other portion of the earth's surface. The ground covered by the twin States is roughly defined by the lines 74° 10′ and 75° 40′ of East longitude and 36° and 37° 10′ of North latitude. Of this area the bulk falls to Hunza. Hunza marches on the North with Afghan and Chinese territory, from which it is divided by an immense mountain barrier traversable only by a few very high passes — the Irshad (16,060 ft.), the Kilik (15,600), the Mintaka (15,430) and the Khunjerāb.

The southern drainage from this range quickly assembles a few miles below Misgār to form the Hunza river, which proceeds southwards through the Hèrber or Gujhāl valley, or rather gorge. On its way the river receives reinforcement by tributaries from either side — the principal being the Batūra and Pasu glaciers on the West and the Shīmshāl valley on the East. About 15 miles East of Baltit, the capital of Hunza, the river changes to a general westerly course, and level with Baltit it receives on its left bank the waters of the Nagir river which represent the meltings of the

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

133 Hispār, Barpu and other large glaciers. Henceforth until Chalt is reached, where it turns South, the river forms the boundary between Hunza on the North and Nagir on the South. Chalt itself and the Chaprōt valley which debouches into it belong to Nagir. Otherwise Nagir is confined, generally speaking, to the valley of the Hispar glacier and Nagir river and the northern slopes of the Kailas range, the crest of which forms the dividing line between it and Gilgit.

On the extreme East Hunza marches with the Oprang valley in Chinese territory and southwards with Baltistan, but the mountain range which separates these regions is scarcely surmountable (v. Text XXVIII). On the extreme West again, Hunza and Nagir territory terminates on a lofty range which runs roughly North and South and is only traversable with difficulty by a couple of passes, the Chillinji (17,000 ft.) and the Daintar (15,210). Beyond lies the sparsely-inhabited valley of Ishkoman, which again is bounded on its western side by a North and South range of mountains on the further side of which is situated the Wershigūm valley, known officially as the Yasin 'Ilāqa. This Wershigum valley is the habitat of the Werchikwār language, a variant form of Burushaski, to which brief reference is made in this work.

133 From the West of Hunza to the East of Wershigum is as the
487 crow flies a mere 20 or 30 miles, but the traveller will spend six days and cover some 115 miles in making his way from Chalt via Gilgit and Gupis to Yasin. Such is this country where cross-country travel is impossible and practicable routes can be found only by following the natural lines of least resistance, and that not without pain.

361 I have now placed our language on the map, approximately, but
162 greater precision is required. In the first place we have to take account of the fact that the bulk of Hunza and the eastern portion of Nagir are uninhabited and uninhabitable. Permanent population exists only on the elevated terraces that skirt in places the sides of the river valleys.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

In the second place we have to note that the population of Hunza and Nagir is neither linguistically nor ethnologically homogeneous. Viewing the territories as a whole, Burushaski occupies only a limited central position. It is legitimate perhaps to see in this an indication that the country has been subject to more or less peaceful penetration from the periphery, but that it has never been overwhelmed by any flood of conquest or organised immigration. We may picture Burushaski as here standing at bay — a language which has once covered a much larger area and has gradually been driven in on its least assailable territory, or has been displaced and pushed back to a final refuge. 162 174

The country with its physical savageness and poverty could never have attracted the ambition or cupidity of any sane conqueror, and with easier routes available to the West there is little reason to believe that any serious invader has traversed or even penetrated it in force. Against this argument, however, are to be set the efforts of the Dogras of Jammu and Kashmir to penetrate and master the country in the nineteenth century. Their aim was doubtless to strengthen their position in Gilgit. 177 721

The relative strengths of the languages current in Hunza and Nagir are set out in the following tables, which are based on figures collected for the 1931 Census, and on the results of private enquiries as to the language spoken in each individual village. 162

District	Number speaking			Total Population 1931 Census
	Burushaski	Shinā	Wakhi	
Hunza . . .	9,938	1,184	2,411	13,533
Nagir . . .	10,362	3,293	—	13,655
Total . . .	20,300	4,477	2,411	27,188

To obtain the absolute total numbers of known Burushaski-speakers 513 must be added to the total of the first column on

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

162 account of 512 Burushaski-speakers recorded in the 1931 Census as resident in the Gilgit Wazarat, and one as resident in North Kashmir. The total thus becomes 20,813[1].

The local distribution of these linguistic groups has now to be considered. On examination it will be found that they fall in the main within definite and unbroken geographical limits. In Hunza from the North southwards down the Herber valley, to and including Galmit the population are Wakhis, speaking Wakhi, with the exception of the inhabitants of Khudāabād (population 97), Nazīmābād (82) and Misgār (174). Proceeding down, southwards and westwards, through Hunza, the rest of the population are Burushaski-speaking with the exception of the two villages, Hīndi (977) and Māyūn (207) whose primary language is Shinā.

In Nagir there are no Wakhi-speakers, but the Burushaski-Shina dividing line falls at practically the same point as in Hunza, viz. at Mīnapin opposite Hindi. From and including Minapin down the valley, with the exception of Sikandarābād (406, a recent settlement) and Chalt (587), the people of Nagir are primarily Shina-speakers.

162 It is to be remarked, however, that these radical linguistic distinc-
191 tions are to a large extent masked, if not superficially deleted, by bilingualism. I believe that all Shina-speakers of both Hunza and Nagir readily understand and speak Burushaski. This is not so with the Wakhis, of whom only a few know the language of their neighbours. On the other hand the Wakhis have imposed their own language on the Burusho settled in Shimshal, and Wakhi elements are to be found in place-names in all the northern part of the country.

563 How far do these linguistic divisions represent also ethnic divisions? Are the Wakhi-speakers (Guwīcho, sg. Guīts, Guwi·čo, Gu.i·ts), the Burushaski-speakers (Burūsho, sg. Burūshīn, Buru·šo, Buru·ši·n) and the Shina-speakers (sg. and pl. Shèn, Ṣɛ·n) to be regarded as racially distinct peoples?

[1] The figure 26,076 given in the Kashmir Census Report 1931, Vol. XXV p. 237, appears to be incorrect. It is still incorrect if the figures for Werchikwar are taken into account.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

In the first case the answer is easy. The Wakhis are certainly 563
of totally distinct stock from the Burusho. Much more difficult
is the question of the relation of the Burusho and the Shina-speakers.
My visual impressions would lead me to regard the Shèn of lower
Nagir as an essentially different people from the Burusho of Hunza.
They seem to me to represent a distinctly lower type in regard to
apparent mentality and sanitary ideals. A large proportion of the
child-population of Minapin and the villages below it are cretinous
in appearance and dirty in person. I have not had an opportunity
of comparing the people of the Hunza Shèn villages of Hindi and
Mayun, either with their Nagir *vis à vis* or with their Burusho fellow-
"nationals". How far again is there any difference between the 184
Burusho of Hunza and the Burusho of Nagir? That is a question 157
which I cannot answer from any adequate personal observation; 361
but it is the general impression among European visitors that there
is a marked difference in temperament between the two peoples.
The Hunza Burusho are felt to be a happy and cheerful people,
their Nagir counterparts give an impression of something approaching
sombreness and depression. This alleged difference is attributed to
the effect of living respectively on the sunny and on the shady, in
winter almost sunless, side of the valley. It might also be in part
attributable to political conditions or religious outlook.

There is a further criterion which is of dubious value, but may be 125
worth brief mention here. In 1924 I took a number of anthropometrical 141
measurements of men of all parts of the Gilgit Political Agency.
The subjects were members of the Gilgit corps of Scouts, and so
were all men in their prime, mostly in early manhood. These measure-
ments were recorded uninstructedly according to an antiquated scheme
of Topinard's and modern experts have judged them not worth wasting
time and labour on, but they were taken on a consistent technique and
are therefore comparable among themselves. I shall quote here only 141
measurements which, in the nature of things, it seems probable are rea-
sonably correct. The figures given are averages obtained by dividing
the sum total of measurements in each case by the number of subjects.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

141

District	Number of Subjects	Head Measurements in Centimetres			Cephalic Index	Height in Feet & Ins.
		Ant.-Posterior Diameter	Transverse Diameter	Frontal Minimum		
Hunza . .	138	19·135	14·833	10·423	76·834	5′ $6\frac{8}{11}$″
Nagir . .	152	19·411	14·256	9·536	73·424	5′ $5\frac{1}{2}$″
Yasin . .	78	19·035	14·788	10·413	77·714	5′ $6\frac{1}{10}$″
Gilgit . .	40	19·362	14·493	10·075	74·931	5′ $4\frac{15}{16}$″
Astor . .	43	19·005	14·494	10·197	76·306	5′ $3\frac{1}{2}$″
Punial . .	65	19·165	14·611	10·342	76·286	5′ $5\frac{13}{15}$″
Kuh-Ghizer	78	19·099	14·791	10·217	77·432	5′ $5\frac{10}{11}$″

Without allowing too much importance to these figures, we may tentatively accept a considerable difference between the Hunza and Nagir subjects in cephalic index and its factors, in frontal minimum and in height. The Nagir type seems to approximate to the Gilgit type, while the Hunza type approaches to that of Yasin. These conclusions receive further support from a detailed examination of the figures. I have plotted the numbers under each figure of the anterior-posterior and transverse diameters of the head, and of the height, and very similar curves are yielded by the Hunza and Yasin records; and the same holds of the Nagir and Gilgit records.

141 My own visual impressions, however, for what they are worth,
184 would suggest that in physique and feature there is a perceptible
157 difference between the Burushaski-speakers of Hunza and the Werchikwar-speakers of Yasin. It is to be noted that both the Hunza and Nagir subjects are almost entirely Burusho; only a few individuals of those measured came from the Shina-speaking villages. This difference in the attitude to a very mild form of militarism may indicate an inherent difference of temperament. On the other hand it may be due to economic or other unsuspected causes.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

Among the vast and savage mountains of the Western Karakoram, 133
which are generally devoid of a blade of grass, and of which the surface 241
by falls of cliff and boulders, the slipping of detritus, and the down- 233
pouring of mud-floods, is kept in a constantly raw and unstable state, nature has made it possible for a small population to maintain itself, in the sweat of its brow, by agriculture and the pasturing of small cattle.

Terraces, apparently the remains of glacial deposits, supplemented 312
it may be by downpourings from the mountain sides, have been left 241
here and there along the sides of the valleys of the main rivers, at a height usually of some hundreds of feet above their stony beds. Where water for irrigation can be obtained from side-ravines these tracts can be cultivated. Without irrigation no cultivation is possible. There are no rain-watered cereal crops and water cannot be raised from the main river. The surface of these terraces is not flat, but slopes down at every kind of angle from the hillsides till the terraces end in abrupt earth-cliffs descending to the river beds. As the ground has to be irrigated it also has to be more or less levelled, otherwise all the soil would soon be washed away. This is accomplished by constructing terraced fields, the lower edges of which are supported by revetting walls built up of the rounded stones available in the diluvium. This revetting is highly skilled work, and is beautifully carried out, and maintained in perfect repair by the Hunzukuts. The Nagirkuts seem on the whole to be less strenuous workers and less tidy-minded cultivators.

There remains the task of constructing channels to bring water 312
from where it is available, often miles away. These channels are designed with precision and executed with great resource and ingenuity, often being carried on revetted or galleried aqueducts across cliff faces. Having made your land and brought your water, it still remains to elaborate a system of distributing the water among the various communities or individuals entitled to a share of it.

Pressure of population in recent years has led to constant endea- 241
vours to devise means of providing water supplies for tracts of waterless but cultivable land. Where land and water have been

3: Lorimer L-3 (1929-4; 1934-5) 1935 AV7 Burusho AV7

241 brought together, the following are the principal crops grown in Hunza and Nagir: wheat, barley, two or three kinds of millet, buckwheat, broad beans, peas and various pulses, lucerne (yielding two crops) for fodder. Maize and rice are not grown at these levels[1]. Lucerne is often grown on the sloping unterraced hillside where water is insufficient for crops. Fruit is ~~also an~~ important item of cultivation. The apricot is universal, and fresh and dry the fruit is a staple food. Besides its kernels are collected and eaten, or crushed for their oil. Apples, peaches, cherries, cherry-plums and grapes are also extensively grown, but do not appear to be dried, though apples and grapes are stored in straw for some months. Pears, pomegranates and walnuts are cultivated in places. The mulberry is eaten fresh and is also dried and preserved. Poplars and willows are grown for their timber, and in the lower tracts the chenar.

233 Agricultural crops and fruit would not however provide a com-
237 plete subsistence. Goats, sheep and a small type of cow supply the necessary milk and fat products, particularly ghee, also hair for ropes and coarse cloth, wool for clothing, skins and hides for containing vessels, foot-wear and thongs. These cattle are kept in the villages during the cool and cold weather, when they are fed on such scanty natural grazing as is to be found, agricultural waste and dried leaves, and pay their way by providing milk and manure. During the hot months they are sent up in charge of herds to the few summer grazing-grounds (tēr, pl. tērming; terr, terrmiŋ), which exist in the higher
234 parts of some of the nullahs. There their milk is collected and converted into forms in which it will keep: ghee, dried buttermilk etc.

361 [1] I.e. from about 7000′ upwards. Chhalt, the lowest village in the country,
133 stands at 6560′. Māyūn and Hīndi are probably about 7000′ and Aliābād about 7500′. Baltit is 8000′ and Nagir 7550′. Misgār, the highest place at which the Burusho have been induced to live, is 10.158′. It is said that the Burusho women refuse to go where the apricot will not ripen, and there are few Burusho settled above 8000′. In Chupūrsan and Shīmshāl the Wakhis are found up to about 11.000′, which is probably the extreme limit at which barley will grow in this region. In recent years a little maize has been grown in Māyūn, Murtazāabād and Ganish.

Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burushe AV7

These various subjects of general interest and actively postulate the existence of a large vocabulary relating to agricultural processes, implements and products; irrigation, fruit culture and the management of live stock and the treatment of their products. 192

Crafts.

Any people who are in the main self-supporting must have developed, and must command, a number of essential crafts. Here it is only possible to enumerate very briefly the principal crafts practised by the Burusho. They include: 463

Building: wall-building without mud; house building, stone-and-mud walls and mud-plastering.

Woodwork: supporting pillars, roofing timber, shaped and unshaped, door-frames, doors and windows. Agricultural implements: ploughs and various forms of wooden shovel and pitchfork; wooden bowls and spoons. Wearing and milling apparatus.

Spinning: hair and woollen thread and twisting into yarn and ropes.

Weaving: woollen home-spun for clothing; hair-cloth for bags and mats.

Basketwork of willow twigs: various forms of baskets and creels.

Preparing skins: for bags for grain etc. and for holding water, milk etc.; also thongs, foot-wrappers and boots.

Metal work: a little iron-work.

Sewing: clothes.

Milling: water-mills are used for grinding flour.

Salt-washing: a method of obtaining salt from saline earth by dissolving it out is sometimes practised.

Gold-washing: the river sand is washed to extract gold-dust. This is done for the Tham of Hunza at certain places, by the lower classes only. I do not know that it is practised privately.

Wine-making and distilling: the latter is now prohibited.

Imports.

The Burusho are dependent on the outside world for their supply of metals and in general for all metal manufactures, e.g. plough- 439

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho

439 shares, sickles, shovel-blades, axes, adze-heads and cooking-pots. A few aluminium vessels may now be seen in the hands of the peasants. Any iron work done locally is done by the Bēricho (sg. Bērits; b'e·ri·čo, b'e·ri·ts), corresponding to the Doms of Gilgit, who provide the musicians and metal-workers of the community and are regarded as at the bottom of the social scale. They are probably, as elsewhere, of foreign (Indian?) origin. Carpentry, formerly also [335] within the sphere of the Bericho, is now generally practised by individual Burusho.

Cotton cloth, now used by practically the whole population of both sexes for shirts and trousers, is imported. Some foreign shoes and sandals may also be seen. All the sugar and most of the salt used are also imported. Both are in demand and the import apparently does not satisfy the public desire, the cost being no doubt the obstacle.

463 Tailors and washermen form no part of the indigenous social scheme, but nowadays one or two men can be found who have some skill in these crafts acquired abroad.

Arts.

531 I have seen very little of decoration or ornamentation in any medium, nor any aesthetic production which could be classified under the heading of the plastic arts. Embroidery until very recently was practised only in the harems of the élite. The ordinary women who are free to pursue, in the open and unveiled, their domestic functions and many kinds of agricultural work, are sufficiently occupied to feel little urge to concern themselves with such elegant triflings, but the girls and young women, before and after marriage, embroider caps for themselves with taste and skill.

Occasional specimens of wood-carving are to be seen, chiefly in the derelict masjids.

535 563 534 Of the other arts, dancing is a traditional and living institution, and is still practised on ceremonial occasions by even the highest ranks of society. The accompanying music is, however, supplied by the despised Bēricho. Occasionally the notes of a flute in the hands of an amateur is heard and the sitār is known.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

Sports.

Sports are represented by Polo for men who own or can borrow horses, and children's games. The women at certain seasons amuse themselves with games of ball and swinging. 526

Religion.

By religion the Burusko of Hunza are Muhammadans of the Isma'ili or, as they term it, Maulāi sect, to which, however, they were converted from Shia-ism only three generations ago. 779

With the Maulais, restrictions, formalities and ritual are reduced to a minimum. The masjids of the former Shia days have been abandoned, and have been replaced in recent years by "jamā'atkhānas". There are no mullahs of the ordinary type. Instead there are khalīfa (pl. khalīfātīng; xʌli·fa, xʌli·fa·tiŋ), who are more servants of the public — being called in chiefly to perform the necessary ritual at marriages and funerals — than its spiritual leaders or teachers. Spiritual authority rests with the Pīr, in this case 'Abdul Ma'ni, son of the late Shahzada Lais of Chitral. He himself now lives in Zēbāk. He replaced the honoured Pir Jalāli Shah, latterly resident in Ishkoman, who died in February 1931. Two of the latter's daughters were taken in succession as his principal wife by the present Tham of Hunza, which affords an indication of the Pir's status in the country. 795 793

Religious observances and prescriptions do not play any very evident part in the life of the Burusho of Hunza, but this does not appear to have any prejudicial effect on their character or conduct. They seem to have firmly planted in them the root of morality and the social and domestic virtues. The Maulais pay tribute to the Agha Khan, the head of the sect. The Burusho of Nagir are Shiahs (pl. Shiātīng; ši.a·tiŋ), a more rigorous and formal school, but they do not indulge in a fanatical interpretation of the duties and implications of religion. They mildly contemn the "mogi[illegible]" (Maulais) as misguided heretics and imperfect Muslims. 788 795 798

Social and Administrative Organisation.

The life of the people is based on the family, and then on the village or community groups which live within definite geographical 621

8: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

621 limits and were originally it seems centred round the *khan* (khan, fortress or strong-place). The general security of later times has led to the scattering of habitations seen in more recent settlements like Aliabad. Inside these village-units, such as Baltit, Altit, Ganish, Haidarabad etc. there survive the names of tribal or class divisions. How far these divisions play any significant part in the communal life of the present day is a subject that remains for investigation.

565 463 Society is recognised as divided into the following general classes:

1. Thamo: the Royal Family, including:
   i. the Karèli, the royally-born on both sides.
   ii. the Arghundaro, of commoner origin on the female side, but in Hunza children of wedlock.
2. Uyōngko or Akābirting — "The Great" — those who enjoy, or have the right to occupy, superior offices in the State, e.g. the posts of Wazīr, Trangfa, Yarpa and Farāj.

   These two classes do not work with their hands.
3. Bār, Bārè Sīs, — These cultivate their land and work with their own hands, but, if personally worthy, are eligible for appointment to posts by the Tham. They are not required to carry loads or perform any inferior class of work.
4. Shadarsho — a large class who get their title ("servants") from their eligibility for employment by the Tham as couriers to convey notice of his movements, carry messages etc. They are exempted from menial labour. This class is increasing by recruitment from the next below.
5. Baldakūyo or Tsilgalasho — these are liable to have to carry loads for the Tham and Uyongko, and to wash for gold. They are exempt from the payment of taxes. The Tsilgalasho are Baldakuyo who are in the employment of Uyongko families and then do not carry loads, but on quitting such employment they revert to the status and obligations of the Baldakuyo. The numbers of this class are declining. Their ascent into the ranks of the Shadarsho is now controlled by the Tham; formerly it was in the hands of the Wazir and Trangfa.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

6. Bērīcho — now of two classes: 565

i. ēgherasho bērīcho — musicians who provide music on all public occasions. 463

ii. ḍak ètasho bērīcho — blacksmiths.[1]

The functions of the Bericho are undergoing a process of extension. They now fetch firewood for the Tham and thorns for protecting enclosures. They also do plastering work for him. A few serve as sweepers. Their status is said to be rising. The Burusho will now eat food prepared by them, which they would not formerly do.

In both Hunza and Nagir the supreme power resides in an autocracy exercised by the Tham, or Mīr. The two royal families derive from a common source and are inter-related by subsequent marriages. This joint royal family claims to have come from Baltistan and to have been established in Hunza and Nagir for the last six hundred years. 643

Each village group is an administrative unit and the Tham is represented in it by one to three Uyōngko (Uyūmko) or Trangfāting (sg.s uyūm = *great*, trangfa). Under their direction these officials have Cherbuting (sg. cherbu, čərbu) who transmit orders to the public. Where the Tham owns land he has a steward, or personal representative, called a Yarpa, who again has subordinates under him to supervise the division of the water-supply. 631

For the settlement of cases and disputes of all kinds there is in Hunza a long progressive series of "courts", if one may use the term. First the case is dealt with by the heads of the two houses and the two families in conclave. Failing settlement it is referred to the Headman of the community (girāmè uyūm; giramɛ uyuˑm). Thirdly: again failing settlement, it is referred to the Headmen of the Four Clans (wālto girāmichīngè uyōngko; waˑlto giraˑmičiŋɛ uyoˑŋko) who proceed to the "gate" of the *khan* and adjudicate on it. 692

[1] The following are the phonetic renderings of the Burushaski words in the above paragraphs: 1. Thamo; karɛˑli; aryˈundəro; 2. uyoˑŋko *or* uyuˑmko; akaˑbirtiŋ; waziˑr; traŋfa; yərpa; faraˑj; 3. bavɛ sia; 4. ḕadərṣo; 5. baldakuˑyo; tailgalaṣo; 6. beˑriṣo; eˑyəraṣo; ḍak etaṣo.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

692 Fourthly: even after this an aggrieved party may carry his suit to the gate of Baltit Fort, where it is heard by the four Headmen of Baltit and the Kaḍako. Fifthly: if he has still failed to obtain satisfaction he can next submit his case to the Wazir. Sixthly: If the Wazir fails, where so may before him have failed, the case then goes to the final court — the Tham's Audience Assembly (Thamo maraka). Here it is heard and adjudicated on for the last time by the Tham, the Wazir, and the elders and officials of every *khan* in council, and a final irrevocable order is passed. It is said that in recent years the Tham has dispensed with the presence of the elders and officials and gives judgement himself. But I imagine this would not apply in a case of major gravity. All "courts" are held in public.

It is thus the policy in Hunza that only matters of serious importance should be referred to the Ruler and that he should be regarded as a final court of appeal. In this way his prestige and authority are not impaired by the constant decision of minor disputations or factious matters.

Character.

157 Of the character of the Burusho something has already been said in *obiter dicta* above. It may be summarily stated that the Hunzukuts are a cheerful, frank and straightforward people; intelligent, keen, and active, with a sense of fun and humour and a commendable spirit of tolerance. They are pleasant people to meet and work with. Among themselves they appear to be good-natured and forbearing, associating together in relaxation, and cooperating happily and amicably in work. They are fond of their children, but do not spoil them, and are considerate to the old or ailing.

000 For more than a month, while partially laid up, I have sat in the Rest House at Aliabad and from the verandah and through the windows seen the life of the place drift past me or concentrate in activity in the fields immediately in front. There is here no

garden, no fence, to interpose a barrier. The much-frequented 000
public way, following the further edge of an irrigation channel, passes within a dozen yards and beyond lie the fields of lucerne, wheat, buckwheat and pot-herbs descending gently in graded terraces. But the ground is beaten hard right up to the verandah edge, and the more adventurous take full advantage of the right of way when they can do so without intrusiveness. So here, almost within touch, pass men, women and children on their various occasions, none without a salute or a smile, or at least a shy recognition. Fifty yards off toil a joint family party, successively reaping, stacking, threshing and winnowing the wheat and pulse crops and carrying off the spoils.

Work goes on harmoniously, without idleness and without hurry. [461]
Normally division of labour obtains, men and women have their 462
recognised rôles, but the division seems regulated purely by physical 578
capacity and convenience. There is nothing rigid about it and in general each sex will freely assume the work of the other if occasion makes it desirable. In this household there are only two men, one able-bodied on whom the heaviest work falls, and one aged who can only do light jobs and rest, intermittently. There are several women and they relieve each other at the heavier work seemingly from a sense of what is the game and without prompting. There is no apparent shirking, there is no quarrelling, disputing or shouting. I have not seen or heard a quarrel yet, except a minor affair between two small boys, Voices are only raised when information has to be conveyed to a distance.

Children roam about in groups of boys and girls, or mixed family 857
parties, playing along the water-channel, chattering and laughing or retrieving the last over-looked apricots by knocking them down with stones or climbing and shaking the trees. Everyone shares without question in the harvest. Children help spasmodically in the elders' tasks; it is not obligatory. There are always one or two rounding up an errant and centrifugal flock of lambs and kids, or a single agile and enterprising cow.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

312 And so life seems to go on. Even water rights, the turning of
423 the carefully-husbanded water on to the land of the various groups in succession, appear to be exercised, according to the recognised scheme, by those concerned without recrimination. But at this season water is plentiful.

562 Women here hold a position of freedom and respect rare in the
884 East. Young and old they move freely about, unveiled and unaccompanied. They mingle and converse quite naturally and unselfconsciously with men. No doubt everyone knows everyone else and many are related. Young marriageable girls are as free and open-faced as the married women.

609 To the stranger within their gates, at any rate to the Sāhib and
123 Mīm sāhiba, strayed out of another world, everyone is courteous and cordial, welcoming approach and questions, anxious to give information, amused at and appreciative of stumbling efforts to speak their difficult language, inviting them to their work parties in their fields or their leisure gatherings in their shady gardens. Always there is perfectly natural, self-respecting courtesy and good feeling, never that servility, false familiarity, self-assertiveness or aggressiveness characteristic of those who suffer from a sense of real or imagined inferiority.

This may appear a roseate, even idyllic picture, and no doubt there must be darker patches on the reverse side of it, but these do not appear to dim the general effect.

184 So much for the Hunzukuts Burusho. Of their Nagir neighbours
157 I can say little. In casual contacts I have found them also friendly and courteous. The general impression is that they are not so actively cheerful as the Hunzukuts.

000 We may now turn our attention to the speakers of Werchikwār (Worčikwar). That language is spoken only in the Wershigūm valley, known as the Yasin district from the name of the village adjoining the administrative headquarters. The linguistic situation existing in Yasin is shown in the following table:

000

District	Number speaking			Total Population 1931 Census
	Werchikwār	Khowār	Shinā	
Yasin . . .	7,518	230 (2,506)	336	8,084
Total . . .	7,518	230	336	8,084

The whole population of Yasin, with the exception of small intrusive colonies of Shina and Khowar speakers, talk Werchikwar as their mother tongue. About one-third of these, it is estimated, have a greater or less command of Khowar, which has been the speech of their rulers for some generations. This bilingual minority is represented in the above table by the entry (2506).

The general physical circumstances of the Wershik are not widely dissimilar from those of the Burusho, but their country is much opener and easier in the habitable tracts, and it is much more accessible from the Gilgit valley than are Hunza and Nagir. On the cultural side it is believed that they share some of the festivals and customs of the Burusho, but their political history has been very different. So far as tradition goes back they have been under the domination of outsiders. For a number of generations they have now been continuously ruled by members of the Khushwaqt or Katōr families of Chitral.

The effects of this domination have been somewhat modified in later times by British control, but the traditions of the Wershik have not been those of a free and independent people able to treat with, ignore, or defy the outer world, but of a subject people existing to serve the interests of their foreign rulers. It is therefore not surprising, whatever their origin may be, if we fail to find among them the same spirit of self-respecting independence, frankness and cheerfulness that we have seen to characterise the Burusho of Hunza. In fact they are reputed to be shifty and untruthful. I am not personally in a position to support or rebut this charge, but in ordinary circumstances I have found them pleasant enough people to meet.

3r Leitner L-3 (1920-4; 1934-5) 1936 AV7 Burushe AV7

THE LANGUAGE.

212 Having described in some measure the country where Burushaski is spoken and the people who speak it, I must now give some account of the language itself and of the influences to which it has, at least in recent times, been subjected.

[59f] Burushaski[1] has no literature and is in fact an unwritten language. Obliging friends may have occasionally written Burushaski letters or texts in the Arabic script to humour enquiring foreigners such as Leitner or myself, but no convention has ever been arrived at to represent the sounds which are unknown to Arabic, Persian or Hindustani. When literate Burusho, and there are not many of them, have occasion to write, they do so in Persian for choice, or
217 in Hindustani. The student of Burushaski has thus no manuscripts, ancient or modern, to turn to for enlightenment. He must go direct to the linguistic fountain-head — the *sujet parlant*. As far as contemporaneous speech is concerned, this is rather a blessing than a loss, but a series of manuscripts or inscriptions going back through some hundreds of years would throw an invaluable light on the development of the language. Lacking them, we cannot divine its history, nor make any guess as to its primitive forms. Only the co-existence of Werchikwar enables us sometimes to deduce that a word or form which occurs in the one as an isolated or rare phenomenon is a survival of what was once perhaps common property, or else normal in some dialect.

[1] I have never succeeded in getting anyone to recognise the word "Burushki", the term applied to the language by Biddulph, and apparently accepted by Leitner, v. H. and N. Höfn. p. 195 l. 9. Leitner also talks of the "Burushki race". One cannot imagine that Biddulph and Leitner invented the term, so it would appear that it has gone out of use since their day. Possibly it may still flourish somewhere in Nagir. Leitner uses the term "Khajuna". This name is applied to Burushaski by outsiders and non-Burusho, as Leitner himself seems to admit (loc. cit.). I have heard the word used in Chalt, in opposition to Shina, by a man who was probably himself normally a Shina-speaker.

Burushaski and Werchikwar[1] are to be regarded as two dialects of one language of which no other dialects exist. The Burushaski of Hunza and Nagir, it is true, differ to some extent: there are differences in vocabulary and minor variations in morphology, but, as far as I am in a position to judge, these are not sufficient to constitute them separate dialects. Local variations occur inside Hunza itself: thus the people of Aliabad say "etsi" *he has done*, whereas the Baltitkuts say "etai". At present we do not know the full range of difference between Hunza and Nagir Burushaski, nor the number and extent of local variants in either, nor how far these are strictly local or possibly connote some difference of social status. 197

Burushaski and Werchikwar have both been subjected to outside influences, some of which must be of ancient standing, some of recent origin, but a glance at the vocabularies will impress one with how little either has borrowed from other languages and how large an original stock of words each has preserved. This can best be judged from the pronouns and from the number and variety of verbal conceptions which are expressed by undoubtedly native verbs. Both dialects seem to have presented a very resistant front to foreign intrusion. Even in these latter days, though many Arabic and Persian words are generally known, and though their use is convenient and probably increasing, they are not essential to the expression of ordinary ideas and many are not used by the common people. 197 177

Of contiguous languages Burushaski has been in direct contact with Shina and with Wakhi. The Qirgis used to raid into the north of Hunza and have left behind them at least two place names: Mintaka and Aqtash (v. Text No. XXXI), but that seems to be all. Some contact with Baltistan, doubtless a very slight one, is to be

[1] "Werchikwar" appears to be analysable into: Werch- or Wersh- + ik + war, of which Werch- is to be equated with the Wersh- of Wershigum; -ik- with the Khowar -ik added to place-names to denote the people of a place (e. g. Laspik, Laspik); -war with Khowar -wár denoting "language", as in the word Insiff Khowár, "the language of the Khó". The probable connection of Wersh- and Burush- is obvious.

177 177 presumed from the possession of a pattern of door known as "Baloski
[829] hing" (baloski hiŋ), and a method of thorn-fencing "Baloski chash" (baloski ćaś). See also Text No. XXVIII. I have even been told that the Burushо believe that they acquired the whole of their material culture from Baltistan. Though there is no territorial contact with Khowar, an occasional surprising common property in words suggests questions.

197 193 The Qirgiz and Balti languages may at once be dismissed as sources of any perceptible influence on Burushaski, and, with infinitely greater opportunity, Wakhi seems to have been equally impotent to make any general impression on it. There remains Shina. Clearly there are borrowings from Shina to be found in the Burushaski vocabulary. Words with characteristic Shina prefixes and endings may be assumed to be Shina e. g. Bu. ʌ-baś, ʌ-ḍ̌ʊmo, ʊ-ḍ̌ʊmo, ʌ-ḍato; adjectives ending in -ʌṭo, ćʌmʊr-ʌṭo, ɣʌlīś-ʌṭo; abstract nouns ending in -ʌr, -iʌr, and -ʊi such as: damijʌr, ćuriʌr, ćuguloi etc. In Shina -o is a very common ending in nouns and the masculine singular of adjectives. Where such words are shared the probability lies that in Burushaski they are borrowings from Shina. Examples are: bargo, baskʊto, bijivo. Sometimes the final -o is lacking in the Burushaski form. In such cases is the -o of Shina possibly an addition to a Burushaski word? Such are:

Bu.	ɣulk	Shn.	gulko	*covered water-tank*
	ɣuḍʊm		guḍʊmo	*deep*
	hisk		hesko	*loom*
	hokʌr		hokʌro	*tamarisk*

Of undistinguished shared words it is for the Philologist to say whether they are of Indo-Aryan stock, and so presumably a contribution from Shina, or not. The same applies to similarities of a more radical character found in the sharing of syntactical practices and idiomatic usages, which seem to postulate direct translation from one language into the other. It is a fair hypothesis that such a process came into action at some time when the two languages were in intimate association, probably by intermarriage, after the

Shina-speaking stock had forced its way in among, or acquired 147
domination over, an originally Burushaski-speaking population. To 193
enumerate such similarities would require a treatise in itself, and in the Grammar I have purposely abstained from drawing comparisons with Shina, which would have taken up space and obscured the immediate issues. I may here just draw attention to a few points. V. § 43. There is much parallelism in the use of the Bu. suffix -an and the Sh. -ek, -k (ek = one), e. g. Sh. ek manu-ju'k *a man*; a-pu'k *a little*; with pronouns: ko-uk *what person?*, jak-ek *something*, kaca-k-ek *a certain number of*, cp. Bu. berrum-an; with numerals: dai bai-ek *ten or a dozen*, bi-ek *a score*. It is also used with the plural and so corresponds to the Bu. -ik. Employed with passive participles and verbal bases it replaces the indefinite by a definite sense. Thus: rai.ituk *the thing said* cp. Bu. senuman; ā-thi hanuk *the bones there are*, cp. Bu. maltaj bilcman *the ghee there was*.

Points of similarity can also be found in the use of the case suffixes: Sh. jak čokrj *how?*, cp. Bu. belaṭz. Sh. -rj = ajz is semantically parallel to Bu. -aṭz. Sh. abl. -jo, parallel to Bu. -tscun used with meaning *after* (of time). Among the pronouns, Sh. ek ek is parallel with Bu. hin hin *one another* v. § 134. Sh. baiyz *both* and bu-to pl. bu-tz *all* generally follow the noun: jak bu-tz *all the people*, cp. Bu. *-altalik and *-yo-n, §§ 177—178.

There is a parallelism between the use of the Sh. ga, gz and the Bu. kz with the indefinite pronouns when the verb is in the negative e. g. Sh. jaga nis, Bu. bezan kz api *it is nothing*, v. §§ 148—154 and 333.

The higher numeral system of both languages is based on the [802]
score (20). In compound verbal expressions there is much parallelism in the use of the verbs *to come*, Sh. wai.o-iki Bu. ju-yas; *to bring*, Sh. walo-iki and aṭo-iki, Bu. d*-taas, dusu-yas, su-yas, v. §§ 261 ff. and 266, also in some other cases. These seem to be translations.

Parallelism of use can also be noted in some independent verbs e.g. Sh. nikhai.o-iki, Bu. du-yas, *to come out, go out, get out, escape;*

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

A7
193

to cross (*a river*; etc.) *to climb up*; *to win* (*in a game*). Both languages use the interrogative suffix -a with verbs, and use it in the same way, v. § 340.

There seems to be some parallelism in the verb *to be able*, Sh. boʼiki, which also means *to be*, *become*, and the Bu. *-amanas which is presumably related to manaʼs, v. § 298.6. Cp. also Kho. bik.

The Conditional particles Sh. taik and Bu. tsɛ, Wer. taik are largely similarly employed.

The extensive use of the past participle active and its employment as a connective are common to both languages. Sh. the *having said*, is used to close a quotation, exactly as the Bu. nusan, v. § 367. Cp. Kho. re.

Sh. thoʼiki and Bu. ɛtas, both meaning primarily *to do*, are always used for *to speak* (*a language*), and the Sh. constantly, and the Bu. sometimes, for *to say*.

There are correspondences in the use of the Sh. passive and static participles and the Bu. static participle, cp. rai.ituk mentioned above, also the active use in Sh. rai.ito manuʼjo *a man who has read* i.e. *a literate man*, v. § 378. b. With §§ 379. b. and 460 cp. Sh. wato o manuʼjo *the man who has come*.

The infinitive is used in Shina as in Burushaski with case suffixes, v. § 392. I. Curiously, the Sh. locative form in -ər in used in the same way as the Bu. dative form in -ər, as described in § 395 d. Is this a case of adoption? The same phenomenon is seen in the Sh. ačaʼkər and the Bu. terrumanər, both expressing in the same way, *at this point*, *thereupon*, *then*, v. § 409 1.

As in Bu. so in Sh. the same or approximately the same form functions as infinitive, inflectable verbal noun, noun-agent and gerundive(?): thoʼiki, thoʼk, *to do*, *doing* (noun); thoʼikəjo fatu *after doing* (*it*); thoʼikət čak *ready to do it*; mas doʼiki asulusus *I was a giver*, *prepared to give*; mas thoʼkunus, tus thoʼkuno, roʼs thoʼkun *I am to*, *have to*, *must do*, *thou must do*, *he must do*; aspɛ kurə kərpa thoʼkun *it is necessary to cut the horse's hoofs*, *its hoofs are to be cut*; aspič tilɛn doʼkun (doʼiki) *the saddle is to be put on the horse*.

In Sh. mat ɪəl han-ɪj *on its being known to me* i.e. *with my knowledge*, mat ɪəl nuš-ɪj *without my knowledge*, the use of the suffix -ɪj (ajɛ = *on*) may be compared with that of Bu. -aṭɛ in ayctum-aṭɛ etc. in § 384, and the combination of the base han with a case suffix, with o·ni-tsum and asqan-aṭɛ in § 407. b. and c. 197 193

The use of the past participle active of the verb *to do* in Bu. to form adverbial expressions is to be compared with the similar Sh. use of the ppc. of tho·iki viz. *the*, e.g. lo·ko thɛ *quickly*, mišto thɛ *well*, Bu. yər nɛ *forwards*, šu.a nɛ *well*, v. § 416. But while the Sh. adverbs so formed are usually Adverbs of Manner, those of Burushaski are mainly Adverbs of Place.

There is also much parallelism in the use of the Sh. particle *to* and the Bu. particle *ks* with temporal clauses and the protases of conditional sentences.

Some correspondences of a like nature can also be traced in Khowar. 192

Burushaski has also been in contact with certain foreign languages which geographically do not lie adjacent to it. These are Panjabi 177 and Dogri, Hindustani, Persian and Arabic. One main point of [443] contact has been provided by the Gilgit bazar, the marketing centre of Hunza and Nagir, where the shops are manned by a mixed crew of Panjabis, Kashmiris and local people, and are frequented by the Dogras of the garrison of Kashmir State Troops and the servants of local officials. Local people are also employed by various public departments, such as the Public Works Department, the Posts and Telegraphs and the Indian Army Service Corps, whose officials talk Hindustani. There are always a considerable number of Burusho resident in the Gilgit Wazārat, and small numbers are to be found in Srinagar and down country, even in Bombay.

Contact again is provided by the corps of Gilgit Scouts. Hunza and Nagir both provide two companies of 80 men each, who come up to Gilgit for training for a month (recently increased to two months) each year. Here they are trained by one or two British Officers, whose medium of communication is Hindustanī, and they must thus pick up a certain limited Hindustani vocabulary.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

192 A third point of contact is provided by the Schools attended by
177 a very limited number of boys chiefly of the upper classes. Elementary
674 instruction in reading and writing Hindustani in the Arabic script is obtainable in Baltit and Nagir. A small number of boys proceed to the Anglo-Vernacular Middle School in Gilgit, where they learn Urdu and Persian, and can make a beginning on English up to the VIIIth. Standard. A few of the sons of the *élite* now go for two or three years to the State College in Srinagar, where they can carry their studies to the point of passing the B. A. examination in English. But as yet there are no Burusho B. A.'s.

177 From all these encounters people return to their homes, temporarily or for good, bringing with them some degree of linguistic acquirement, and an enlarged, not necessarily improved, view of life. A few in recent times have brought with them some foreign accomplishment, tailoring, clothes-washing or, petty trading and shopkeeping.

177 One great source of extraneous culture remains to be mentioned:
192 the Islamic Tradition, which carries with it many kinds of lore and knowledge not directly religious. What exactly it connotes in any given case would be a complicated subject of research, on which I have made no attempt to embark, but it is probable that what Ismailism has brought to Hunza does not exactly tally with what Shiahism has brought to Nagir. What comes in the way of doctrine, history, legend and language (Arabic terms) directly through mullahs and religious teachers, where they exist, and what is transmitted by the ordinary intercourse of Muslims of all nationalities and in all places? It is by the latter route presumably that folk tales such as Texts I, II and III have found their way into Hunza and Nagir. I think it may also be assumed that the bulk of Arabic words current in Burushaski have been acquired through the medium of Persian and Hindustani, or have filtered through Shina.

ccc The people of Yasin have had less numerous external contacts than those of Hunza and Nagir. They have also, I think, sent

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

fewer youths to be educated. On the other hand they have for many years been in very close contact with one foreign language, Khowar, which has been brought to their doors, and for many into their daily lives This is reflected to some extent in the Werchikwar vocabulary as far as it is known, but I do not know enough to say anything definite about morphological and structural analogies between the two languages.

Earlier Work on Burushaski and Werchikwar by Europeans.

The only original work of importance done in the past on Burushaski is that published by Col. J. Biddulph in 1880 (revised 1884) and by Dr. G. W. Leitner in 1889. In the Linguistic Survey of India, Vol. VIII their results are revised and summarised and a version of the parable of the Prodigal Son is added. Biddulph's work is sound as far as it goes, but it is only a brief sketch. There are 22 8vo. pages of Grammar, 4 pages of sentences and texts and 20 pages of Burushaski-English Vocabulary. He deals with the Nagir dialect which he calls "Boorishki" (v. footnote p. XVIII). Leitner in his "Hunza and Nagir Handbook", 1889, also principally describes the Nagir dialect. He collected a considerable vocabulary, extensive paradigms and a large mass of miscellaneous information, all of which he presents unfortunately in an ill-digested and unsystematic manner. His translations are often so loose as to suggest that he did not fully understand his texts, and naturally errors are not lacking.[1]

In both Biddulph's and Leitner's Vocabularies a considerable number of Shina words are to be found. This is probably characteristic af Nagir Burushaski, which has always been more exposed to infection by Shina than the Hunza speech.[2]

[1] It would be unwise to express a final judgment on Leitner's work without checking it through in detail with the assistance of Burushaski speakers, which I have not done.

[2] Cp. also the Bibliography in LSI, Vol. VIII, 1, p. 551. — Manuscript vocabularies compiled by B. L. Grombchevskiy and M. S. Andreev are in the possession of the Asiatic Museum of the Russian Academy.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

000 In the past Werchikwar has received even less attention than Burushaski. The Linguistic Survey of India, Vol. VIII contains a brief notice of it and a version of the parable of the Prodigal Son furnished by an Indian Official, Khan Sahib Abdul Hakim. Recently, however, I. I. Zarubin has furnished in Russian a valuable description of the language (v. § 500 below), to which he appends a vocabulary and a detailed criticism of the L. S. I. "Prodigal Son", which appears just, as far as I have examined it.

The Present Work.

114 The world has recently been presented with works on little-known Indian languages which represent the knowledge and labour of half a life-time. Such are Hoffmann's "Encyclopaedia Mundarica" and Bodding's Santali Dictionary. The present work makes no pretence to such a foundation. It represents merely an endeavour to squeeze the contents out of such material as I was able to collect hurriedly in a short time, and to arrange and present it in a systematic manner, so that it may be conveniently available to the student.

In September 1920 I took over charge as Political Agent, Gilgit, and remained there till September 1924. During the greater part of the first three years I devoted my spare time to the Shina and Khowar languages and it was only in May 1923 that I added to these Burushaski. From then until July 1924 it somewhat interruptedly received a portion of my attention. In 1921 my wife had made a start on Burushaski, working for two or three weeks with Gushpūr Maḥbūb 'Ali Khān, son of the Mir of Nagir, a bright and intelligent youth. I now turned to her work and gained some idea from it of the principal features of the language, the use of pronominal prefixes, the four "genders" and the main lines of inflexion. Otherwise I started from zero, as I did not wish at this point possibly to prejudice my openness of mind by having recourse to Biddulph and Leitner. In the event I never consulted them at all while I was in Gilgit.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

My mode of procedure was as follows, and in all the circumstances it seems to have justified itself. For a few weeks I worked with Nazer of Aliabad, head of my establishment of domestic servants, eliciting from him the principal inflectional forms of the language as well as the chief pronominal forms and the numerals. Nazer, though illiterate, was a man with excellent brains and the instincts of a teacher and elucidator, and Hindustani provided a medium of intercourse. After this I secured the services of Imām Yār Bèg, brother of the Wazir of Hunza and a Jemadar in the Gilgit Scouts, and began to take down texts to his dictation. Each day I wrote down as much as I had time to, making every effort to record the sounds phonetically as far as I was able to appreciate them, and to make sure of the division of the words. I did not make a point of fully following and understanding what I wrote. The same day, or the next working-day, I read out to him what I had written, corrected it as far as I could from every point of view and strove to arrive at the exact meaning of every word and sentence. I made notes of the translation and obtained the principal parts of verbs, the plural forms of nouns and so on, and recorded other words and phrases that were suggested by those of the text. 126 115

All this was very hurriedly done, but the results have in general proved satisfactory and the texts themselves seem to be readily intelligible to Burushaski-speakers when read aloud to them. They will often complete a sentence and continue the narrative, where it is short, in much the same words as the original, for though there are no professional story-tellers in Hunza, many of the local stories or accounts of customs appear to be told habitually in a customary, if not stereotyped form. [537]

Imam Yar Beg was a man of first-rate intelligence, great energy and a forceful personality. His own tastes ran naturally to sport and the practical. He was an enthusiastic and skilled polo player and I fear linguistic enquiries must sometimes have bored him, but he stayed the course until at length he unfortunately fell ill a month or two before I left the country. In that month or two,

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

115 of course, everything was going to have been checked and corrected
126 and much additional information was going to have been obtained — an impossible programme!

Simultaneously with the writing of the texts I ran through an
126 extensive list of common English words and obtained as far as possible their Burushaski equivalents by direct enquiry. This method helps to fill up unexpected hiatuses which will always be found in the vocabulary obtained from any moderate body of texts and casual information. It works well enough with nouns that are the names of material objects and with the simpler direct verbal conceptions. As a sole method, with an imperfectly-known common language as medium of communication, it would be quite unsatisfactory.

Also, in desperation, to make the most of the time available, I adopted a still less satisfactory expedient. I commissioned Imam Yar Beg's elder brother, 'Ināyatullah Bèg, to write out for me a list of all the Burushaski words and proverbs he could think of with explanations in Hindustani. He had some months in which to do this. I gave him for the purpose a large number of slips, each to be used for a single word, of which the vital inflected forms were also to be given. Unfortunately I was not able to convey my instructions by word of mouth and IUB devoted himself to a paper-economy campaign, writing as many words in pencil in a small hand on each slip as he could cram on to it. The result was almost illegible. I handed these slips over to Shāhzāda Yūsuf of Yasin to re-write. He had an adequate knowledge of Burushaski and non-literate Burusho at hand to consult. With great industry he rewrote all the words on separate slips, adding in some cases Roman transliterations of his own. This did not suffice, however, to distinguish with any certainty a from ā, i from e and u from o, nor to exclude ambiguity in the case of some other sounds.

128 All this material, which contained much that was new to me, I was unable to examine till years later when in England and unable to obtain help. Another very difficult manuscript with which I

had to struggle unaided was that of text No. 47 which had been supplied to me in two not identical versions, Burushaski and Urdu, by Gushpūr Muhammad Ghani Khān, before I had begun to work at the language.[1] 128

In collecting linguistic material there is a choice of two attitudes one may adopt. The first is to try and clear up and master every difficulty as it occurs and ideally to make one's effective knowledge keep pace with the information that one writes down; the other is not to linger over difficulties which prove at all intractable, not to memorise and not to endeavour to learn to speak as one goes along, but to write down in the way of Texts etc. as much as possible in the time available, only making notes of the meaning and of usages as far as that is possible without undue delay. 126

The former method is of course the ideal one, but I doubt whether it is the wiser when time is limited. One may spend hours debating over an obscure phrase or construction without arriving at a full comprehension of it, while if the time is spent instead in recording more texts, there is a considerable chance that the word or phrase will turn up again in contexts which make its meaning or force plain. At least this has been my frequent experience. As regards trying to talk and memorising one's material as one goes along, where the language is as difficult as Burushaski, that is largely a question of the quickness and acquisitive power of the recorder. With no spare time or energy at my command such ambitions lay beyond my hopes.

I therefore resigned myself to the second method and devoted myself to collecting as much material as I could in the time — and the "time", it must be remembered, was what remained to me when my official work was done, and had to be divided between the three languages I was working at concurrently, Shina and Khowar as well as Burushaski. Then on retiring and returning to 126 128

[1] There is an error in the statement made in l. 3 of the note on p. 376 of the Texts: "1923" should be altered to "1922", or else the words "more than a year" should be cut out. I am not sure which.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

126 England I settled down first to translating the texts and working
128 out the vocabulary, and then to an intensive comparative study of every word and every grammatical form occurring in my material. On this basis I then prepared and annotated the Texts and drew up the Grammar and Vocabulary as they now stand. This took in all four and a half years, from January 1926 to June 1930.

I have dwelt at some length on my methods of work, because without such knowledge it is impossible for the reader to form any just estimate of the degree of authority to which the book can lay claim. For the same reason I have made a free use of question marks in the Vocabulary and elsewhere to indicate points in regard to which my information is uncertain. I hope I have stated nothing as a fact except on reasonably adequate grounds.

114 The whole edifice stands essentially on the foundation of Jemadar Imam Yar Beg's Burushaski, a foundation the general reliability of which I think no one in Hunza would dream of questioning. But this statement requires serious qualification: it is IYB's Burushaski as affected by the mishearings and misunderstandings of the recorder. That there are such I have not the slightest doubt. I am only surprised that the substance of the Texts has worked out so homogeneous and, as I have now some ground for believing, so correct.

A special word of warning should be given in regard to the Phonetics. I am myself no phonetician and made no constant systematic attempt to distinguish by all means at my command between different sounds which sooner or later I knew to exist, but could not myself certainly distinguish This applies specially to the two parallel series of cerebrals and non-cerebrals, aspirates and non-aspirates. Many cerebrals and aspirates may have escaped undetected; I can only say that where a sound is marked as cerebral or aspirate, it may safely be assumed to be such.

121 My general aim in the preparation of this work is now sufficiently evident; it is simply to give a perfectly objective view of what I was able to ascertain about the language. I have created a hypothesis

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

only where it seemed necessary to attain brevity and clarity in the statement of facts. Such is my theory of the initial *-A- of many nouns and verbal bases, and the combination of it with the pronominal prefixes. Otherwise I have avoided speculation in realms outside my competence. I have raised no questions of the relationship between Burushaski and other languages and I have also intentionally omitted to point out many parallels in grammatical usage and idiom between Burushaski and the adjacent, though non-related, languages Shina and Khowar. In the Vocabulary on the other hand I have noted when the same word, or obviously a form of the same word, is in use in those languages. I have done this because I believe that many of these Shina and Khowar words have not before been recorded, and even when they have been, will not always be readily accessible to the reader.

As I have eschewed questions of relationship, so for still better reasons I have abstained from any attempt to propound linguistic theories of a more general nature. With less certain virtue I have also failed to supply any new grammatical terminology. Another terminology than that of my boyhood's reminiscences of Latin Grammar is certainly needed to describe the phenomena of Burushaski. I do not know that such exists, and I have thought it wise to leave this thorny matter to hardened experts and not to complicate the issues by amateur attempts which would only prove a stone of offence.

The principal work that remains to be done for Burushaski as I see it is:

1. To make a scientific determination of the phonetic system.
2. To clear up existing grammatical problems and to discover more.
3. To ascertain the relative frequency of various syntactical usages. Some which in my material occur rarely are probably in fact common enough.
4. To make a parallel study of Nagiri Burushaski and local variations in phonetics and vocabulary.

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

000 5. To complete the vocabulary and to collect obsolete and obsolescent words. There are a multitude of general terms to be collected, while there is undoubtedly an immense field of "technical" terms, in the widest sense, to be covered.

In this last task the most fruitful line of approach will be by the way of anthropological interests and anthropological methods. Burushaski also appears to have a great facility in the metaphorical use of specific words, especially verbs. These uses can only be educed with time, patience and experience.

To these various subjects for enquiry, except the first, I now hope to be able to make some contribution.

114 Self-determination and luck have brought me again, after ten
122 years, to the land of the Burusho, in the midst of whom, at Aliabad in Hunza EOL and I are now living. This luck I owe "first", as they would say here "to the grace of God", and then to the "kindness" of the Trustees of the Leverhulme Research Fellowship Fund, who have granted me substantial financial assistance. It is a short time spent again with Burushaski-speakers that has enabled me to say above that the Texts and Grammar appear to be generally sound beyond my dreams. This does not at all mean that they are impeccable.

How much can now be done will again be governed by the time factor — the harvest is ripe, but the labourers are few.

But this is anticipating.

000 Meanwhile in what concerns the present work there remains to me the pleasure of paying many debts of very genuine gratitude. To the Tham of Hunza, Sir Muhammad Nazim Khan, K.C.I.E., I have paid my tribute in the Dedication. To him I owe much personal kindness and hospitality and also the services of IYB over a long period. The Burushaski of the Dedication, I may say, has been constrained with much expert advice to an unprecedented use.

Next I have to thank my active collaborators, to whom ultimately everything is due, Jemadar Imam Yar Beg, Inayat Ullah Beg,

3: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

Shahzada Yusuf and Nazar. Further I would very specially thank my friend, Khan Sahib Muhammad Masih Pāl, in my time and still, Indian Assistant to the Political Agent, Gilgit, for many and various services extending over a number of years.

To Professor Georg Morgenstierne's inspiration and good offices this work owes its appearance in print, for he introduced and sponsored it to the Directors of the Norwegian Instituttet For Sammenlignende Kulturforskning who have honoured me by approving it and publishing it at the expense and under the aegis of the Institute. I should like here to express my sincere and cordial thanks to the Institute and its Directors. With great unselfishness Professor Morgenstierne has also spent no little valuable time and much patience on matters connected with proofs and printing. He promises to crown his kindness by contributing a Preface.

Finally my thanks are due, as always, to my Wife for steadfast encouragement, judicious but unvexatious criticism, and unstinted typing, each of which contributions is in its way equally essential to my continued functioning.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

[P. iv contains no textual material - Analyst]

PREFATORY NOTE.

The following texts were collected by me in 1923—24 in the manner described in the Introduction. No.s 1—3, 5—45 and 46. B. were supplied by Jemadār Imām Yār Bèg, son of the late Wazīr Humāyūn Bèg, a man of distinction to whom some reference will be found in Durand's "Making of a Frontier" and who later rendered valuable services in the Chitral Campaign of 1895. The eldest son, Shukr Ullah Beg, has been Wazir of Hunza since his father's death. Of some of these texts IYB wrote out versions in the Arabic script, which I possess. They do not always agree verbatim with the dictated versions. 126 115

On my return to Hunza, after ten years, in July 1934, I met Jemadar Imam Yar Beg briefly on two or three occasions and it was a great pleasure to renew our old cordial relations, and a happy prospect to look forward to their continuance. But this was not to be. On the evening of the 27th October Imam Yar Beg was shot in the Gilgit Bazar and died three hours later in hospital. This morning his body was carried past here on a bier, attended by the brothers and a throng of mourners. And in company with the local population, I could only pay a last tribute to an old friend as the cortège passed on its way to Baltit to the sound of a melancholy dirge and subdued lamentation. 115

So has disappeared in his prime a vivid personality from Hunza life. As I knew him in earlier days he was the embodiment of energy and zest for life. What his hand found to do — riding.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

115 hunting, polo — he did it with his might; manly, competent and fearless; a dynamic figure, not necessarily every man's friend. Since then he had visibly aged, but there was still about him something of the alert, dashing air of the born adventurer.

To return to the Texts: No. 4 was related by a then old man, 'Ali Madat of Baltit, who, I believe still survives, though perhaps no longer capable of repeating his effort of eleven years ago.[1] IYB's help was essential in recording this text.

Nazar of Aliabad supplied the version of the "Prodigal Son" given in No. 46 A. No. 47 was written out and sent to me by Gushpur Muhammad Ghani Khān, the son of the Mīr by a local, non-royal wife. He also was a man of vigour and ability who died quite young of some illness, four or five years ago.

The Proverbs were furnished to me in writing by 'Ināyat Ullāh Bèg, the second of the three sons of Wazir Humayun.

The Werchikwār Texts No.s 1 and 2 were obtained by me in Yasin from Hidāyat Shāh of Thui, and the translation of the "Prodigal Son" from Bahādur Amān Shāh of Yasin. In recording these I had the valuable help of Mèhtarzhau Shāhzāda Yūsuf of Yasin.

538 One point of interest may be noted with regard to the Buru-
[565] shaski Texts, especially those containing local narrative. I have found, on reading out bits of them at random to several people here of the upper class, firstly that they appear readily to follow my rendering of the Burushaski, and secondly that they can habitually continue the statement at any point in almost the same
[195] words as the recorded text. This shows that, though there are no professional narrators in Hunza, with the possible, partial exception of Ali Madat, the ordinary people are in the habit of passing on tales and explanations of customs in a more or less
[173] stereotyped form of expression. This is probably the relic of a former custom of the upper classes of spending the evening after

[1] I have, since writing this, sought him out, and found him decrepit, but cheerful. Public opinion denies him any large measure of sympathy, as "he is not really old and has a number of sons who support him in comfort".

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

the lighting of lamps, between supper and bedtime, in recounting past events, and doubtless in confirming and explaining traditional behaviour and practices:

> šapi·k ši·mtsum gučaspal xa (I am told) gəri·tsɛ gəri·bilumiło ya dapiŋ ɛtało hurusa·n. Thamini tɛ·ndili gərɛŋtɛ akə·birtiŋ hurusam da sajara (= šajara = ta·ri·x) ɛčam.

"From eating food till lying-down time those who had lamps or those who were preparing wool for spinning used to sit "by the lamp." In former years the people of the upper class used to sit by their lamps and recount past events."

That these séances had an educative and moral intention is evident from the saying, ascribed by tradition to Big Ali of the Ghulwätting clan:

> Ghulwaṭiŋɛ Big Ali.ɛ bor bila: "uyo·n ja gəri·tsar du·n ja·tsum siskuṭ (= insa·ni.at) haki·ba·n. Ja khu γuniki.ɛnta ayu· γuniki.ɛntɛ gərɛ·ŋtsar niča·n."

"There is the saying of Big Ali of the Ghulwätting: 'All people have come to my lamp-side and have learnt from me human virtue. Only these evil sons of mine go to the lamp-sides of evil persons."

The few remarks I have to make about the provenance of the subject matter of the texts are embodied in the notes subjoined to each. Otherwise the notes are chiefly confined to grammatical queries and explanations. Paragraph numbers quoted in the notes refer to the Grammar. Obviously the texts, especially those relating to local traditions or customs, require much fuller annotation to reveal and explain their full content; but lack of knowledge, no less than lack of space, made it impossible for me to attempt such annotation.

I hope that my present investigations in Hunza may serve to throw light on many of such obscurities.

Aliabad, Hunza, *D. L. R. L.*
29th October 1934.

---

1 senas — infin. form 'to say', specialised in the sense of "called", "by name".

2 daltasan — suffix -an with nouns and adja. v. §§ 43. 4. & 103.

3 ertuičam = a + duičam — 3rd.sg. imperf. negative of duwas 'he used not to come out'.

4 ečam — 3rd. sg. hm. imperf. of ečas.

ya kuyo·čs — the harrator merely meant to substitute the word kuyo·čs for sise.

e·itsuman = a + i + °-itsuman or °-itsuman, 'they did not see him' from °-itsas, °-itsas 'to see'.

5 guntasanulo = gunts + an + ulo. MS. here and in p. 20 l. 1 has gunteanulo.

han pfu·tan — 'a demon', dem. Note that pfu·t is n not hm. hence han not hin. Similarly line 7 ewe pfu·t, but sometimes the human conception prevails v. p. 18 l. 8 note.

6 yeičam = i + °-ečam, 'I shall see him', 1st. sg. fut. of °-ečas 'to see'.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

TRANSLATION.

[3]

No. I.

Shāhzāda Bahrām, Shahri Bānu and the White Dēu.

In former times there was a King called Shāhzāda Bahrām. He was a very good man and he was very just. His subjects enjoyed great peace and comfort. As he never came out of his palace his Wazir looked after his land. A long time passed and the people (*or* his subjects) did not see him. 5378 173

One day a certain Dēu thought: "I'll have a look at King Shāhzāda Bahrām," and he came to his door (and asked permission to enter his service). The Dēu's name was the "White Dēu." For some years he continued in the King's service, but the King did not come out and so he did not see his face. He was greatly exercised in mind. At last he reflected and said to himself: "There is no other remedy than this — I will enter into the skin of the Wazir and go to him." 5378

---

ozaro, ozaro — p. pc. active of *ozaz* 'to say' constantly used to indicate the end of Oralle Recta.

ćuz highar dirwi — *hig* + *ću* + *ar* 'on to the door', *dirwi* 'he came' 3rd. sg. hm. s. & y of *ćayaz* 'to come'. Literally "he came to his door", perhaps has some idiomatic implication of taking service with a master.

9 *ofurwimi* = *o* + *durwimi* — 'he did not come out' from *durwaz*.

10 *omazowi* — So the MS. Doubtless for *omazowi*. Note the *-wi* ending. See § 314.1.

11 *Wazirv hāir ashīrv* — *ashīrv* p.pc. active of *ćayaz* n.c. 'to plunge, precipitate oneself', "entering into the skin of the Wazir" i. e. 'assuming the form, appearance of the Wazir'.

660 Han gunteanulo Wazi·ts batar nikiʼn bardia salaʼmar niʼmi. Hiṇatsum maharamtiṇe bardiaʼr xabar ctuman ke "Waziʼr di baiʼi" nusen. Bardia hukum ctimi "Ulo juṭ" nusen. Waziʼr diʼmi. Diʼn bardiaʼr salaʼm ctimi. Salaʼm ne iʼmo diṭulo adabe ka huruʼtimi. 5 Bardia ke Waziʼts čayamiṇ hiʼn hiʼne ka ctuman. Čaya netan netan Waziʼts senimi: "Nazar bardia, ke uṇe kuyoʼč uʼn guyctaase armaʼnulo buʼt baʼn. Berum den niʼmi akuʼiʼtsumate ormaʼn atuʼsum berumian uʼiʼruman."

Bardia gute čaya deryalin waziʼrar senimi: "Buʼt šuʼa ke je buʼt 10 xuš amanam. Jiʼmale jeʼimo kuyoʼč uyoʼne ka baʼne šikarar ničen. Teʼrdine uyoʼn gati maniṭan."

Waziʼr bardiaʼr gute čaya eʼsase ka dʼusimi. Duʼs marakaʼulum uyoṇkuwar da šadarṭuʼar, niʼrštkartiṇar hukum ctimi: "Jimale bardia fulaʼna iʼte diṭar šikarar ničaiʼi. Ma ke taiʼar maʼnin." Iʼne waziʼts 15 batar gi bam iʼte batetsum duʼsimi.

Tapeʼi iʼse pfuʼt iʼte šikare diṭ yakalate niʼmi. Telar niʼn han buʼt šuʼn šikam hayuran manimi. Teniṭe tiliṇ yeniṭe taʼbaṇe ka niʼltul huruʼtimi. Eʼka menen ke sisan apam. Hinuman hayur numa huruʼtimi.

---

1 *bardia salaʼmar niʼmi* — "he went for the salam of the king" i. e. 'he went to' pay his respects to the king'.

2 *hiṇatsum* = *hiṇ* + (*i*) + *tsu* + um. -um here adjectival, 'those being at-the-door,' v. § 78.
xabar ctuman ke — 'informed him that'. This *ke* after verbs of "saying" etc. is not necessary. It has presumably been picked up from Persian or Hindustani.
di baiʼi — 3rd. sg. hm. perf. of *juṭyan*, 'he has come'.

3 *ulo juṭ* — 'let him come in' fr. *juṭyan*, v. § 357.
diʼn — p.pc. active hm. sg. of *juṭyan*.

4 *ne*, or *netan* — p.pc. active of *ctan* 'having made or done' v. § 298. 4.

5 *bardia ke waziʼrs . . . ctuman* — note that only the latter of two nouns united by *ke* takes a case suffix v. § 97.
netan netan — the repetition of the verb denotes continued action.

6 *iʼte* — apparently dependant on *senimi* and unnecessary.
uʼn guyctaan armaʼnulo — 'in the desire of seeing thee'. *guyctaan* gen. of infin. *gu* + °*-ctan*, *uʼn* a variant of *wṇ*, in Nagir *wne*.

6 *beʼrum den* — 'a number of years'. Note the sg. v. § 170.
akuʼiʼtsumate — 'without having seen thee'. *a* + *gu* + *itsum* + *ate* static pc. of °*-ctan* with active meaning v. § 384.
atuʼsum = *a* + *durum* static pc. of *durtan*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

539x

One day, entering into the skin of the Wazir, he went to salām to the King. The confidential servants at the door informed the King: "The Wazir has come." The King commanded: "Let him come in." The (seeming) Wazir entered and salamed to the King. Having done so he respectfully sat down in his own place. The King and the Wazir conversed with each other. Talking on and on, the Wazir said: "Sir King, your subjects are very desirous of seeing you. How many years have passed and how many of them have died without their grief at not seeing you having left them!"

On hearing this speech the King said to the Wazir: "Very good I am much pleased. Tomorrow we shall go a-hawking with all my people. Let them all assemble in the morning."

After speaking thus to the King the Wazir went out. Going out he gave orders to the great men of the Court and to the servants and to the huntsmen: "Tomorrow," he said, "the King is going out to such and such a place to hunt. Do you also be ready." He then came out of the Wazir's skin into which he had entered.

At night the Dēu went off to the hunting place. Having arrived there he turned into a very handsome grey horse, and, equipping himself with a golden saddle and a golden bridle, there he remained.

9 *deryœlin* — 3rd. sg. hm. p.pc. active of *d**-*ayilas* 'to hear', a transitive verb in which the pronoun infix refers to the subject v. § 249. 4.

ḫwa ka je — this *ka* is unintelligible to me.

10 *ammanam* — 'I have become', 1st. sg. pret. of *a* + *-*manas*.

niten — 1st. pl. fut. of *niyas*, 'we shall go', or 'let us go'.

11 *manijan* — 3rd. pl. injunctive of *manas*, 'let them become'.

12 *eṛaso ka dusimi* — infin. *i* + *-*asas* 'to say to him', v. § 400 'after saying this to him he went out'.

dus — p.pc. active of *dusas*.

muṛakaṛolom — adjectival v. § 77.

13 *uyoṛgkuṛor* — dative of *uyoṛgko* pl. of *uyuṛm*.

14 *maṛnin* — i. e. *manin*, imper. pl. of *manas*.

17 *niltul* — p.pc. active of *-*ilulas* v.t. 'to put a saddle on a horse' (direct object). *kayor iltulas* 'to saddle the horse'. The dual personality complicates the situation. The Dēu saddles the horse which is himself. It seems necessary to understand *iṛkor* himself as object.

18 *eṛka* — 'with him' *i* + *-*aku*.

numa — p.pc. active of *manas*, cp. p. 6 l. 6 note.

(10) Teordinar bardia ikorer i-ro tərqəiteum durəimi. Mirtikartiq yor ne thamteum gutəuram. Mirtikartiq jurtəuman ke i-te dasulo han hayurən bi-m. Da hin sisane i-teu uyur bilum. Telateer nin i-teu balu bilum, i-se hayur bim yurtəuman. Ni-tai-n kao etəuman ke: "Gusu

2 *yor ne* — 'ahead', for adverbs formed with *ne* v. § 416.
gutəuram — 3rd. pl. plup. of *gutəuras*.
jurtəuman ke — for this idiom, future + *ke*, v. § 343. 2.
3 *telateer* — *tele* + *ter* + *er*.
4 *balu bilum* — 3rd. sg. y. plup. of *baleryas* 'to be lost'.
5 *ever* — *i* + *-*der*, used as the indefinite form of *-*der*, 'a voice, sound'.
atimi — *a* + *dimi*, 'it did not come'.
e.iteuman — cp. p. 3 l. 4. *kraka or mumun ke* may be understood as the object.
6 *numan* — *n* + *u* + *man* p.pr. 3rd. pl. of *-*manas*. The p.pr. of *manas* is *nume.an*, *nume.an* or *nume* and is invariable.
7 *iiji ne* — adverb cp. *yor ne* l. 3 above.
bardia.e yakalater — the genitive suffix *-e* is not usually found after final *-a* nor before p-.
8 *nukan* — p.pr. active, invariable, of *gunas* 'to take' (a *y* object).
djum — 'behind', strictly, 'from behind'.
jurtam — 3rd. sg. hum. imperf. of *juryas*.
9 *duyərənimi* — 3rd. sg. hum. pret. of generalised non-pronominal form of *d*-ayərənas* to question (someone); also *dəyrənəmi* p. 10 l. 11.
dukərma — 2nd. sg. pret. of *juryas*.
11 *hayurən . . . tilaq . . ne.ztan bi* — cp. p. 4 l. 17 *mirtikel*. We have again the dual personality of the horse to complicate matters.

The exact nature and force of *ne.ztan*, *ne.ztan* is uncertain. Are these forms

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV? Barnabo AV?

5378

There was no other person with him. After turning into a horse he stayed there alone.

Next morning the King went forth from his palace to hunt. The huntsmen had gone on before the King, and when they came (to the place) there was a horse in the plain and there was the track of a man (leading) on in front of them. They saw that the track had gone up to the spot and disappeared and that there was the horse (there). On seeing it they called out: "Owner of this horse, who are you? Where are you?" No answer came and they saw no one. They were confounded. They reflected, and one of them said: "Let us quickly take the news to the King." Then one of them went back thence in the direction of the King, bearing the news. The King was coming along behind. The huntsman approaching him salamed. The King enquired: "Where have you come from?" "Hail King," replied the huntsman, "There is a very fine grey horse wearing a golden saddle and bridle in the plain; and its owner is not there. We made great search, but saw no one."

The King came on and saw that in fact there was a fine horse. He fell greatly in love with it and said to the Wazir: "Mount this horse and let us see what it is like." "O King," said the Wazir, "this horse is not suitable for me to ride, rather is it suit-

---

of ctas with a prolonged first vowel causatives, or are they simply accidental variants? v. § 240. One would expect the man in the present case simply to say that "there is a horse saddled with a golden saddle", but *ucstas* can scarcely be passive. The sense is perhaps "having put on", "wearing" a saddle.

10 *hovcimi ke . . . hovcem ki.* — This is a stock idiom. The future of *hovcmas* to look (at) + *ke* followed by a statement of what was seen. The meaning seems to be "when he looks (he sees) there is a horse" i. e. "he looked and saw that there was a horse". There is an exact parallel in the Shina [*okei te . . .*

One may also have the preterite *hovcimi ke*, cp. p. 8 l. 1.

11 *ucvmas* — p.pc. active 3rd. sg. hm. of *°-mamas* cp. *ucvmas* l. 6 above.

hovcyem hetek ki ke — "let us see what sort (of a horse) it is". *hetek* usually appears as a simple interrog. particle "of what sort?" "how?" Here it is used with *ke* in an indirect question.

13 *je holjaiyaas yakki* — *holjaiyaas* is doubtful. *yakki* regularly takes *-des* as in the following line. Note the nominative *je* and *wg* with the infin. The genitive is also permissible.

17 *ucvimi . . . dosrè* — This is a case where the verbal prefix *d-* is optional and appears to have no effect on the meaning cp. § 256.

4: Lorimer L-3 (1930-4; 1934-8) 1936 AV7 Burushe AV7

able for you to ride on. For it is by your good fortune that God has created it." The King dismounted from his (own) horse and saying "Bismillah" mounted the other and found that it was a marvellous animal. He was highly pleased, and said to his Wazirs and Elders: "Let us return hence to the palace," and they turned about. On the way back he made the horse gallop. It was a very fast horse and galloping swiftly on and on it carried him far away in front of his Wazirs and followers. They were left behind.

The Dêu, shaking himself, became a Dêu again and bore the King up to the sky. He set him down in a very beautiful place and made him sit down. Then he salamed to him and said: "O Shâhzâda Bahrâm, today I have become at rest in my mind. I have seen you. I brought you here because for a number of years I have continued serving you in order to see you. As you did not come out, I entered into the skin of the Wazir and came to you and making a pretext of hunting I brought you out. Having got you out I turned myself into a horse in the plain. Then I brought you here. Now dwell with me in peace. I have become your father and you have become my son. I have given you all my property."

Then he established Shâhzâda Bahrâm there and every morning he came to salam to him, and he used to converse pleasantly with him. In this wise a number of days passed.

(Now) when Shâhzâda Bahrâm, mounting the horse, had turned back from the plain in the direction of his palace, (the horse) had

1 *n·tsum* — *n* + *e* + °-*ter* + *n* p.pc. active of *i* + °-*duryan*.
dəspapali bem — *Bali.* sg. 2 plup. of *d*°-*aspapalan* 'it had carried him through the air'. This verb is based on the adjective *bálal* 'hanging, suspended'. cp. Shina *bálala*, 'floating'.
etsi nultan — 'following him'. *ne* + *lla* + *n* p.pc. active of °-*lai lisiyan*. I have recorded the *-l-* only in this part of the verb. Owing to the divergence of meanings it seems impossible to connect this verb with °-*litsiyan*, °-*altsiyan* 'to put on' (shoes etc.)
2 *duwan* — 3rd. pl. hm. pret. of *furyan*.
ni.en u·r uyon — 'taking him', *n* + *i* + °-*yan* p.pc. active of *i* + °-*yanan* with sg hm. object.
4 *doγ·arusin* — p.pc. active of *doγ.arusan*.
odori et.aur — 'in order to search', dative of infin.
5 *duw.iuman* — 3rd. pl. hm. of *dewalan* 'to go out' etc. This form is usually so recorded, but should be *duw.al.uman*.
atoγurkuman — *a* + *d* + *w* + °-*γurk* + *uman* 3rd. pl. hm. negative pret. of *d*°-*γurkan*: a transitive verb with a pronominal infix referring to the subject § 307. 3.
γamulo — for *γ.amulo*.
6 *hurućuman* — for *hurućum.an* 3rd. pl. hm. pret. of *hurućiyan* | *hurutan*.

6; Leitner 1-2 (1920-4; 1934-5) 1935 AV? Barnsho AV?

carried him far away from his chief men and had borne him off through the air. All the Wazirs and servants came along following him from behind. They nowhere saw the King and thought: "Doubtless the horse has taken the King and brought him to his palace." They went to the King's palace and saw that neither the horse nor the King was there. They made enquiries and then they went out to search for him. Nowhere did they find him. For some days they remained in grief. At last they took the (original) Wazir as king and thereafter he carried on the government.

Up above, Shāhzāda Bahrām and the Dēu were in a chamber in the Dēu's palace. Some days passed and a letter came to the Dēu from his brother. The Dēu read the letter. His brother had written: "It is my son's marriage. Come to the wedding." The White Dēu said to Shāhzāda Bahrām (lit. 'asked'): "O my son, a letter has come from my brother. He is celebrating his son's marriage and has invited me. When I go off tomorrow, do you walk about all these gardens with these peris till I come back. They will show you every attention." "Very good, Father" said Shāhzāda Bahrām. The Dēu took his leave, and at his departure he displayed great friendliness to Shāhzāda Bahrām. The Dēu proceeded to his brother's home.

Shāhzāda Bahrām went out for a stroll with the peris. Now

1 *ovam* — 'he had said to them', 3rd. sg. plup., subject *a* indirect object *h.* pl. *o* + °-*am.am* from °-*am.a*.
ortam — ditto from °-*ilam* better *ortam* as in line 6 below.
čeri — by origin "key" (Shina, *čheri*, Hind. *čabi*), applied to the local wooden bolt-and-pin "lock", *čeri dova.e* 'to open a lock' and so 'to unlock a door'.
ajonin — 'do not ye open', *a* + *donin* from *dova.e* or *dova.e*.
7 *masqaiyam* — 'I shall kill you', *ma* + °-*asqaiyam* 1st. sg. fut. of °-*asq.a.e*.
8 *d'uyorm* — 'closed' static pr. pass. of *duya.e*.
6 *pfu-tz hukom arpi-m* — 'the Dewa's order was not' i. e. his order was to the contrary, or, 'there was not his permission, cp. Hind. *parbab kar hukum nahi hai*.
pori.ennu — general oblique of the hf. noun *pori* + *en* 'a peri', *pori* + *en* + *nu*.
ortam — 'he had made (people) make', *u* + °-*ilam*.
ennu — 'of her' gen. hf. of *ine*.
nu.i-k — 'her name', *nu* + °-*ik*.
8 *iri-ną(er) ajuto bem* — 'she was not coming into his hand, she continued not coming . . . . . .' *i* + °-*riną*, *a* + *juto bem* 3rd. sg. hf. neg. imperf. of *juyo.e*. The imperfect here denotes continuous action etc. commencing in the past and persisting in the present: "she had continued up to the present not to come into his power," "he had as yet failed to get possession of her".
9 *ke ke* — 'if not, if you don't, otherwise'.
ją — Transitive nom. form as subj. of pres tense of trans. verb § 61. III.

4: Lorimer L-3 (1930-4; 1934-5) 1935 AV7 Buruho AV7

the Dēu had said to the peris and warned them: "Don't open the door (lit. 'key') of that one garden for him, but take him round everything (else); and (see you) don't vex him. If you do vex him I will kill you." Thus had he admonished them.

The next day Shāhzāda Bahrām again went out for a walk and came to the door of that garden. The lock was shut. "Open it," said he. The peris did not open it because of the Dēu's prohibition. (The Dēu had had the garden made for a certain peri. Her name was Shahri Bānu. The Dēu was in love with her but he could not get possession of her.) Shāhzāda Bahrām was very much annoyed: "Open it for me," he said, "if you don't, I shall kill myself." The peris were frightened. "If he kills himself," they said, "the Dēu will kill us for no fault of ours. For that reason let us open the door of the garden for Shāhzāda Bahrām." They opened it.

Shāhzāda Bahrām went in and saw that there was a very wonderful garden. In the middle of it there was a pond, and there was a weeping willow tree, and there were many raised sitting-places. After looking all round he returned again the same day to the Dēu's house and remained there. On the following day he again went to the garden. Going in he made a pit for himself in a certain place and sat hiding in it. When he had sat there for a little seven pigeons came (and lighted) on the weeping willow tree.

9 *ēkēr sapōi.ām* — 'I shall kill myself', *ē* + °-*sapōiy.ām*. °-*ēkēr* is always treated as 3rd. pers. sg. § 397.

10 *ēkēr sapōmēnē ke* — 'if he kills himself', 'if he were to kill himself'. The perfective is regularly used to express a condition in future time which is imagined as fulfilled.

ēt'ēnēm ke — 'for that reason, therefore', ablative of *ēte*. Note the use in such cases of the *y* form of the pronoun. *ke* appears to be unnecessary cp. Engl. " and so ...".

11 *dōyām* — 1st. pl. fut. of *dōwām*.

14 *sapōmēn* — p.pe. active of *hōwām*.

gēnāe — gen. obl. v. § 84 III.

15 *nēmēn* or *nēn* — p.pe. active 3rd. sg. hm. of *nēyām*.

16 *hōrwīnē ke* — v. § 400.

17 *d'wnāē* — 3rd. pl. a pret. of *ḑwyām*.

nēwēt — p.pe. active of *hōrwīnē*.

ānāmāē ke — the *ke* is merely the connective 'that'.

8 *ki·nemutse* — 'on her', *kinemu* gen. obl. hf. of *kinu*.
du·yam — 'I shall lay hold' 1st. sg. fut. of *duwas*.

10 *dumu·wasumo* — 'she remained' 3rd. sg. hf. pret. of *d°-wasas* (*d°-wisas* etc.) v. Vocab.
ho·l ne — 'outwards' or, 'from the pond'.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Buzusho AV7

After sitting there for a short time they said: "Let us now bathe in this pond, for later, when Shahri Bānu has come, there will be no room for us." Just at this point with a sound of wings they brought Shahri Bānu from the sky on a litter. They set her down and Shahri Bānu said: "Look about. There is a smell of human being." They looked but saw no one anywhere.

Thereupon Shahri Bānu, with a view to bathing in the pond of milk, left her clothes on the litter. Then coming out naked she entered the pond with her peris. Outside, Shāhzāda Bahrām, having seen Shahri Bānu, had fallen in love with her face. He thought to himself: "I will catch her." Then he made cow-dung smoke and snatching up Shahri Bānu's clothes he held them over the smoke. All the (other) peris flew away (but) Shahri Bānu remained in the tank. She begged and implored from where she was in the pond: "Whoever you are, for God's sake, give me my clothes." Shāhzāda Bahrām did not give them to her. Again she implored: "As my father, give them to me." "I am not your father" said he. "As my brother, give them to me." "I am not your father's son," said he. "As my uncle, give them to me." "I am not your mother's brother," said he. "As my husband, give them to me," said Shahri Bānu, and (then), after holding the clothes over the smoke, he gave them to her. She put them on, but she was unable to fly. Taking her by the hand he led her into the house. They sat down in the house and then they fell in love with one another.

---

11 *ja gaθēŋ ayʿvn* — 'give my clothes to me', imper. of *-γωλαs (and *-ayωωαs) 'to give' when the direct object is y pl. § 231 d.

aωayωnimi — 'he did not give them to her', *a* + *ωa* + *-ayωnimi*. *ωaa* or *ωa* 'my father' *a* + *-ωʿy*). *ayn* was given as an alternative.

12 *haδra* — v. § 271. 1.

13 *ovlas* = *a* + *-alas*

14 *gωωωmo* — 'of thy mother', *gω* + *-ωi* + *ωω*.

malas = *ωa* + *-alas*.

16 *dωʿv* — v. § 259.

aωωn.....aωω — 'she was not able to . . .'

17 *havlo* — this seems to be the regular expression for "in" as well as "at" 'the house'. I do not remember to have met *hωvlo*.

1 *gər nəwpas* — 'having settled the marriage', *n + i + °-nəpas* p.pr. active of °-nəpas.

2 *ərpačər di-mi* — 'he came to him'. The verb "to come" is constantly used where we should say "to go".

4 *hə-nanulo* — this form has been cut out of the Ms. text and again restored to it. One would expect *hə-nuq* (*hə- + an + uq*). Perhaps it is for Persian *xəno + an*. *mərstaqami* — 'he hid her' from °-*stəqəriyas*.

5 *bərqanz ztimi* — 'he embraced him'. *bərq* is 'throat, front of neck'. I cannot explain the form; perhaps the suffix is for *-anp*, or possibly *-az* in the p.pc. act. of *ztas*.

6 *ar imai.imz* — 'fearing' *i + mai.imz* present pc. of °-mə.əs.as.

8 *hurutam* — 'he was sitting', plup. equivalent to impf.

11 *ni.a baiy.am* — 1st. sg. plup. of *əiy.as*, 'I had gone'.

qulf dəlum bim — 'the lock was affixed, applied (to our garden). *dəlum* static pc. passive of *dəl.as*; *wəlum* (i. e. *w.əlim*) static pc. pass. of *w.əli.as* is given as an alternative. The conception is probably of a padlock.

12 *ərsam* — 'I said to them', *n + °-əsam* from °-*əsas*.

5394

Meantime the White Dēu, having disposed of the marriage of his brother's son, returned to his home. Arriving there he said to himself: "I will go and pay my respects to Shāhzāda Bahrām and come back again." He went to him. Shāhzāda Bahrām, fearing the White Dēu, hid Shahri Bānu in a chamber. The Dēu came up and salamed to Shāhzāda Bahrām and embraced him. Then he enquired how he was. Shāhzāda Bahrām was afraid and feigned gladness. That day the affair did not become known to the Dēu. He went off to his own house. The next day again he came to pay his respects. Shāhzāda Bahrām was sitting in deep grief. The Dēu enquired: "Why are you distressed?"

Shāhzāda Bahrām in fear answered him: "One day I had gone to visit the garden(s). The lock on one garden was closed. I said to the slave-girls: "Open it," but they did not open it for me. I said: "If you don't open it I shall kill myself." They were frightened and opened it for me. When I had sat there for a short time seven pigeons came (and lighted) on the weeping-willow tree. When they had sat there for a little some peris brought a peri on a litter. The peri said: "I feel a smell of human being. See what it is." I had made a pit and was below the ground and they weren't able to find me out. On this the peris all took off their clothes and plunged into the pond. I fell in love with the peri and determined to catch her. I snatched up her clothes and held them in the smoke of (a) cow-dung (-fire). All the other peris flew

away, (but) Shahri Bānu was unable to fly. She demanded her clothes of me, but I did not give them to her. She said: "As my father, give them to me." "You were not begotten of me," I answered her. "As my brother, give them to me," said she. I did not give them to her. "As my uncle, give them to me." I did not give them to her. "As my husband, give them to me." When she said this, after holding the clothes in the smoke, I gave them to her. She put them on, but when she tried to fly she was unable to, because I had made her clothes impure by putting them in the cow-dung smoke. Seizing her I brought Shahri Bānu here to the house. Now I am afraid of you, (lest you may say) 'Why did you bring her here?' and eat me up."

The Dēu became very angry because he was himself in love with Shahri Bānu. In order to get her for himself he had planted there the garden and the milk pond and the musk weeping-willow. But there was nothing he could do, because Shāhzāda Bahrām was also very dear to him. So he said: "It doesn't matter. Wherever she is fetch her." Shāhzāda Bahrām, taking Shahri Bānu by the hand brought her before the White Dēu and the White Dēu read the marriage service of Shāhzāda Bahrām and Shahri Bānu for them. Then graciously he said to Shāhzāda Bahrām and Shahri Bānu: "You have become my son, and you have become my daughter. Abide here in peace." So saying he went off to his own house. He further said to them: "Formerly I used to come to salam to Shāhzāda Bahrām. Now do you both come every day to salam to me. For I was desirous to marry Shahri Bānu myself, but you have married her." So they remained there and every day Shāhzāda Bahrām and Shahri Bānu used to go to salam to the White Dēu.

11 *dasurtu* — 2nd. sg. imper. of *d*ᵃ-*tāas* with hf. sg. object v. § 318. 3.

16 *aiá* — 'my daughter', *a* + ᵃ-*áá*.

539

For some time they remained here in the Dêu's house, (then) one day Shāhzāda Bahrām had a dream. (He dreamt) that he found himself in his own country and that going into his palace he saw that his Queen and sons were in a very evil case. The Pipe-Bearer had possessed himself of the sovereignty and was making his Queen fetch water as a servant. On seeing this Shāhzāda Bahrām was greatly distressed. He awoke from sleep and made great lament. Shahri Bānu asked him: "What has happened to you?" Shāhzāda Bahrām wept and said to her: "Today in a dream I found myself in my own country. I went to my palace and saw that my Queen and my sons were in an evil state. The Pipe-Bearer has possessed himself of the sovereignty." "O, Shāhzāda Bahrām," said Shahri Bānu, "if you wish to go now to your own country why don't you go to the White Dêu and ask for leave? He will grant you leave, for he has now become disgusted with you."

Shāhzāda Bahrām and Shahri Bānu went and salamed to the White Dêu and addressed him. The White Dêu asked: "For what purpose have you come?" "O Father," said Shāhzāda Bahrām, "today I saw my own country in a dream. My Queen and my sons are in great difficulties, and the Wazir has taken possession of the sovereignty." The White Dêu gave Shāhzāda Bahrām and Shahri Bānu leave to depart.

Shahri Bānu said to Shāhzāda Bahrām: "Say to him, 'I do not know the road because a long time has passed (since I came by it)'." Then Shāhzāda Bahrām addressed the White Dêu: "O Father, you have kindly given me leave to go, but I do not know the way."

4z Lorimer L-3 (1929-4; 1934-5) 1935 AV7 Burzuhe AV7

"Shahri Bānu," replied the Dēu, "is much better acquainted with the road to the world than I am; she will conduct you." "Very good," said Shāhzāda Bahrām and (he and) Shahri Bānu returned to their own house.

"We have forgotten one thing," said Shahri Bānu, "in asking the White Dēu for leave, you did not say this: 'In case trouble come upon me give me a token from yourself so that when any (such) trouble presents itself I may seek help from you'." Shāhzāda Bahrām said this to the White Dēu and the latter gave him a little hair from under his arm-pit and said: "Whenever any trouble comes upon you, throw this in the fire and then I shall appear."

Shāhzāda Bahrām and Shahri Bānu set out in the direction of their own country, taking with them a considerable quantity of the Dēu's wealth. In one hour Shāhzāda Bahrām and Shahri Bānu arrived at the frontier of their country. (Now) there was the house of an old man on the extreme border of the land. They came up to his door. The old man coming out saw that there was a very handsome youth and a very lovely lady. On seeing the youth's face the old man wept, for he had reared Shāhzāda Bahrām as a foster-child. (So) having recognised him he conducted (the couple) into the house, and showed them great honour. They remained in his house for some days, and Shāhzāda Bahrām used to go out (every) day to hunt.

---

17 *gwāz hām* — 3rd. sg. hab. pisp. of *-*wēz.ēd*.

ēyēn — a difficult word. Apparently p.pc. of *-*ēyēmēnēd*, *ē* + *i* + *-*ēyēn*. There is a transitive verb *-*ēyēmēnēd* meaning 'to count', the pronoun predx referring to the object, but there is also another verb *-*ēyēmēnēd* in which the pronoun predx refers to the subject, which seems to mean 'to see, to regard as' and which is used where in English we should say "it appears to me" etc.

dādēl ēyēn ēd 'I see it thus, it appears thus to me'.

This must be related to *yōnēn* v.i. 'to appear'. *ēwēn ēyēn ēyēn* probably means, "seeing him as the youth", "recognising in him the youth".

ēyēn may of course be *ēn* 'like, resembling', but this would hardly aid construal.

19 *gwāzē* — for *hēr gwāzē* 'every day'. Otherwise, 'in the daytime'.

539A

One day the Tham of the country, who had succeeded Shāhzāda Bahrām, came for an outing in the direction of the old man's house. Shāhri Bānu was sitting at the window. A bright light shone in the Tham's face. He glanced up and when he looked he saw a lady of wondrous beauty. He fell in love with her. He dismounted there and said to his men: "Go. Whoever the woman in this man's house is I will marry her." Two men went into the house and on entering and seeing Shāhri Bānu's face they lost consciousness. (The party outside) waited a long time, but no news came from inside. Again the Tham despatched two men. They brought answer: "There is a marvellously beautiful woman."

The Tham said: "Say to the woman that I will marry her." Going to her on behalf of the King they said to Shāhri Bānu: "The king says he will marry you." "I have a husband," said Shāhri Bānu, "what am I to say to him?" The King sent them again: "Fetch her here by force," he commanded, "and I will take her and carry her off to my palace."

They went and pressed her, saying: "The King is going to marry you. Come along." "The key of my trunk of clothes is with my husband," said Shāhri Bānu. "If you get my clothes out of the box for me I shall put them on and marry the King." "If there is no key," said the King, "bash the box with a stone and break it up and take out the clothes and she can put them on." They were proceeding to break up the box, (but) Shāhri Bānu said: "Don't break it. I have the key," and she opened the box. Taking magic clothes out of the box, she put them on and went out on to the roof. Then she called out with a loud voice: "O old man, if Shāhzāda Bahrām comes say to him: 'The Pipe-Bearer

2 *ni·dilεn* — i. e. *ni·delin*, *n + i + del + in* p.pc. active of **-delas*.

4 *yas* — only twice recorded for the ordinary *yatsε* 'head'. Cp. *yači* p. 28 l. 16 note. *ni·m . . . dii* — static pc. of *niyas* v. § 279. e.

5 *i·tsε* — it is difficult to account for this x pl. If the pronoun stood for "affairs", "work", "business" it would be in the y form. Perhaps it is *i + *-tsε kε*, 'on it also', v. § 74.

7 *nuyεn* — 'having taken them', *n + u + *-yan* from *-*yanas*. *ho·l* is regarded as a plural. This participle is constantly used as the equivalent of "with": 'he has come with an army'. Cp. Hind. *lekar*'.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

having said: "I am going to marry you," Shahri Bānu said 'no' and went off to Shahr-i-Shaskin.'" So saying she took earth in her hand and flinging it in the King's face she flew away.

Meanwhile the old man, on hearing from Shahri Bānu the name of Shāhzāda Bahrām, put earth on his head and ran off towards the place where Shāhzāda Bahrām had gone to hunt. When he got there Shāhzāda Bahrām was busy with his hunting. The old man called out: "O Shāhzāda Bahrām, come quickly, Shahri Bānu has gone off to Shahr-i-Shaskin, and the Pipe-Bearer has come with an army to slay you." On hearing these words Shāhzāda Bahrām lost consciousness for a little. Coming to his senses he said: "Say once again what you said." The old man told him again: "Shahri Bānu has gone off to Shahr-i-Shaskin, because the Pipe-Bearer put force on her saying: 'I will marry you,' and now he has come to kill you."

On hearing this Shāhzāda Bahrām lighted a fire and threw into it the hair that the White Dēu had given him. When he had done this the Dēus appeared. Meanwhile the Pipe-Bearer's army also arrived on the scene. The White Dēu enquired of Shāhzāda Bahrām: "What trouble has come upon you?" "The Pipe-Bearer has come with an army to kill me. And on his saying: 'I'll marry you' Shahri Bānu has gone off to Shahr-i-Shaskin." "Call out quickly to the Pipe-Bearer's army," said the White Dēu, "and say: 'Those of you who are for me move to one side, and those who are for the Pipe-Bearer move to the other side'."

Shāhzāda Bahrām called out accordingly and on his summons all came over to his side. (Only) a few men joined the Pipe-Bearer and these the Dēus ate up. Then the Dēu said to Shāhzāda Bahrām: "Now what do you propose to do?" Shāhzāda Bahrām appointed the old man, his foster father, Tham in the place of the Pipe-Bearer and established him in the palace. And he decided himself to follow after Shahri Bānu. Having so decided he enjoined on his subjects:

"Till I come again, abide by the orders of (this) my foster father, and I shall return soon." So saying he departed. 539

He came to the White Dēu and said to him: "Show me the way to Shahr-i-Shaskin." The White Dēu assembled all the Dēus and asked them: "Does anyone know the way to Shahr-i-Shaskin?" All replied: "We do not know it." One Dēu, however, got up and said: "In such and such a place there is a very aged Dēu. He will know." They quickly fetched him and asked him: "Do you know the way to Shahr-i-Shaskin?" The Dēu was very old and hard of hearing, so they shouted loudly at him. On this he replied: "Yes, I know it. I was a goatherd with my father and I had gone with him to the mountain," and he pointed it out with his finger."

A number of Dēus then taking the old Dēu with them and also Shāhzāda Bahrām carried them off to the mountain. The White Dēu had given Shāhzāda Bahrām a stick, and one of his brothers had given him a cap and another a pair of sandals. If he put the cap on no one would see him; if he put the sandals on it would become easy to traverse every vile road and jungle; the stick would aid him in killing enemies. Taking those three things he proceeded in the direction of Shahr-i-Shaskin. When he came to a certain place a boy and a girl had come there to (their) goats. They had with them two cakes of bread as provision for the road. Shāhzāda Bahrām put on his cap of invisibility and came up beside them and

---

17 *ɑʷɑʷnɨ* — perhaps for *ɑʷɑʷni* a foreign noun wrongly used as an adjective v. § 101. e. cp. *ɑʷɑʷnɨ dɨrɨʷʌn* p. 50. l. 20. Otherwise the genitive.

18 *mʌdʌd ičičі bim* — 'it used to give help (y sg.) to him'. From **-čiʌs*.
ʷʌʷsko — the number *ʷsko* 'three' with the x pl. pron. prefix *ʷ* v. § 133.

19 *huy'ʷʌʌlɨ* — the force of the *-ʌlɨ* is not clear to me. The ordinary meaning would be "to", but here one would rather expect "with".

20 *dʌʷʌʌm* — 3rd. pl. h. plup. of *juyʌs*.
ʷtsiyenʌs — from **-tsi yenʌs* 'to take with one', with specialised meaning.

21 *ʷitsʌs pfɨrtsin* — 'the cap of invisibility'. A form of **-itsʌs* 'to see'. *Ʊitsʌs* seems to be *ɑ* + *u* + **-itsʌs*, literally 'not to see them' or 'the-not-seeing-them', which it is rather difficult to twist to the required meaning, but the -u- is possibly indefinite, equivalent to "one", "anyone".

14 *di·m* — static pc. 'the king who has come'.
i·i — 'himself', equivalent to 'this very'.
da·rai.i — perf. of *d-asas* means 'he has sent me'. The sentence is obscure and

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

sat down. The boy and the girl said: "Produce the food and let us eat it now." They took out the bread. The girl said: "I have no appetite today, because today a king has come with an army to marry my sister Shahri Bānu. My sister is refusing him because she had married a Tham called Shāhzāda Bahrām. For that reason she is disobeying her father and mother's command."

At these words Shāhzāda Bahrām was greatly pleased, saying to himself: "I have now found Shahri Bānu." He was able to see the boy and girl, but they did not see him. Shāhzāda Bahrām ate up all the food and they were quite at a loss saying: "Where has this (food) gone to?" and they beat each other saying: "You have eaten (too) much." Quarrelling (thus) they drove off their goats homewards. Shāhzāda Bahrām also went with them following along behind. Going along he approached the King's palace. The girl entered the palace and he too went in. Entering he saw that Shahri Bānu and her mother were both sitting there. The mother was saying: "For God's sake marry this king who has come to you saying: 'Your father has sent me'." "O mother," said Shahri Bānu, "I will not give up Shāhzāda Bahrām and marry another. There is no one like him in the world." The Queen said: "Wherever he is, why doesn't he come?" On this Shāhzāda Bahrām removed his cap a little and they saw his face shining. At the sight Shahri Bānu was perturbed and cried out: "O Shāhzāda Bahrām!" Then she fainted. When she came to herself Shāhzāda Bahrām made the whole of himself visible. Shahri Bānu and her mother were both greatly delighted.

His mother-in-law said to Shāhzāda Bahrām: "Quickly take Shahri Bānu and save your lives." Shāhzāda Bahrām replied: "I will not

1 *jaŋ ayɛtomʌtɛ* — *a* + *ɛtom* + *ʌtɛ* v. § 384.

notʌγʌn — i. e. *notʌγʌn*, 'hiding' i.e. 'secretly', p.pc. active of *dʌγai.ʌs* v.i. 'to hide'.

o·ničam — *o·* neg. prefix. v. § 339.

2 *ni·ṣin* — p.pc. active of *ṣi.ʌs* (or **-ṣi.ʌs?*)

baŋut dɛlim pa·dša — 'the king who has constructed breastworks'. *dɛlim* static pc. active of *deli.ʌs* cp. § 378 b. cp. *delimʌn* p. 30 l. 9; the verb *delʌs* yields *delomʌn* and *delom*.

3 *e·riŋ* — for the usual *iriŋ*. There is a tendency for the uninflected **-riŋ* to be used for **-riŋər* or **-riŋolo*.

4 *hahʌn* — *haha* seems to mean primarily "shout", especially the shout raised in attacking, the "battle-cry", and then to be used for the attack itself.

6 *u u·i hərʌŋ* etc. — 'they among themselves killed themselves' i. e. 'they killed each other'.

u and also the following *uyo·n* are here used in the simple nominative form with the past tenses of transitive verbs, an exception to the general rule which requires the Trans. nom. v. § 60.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

go away today secretly without having fought with the king's army. Bring me food and I shall eat and presently engage in battle with the king who has entrenched himself." They brought food and after eating it he took the stick in his hand and donned the cap and put on the sandals. When he had done so, raising a battle-cry he charged in the direction of the king. He fought the army with the stick. He saw them, but they did not see him. (Fighting) among themselves they slew each other and entirely annihilated themselves. He too slew a number of them. He won the victory and returned to his father-in-law's house.

His father-in-law was greatly delighted. He made him have a bath and put on new clothes and he fetched Shahri Bānu, and he was greatly pleased with his son-in-law. He made them stay with him some days. (Then) Shāhzāda Bahrām and Shahri Bānu asked leave (to go) to their own country. The King presented them with much wealth and dismissed them.

They arrived in their own country and all the people were greatly pleased and they took up their residence in the palace. The old man, his foster father, Shāhzāda Bahrām made his Wazir and he abode with great peace and security in his palace.

Eating, drinking and hungry I have come.

---

8 *tu.aŋ* — y pl. of *toi* 'new'. Such agreement of adjectives is not very common, at any rate in the texts v. § 106.

ne.ibil — 'making him put on', p.pc. of *°-ʌbilʌs* causative of *belʌs* used when the object is *y*.

11 *nučin* — 'having given to them', n + u + °-či + n p.pc. active of °-*čiʌs*.

13 *yu, yuʷ* — 'his father' *i* + *uy*.

15 *je ǰičoma, mima* etc. — 'I came eating, drinking, hungry'. This is a story-teller's formula and is I think intended to indicate that he would appreciate some reward.

ʌaiyʌm — 1st. sg. pret. of *juyʌs*.

No. 11.

2 *yu·ɛan* — 'his wife' *i* + *-*u·s* with suffix of singleness: -*an*.

4 *ikərɛŋɛ* — *i* + *-*kər* + *aŋɛ* v. § 144.

jama·at kɛ aiyu·ɛ ka — '(my) wife also with my sons' i. e. 'my wife and sons'.

6 *nu·n* — 'giving bread etc. to them' n + u + *-*u* + n from *-*uyas* 'to give' (h. and x objects) v. § 231 d.

kɛ — apparently dependent on *akurəman* 'so much . . . that'.

10 *di·miwasuman* — v. Vocab. *d**-*u esas*.

11 *mi.ai.asan* — I took this to be the infin. form of *-*yaiyas* 'to obtain' (cp. §§ 230. 3. and 249. 4) + suffix -*an*, meaning perhaps 'a thing we are to obtain',

[Errata', should be - yo'lasar, cf. corrigenda, p. 419, cat. 116 -- analyst.]

No. II.

The Poor Man of Rūm and the King of Irān. [35]

5394

In former times, they say, there was a man in the land of Rum. He had a wife also and two sons. The man was very poor and he was very weak. He was in straits for food to eat and for clothes to put on.

One day he thought to himself: "In this country it is difficult to support my wife and sons, so I shall go to the land of Iran, for they say that the King of Iran gives food and clothing to wayfarers and poor people and provides for them." So saying he consulted his wife. By the power of God his wife was so obedient to her husband that she never used to depart from what he said. "O wife," said her husband, "today for some years (now) we have continued hungry and cold and there is no hope that we shall here obtain food and clothing. I have heard them say that the King of Iran is very kind-hearted and a great cherisher of the poor. So today I put it to you — let us take our sons and go to Iran, so that if God shows favour and we get food and clothing from that King we may abide there returning thanks (to God)." The

but I now understand that Professor Siddheshwar Varma has recently discovered a sort of Subjunctive form *ə'mʌnəsi* = 'I would become'. This might well have a 1st pl. form *mimʌnəsʌn* to which *mi.ai.ʌsʌn* would correspond. *Ame.imʌnʌsʌn* (p. 50 l. 11) could also be similarly explained.

I·tstsum — here appears to anticipate the *itertsum* in l. 12.

13 *gutsimo* — 'from thee' *gu* + **-tsimo*.

14 *dirme.iγurkʌn* — v. § 261 A at end; 1st. pl. pret. of *d*-ʌγurkʌs*.

---

5 *waščam* — *wašč-* seems to be the customary present base of *waši.ar*, instead of the *wašič-* which one would expect.

Leve ke — usually means 'because' but here it appears to be used in the sense of 'so that', 'in order that' cp. Vocab. s. v.

6 *duyan* — short form of 3rd. pl. pret. of *juyas* v. § 314.

7 *o·manš* — Ma. has *o·maš*.

9 *no·ljan* — 'causing them to mount' n + n + *-*ALJA* + n from *-*AUljaiyas* Ca. of *hulja*iyas.

12 *o·tam* — 3rd. sg. plup. of u + *-*ATAS*, probably Causative with the u standing for "people": 'he had made people prepare a room for them'.

In *tai.a·r o·tam* in the next line the u may refer to the *šapik* etc.: 'he had made them ready'.

339k

wife was greatly pleased on hearing this suggestion and falling in with it she said: "You say well, O my husband, let us go."

From Rum, from their home, they set out in the direction of Iran. Proceeding for some days on their way they arrived at the frontier of Iran. From his palace the King of Iran used every day to train his telescope far away on the road: "So that," as he said, "if any poor travellers should come from anywhere to this country of mine trouble may not befall them." When he looked he saw that three persons were coming on foot from the frontier of the country towards the royal palace. The King commanded, saying: "Take out horses for those wayfarers and make them mount and bring them in." When he had so commanded, (his servants) took out horses for them, and they mounted the man and the woman and their two little ones on them and brought them in.

The King had had a house made ready for them and in the house he had had cooked food and ready-sewn garments and under- and upper-bedding prepared for them. When they had brought them in, by the King's command they conducted them to this house and there the poor man and the poor woman and their two sons took up their abode in peace. There they remained for some days in great comfort.

One day the wife said to her husband: "O husband, thanks to this King's kindness we are living here in great ease, for he has given us a home. Today it is befitting that you should go to the King and do him some service." The man was pleased with this suggestion of his wife's and went off to the King's palace. There were guards at the King of Iran's gate and he went to them and salamed and sitting down said to the chief of the guards: "Be so good as to ask permission from the King for me to keep watch with you at night." The officer went to seek authority from the King for him to do so. The King said "Very good" and granted permission.

But in both cases it is possible that the *ɔ-* has the force of the indirect object, "for them" v. § 248. 2.

14 *hukumtsum* — v. § 75. III.

15 *mi gusastsum* — for *gusastsum* 'from our saying to thee' *gu* + *-*asas* + *tsum*.

16 *dukoˈwa* — 2nd. sg. perf. of *juyas*.

22 *be zailate kuˈli ˈatiwˈeše.a?* — the meaning is clearly: 'will (or may) he not in any way escape?' but I am not certain of the exact force of *be*. It is probably

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

In the meantime night came on and when it might be near to 10 o'clock the poor man of Rum's turn came to walk up and down (on sentry go). He had patrolled for an hour, when a sound of people weeping came from a distance. The King heard it and called out to the watch: "One of you go and find out and report who are weeping." It was a very dark night and all the watch were afraid. The poor man of Rum, putting down his gun, went out from the palace to get the information. He proceeded in the direction of the place (from which the sound was coming). The King also, slipping down from the window by a cord, followed after the Rumi.

When the man of Rum came to the place of weeping (he found that) three women were weeping in a garden. The Rumi listened and then went up to them and questioned them. "May I be your sacrifice, my mothers and my sisters!" said he, "tell me why you are weeping." The King of Iran was also listening. The women gave the man of Rum no answer. Again he entreated: "For your own God's sake tell me why you are weeping." There was among them an old woman and on this she turned towards him and said: "What would be the good of our telling you? Hold your peace and go (back) where you came from. You have no business with us." "No, mother," said the man of Rum, "for God's sake tell me why you are weeping." "It is for this we are weeping," said the woman, "early tomorrow the King of Iran is going to die. We are his Guardians. Therefore we weep in grief at his death."

The Rumi was deeply distressed at her words and again asked: "O mother, tell me this also; is there no means by which the King may escape? He has great wealth. If he expended something in the name of God might he perhaps escape?" "No," said the woman,

an indefinite adjective 'any', standing in the same relation to the interrogative *be?* as *beʀʌn* 'anything' does to *beʀʌn?* 'what?' cp. § 155.

kwli — seems here to be merely emphatic, 'at all'.

24 *bʌγevri* — repeated as *bʌγairi* p. 44 l. 8. If *bʌγevri* has the original meaning of Ar. Pers. *bʌγair i* (*in ki*) 'except, unless' then the construction is elliptical or contaminated: 'except if someone slay his sons he will escape, otherwise he will die'. The sense clearly requires 'only if' for *bʌγevri . . . ki*.

"he will not escape by expending his wealth. Only if some man bring his two sons here and slay them this night, then only will the King escape. Otherwise he will die tomorrow morning."

When the man of Rum had heard this news he returned with it towards his home. The King of Iran having also heard the news was grieved and getting ahead of him came and ensconced himself in hiding near the Rumi's house. Presently the Rumi also turned up and coming to the door he found that his wife had bolted it and gone to bed. When he called out she didn't wake up. He went up to the smoke-hole on the roof and called down: "O wife, open the door for me." The wife answered up to him: "Why have you come back again without having done service to the King?" "It is not so. Open the door for me," said he. On this she opened it for him and he went in.

When he had entered he said to his wife: "Today the King who has nurtured us is going to die in the morning. His Guardians are weeping for him at such and such a place. I enquired of them and they say: 'If anyone will get his wife to consent and get his sons to consent and will (then) slay his two sons at this spot, the King of Iran will escape. Otherwise he will die in the morning.' So I have come to ask you (about it), because this King has made life very pleasant for us." Now the King of Iran was listening at the smoke hole. The wife said: "Today I and you, and both our sons, must be a sacrifice for the King. Let us four go there and kill ourselves." When she had said this, the two of them being agreed, they woke up both the elder son and the younger son, and applying antimony (to their eyes) and dressing them (up) they took them along with them to the place where the (King's) Guardians were. The King of Iran also went following after them.

The man, leaving his wife outside the garden, and taking his two sons with him, approached the Guardians. He salamed to them

1 *očər* — v. § 406.

3 *wašimi* — *-*awrufas* can also be used of casting an animal prior to cutting its throat.

4 *is'ərkimi* — the radical meaning of *-*sarkas* seems to be "to bring something down on another." Here perhaps to "apply to."

ɛrɛ kɛ — 'nothing, no' here appears to be used in the sense of '(not) at all'.

6 *iski·ər* — obviously means 'at the third time', but one would expect some form of the ordinal. Perhaps it may be explained as the z form with some such meaning as: 'on occasion No. 3'.

19 *tsilanatɛ* — 'over a water (supply)' i. e. in regard to the distribution of irrigation water.

[Error: should read aiye'skərtsimi, cf. corrigenda, last of analysis.]

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

and said: "My wife and I, both of us being of one mind, have brought these our sons to slay them in place of the King." The (elder) Guardian said: "Bismillah, God is satisfied and we are satisfied. Slay your elder son." The father threw him down to kill him and applied the knife to his throat, but the knife cut not at all. Once again he applied the knife and again it did not cut; again he applied the knife and again it did not cut.

At the third time the Guardian laid hold of the Man of Rum's hand and said: "This one has been accepted by God, let him go. Slay this other son of yours." The man threw him down to slay him, but him too the knife did not cut. At the third time again the woman laid hold of his hand and said: "Congratulations! Your wish has been accomplished. The King has escaped. Now he will not die." And the Guardians said to him: "Take the news and take your sons, and with your wife go joyfully to your home." So taking their sons they proceeded home. The King arriving first climbed into his palace by the cord, and the Guardians ceased their weeping.

The Rumi leaving his wife and sons at home went off to the King's palace. There he demanded back his gun from the sentry and began to march up and down (again). Presently the King came to the window and called out: "O Rumi, have you brought news from there of who was crying?" "O King," replied the Rumi, "yes, I went there and have come back." "Who was weeping?" asked the King. "O King, a few people were quarrelling there among themselves over a water supply. It was their noise that we heard, and I went and settled the matter for them and silenced them."

The King, having heard this story, with a view to investigating it on the morrow, went into his palace and lay down and slept peacefully. When he had slept a little day broke and the King went out to the place of assembly. When he had done so his

22 *tsordine desq(k)atan gane.* — The idea appears to be: "he determined to investigate the matter next morning and in the meantime went off to his palace and lay down". The use of *gane* 'for the sake of' here appears rather strained.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burushó AV7

4 uˑɛr *duγaruɛam*. — 'I enquired of them'. This use of the dative is rare. The generalised *duγaruɛaɛ* usually takes the person questioned in the ablative, while the pronominal form *dᵃ-duγaruɛaɛ* takes the accusative.

10 *šeyaso* — pl. of *šeyaɛ* indn. form with the force of noun agent.

11 *oˑtin* — either 2nd. pl. or 3rd. pl. pret. short form of *u* + *ᵃ-ɛiɛ* v. § 214.

14 *uˑŋatum* — cp. note p. 69 l. 19. The *-atum* is the suffix associated with *gerbum* and similar words.

17 *guya baiyam* — 1st. sg. pivp. of *ᵃ-ɛyaɛ* with 2nd. sg. indir. object.

19 *guɛme* or *mahime*. — *guyaɛ* is used with pl. h. or x object. v. § 230. 2 and § 252.

20 *dau.aɛam* — from *dᵃ-u.aɛaɛ*.

4: Lorimer L-3 (1928-4; 1934-5) 1935 AV7 Burushо AV7

Wazirs and Elders and servants came and salamed to him and took their seats in the court. Thereupon the King addressed the Wazirs: "O my Wazirs, today I have had a dream. In my dream a party of women were weeping. I asked them: 'Why are you weeping?' They said: 'Tomorrow morning the King of Iran is going to die. We are his Guardians and we are weeping in grief for him.' I asked them: 'Will the King in no wise escape if he gives some alms?' 'No,' said they, 'whatever he may do he will not escape. Only if some man of his own free will bring two or three sons of his to this place and slay them, will the King not die. Otherwise tomorrow morning he will die.' Thus they spoke. (Now) today if you Wazirs and Elders who live on my wealth slay two of your sons, then I shall escape. Otherwise I must die. Look to it."

Immediately all the Wazirs and Elders rose up and said to the King: "O King, our houses, our lands, everything, we will surrender for your sake, but we cannot slay our own sons." On this the King was vexed with them and said to the man of Rum: "O man of Rum, bravo to you! For four days I had given you food, and in order to save me you took your two or three beloved sons to my Guardians and threw them down to slay them. And you applied the knife, but by God's command it did not cut their throats, and I was saved. Today I asked these Wazirs and Elders who batten on my wealth and none of them said from their hearts: 'We will kill these our sons,' but you and your wife with one accord ungrudgingly sacrificed the lives of your sons in my service. Today I have given you the Chief Wazirship over all the Wazirs of this country."

Then he commanded his attendants, saying: "I had got ready beforehand in the house a robe for this man of Rum, fetch it." And he caused them to bring it and made the man of Rum put

The entirely foreign origin of this narrative is obvious. It deals with such historic personages as the Persian Kings, Kubad and Nushirwan.

Buzur Jambur is only a corruption of Buzurjmihr, as was known to the narrator who gave the approximately correct form of the name on one occasion (v. p. 56 l. 16).

For a synopsis of what is recorded about Buzurjmihr see the very interesting article, "La légende du sage Buzurjmihr" by Professor Arthur Christensen in the "Acta Orientalia" vol. VIII (1930).

It is interesting to note that the name is given as Bazarjamhir in the Syriac of Bar-Hebraeus (op. cit. p. 96 note 6).

2 *mutsowam* — i. e. *mutswyam*.

3 *nusɛ* — here used like *sman* with a passive meaning: 'called'.

[49]

Buzur Jamhūr and Alqash Wazīr.

Kubād was King of Madāin and Alqash was wazīr. Alqash had 539*
a friend, Bakht-i-Jamāl. Bakht-i-Jamāl had married the daughter of Jamas Hakīm. There was a book called the Jamasnāma. Jamas gave it to his daughter as her dowry. She brought it to her home for Bakht-i-Jamāl to see. He could understand nothing of it. He was unable to read the book. There was a great scholar and Bakht-i-Jamāl took the book to him (and said:) "O sage, I am unable (to read) this book. Will you instruct me in it?" "Bring it here," said the learned man, and Jamas gave it to him. The man of learning looked at it. He too was unable (to read it), to him too it was unintelligible. "O Bakht-i-Jamāl," said he: "I also can make nothing of it." "Well," said Bakht-i-Jamāl, as it is unintelligible, leave it there. What are we to do with it? I too cannot understand it?"

Alqash Wazīr and Bakht-i-Jamāl were bosom friends (lit. 'soul's 539* 572
friends'). Alqash Wazīr, before going to salām to the King, used to go and salām to his friend. Then, having looked on his friend's

face, he used to go and salām to the King." So dear were they to each other. They were devoted to each other. 539x 572

One day Alqash Wazīr came to salām to Bakht-i-Jamāl. Salaming him he looked at him, he looked at him with an unfavourable eye. "O friend," said Bakht-i-Jamāl, "why do you look at me today with an unfavourable eye?" "O friend," (replied Alqash) "the day of your death has come. You are going to die. It is for this reason that I look at you with repugnance." Alqash Wazīr was versed in astrological calculations and Bakht-i-Jamāl was alarmed for his life. "I am going to die then," he thought, and he said: "O friend, this that you say is true, but may I perchance escape by some device?" "Friend," said Alqash, "there is one thing, and if you and I can do it, you will escape. If we cannot do it you will die." "O beloved friend, what is it that we cannot do?" "Beloved friend," said Alqash, "for 40 days do not come out of your house, do not speak to anyone, do not look at the face of anyone, let no one look at you, let no one speak to you, let no one hear you speak, and do not you listen to anyone speaking. If you remain (thus) one day more than the 40 then you will die, and if you go out one day too soon, before 40 days are completed, you will die. When exactly 40 days are up, if you go out of your house, you will not die." 534x

Bakht-i-Jamāl was overjoyed. "O beloved friend," said he, "this is a very easy matter. On which day shall I (begin to) stay in the house?" "Stay in today," said Alqash. "Friend, give my wife instructions and advise her how she is to give me food and how she is to give me water." "Bring her here, friend." Bakht-i-Jamāl brought his wife and Alqash Wazīr said: "My sister, give ear to what I say. It is a very serious matter. Make my friend stay in the house. Sit yourself in the upper verandah. Take care not to speak. Take care not to look down. (To Bakht-i-Jamāl) Friend, do not speak. Do not look up. Let her send down food and water to you at the proper time, letting it down on something through the smoke-hole, and do you eat the food and drink the

---

4 *iγan* — note the sing. pron. prefix referring to pl. y noun *guntsiŋ*. With an x pl. the pl. pron. prefix is used e. g. *gutse wγan* l. 20 below.

6 *i·tsɛ* — probably means 'after him, behind him' cp. **-tsi thaiyas* 'to follow after, pursue someone', but l. 7 **-tsi yanas* 'to take with one'.

7 *qhi.ɛn.* — the sound of this word I found very illusive. v. vocab. s. v. *qhuye*.

12 *Xuda·yo qudərat* — in this stock expression *qudərat* is apparently used in the sense of "will". The ordinary gen. of *Xuda* in this and other phrases is *Xudai.s*. For the gen. sg. in *-o*, v. § 46 note

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

539

water. (Then) tie (the things) to the cord which was let down and leave it there and she will pull them up. Turning her head away, she will pull it up without looking down. Come now, take my advice. O my beloved friend, count the days in your house and I shall count them in my house. Now from this present day you keep the reckoning, and I too will keep the reckoning."

(Alqash then) went out from his friend's house and he closed the door after him and locked it. The key of the lock he took with him and he went to his own house and put down one pebble. Bakht-i-Jamāl wrote 'one day is passed' and thereafter every day in his own house Alqash Wazīr put down a pebble and Bakht-i-Jamāl struck off a day. (Eventually) with Alqash Wazīr 40 pebbles were (collected) and the full forty days were completed and with Bakht-i-Jamāl also the 40 days were completed. Both (accounts) came out even. By the power of God in both of them there was an error of one day.

Alqash Wazīr took the pebbles and came to Bakht-i-Jamāl's door. With his own hand he opened the lock. He entered the house and salamed (to Bakht-i-Jamāl). He asked for his foot and hand (to kiss) and he conversed with him. "O beloved friend, forty days have passed. Is your reckoning completed or not?" "O beloved friend," said Bakht-i-Jamāl, my reckoning has come out even. I was watching, thinking you would come." "I have kept my account with these pebbles," said Alqash Wazīr, "every day I kept adding one. Today the forty days were completed. Take the pebbles and count them." "I have written the days down," said Bakht-i-Jamāl, "have a look at this written record." The one examined the writing and the other counted the pebbles. Both their reckonings came out even. "Both our reckonings have come out even," said Alqash. "Now let us go out." And they went out from the house.

"O beloved friend," said Bakht-i-Jamāl, "let us go for a long walk. I very much wish to." "By all means, friend," said Alqash Wazīr.

26 *Aski duw'Alila* — glossed as Hind. *avrru horgiya* and explained as "my heart has risen". It seems to be a metaphorical use of the verb *duwalas* 'to fly (up)'.

4: Lorimer L-3 (1920–4; 1934–5) 1935 AV7 Burusho AV7

'Gukɛ γenaŋ yɛtsam' sɛnam kɛ da uŋ axirɛtɛ jakun amanša," sɛnimi.

---

7 *γeniŋɛ* — I cannot account for the *-ɛ*. It is probably a glide to the following *y-*. *γenaŋ* (*γeniŋ*) is the plural of *γeniŋ*. The use of the plural indicates (large) quantity. V. §§ 35 (end) & 45.

atoγ'anas — or *atoγanas* glossed as "uncountable" "inexhaustible." The first meaning would suggest a connection with *°-γanas* 'to count'. There are, however, a number of forms referable to infinitives *d°-γanas*, *d°-ayanas* with the meaning 'to be used up, exhausted, worn out, finished; to come to an end' with which, in the absence of any strong reason to the contrary, it is natural to connect it, so that the meaning 'inexhaustible' may be taken as the more exact.

8 *fat amanam*, — *tumok amanam* was given as an alternative.

16 *bəsa tɛ* — MS. *bəsatɛ*, but doubtless for *bəsɛ tɛ.i*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

They went on, they went on a long way and Bakht-i-Jamāl said: "Wait here, I want to relieve nature. I shall do so and come back." The Wazīr sat down and Bakht-i-Jamāl went off. He proceeded a long way and came upon a big garden and squatted down to relieve nature. He pulled up a clod and a hole appeared. He pulled up another clod and a large aperture appeared. Inside, a door became visible. He went up to the door. The key was hanging on the lock. He undid the lock and threw open the door and looked and saw gold. He saw inexhaustible quantities of gold. He said to himself: "I have lighted on the treasury of Sulēman the Prophet." He turned back from the door of the treasury saying: "I won't hide this gold from my beloved friend. I will show it to him."

He came back from the place and called out to his friend: "Friend, come here." Alqash came to him: "Why are you calling?" he asked. "O beloved friend, I have seen a treasury of gold." "Where did you see it?" said Alqash Wazīr. "Friend, it is inside here" said (Bakht-i-Jamāl) and showed him. Alqash Wazīr looked and saw it. He reflected and having reflected he lifted up (Bakht-i-Jamāl) and dashed him on the ground. "O friend," said Bakht-i-Jamāl, "what have I done? Why do you act thus?" "I am going to kill you" replied Alqash. "O friend, what have I done that you should kill me?" "I am going to appropriate this gold and carry it off for myself. And I shall let no one know (of it). If the two of us shared this gold the story would get out. So I am going to kill you. This gold is a calamity. If the King were to hear about it he would kill us both, me and you. So I am going to kill you." "O friend," said Bakht-i-Jamāl, "don't kill me. The gold may be for you alone. If I (ever) say to you 'Give me a little of it,' may I be your donkey in the next life. If I say 'I saw this gold,' again, may I be your donkey in the next life."

---

17 *gosqai.a ba* — The present expressive of determination on future action. 'I am going to kill thee'. There are many examples of this use in what follows.
ke — the Pers. Hind. *kiā* 'that' (conjunction).

2 *kərkaʸmutsɛ* — perhaps for *kərkaʸmuts* + *tsɛ*, but one would expect *kərkaʸmutsatsɛ*.

4 *akoʸskərtsiš* } The pronominal prefixes here stand for the secondary indirect object
5 *goʸskərša ba* } (or have the force of an ethic dative). "I'll cut off your head for you".

10 *jamaʸatalər* } The latter form is the more correct, as *jamaʸat* here is hf.
11 *jamaʸatmulər* }

16 *Buzurj Mɛhər*. — V. introductory note on this text.

17 *akuruʸmtsum* — the abl. of comparison with the adj. not expressed, 'I have nothing to say (more) than this much'.

18 *ya* — probably for *yɛ* under the influence of the *a-* of *akuʸruma*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

"Ignorant fellow," said Alqash Wazīr. "I know much more than you. If one catches a hen gently, it makes an outcry. If one lays hold of it violently, it makes an outcry. Till you have cut off the hen's head it won't keep quiet. When its head is cut off its clamour is silenced. So long as your head is not cut off this matter will not remain quiet. So I am going to cut off your head."

Bakht-i-Jamāl abandoned hope of escape. "O friend," he said "there are two things I would tell you." "Well, tell me," said Alqash, "what they are." "My wife has been longing (to see me), for these 40 days she has been longing (to see me) and she has kept looking out saying: 'My husband is coming.' Go to my wife, go to her with twelve *khars* of this gold (Rs. 72), give it to her and say thus to her: '(Your husband) has gone to Khāruz with a merchant of Khāruz.' Say to her, 'He said: "I shall come back in six months."' (Say to her from me). 'Until my return buy food and clothes for yourself with this gold.' My wife is with child. (Say to her from me): 'If you give birth before my return, if a girl is born to you, give her a name yourself. If a son is born to you, call him Buzur Jamhūr.' If you say this to her, it is as you please; if you don't say this to her, it is as you please. Now I have nothing more to say." "Oh, is that all?" said Alqash Wazīr, "Yes," said Bakht-i-Jamāl.

Alqash (then) led Bakht-i-Jamāl forward into a corner on the far side of the Treasury and (started) digging. He made a pit and leading (Bakht-i-Jamāl) up to it he killed him and flung him into it. He threw in earth on the top and filled (the hole) up and trampled it down with his feet, and destroyed all signs of the burial.

"This gold has become mine," said Alqash Wazīr, rejoicing. He did not touch the gold, but putting on the lock he closed (the door) and concealed it. He told no one about it and returned to his home. Taking 12 *khars* of gold from his house, he went to Bakht-i-Jamāl's wife: "My sister," said he, "your husband has sent you this gold. He has gone to Khāruz with a Khāruzi merchant

8 *di·bate* — apparently *di bai* + *ate* v. § 407. a.
10 *o·samo* — i. e. *o·sumo*.

4: Lorimer L-3 (1920-4: 1934-5) 1935 AV7 Burusho AV7

and he said: 'I shall come back in six months. You are with child. If a daughter is born to you, give her a name yourself. If a son is born to you, call him Buzur Jamhūr'." Alqash then gave her the twelve *khars* of gold and said: "(Your husband) said to (say to) you: 'Spend this on yourself till I come back. Spend it on food and clothes'." Having said this to her he went off to his own house.

Bakht-i-Jamāl's wife was delighted. She said: "My husband has sent me all this gold," and she rejoiced. "When he comes back from Khāruz in six months, then he will bring me more," she said, and settled down in peace. Some days passed and she was brought to bed before he had yet returned. A son was born to her and she named him Buzur Jamhūr. She kept reckoning (the time) from the departure of her husband. Six months passed and he did not come, and seven months passed and he did not come, and the twelve months of a full year passed and he did not come. But she kept hoping: "My husband will come."

Three years passed after the birth of her son and she abandoned hope of her husband. "Nothing has become known of my husband's being alive," she said, "nor has anything become known of his being dead. I have heard nothing at all." Thus thinking she still did not become unduly depressed. She said to her son: "O son, go to the bazar and fetch a little flour. I shall give you a *khar* of gold to take with you. You are a sensible fellow." She sent him off with a man with him and he went to the bazar to the Farāch (the King's Treasurer). "As salām alē.ikum, Farāch". "Wa alē.ikum salām, boy. Why have you come, boy?" "O Farāch there is some gold I have brought to sell. I have heard this name of 'gold.' They say this is gold. Is it really gold or is it not? Have a look at it." "Bring it here," said the Farāch. The Farāch looked at it. "Boy," he said, "it is real gold." "O Farāch, if this is real gold do not give me short value for it. I don't know

3 *gogičʌm* — 1st. sg. fut. of *gu* + *-*ʌgiyʌs*. In such cases the meaning of the verb appears to be 'to put something on some one' (or 'on some thing'), and the pn. pf. represents the indir. obj. as in the present instance, or is a sort of ethic dative as in line 8, *ja æši šaŋaličiŋ a·giči* 'he will put chains on my neck for me' cp. § 245.

7 *ʌčim* — static pc. of *a* + *-*čiʌs*.

9 *gusɛ ši.ʌs . . . bi.a.* — cp. p. 62 l. 23 The infin. as subj. is generally accompanied by the y form of the verb 'to be' viz. bila. Again *gusɛ* is surprising, as the words for which it might naturally be expected to stand are all y: wheat, grain, gold, property. It seems necessary to take *ši.ʌs* as being x and translate *padša gusɛ ši.ʌs uyon* 'this eating everything of the king's' or 'all this living at the expense of the king'.

11 *ɛtumʌna* — alternative *dɛlumʌna*.

13 *ayɛta·n.* — The plural verbs in this passage must refer to B. J. and the man whom his mother sent with him (v. p. 58 l. 17), but who is not otherwise mentioned.

16 *o·l a·ti* — from *-*u·l* *-*ʌtʌs*.

17 *hisər* — this use of the dative of *hisa* with the sense of 'every month', 'per month' occurs several times and must be regarded as idiomatic.

20 *jačі* — v. § 255.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

what its value is. If you give me less than the price of the gold, I'll lay a claim against you at the Last Day. If you give me the (full) price of the gold, at the Last Day I will make no claim against you."

The Farāch gave him ten twelve-seer measures of wheat. "O boy, I have given you this as the price of your gold. There must be no dispute with me about it." "O Farāch, is that all?" "Yes. Now take it away. It has worked out at so much." "O Farāch, come now tell me the truth." "O boy, what am I to tell you the truth about?" "Have you acquired this wheat by labouring along with your children? (Or) have you got it from others? Does it belong to someone else? Now tell me truly." "O boy," said the Farāch, "what business is it of yours whom it belongs to? I have given you the grain; you have given me the gold. If you wish to, take away the grain; if you dont wish to, take away your gold." "I'll put chains on your neck," said Buzur Jamhūr. "Do you expend all this wheat of the King's for yourself and do you take my gold (too) for yourself? I'll tell this in the King's court." "O boy," said the Farāch. "Don't say this. You are saying exactly what I feel in my heart. I am taking the gold for myself; you are right in saying so. Don't tell this in the court. Take this wheat for yourself and take back the gold you have given me and tell no one about it. (The King) will put chains on my neck." "Is it lawful for you," said Buzur Jamhūr, "to devour all this (grain) of the King's? I will devour it too." (So saying) he carried off home for himself the gold, and he also carried off the wheat."

"O son," said his mother, "have you looted a bazar somewhere, that you have fetched (home) all this grain and have also brought (back) the gold I gave you?" "No mother, we have not raided and plundered a bazar." "Then how else did you get this, my son." "Listen to me, mother. I frightened the Farāch and got it (from him)." His mother was pleased.

"Mother," said Buzur Jamhūr, "give me a lot (to eat) and fill my belly, and do you too eat a lot, and what is over give to others. I shall bring you these ten measures of wheat every month."

"As salaˈm ale.ɪkum, gulčin." "Wa ale.ɪk us salaˈm, le hileˈs. Besanər dukoˈma, le hileˈs?" Buzur Jamhuˈte se.ibai.i: "Γenišan dusuˈya ba. Γeniš bila api ke ja akeˈya ba. Uˈŋ bəreˈn." 21 *žuˈ* — variant for *ju*.
22 *yu* — perhaps for *ye*.
tsanč — not recorded elsewhere and said to be used only in this phrase.
baskaretə — should presumably be *baskaretan*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burushо AV7

Next day she said: "O son, your plan is a good one. I'll give you the gold and you take it to the bazar and get a little meat." "Very good, mother, give it to me here." She gave it to him and he went off with it to the bazar. (He went) to the King's steward and said: "As salām alē.īkum, Cook." "Wa alēik us salām, boy. Why have you come here, boy?" "I have brought some gold," said Buzur Jamhūr, "whether it is gold, or is not gold, I don't know. You have a look at it." "Give it to me here," said the Cook. He gave it to him and the Cook examined it and said: "It is real gold, my boy," he said. "Is it real gold?" "Yes," said the Cook, "it is real gold." "I don't know the value of this gold," said Buzur Jamhūr, "you look and see how much it is. If you give me less than its value I'll lay a claim against you at the Last Day. If you give me its proper value there need be no dispute between you and me at the Last Day."

The Cook gave him a wether (saying:) "I have given you the price of your gold. At the Last Day there must be no dispute between you and me. Now take it away." "O Cook," said Buzur Jamhūr, "come now, speak the truth. Have you reared this sheep and made it so big as this yourself? (Or) did you get it from someone else? Does it belong to someone else?" "O boy," said the Cook, "what business is that of yours? You gave me the gold, and I gave you the sheep. Won't you shut up and take it away?" "O Cook, why am I to shut up and take this (beast) away? You steal it from the King and give it to me. Why am I to shut up and take it away? I'll say in the King's court 'The Cook has stolen a sheep and given it to me'." "O boy," said the Cook, "May I be your sacrifice! Don't give me away over this theft. (The King) will put chains on the necks of myself and my children. Take away this gold of yours, and take away too this sheep which I have given you. Come again in a month and I'll give you another sheep like this. Indeed(?) at the end of every month I'll give you a similar sheep." "O Cook," said Buzur Jamhūr, "is it lawful for you to devour all the King's substance like this? Give me (a share) too and I also will devour it." "May I be your

5398

sacrifice: I'll give you (a share)," said the Cook. "For this month I'll give you this sheep, and take away this gold of yours too."

Buzur Jamhūr took (the sheep and the gold) home to his mother. "Mother, I have brought this sheep too for the month. Come now and let us feed in peace." So they lived in comfort, and one day his mother said: "O son, will you get green vegetables somewhere?" "Mother, give me that gold." "Well, take it, my son," she said and gave it to him. He took it and went off. There were no (green vegetables) anywhere. (Only) in Alqash Wazīr's garden were there some. He went to the gate of Alqash's garden. The superintendent of the garden was at the gate. "O Gardener," said Buzur Jamhūr, "I'll give you some gold, will you give me (some) greens in this basket?" "Very good," said the Gardener, "I'll give you some," and he unlocked the door and opened it. Alqash Wazīr saw the opening of the door. He was at the window of his house. He saw the gardener enter the garden and a boy follow after him. The gardener went to a vegetable plot. Buzur Jamhūr had tied up a sheep to a peg in the garden. He went up to it and he cut the cord (by which it) was (tied) and the sheep went and ate the flowers. The gardener noticed the sheep and saw it eating the flowers. He went and caught it and tied it up. The gardener went (back) to the vegetable plot and Buzur Jamhūr let the sheep loose. Once again it went and ate the flowers and again the gardener saw it. He took a spade and came along and struck the sheep on the loins. The sheep died. "Three lawful things you have made unlawful," said Buzur Jamhūr. "This is only one sheep. How have the other two become unlawful?" "O gardener," said Buzur Jamhūr, "there are two young ones in its belly; one is black and one is white. The white one is a female lamb, and the black one is a male lamb." "Curse its mother!" said the gardener.

Alqash heard what the boy had said. He called out: "O gardener, bring the boy and bring the sheep." The gardener took the sheep, Buzur Jamhūr followed after him, and they both went (to the Wazīr). The boy salamed to Alqash Wazīr. Alqash asked him: "You said (lit. 'say') to him: 'You have made three lawful things unlawful'.

1 *gωyi* — for *gωye* gen. of *gωy*.
mi aya — the expression is probably more respectful than *ja aωy*. For other examples of *mi* = 'my' v. vocab. s.v. 2. *mi*.
9 & 11 *asqanεr* — v. § 407 C.
10 *ja asqanas . . . akωri ba.* — This is said by Saladar. I miss the point of it. S. says: "Didn't you somehow find out about the young ones in the sheep, and don't you then know about the killing of me?" But B. J. had just told him that A. W. would kill him in certain circumstances, and now he goes off on another line: "How will my death benefit you?" S.'s speech seems to hang in mid air. Perhaps *asqanas* is a slip for *gωsqanas* 'my killing thee'.
14 *εi gωši gωsεččam* — **-amaši.εs* is a difficult verb v. § 248. The meaning is probably: 'I will throw A.'s daughter on your neck for you'.
18 *εωhaiωaʼnan* — the *-an* suffix following a demons. adj., if correct, is at any rate rare.
amulo kε. — One would rather expect: *amulo aiyεʼčam kε* 'if I get it anywhere', or, 'if I somehow get it'.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

One is this sheep. Where do you get the other two from?" "O Wazir, this sheep was pregnant and there are two young ones in its belly. One is black and one is white. The white one is a female lamb and the black one is a male lamb." Alqash commanded the gardener: "Cut the sheep open." The gardener cut it open, and there were two young ones just such as Buzur Jamhūr had described. The white one was a female, and the black one a male lamb. Alqash said to the boy: "O boy, what is your father's name?" Bakht-i-Jamāl is my father's name." "What is your own name?" "My name is Buzur Jamhūr."

The son of the King of Habash, being in love with Alqash's daughter, was serving Alqash. He was with Alqash Wazīr. Alqash said to him "Saladār, my son, take this boy to such and such a place and put him to death. (Then) roast his liver and kidneys and bring them to me. Now take him away." Saladār led him away. At the place of slaughter, Buzur Jamhūr said: "O Saladār," "are you going to kill me now?" "Yes, I am going to kill you." "On your killing me he (Alqash) will kill you too." "Somehow or other you found out about the lambs in the sheep's belly, did you not? Do you not also know about my being killed?" "By killing me," replied Buzur Jamhūr, "how will you attain your heart's desire?" "What is my heart's desire?" said Saladār. "Are you not in love with Alqash Wazīr's daughter?" said Buzur Jamhūr. "You speak truly, I am in love with her." "I shall bring about your heart's desire for you. Don't kill me and in forty days I shall throw Alqash's daughter on your neck." "(But) from what shall I take your liver and kidneys?"

(Buzur Jamhūr) gave him the gold that was with him and said: "They have brought out a male lamb to the bazar to sell. Give them this gold and buy the lamb." "O Buzur Jamhūr," said Saladār, "Wherever I may get that animal, it won't have the taste of human flesh, will it?" "O Saladār, you don't understand such matters. A woman was with child and a sheep was pregnant. A daughter was born to the woman. The sheep gave birth and a male lamb was born. The woman's daughter died and the lamb's mother died.

8 *ni·patər* — p.pc. act. of *-*fatəras*.

8 *dukoʳras* — infin. or agent form with 2nd. sg. pn. pf. of *d*ᵉ-*aras* 'to send someone'.

17 *hoʳi atuʳtsuma.* — This appears to be wrong. *hoʳi* is y pl. and should take a form of the verb *dusuʳyas* (or, *suʳyas*) not of *d*ᵉ-*tsas* which is used when the obj. is h or x v. § 231 d.

The correct form would be *atusuʳma* (*a* + *dusuʳma*) cp. l. 20 *hoʳi suʳča baiyam*.

20 *ɛsabatɛ* — apparently *ɛsa'ba* + *atɛ* 1st. sg. perf. of *-*asas* with case suffix, cp. note to p 58 l. 8.

25 *šuʳai.ɛ* — probably *šuʳa yɛ*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

The woman, out of love for her daughter, gave the lamb her milk. When it grew big she fed it also with bread. (So) it had drunk human milk and eaten bread. They have (now) brought out that lamb to the bazar. Now the taste of its meat is like the taste of human flesh. Go now quickly and buy it."

(So saying) Buzur Jamhūr gave Saladār the gold and Saladār went off with it to the bazar. They had brought the lamb to the bazar and he gave them the gold and brought the lamb to Buzur Jamhūr. "Hallo, Saladār, have you brought it?" "Yes, I have." "Well now slay it and skin it and roast its kidneys and liver and take them to (Alqash). Then he will send you once again to my house. You hold your tongue and say nothing and come to my house." Having said this to him Buzur Jamhūr went off to his home.

Saladār slaughtered the lamb and flayed it. Then he took out its liver and kidneys and having roasted and cooked them took them to Alqash. He set them before Alqash and Alqash ate them. "This was my enemy," said Alqash. "I have killed him too (as well as his father). He was a partner in the gold I saw. Now again the gold is known to no one. Now it has become my very own." Alqash's uneasiness was dispelled and he lived in great comfort.

Buzur Jamhūr went off to his home. "Have you not brought any greens?" said his mother. "Somehow or other I have escaped from death at the hands of Alqash Wazīr. He told Saladār to kill me. I implored Saladār 'Don't kill me,' and on my saying 'Let me go,' he let me go. But how was I to bring back any greens?"

(His mother) put Buzur Jamhūr to study. He studied with a man of learning. In three days or four he exhausted all that the learned man had (to teach). The man of learning was amazed on seeing his intelligence and understanding. "O Buzur Jamhūr," said the learned man, "I have a difficult book which is unintelligible to me. Will you just have a look at it? Shall I show it to you?" "Good!" said Buzur Jamhūr. "Bring it and show it to me." The Akhund brought it and gave it to him. Buzur Jamhūr

000 je·imo ha·lɛ a·ltul ɣat'aiyam, æčičuma?" Axo·nɛ se.ibai.i: "Gutɛ u·ŋɛ kita·p bila. Gutɛ kita·b gopkutsə go·pi.ɛ bilum. G'umimur mutɛ·ŋi muči bam (*or*, mo·r ɛtam). U·ŋɛ gu· kɛ šu·a axo·n bam. I·nɛ akɛ·nimi. Ja·lər dusu·am. Ja kɛ akɛ·nam. 'Kot akɛ·ya ba·n

---

2 *gopkutsɛ go·pi.ɛ* — *gopkutsɛ* was an addition to the original text. *-*apkuts* appears to be used in the sense of 'the members of the mother's family', and then in the genitive as 'maternal'. It looks as if it were compounded of the base *-*api* 'grandfather' plus *kuts* 'people'. See Vocab.

5 *biliš* — ā. λ. recorded with -*š* v. § 271. 3.

15 *a·sqanai.i* — see below, p. 80 l. 12 note.

18 *itsumtsum* — static pc. of *i* + *-*tsuyas* + *tsum* v. § 387.

jɛ da (ja) *da·ɣasas* — either *jɛ* or *ja* is correct, and one is redundant.

21 *ɣana·s.* — The idea seems to be to make a grave that will be visible and obvious. Alqash had taken pains to make the original grave invisible.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

examined it. "O Akhund," said he, "will you give it to me? I shall read it for a couple of days in my own house." "This is your book," said the Akhund. "It belonged to your mother's father. He had given it to your mother in her dowry. Your father also was a fine scholar. He did not understand it. He brought it to me. I too did not understand it. He left it behind saying: 'As we do not understand it, let it remain here.' (This) is now that book, and it is your property."

Buzur Jamhūr touching it with his fingers and kissing them took it. He carried it away to his own home and there he read it. When he had read it he shut it and wept. His mother also wept. Both mother and son wept. Again he opened and read it. He read it for a long time and (then) shut it up. He laughed. His mother also laughed. Again he opened it and read it. (Then) closing it he put it away, and getting up he danced.

"O son," said his mother, "have you gone mad?" "No, Mother, I have not gone mad." "First you wept, next you laughed and then you danced. You *have* gone mad." "Mother, listen to me. Alqash Wazīr murdered my father. I learn that in this book. Moved by grief for my father, I wept." "You say truly, O my son. He brought your father out of the house and had taken him for a walk. Wherever your father went after he was taken for the walk he disappeared. You speak truly." "Mother, then again my laughing was due to this: I am going to put horse-gear on Alqash Wazīr and mount him, and at the spot where my father was murdered I am going to kill Alqash Wazīr. I shall exhume my father's bones and make a grave and make it visible (to all)." "O son, don't say this. Alqash Wazīr is a very hard man to deal with. How will you, an orphan boy, be able to kill him? He will kill you. Don't speak thus to anyone." "Mother, in this book it is stated that he will not be able to kill me, but that I am going to kill him."

24 *be emai.i bai.i* — *be* here seems to be the negative. Its use as a neg. particle in conjunction with and preceding a verb is rare, but seems to be established by this example and ll 12—14 p. 72. V. § 342.

Padša yu·ljɛn yɛtsimi. Yu·lji ni·itsin til e·limi. Alqaš Wazi·rtsum doγ·ərusimi: "Le Alqaš Wazi·r, ja o·lji ni·itsin til a·lam. Jɛ til a·lum (*or*, a·lam) i·tɛ čaγa u·ŋ a·r ɛti." 5 *dukoʳtsiki.am.* — 'I will hang you up,' but here the pn. pr. is probably to be taken as an ethic dat., as also in the case of *nuk·o·skərts*. 'I will cut off your head for you and hang it up'. V. § 249.-3.

7 *dusu·ya* — short form of 1st. sg. pret. v. § 314.

8 *han hisa tɛ.* — The Ms. has *hisatɛ*, but it seems really to be *hisa te.i.* 'I have' (i. e. 'I shall') let you be for one month thus' i e. 'as you are'.

9 *uyu·mkuš* — is properly a noun 'greatness'. There is probably a contamination of construction.

12—13 *bɛ* — see note to p. 70. 24.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

(Now) the King had a dream, but he forgot his dream. He asked Alqash-Wazīr: "O Alqash Wazīr, I had a dream and I have forgotten it. You tell me what it was that I have forgotten." "O King, *you* had the dream. I cannot tell you what it was." "O bastard. I'll cut off your head and hang it up on the gateway. You have consumed much of my wealth." Alqash Wazīr was frightened and said: "O King, let the matter stand for two or three days, then if I get the story of your dream from anywhere I'll bring it to you." "O Wazīr," said the King, "I'll let you go for a month, and if you bring me the story of my dream I'll give you a big reward and you will be promoted to very high rank. Now go."

Alqash Wazīr went off and going to his own house summoned Saladār to him. "O Saladār," he said, "I gave you a boy and told you to kill him. Where have you taken him?" "Wazīr, did you not order me to kill him and say to me 'Kill him and cook his liver and kidneys and bring them to me?' Did I not bring them to you and did you not eat them? Where then did I take him?" "O Saladār," said the Wazīr, "if you have killed him, I will now kill you." "I haven't killed him," said Saladār. "Aha, bravo to you! Now tell me how you haven't killed him when I had told you to kill him. Of what did you bring me the liver and kidneys? Come tell me that."

"I'll tell you now, Wazīr," said Saladār, "People had brought out a lamb to the bazar and the boy said to me: 'Don't kill me; go and get that lamb'. He gave me a *khar* of gold and said: 'Pay this and buy the lamb'. I said to him: 'What shall we do with the lamb? The lamb will not have the flavour of human flesh'. 'You don't understand the affair,' said he, 'hold your peace, and go quickly and fetch the lamb. A woman was brought to bed and gave birth to a girl. A sheep yeaned and gave birth to a male lamb. The lamb's dam died and the woman's daughter died. The

21 *gots gAš ne — gAš etAs* ordinarily means 'to sell,' but here probably 'to pay for, buy.
25 *i·mi* — as referring to a sheep is here x, hence *i·rimi* not *mu.i·rumo.*

4 *deʼɛgus* — with the x plur. *ɛsumuts* one would expect *doʼgus*. The sg. pronoun infix in p. 70 l. 21. *ja auɛ tinjo deʼɛgus* and also p. 80 l. 22. *ja auwɛ tinjo deʼɛgušam* is similarly peculiar. The infix must in fact refer to the person etc. affected, here 'the lamb' and 'the father' respectively.

jajam nɛ — can hardly be accounted for in this way. It is probably a mere lapse from grammatical rectitude. We had *ɛsumuts jajam no* p. 66 l. 6 and *eʼkin jajam nɛ* p. 68 l. 8, both correct.

7 *gušai.i* — i. e. *gošai.i*.

4: Lorimer L-3 (1930-4; 1934-5) 1935 AV7 Burusho AV7

woman suckled the lamb. When it grew up she fed it with bread. It has now become big and they have brought it to the bazar. In its flesh there is the taste of human flesh. Go quickly and fetch it here at once.' I fetched the lamb and killed and skinned it. I extracted its liver and kidneys and roasting and cooking them brought them to you. The boy I let go."

"Bravo to you!" (said the Wazīr). "Now go and tell him to come." Saladār went off to Buzur Jamhūr's house. "O Buzur Jamhūr," said he, "the Wazīr says to you 'Come!'" (Buzur Jamhūr replied): "I said to you: 'you will come back to me.' Now come let us go." And the two of them proceeded to Alqash Wazīr. Buzur Jamhūr salamed to Alqash and Alqash got up to receive him and made him sit on a chair. Then he said: "O Buzur Jamhūr, I have done you a discourtesy. Forgive me." "O Wazīr, the Great do such things. It is nothing." "O Buzur Jamhūr," said Alqash Wazīr, "if anyone dreams a dream and forgets it, can you interpret it?". "I do do such things." "O Buzur Jamhūr, may I be your sacrifice! The King had a dream and has forgotten it and he says to me: 'Tell me my dream.' Now you tell me what was the dream he had." "O Wazīr," said Buzur Jamhūr, "until I have seen the face of the person who had the dream it is not revealed to me." "O Buzur Jamhūr, if I mention your name to the King will you come (to him) or not?" "O Wazīr, why would I not come to a King? (Of course) I'll come.".

The Wazīr went to salam the King. He salamed to him and the King asked: "O Alqash Wazīr, have you brought the story of my dream or not?" "Yes, King, I have brought it." "Tell me it." "O King, I cannot tell it. Bakht-i-Jamāl's son, Buzur Jamhūr, will tell you it, but he is on bad terms with me. You yourself send a man and he will come." "Very good," said the King, "I'll send someone." And he gave orders to a man: "Go, and tell Buzur

Jamhūr to come." The man went off to Buzur Jamhūr and said: "O Buzur Jamhūr, the King says to you 'Come'." "Who are you?" asked Buzur Jamhūr. "I am a servant." "Perform your service then. Say thus to the King 'I want nothing from you. I have no intention of coming to you. Why should I come walking on my own legs?' Say that to him." 539*

The servant went off to the King and the King enquired of him: "O servant, haven't you brought him?" "O King, he didn't come." "Why didn't he come?" said the King. "He said: 'I want nothing of the King and have no intention of coming. Why should I come?" "What he says is true" said the King. And he had a golden bridle and saddle and complete trappings put on his own horse and despatched it with a groom. "Say to him: 'Mount this horse and come'," he said. The groom saddled the horse and took it away to Buzur Jamhūr's door and called out and said: "O Buzur Jamhūr, the King has sent you his own riding horse. Now come." "O Groom," said Buzur Jamhūr. "I have never ridden that horse. If it throws me and breaks some part of me what shall I do? Tell him I won't come. Go."

The groom went off with the horse to the King. "O Groom, has he not come?" "O King, he said, 'I have never ridden that horse. If it throws me and breaks some part of me what shall I do?'" "What he says is true," said the King. And he had a litter placed on an elephant and despatched it. He said: "Say to him. 'Mount this and come'," and he sent off the elephant. They led the elephant away to Buzur Jamhūr's door and said to him: "O Buzur Jamhūr, the King has sent you the riding elephant that takes him out. Now come and mount it." "O Elephant-grooms, this that I say, repeat to the King: 'The horse (you sent) before was small (in comparison), (now) you have sent something even bigger than it. If this (elephant) seizes me with its trunk and flings me down it will kill me. In that case what am I to do?' Take it back." They brought the elephant back to the King's court and the King said: "Hallo, hasn't he come?" "O King, he said to us: 'You have sent an even bigger (animal) than the first one. If this great brute seizes me with its trunk and throws me down it will kill me.

1 *ji·tsum a·rči* — 'it will despatch me from life'. Use of **-ar as* 'to send' as cs. of *ni.as* 'to go'.

5 *nukoərur·t* — p.pc. of *gu-* + **-asruras*.

9 *je be gusan ba* — the *be* seems to be used as a simple interrogative particle, or else to have some such meaning as: 'in some way', 'in any respect' or perhaps, 'some sort of' v. § 155.

je ... ba kɛ, — *kɛ* seems to be a mere connective, 'that'.

14 *ja je.imo ... jučam* — a somewhat complicated sentence. *gute bila* must be understood after *rai.i*. 'This is my will': —

22 *ixači* — *i* + **-xat* + *tsi* v. § 71.

24 *senam* would be 2nd. sg. plup.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

In that case what am I to do? Take it back'." "What he says is true," said the King. "He is quite right. Take the travelling litter and seat him in it and bring him along."

They carried away the litter (to him) and said: "O Buzur Jamhūr, now come. We have brought the litter. We'll seat you in it and take you along." "Look here. Am I a woman? Or has some part of me been broken that you would take me away on a litter? Say this to the King: 'You are a very stupid fool. I won't come in such a way'." (On this) they carried the litter back to the King's court. "Hasn't he come?" (said the King). "No, he hasn't come." "Why doesn't he come?" He said to us 'Am I a woman that you should take me up on a travelling-litter? Or has some part of me broken that you want to carry me?'" "What he says is true," said the King. "I did a stupid thing. This time say to him: 'Come in whatever way you yourself prefer to come'." And he despatched a man of consequence to him.

The man went to Buzur Jamhūr and said: "O Buzur Jamhūr, the King says 'Come in whatever way you like best'." "This is my pleasure," said Buzur Jamhūr, "Put horse furniture on Alqash Wazīr and hang the whip on the pommel of the saddle, and saddle him and bring him along and then I shall mount on him and come."

The man of consequence returned with this answer to the King. "O King," he said, "he says a strange thing." "Well, what does he say?" said the King. "He says: 'Put horse furniture on Alqash Wazīr and saddle him and hang a whip on the pommel of the saddle and bring him to me. Then I shall mount on him and come."

The King gave command, saying: "Saddle Alqash." And they put a saddle on him and in his mouth they put a bridle and hung a whip on the pommel of the saddle. And (so) having saddled Alqash they led him away to Buzur Jamhūr's door. "O Buzur Jamhūr," they said. "Now come. In accordance with your instructions we have saddled Alqash Wazīr and brought him to you. Now come." Buzur Jamhūr came out of his house. He mounted

on Alqash Wazīr, took the whip off the pommel of the saddle and slung it (by the loop) on his wrist and he gave Alqash Wazīr a cut with the whip. Alqash Wazīr proceeded on all fours with Buzur Jamhūr and carried him to the King's court. Without dismounting Buzur Jamhūr went (in), and he took his seat on Alqash's chair. Alqash Wazīr they left just as he was, without removing the saddle from him.

The King asked him: "O Buzur Jamhūr, when people have had dreams can you tell what it was when they have forgotten them?' "O King I can do that," replied Buzur Jamhūr. "I had a dream," said the King, "and I have forgotten it; now tell me what it was." "O King," said Buzur Jamhūr. "I'll tell you about your dream afterwards. I have a suit, settle that for me first." "What is your suit?" said the King. "This bastard, Alqash," said Buzur Jamhūr, "is the murderer of my father."

The King brought up and assembled the Qazis (and said): "O Qazis, whatever this suit may be you decide it for Buzur Jamhūr. He says: 'He has killed my father'." The (chief) Qazi stood up to deal with the case: "O Buzur Jamhūr," he said. "Now speak the truth. You have come for justice? Nothing is known, none of us have any information as to whether your father died, or got lost, before you were born. Whoever have told you about this, produce them as witnesses. We shall settle the case with them." "Did you, or did you not, know my father?" said Buzur Jamhūr. "He is known to all of us," replied the Qazi. "Had not my father gold rings bearing his name? Had he not got them on all his ten fingers? Was not his name on all of them?" "What you say is true. You speak as one who has seen." "Is not this statement of mine correct?" "Yes, this statement of yours is correct."' "(Well) I shall take this Alqash to the spot where he murdered my father, and I shall dig and I shall exhume my father's bones, and on the bones of the fingers will be the rings. If I take them and show them to you, will you believe me or

1–2 *daq atuˑša baˑn.* — This form is confirmed by another record *daq atuˑša ba.* 'I don't believe'. One must conclude that the idiom is *daq duˑsas*, though that seems inherently improbable. *atuˑša* can otherwise only be referred to *dˑ-tsas* with a pl. h or x obj. (*duˑtsas, duˑš-*) but *daq* is y sg. as is established by the phrases: *daq biin, daq ačučila, daq suˑyas* and *daq dasuˑiyas.*

4 *mərin mərin* — v. § 114.

7 *tik bitsuman* — v. §§ 43. 8 & 9 and 389.

24 *je.i* — the corroborative or emphatic form 'I myself' v. § 142. Why the 'I' should be emphasised is not clear, but perhaps the effect produced is the Eng. 'I *do* know.'

[Errata: should read [ˈaltin], cfr corrigenda, p. 419, cat. 116 -- Analyst.]

not?" "If you do this thing that you have said," replied the Qazi, "then there is no one like to you. How then shall we not believe you?" 5914

"Come then," said Buzur Jamhūr. "All of you come. Such of you too as are men of standing come with me and you will all see (for yourselves). The King gave command: "You who are men of standing, all of you go too and see."

They set out from the King's court and Buzur Jamhūr conducted them to the place where his father had been murdered. At the site of the murder he made them dig. They removed the earth that was (in the grave) and the bones emerged. They took all the bones out and when they looked there were the ten gold rings, and when they looked again the name of Bakht-i-Jamāl was engraved on all the rings. "O Qazis," said Buzur Jamhūr, "are these my father's rings or not?" "O Buzur Jamhūr," said the Qazi, "there has never been any one like you. These are your father's rings. What you say is true. Alqash has killed your father." "Make a grave," said Buzur Jamhūr, "and bury these bones of my father in it and make it (a) visible (monument) for me." They made a grave for the bones and threw them into it, and made a burial mound over it that could be seen.

They returned to the King and the King enquired of them: "Is what Buzur Jamhūr said true, or is it lies? Come tell me about it." "O King," said the Qazi. "There is no one like this man. What he said is true." "O Qazi," said the King, "settle this case." "I shall settle it," said the Qazi. "O Buzur Jamhūr, now speak the truth." "What am I to speak the truth about?" "When he murdered your father did Alqash take anyone with him to help him? Did Alqash strike your father one blow or two blows? Tell (us) this." "O Qazi," said Buzur Jamhūr, "I know about that. Alqash took my father away alone and murdered him. He killed him with a single blow, and he himself threw earth on the top of him and stamped the earth down with his feet, and

---

4 *čərap nɛ* — glossed "cutting his neck." Probably this means "cutting off his head" as *čərap* usually implies "severing."

6 *γuyɛ ɛtumɛ* — v. § 382.

7 *di·mi . . . Buzur Jamhu·r* — such inversions, which will frequently be noticed, are due to the casual, colloquial style: 'he came to . .' i. e. 'B. J. came.'

9 *be·ɛsa* — I cannot explain this form. It is glossed "now get on with telling" and annotated "not otherwise used". The only guess I can hazard is *be* + *asa* + *a?* with some such meaning as "tell me, won't you?"

13 *i·tɛ γunikɛ̄ nukʼo·γan* — p.pc. act. *γu* + °-*aγanas* v. Vocab. and § 249. 4. Cp. *nuγan* p. 22 l. 17.

14 *čaŋ go·tiluma* — 3rd. sg. *y* plup. interrog. of *caŋ* °-*atas* 'to vomit' v. § 261. II.

18 *ama* — (sc. 'I will tell you) but I won't tell you here'.
čito bamatɛ — the meaning is 'in seclusion, in private', literally, "on (our) being apart" v. § 391.

made (it) look as if there was nothing (there). Now I shall take him and slay him at the pit where my father was buried and fling him into it." The King gave command: "Take him away and slay him in this wise." 539*

Buzur Jamhūr led Alqash off to the pit where his father had been slain and cutting off his head with one stroke flung him into the pit. With his hands he threw in earth and with his feet he stamped it down. He filled up (the hole) and removed all evidence of the burial.

He then returned to the King's court. "O Buzur Jamhūr, has the desire of your heart been fulfilled?" "Yes, O King, my heart's desire is accomplished." "Well, now, get on and tell me about my dream." "In your dream," said Buzur Jamhūr, "did some savoury food appear before you?" "O Brothers," said the King, "he is telling my dream. Wa! He is telling me just what I saw." "Did a great desire come on you to eat the food?" said Buzur Jamhūr. "Yes, I felt a great desire to eat it." "Did a black dog plant its paw in the food? Feeling this (to be) revolting, were you perchance seized with vomiting?" "O Buzur Jamhūr," said the King, "there is no one like you! You tell me things just as I saw them. (But) I do not know the meaning of this vision that I saw. Explain it to me." "O King don't you know the meaning of it?" "No, I don't." "Well, I won't tell you in this public assembly. I'll tell you when we are alone."

The King went to his palace, he and Buzur Jamhūr, the two of them. "O King," said Buzur Jamhūr. "Don't you know the meaning of your dream that I told you?" "No, I don't know it." "Well, now I will tell you, listen. Some savoury food appeared before you. You wished to eat it. A black dog put down its paw in the food. Feeling this (to be) revolting, you vomited?" "Yes, I vomited." "Well, you saw all this?" "Yes, I saw all this. Now interpret it for me." "Good. I'll interpret it for you. Have you, or have you not married the daughter of the King of Habash?" "Yes, I have married her." "She was the savoury food. She has

5 *uγq apamate* — v. § 391.

13 *oγqanas be* — v. § 491.

16 *odiluman* 'they fixed their hands for them in the leg' v. § 248.

22–24 *araq bilum.* — In the first case *bilum* may be the 3rd. sg. *y.* past, in the second it seems to be the static pc. based on *bila*, 'the-wine-which-is'.

25 *Nuširuwaγn* — this unorthodox derivation of the name *Nuširuwaγn* is not carried to its conclusion in the text. The narrator explained it as: *numin γeiser* 'drinking, go'; 'drink and go'. Pers. *nuš o raωaγn* (Pu).

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

5394

brought a friend for herself from her father's city and she amuses herself with him in your absence." "Where is he now at the present time?" asked the King. "At the present time he is in the King's daughter's treasury." "Is he there now?" said the King. "Yes, he is there now."

The King opened the door of the treasury of the Habashi King's daughter and saw that he was inside. Seising him he dragged him out and led him off to the court. They assembled the Qazis and the King said: "O Qazis, I am King and this wife of mine has brought a lover here for herself. Now give judgement." "I'll give judgement," said the Qazi. "O King, let no one kill these two. Let them take them away to a waste place and split a log and put one of them on one side of it and one of them on the other side of it, and securing their hands in it leave them there. This is the judgement I have given," said the Qazi. They took (the guilty parties) away to the desert and secured their hands in the (split) log and pulling out the wedges left them there in the desert.

On Buzur Jamhūr (the King) bestowed the Wazirship.

A number of years passed and (one day) they were drinking *'araq* in the King's court. They had poured out (some) for the King and they presented it to him and he took it in his hand. Then they offered their congratulations to the King and said: "A son has been born to you." "O Buzur Jamhūr," said the King, "what name shall I give my son?" "Drink (Persian: 'Binūsh')" said he, and the King drank the *'araq* that was in his hand. "O Buzur Jamhūr, what name shall I give him?" "What name did I just now give him, O King?" "You said to me just now 'Drink the *'araq*' (that was in my hand)." He called him: 'Nushīruwīn' ("drink and go").

"O Buzur Jamhūr", said the King. "You know all these things: has this son of mine been born good or has he been born bad? Now tell me this." "Listen King, I shall tell you. He was born in a happy moment. He was born lucky. Seven kings will serve him. He will have 4000 private attendants. There will be 5000

2 *padšaha·ntiŋ* — the Persian pl. *padšaha·n* + *Burus.* pl. suffix *-tiŋ*.

3 *xabərdərri etiš me.iman* — *etiš* is perhaps for *etašo* the pl. of the noun agent. It does not seem possible to take it as *etiŋ*.

4 *dumaimi* — presents some difficulties. As far as meaning goes it could best be attributed to *d**-*MAN.IS* 'to come into existence' etc. but the form should then be *dimaimi*, so that it is necessary to assume a generalised form of *d**-*MAN.IS*: *DUMANAS*.

A verb *DUMANAS* does exist meaning 'to freeze, coagulate, take shape'. Whether or not this is a generalised form of *d**-*MANAS*, or a distinct verb, there is no clear evidence.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

men to guard him. He will have a tent with 1000 poles. His crown will be all of satin. His carpets will be all of gold brocade. The pegs of his tent will all be of gold. There will be as many golden chairs as can find place in the whole tent. Over his doorway he will hang chains of true justice. In those days he will be "The Just." They will call him "Nushīrwān the Just."

Even as he had finished saying this a son was born to Bakhtiār. "O Buzur Jamhūr," said the King, "they say a son has been born to this wretch too. Of what nature has he been born?" "He has been born very knowing. He has been born a trickster. He has been born (to be) Wazīr to your son," said Buzur Jamhūr. "What will (Bakhtiār) call him?" "He will call him Bakhtēk." They said to Buzur Jamhūr: "A son has been born to you too," and they congratulated him. "What name will you give your son?" they asked. "My son's name is Siā.okhash." These three sons were all born at one time.

Twenty years passed after their birth and Nushīrwān Pādshā came of age. Kubād said to Buzur Jamhūr: "The signs which you spoke of at the time of his birth are (evident) on this son of mine," and he asked him: "Is there anywhere any enemy of my son or not?" "There will be an enemy of your son." "Where is he at the present time?" "He was in his father's loins and he has now passed into his mother's womb." "What is his father's name?" "It is Abdul Mutalib." "What will he call his son?" "He will call his son Hamza. The name of his country is Arab." "I now give you leave to go," said Kubād, "and whatever women are with child in the country of Arab rip open their bellies." He made them get ready gold on 1200 camels and said: "O Buzur Jamhūr, I have prepared this gold on 1200 camels for travelling expenses for you. Proceed to the country of Arab."

4 *taj . . . ADILAS* — one would have expected a golden or jewelled crown rather than a satin one.

6 *uyAMAN kursimots* — *uyAMAN* from **-yaiyAs*. The form seems to be analagous to *bAMAN* and is probably the static pc. plus *-AN* v. §§ 389—390.

16 *u.ēski* — numerals with the pron. prefixes are rare v. § 133.

18 *dusyərubai* — as here, frequently introduces a statement not a question.

---

2 *padša hukəmate . . . deʿerai.i* — *hukəmate* is out of place. Simply: 'the king has sent.'

4 *nusen doyeluman* — is equivalent to: 'they heard it said that . . .' *nusen* merely indicates reported speech.

7 *diʿa yetsuman* — 'they saw he has come to meet them' i. e. 'they saw him coming.'

11 *ma besantsum aʿr baʿn ke* — this would normally mean, as it does in line 13, 'whatever you are afraid of', but here the *ke* is probably merely the connective 'that' and the *besan* interrogative: 'what are you afraid of that there is no colour in your faces?'

maskilulo — 'in your' (pl.) 'face' (sg.). The plural pronoun prefix is frequently felt sufficiently to notify the pluralness of the noun v. § 128. III.

[Errata - after etimi insert ifatiyate baʿn etimi cf. Corrigenda, p. 419, cat. 116 -- Analyst.]

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

539

Buzur Jamhūr proceeded in the direction of Arab taking with him a number of servants. News (of his coming) reached Arab. They reported: "A great King has sent a very great man, a very wise man, to Arab and he has arrived. He has come to rip open the women's bellies." The people heard and were alarmed. Abdul Mutalib said: "O community of Islam, you who do service to God, a very great man has come. Come, let us go to meet him." "Good, we will go," said they.

They went out and proceeded some way to meet him. They saw Buzur Jamhūr coming to meet them. Abdul Mutalib dismounted from his horse. Buzur Jamhūr saw him and he too dismounted. Then they salamed to each other and kissed each other's hands and sat down. Buzur Jamhūr said: "O Abdul Mutalib, of what are you afraid that there is no colour in your face? Your colour has changed. Do not fear. Good will come from me, evil will not come from me. Whatever you are afraid of, do not fear. You will receive favours from me. I shall do no evil." They became very happy and led him off joyfully to the country of Arab, and established him there with great honour and settled down themselves in great peace and comfort.

Buzur Jamhūr stayed there for a month and a son was born to Abdul Mutalib the Prophet. They told Buzur Jamhūr. "A son has been born to Abdul Mutalib." "Call Abdul Mutalib," said Buzur Jamhūr. They called him. Abdul Mutalib came. "O Abdul Mutalib," said Buzur Jamhūr, "bring me the son who has just been born to you." Abdul Mutalib went off to the place where his son was and fetched him. "Give him to me here," said Buzur Jamhūr. He gave (the child) into Buzur Jamhūr's hands and Buzur Jamhūr kissed it on the eyes and he kissed it on the forehead and he kissed it all its joints. The people in the assembly said. "O Buzur Jamhūr, what honour have you done to this small child? You, so wise and so great a man, why have you done it such honour?"

9 *yu·ša* — alternative reading *yu·šen* 2nd. pl. imper. of *i* + **-uše.as*.

17 *u·ŋɛ ɛtas* — *ɪzzat* must be supplied.

19 *ki·ne dimanum* — i. e. 'of this one who has been born'.

27 *u·ŋ juwanan mɛn kɛ apam i·nɛ a.u.* — This passage is obscure. The main difficulty, *i·nɛ*, was a later addition to the original text. The *i·nɛ* seems to be due to an uncompleted change in the form of the expression from: "there was no one like thee, O father" to: "there was no one like him, that father of mine."

534A

"Listen," said he. "I shall tell you the child's virtues. Down its right cheek is the line of the Bani Hāshim, and between its eyebrows is a sign. Such as these are born of the family of Ibrahīm the Prophet. The child belongs to that family. For that reason I do it such honour. From the rising of the sun to the setting of the sun (*or* from the East to the West) mighty kings will he cast down from their thrones and fling them on the bier. He will establish Islām. He has been born a pillar of Islām." Then he bestowed on Abdul Mutalib a present of 1100 camel's loads of gold. "This son of yours," said he, "is your son, and he is also my son. One day he will benefit me too. Expend all this gold and rear him handsomely."

From a distance, a man carrying something in his bosom was looking at Buzur Jamhūr. "Who is that looking at me from a long way off?" (said Buzur Jamhūr). "O Buzur Jamhūr," said Abdul Mutalib, "he belongs to Islām, he is of my faith." "Tell him to come here," said Buzur Jamhūr. Thereupon they brought him up. "O man," said Buzur Jamhūr. "Why do you look at me from afar off?" "May I be your sacrifice! On the day that this son of the Prophet was born, a son was also born to me. I have brought him." "Give him here to me," said Buzur Jamhūr. The man gave him (the child) and of him too Buzur Jamhūr kissed the joints. All said: "O Buzur Jamhūr, your doing honour to the Prophet's child was right and proper. This is the son of common folk. Why do you treat him thus?" "Listen and I shall tell you his virtues." All listened. "This child," he said to them, "will take a tax of the beards of all mighty men of valour. He will set fire to idol temples. He was born (to be) Wazīr to the Prophet's son. Whatever the prophet's son says he will carry out. He will obey his behests."

Buzur Jamhūr took up his abode in the country of Arab. (He said) "Kubād sent me saying: 'Tear out the roots of the enemy of my son'. (Instead) I gave them presents. Now I have become unable to go (back) to my own country. I shall now stay here." He abode there for three years. When three years had passed his son sent him a letter: "O my father, there is no one like you, my

1 *dešqalti.a* — this is the short form of the 3rd. sg. pret. + *a*, and it is obviously equivalent to the common form of future condition, the pret. + *kɛ* 'if it arrives, should it arrive'.

2 *ʒu'* i. e. *ju'*. In Shina I have found this vacillation between *j* and *ʒ*, and between *j* and *ž* very common. It occurs in Burushaski also, but, in my experience to a much less extent. With my informants *ʒ* and *ž* were not very common sounds.

5 *ni go'sasan* — 'a sayer to thee (of) "go"'. Noun agent from *°-asas* § 403. 1.

9 *mulkɛtsum* — the *ɛ* is probably to ease pronunciation.

11 *di'a nusɛ.* — I am not sure whether this is to be taken as: 'N. P. heard it said (that) B. J. has come' or as: 'N. P. heard of it and saying "B. J. has come..." (and saying) "I shall go to meet him" . . .'

Probably the former. Cp. note on p. 90 l. 4.

13 *ničama ya'?* — I am not sure of the force of *ya'*. Perhaps it is simply the interjection v. § 344.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

father. Kubād departed from this world. Nushīrwān took his seat on the throne and Bakhtek secured the Wazīrship. He gave evil judgements and committed evil acts of oppression. The country has been ruined. If this letter of mine arrives at night, come (the same) night. If it arrives by day, come (the same) day."

Buzur Jamhūr addressed Abdul Mutalib: "O Abdul Mutalib, I am going to go back to my own country." "O Buzur Jamhūr," said Abdul Mutalib. "There is no one over you to give orders and say to you 'Go.' There is no one over you to give orders and say to you 'Stay.' If you go, it is your own pleasure. If you stay, it is your own pleasure." "I am going to go," said Buzur Jamhūr. "God be with you, then go."

Buzur Jamhūr rose up from the country of Arab and proceeded in the direction of his own country. Nushīrwān, the King, heard that Buzur Jamhūr had come from Arab. "I'll go to meet him," he said, and got his things ready. He sent for Bakhtek Wazīr. Bakhtek Wazīr came. "O Bakhtek Wazīr," he said. "They say that Buzur Jamhūr has come. Shall I go to meet him or not?" "O King, do not you, so great a king, go to meet him. He is an insignificant person." "O you wretch," said Nushīrwān. "My father counselled me saying 'I have sent Buzur Jamhūr to pull up the roots of your enemy. He will achieve this task. At the time of his returning do you go out to meet him.' He said to me: 'He is a very great man, he is very wise.' I am going to meet him. Are you coming with me or not?" "King, if you go I will come too." "Yes, I am going. Inform my followers." Bakhtek Wazīr informed them.

The King went out to meet (Buzur Jamhūr), and proceeded with those of his men who were there. When they had gone some

14 *padšan* — vocative: 'you, so great a king, do not go.'

15 *kanao atai.i* or *stai.i.* — If *atai.i* stands *kanao* *-*ataš* is treated as a compound verb with the object regarded as "me"; with *stai.i* the object of *-*ataš* is *kanao* and the indirect object *ar* ought probably to be expressed as in the case of *or xabor eti* in line 20.

19 (*a*)*kartomor* — the Ms. has *kartomor*, but the word is otherwise established as *-*akartom*. The *a*- has been absorbed in the *a* of *ja*.

yɛtsuman. O·ltalik hayurtsum duso·kuman. Hini·nɛ iri·ŋčiŋ d'umərumen. Huru·čaman. Nu·širwa·n padša makuči huru·timi. Baxtɛk Wazi·r do·upa huru·timi. Buzur Jamhu·r γagpa huru·timi. Padša se.ibai.i: "Gutsɛ bɛ·sɛ te.i məi.ibi.'ɛ kɛ gutɛ čaγa ja·r aiye·č'a kɛ jɛk (= jɛ kɛ) u·ŋ hərəŋulo ni·mi." Buzur Jamhu·rɛ se.ibai.i: "Ya padša, go·sə ka gu·ltu·mal ɛtas ba kɛ gutɛ čaγa go·r ɛ·čam. Dalbat ɛtum gult'u·mal ɛ·ča kɛ jɛ kot čaγa go·r aiy'e·čam." Padša se.ibai.i: "La·t Mana·ttsum tɛš maniš, 'ase ka altu·mal ɛčam." Buzur Jamhu·rɛ: "Yɛ g'ultumal ɛti, go·r čaγa e·čam," senimi.

Padša iltu·mal ɛtimi. Buzur Jamhu·rɛ se.ibai.i: "Le.i padša, jɛ kɛ u·ŋər tu·ki ju·as duro·wanatɛ aki·l məi.ibi.ɛn." Padša samba ɛtimi: "Besan γunikiš duro·wan ɛtuman?" nusɛ. Buzur Jamhu·rɛ se.ibai.i: "Gusɛ han balasanɛ han isɛ·r se.ibi: 'Ja e·iər go·i jo,' 'ɛši bi. I·sɛ balasɛ: 'Bɛsɛ gu·ča ba?' ɛši bi. I·sɛ balasɛ: 'Bɛsɛ aiyau.uča?' 'ɛši bi. Da i·sɛ balasɛ se.ibi: 'Nu·širawa·nɛ wa·lto ša·riŋ xəra·b manitsa, i·kɛ ja ai.imo mu·mimo muy'ɛnimiŋulo muγu·nas ba kɛ ja ai.i gu·čam.' Da han i·sə balasɛ se.ibi: 'Nu·širwa·n taxtatɛ bačantsɛ (*or*, bamantsɛ), Baxtɛkalɛ wazi·ri biličantsɛ, turma walto xəra·b mana·šo bitša, ɛk kɛ goγ'u·yam. A·ltər wa·lto xəra·b mana·šo bitsa, ɛ·k kɛ goγ'u·yam.' Ya padša, yɛ (*or*, ya) aki·l čaγan 'ɛči.ɛ gutsɛ b'alašu.ɛ."

1 *iriŋčiŋ* — the plural is due to the plural verb used with *hini·nɛ*. Each, I think, seeks only 'one' hand of the other.

3 *γagpa* — δ. λ. The *-g-* is hard to account for. Otherwise for "left" I have: *γayum* and *γauγum* (i. e. *γayum*, *γauyum*).

9 *məi.ibi.ɛ kɛ* — the force of the *kɛ* is not clear. It probably corresponds to the English form of direct question "why ever are they acting so?"

10 *go·sə ka* — i. e. *gu* + **-as* + *ɛ ka* 'with thy heart'.

11 *dalbat ɛtum* — originally written *dalbatatum*. It is difficult to say whether the static participle of *ɛtas* or the suffix **-ate* + *um* is the more probable.

16 *tu·ki ju·as* — appears to mean 'from which comes' i. e. 'involving contempt,' or 'disgrace' v. Vocab. & § 402.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

distance (the two parties) met, and (Nushīrwān and Buzur Jamhūr) saw each other in the distance. They both dismounted from their horses and each kissed the other's hand. They sat down. Nushīrwān the King sat in the middle, Bakhtek Wazīr sat on his right hand, and Buzur Jamhūr sat on his left. Some birds started fighting in the sky and there was a disturbance. Bakhtek Wazīr said to the King: "Ask Buzur Jamhūr, who understands the language of birds, why the birds are behaving thus." Nushīrwān the King asked him: "O Buzur Jamhūr, why are these birds attacking each other?" "O King," replied Buzur Jamhūr, "don't ask me why they are acting thus." "If you don't tell me," said the King, "why they are acting thus, then all is over between you and me." "O King," said Buzur Jamhūr, "if you will listen seriously, I will tell you all about it. If you listen heedlessly, I won't tell you." "I swear by Lāt and Manāt that I will listen with all my heart." "Well, listen, and I will tell you," said Buzur Jamhūr.

The King gave ear and Buzur Jamhūr continued: "O King, they are behaving thus over a matter that entails disgrace to you and me." The King thought: "What evil thing have we done?" "The one bird," said Buzur Jamhūr, "is saying to the other: 'Give me your daughter for my son'. The other bird says: 'Why should I give her to you?' The first says: 'Why won't you give her to me?' Again the other says: 'Four cities of Nushīrwān's have been destroyed. If you will give those (cities) among the wedding gifts of my daughter's mother, I will let you have my daughter." Then the first bird says: "Owing to Nushīrwān's being on the throne and to the Wazīrship's being in the hands of Bakhtek, fourteen (more cities) will be destroyed. I will give you those too. Twenty-four (more) are going to be destroyed and those too I will give you.' O King, such things are the birds saying.".

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

"O Buzur Jamhūr," said the King. "If I have done any evil deeds the (other) kings will laugh at me. Will you be able to remove this disgrace from my face? (If you can) this very moment I will seat you on this chair of Bakhtek Wazīr's." "If you were to do this," said Buzur Jamhūr, "I shall win you the applause of mighty kings, and I shall exalt your fame on high."

The King made Bakhtek Wazīr get up from the chair and seated Buzur Jamhūr on it, and he charged him with the duties of Wazīr and bestowed the Wazīrship on him. All wished him joy, and they rose up and went their way and arrived in Madāin. (Then) Buzur Jamhūr despatched letters to all the lands (of Nushīrwān) saying "Whatever injustices have been done to you, whatever taxes have been imposed on you, I Buzur Jamhūr have come and have entered into possession of the Wazīrship. Lo, I, the man who does even-handed justice, have come. I shall do even-handed justice for you."

(Thereafter) occupying the Wazīrship, he abode in peace and comfort with Nushīrwān in Madāin.

Kiser, the central figure of this tale, is no petty personage of merely local distinction, but a hero of renown throughout Northern Asia. Kesar provides the subject of a lengthy epic in Tibetan, and Gesser Khan's exploits are recorded in a Mongolian saga. His fame is further perpetuated in the unwritten folk tales of many Siberian and Mongolian peoples.

The tale of his deeds was found to be current in every village in Ladakh by A. H. Francke, who collected and published two of these oral Tibetan versions, with an argument for their significance as the relics of a primitive religion. It is from this tradition that the Burushaski version seems to derive.

The home of the Kesar legend remains undetermined, and this is not the place to examine either its character or its geographical extension.

It will suffice to provide clues to the literature on the subject in the following references:

Bergmann, Benjamin. "Nomadische Streifereien unter den Kalmüken in den Jahren 1802 und 1803." Hartman, Riga. 1804. Vol. III pp. 233—284. "Bokdo Gäsär Chan," Eine mongolische Religionschrift in 2 Büchern.

The Adventures of Kiser.

[101]

In Lama there was a rich man. In the Spring season he was giving wheat to the people. A small child made its appearance *in the wheat and he took it out. The rich man's* daughter-in-law was with milk and he brought the child (home) and reared it (with her help). It grew up and they gave it the name of Dungpa Miru

---

Laufer, Berthold. A review and criticism of Francke's "Spring Myth of the Kesar Saga" (as originally published in German). "Wiener Zeitschrift für die Kunde des Morgenlandes." Vol. XV 1901 pp. 77—107.

Contains what amounts to a bibliography of previous literature relating to Kesar or Gesser Khan.

Poppe, N. "Untersuchung der sprachlichen Eigentümlichkeiten der mongolischen Version des Gesser Khan." "Asia Major" Vol. III. Fasc. I and III, Lipsiae 1926.

The little I have to contribute on the subject will be found in "Folk-Lore," Vol. XLII, 1931 no. 2.

This text presents a good many difficulties, a considerable proportion of which are probably due to the circumstances in which it was recorded. 'Ali Madad of Baltit, the old man who related the story, was only able to do so at a pace at which it was impossible to write it down.

He could not repeat himself, and when asked to do so was liable to lose the thread of the story. The services of my usual informant, Imam Yar Beg, had therefore to be requisitioned to catch each episode as it fell from Ali Madad's lips and retail it at a pace and in a form convenient for the recorder.

The process was not an easy one for any of the persons concerned and it undoubtedly resulted in some confusions and errors which were not all eliminated by subsequent revision.

2 *dyarsin* . . . . *mendag* MANINI. — The meaning of this is clear, but it affords an example of the confusion just referred to.

3 *aku·čamo* — 3rd. sg. hf. pret. neg. of *gučai.as*.

7 *su·rat* — is used either of the "appearance" in general or of the "face". It is here probably equivalent to "head". In the Ladakhi version of the story the corresponding personages have animals' "heads" in Francke's translation.

8 *gi·m bila* — for this use of the static pc. v. § 379 d.

21 *nazərtsum dal manimi* — "he rose from aiming", but it is probably only meant that he ceased aiming and looked direct at the ibex.

28 *məimtsɛ* — 3rd. sg. Conditional of *manɛ·u*, *mai* + *um* + *tsɛ* v. §§ 313 & 351.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

53A

When he had reached manhood they procured a wife for him. In due course she became with child, and after nine months her labour came on. Her labour continued, but no child was born. She was not delivered. For 100 days her pains continued and she was not delivered.

Her husband went to a diviner and said: "O Diviner, my wife has been in travail for 100 days and she does not give birth." "She has been delivered," said the diviner, "now go." He went off and when he came (to his home) his wife had been delivered and a son had been born to her. He saw that the child had a donkey's head and a human body. (Again) labour pains seized his wife and he went once more to the diviner. "O Diviner," said he, "you were right. My wife has been delivered, but the child has a donkey's head and a human body. What name shall I give it?" "Call it Abadum Bu (*or*, Aba Dumbu)," said the diviner. "Your wife has again given birth, go, a boy has been born." Dungpa Miru went off and when he reached home his wife had been delivered and a boy had been born. He saw that it had a dog's head and a human body. (He went again to the diviner and said:) "What name shall I give it?" "Call it Aba Kitung. Another son has been born to you, go," said the diviner. When he came again (to his home) a son had been born to him. He had a hawk's head and a human body. Again he went off to the diviner and said: "What name shall I give it?" "Call it Aba Chukhtung," said the diviner, and the man went off again. In like manner one hundred sons were born to his wife.

After the hundred sons had been born Dungpa Miru went off a-hunting. In a jungle was an ibex goat all by itself. He took aim at it. When he did so there appeared to be two goats. He got up from his aiming and there was only one goat. Again he aimed and again there appeared to be two. Putting his faith in God he fired. The bullet hit the goat and he went up to it and finished it off and skinned it. In the skin he noticed that there were two (bullet-)holes, while he had fired only one shot. He said to himself: "I fired only once, there should be only one hole, but here are two holes."

7 *nas tsučo bo·m* — this expression is used of the cravings for special food etc. sometimes experienced by pregnant women.

9 *ti bɛsan ka·t nɛ ači* — the force of this 'ti' is not clear to me. I can only translate the phrase as: "making any (*or*, some) other condition, give it to me", and I have it glossed in this sense, but no previous condition has been stated.

11 *dum'u·manu* — the short form of 3rd. sg. hf. pret. v. § 314.

17 *yakaltər ni·mi* — this is followed in the text by *i·nɛ kɛ i·mo hai yakaltər ni·mi* "he (i. e. *Pfasan Karaski*) too went off to his home," but this breaks the syntactical sequence.

18 *i·ljum* — 'from behind' i. e. from the date of the agreement.

24 *gaptsum bišk* — *gaptsum* is to be regarded as adjectival: *gap* + *tsə* + *sum* 'the being-on-the-skin hair'.

4: Lorimer L-3 (1929-4; 1934-5) 1935 AV7 Burusho.AM1

5394

Two men came up to him and said: "O man, speak the truth. We had shot this ibex first, (but) it fell in front of you. Is it yours or is it ours? Speak the truth." "You are right," said he, "you had hit it first, (but) according to justice it is mine." "You are right," they replied, "according to justice it is yours." (Then) one of them said: "Give me the meat and do you take the skin." "I will give you neither the skin nor the meat. My wife (being pregnant) had a craving for it and said: 'Bring me ibex meat,' so give me that meat." The other said: "I will give you the meat, but only on a certain condition will I give it to you. I won't give it to you for nothing." "Well, make whatever condition you please and give me the meat." "My condition is this: If ever a boy is born to your wife, or if ever a girl is born to her, give the child to me." The man obtained Dungpa Mīru's consent and gave him the meat. "I do not know your name," said Dungpa Mīru. "Nor do I know the name of your country, nor do I know the way to your country." "My name," said the man, "is Fazan Karaski, and the name of my country is Yal Butot." He also showed him the way to it saying: "Come by this road. Count the days up to twelve months and watch the appointed time and then come."

Dungpa Mīru (then) took the meat and went off to his home. (Arrived there) he gave the meat to his wife and she ate it and became with child. Thereafter Dungpa Mīru kept the tally of the days and having made up the exact time and day he set out for the other's abode. Proceeding on his way for a number of days he arrived at the man's house. Before this his wife was brought to bed and a boy had been born to her and with the boy a bull calf had also been born to her. The horns of the bull calf were of gold, its hoofs were of gold and its forelock was of gold, and its mane was of gold and golden also was the hair of its coat. The boy there was small, (but) he had been born strong. That is, the boy who had been born under

2 *i·nɛ senimi* — i. e. *Pfaran Karaski* said . . . The narrative is continued from *drəqaltisi* p. 104 l. 20.

ja wa·da ɛta baiyam kinɛ . . . 'the one whom I had stipulated about'. This is an example of how the lack of a Relative Pronoun is made good in Burushaski. The clause is adjectival and one must either suppose a relative which does not exist or regard the verb as being participial.

4 *astam no·tan* — 'causing them (the people) to make a decision'. The exact nature & significance of the episode which follows is obscure.

6 *ašə·to nɛ* — i. e. *ašə·to inɛ* 'that weak one' there is nothing to indicate who the "weak one" was.

9 *yatɛ hi·nər* — probably 'next, to another'.

15 *ama u·ŋ . . . ni* — "he said to his own father" should be inserted either before or after *ama*.

805 16 *pfər* — the use of *pfər* here is peculiar. The literal rendering of the passage is probably "reckon from today backwards in the current year up to twelve

4: Lorimer L-S (1933-4; 1934-5) 1935 AV7 Bursaho AV7

the contrast was strong. His father grudged to hand him over to the man. The latter said: "Is (the child) I had made the condition about a boy, or is it a girl?" "It is a boy," said Dungpa Mru. "Are you going to give him to me, or not?" "I will give him to you. I will have the matter adjudicated on in my country and then give him to you."

Taking his sons with him he presented himself for a decision of the case. He said to the people of the country: "I won't give him this fine boy. I'll give him the feeble one. I'll make them show off their accomplishments. You watch." Then he gave orders to his sons saying: "You take it in turns and wrestle with this boy." One got up and grappled with him. The small lad overpowered and threw the big one. Then the father said to another: "Tackle him," and the small lad threw him too. "Now you decide," said he to the people, "which among them is the inferior, and which is the superior?" They all with one voice said of the strong one: "He is the weakest." On this Dungpa Mru said: "I shall give him this boy, as the one who was born under the agreement."

So he brought him along to the man's house and said: "Friend, this lad was born under the agreement, I give him to you." "My son," said the man to the boy. "You are mine according to the agreement. Will you come with me or not?" "Yes, father, I will come," said the boy. But (to his own father he said:) "You go back to your own country and in this coming year reckon up to twelve months from today. Then go up on to your roof, make your reckoning, put a bowl down beside you and sit in silence. I shall become a rainbow in the sky and I shall become a drop of rain and fall from the cloud into the bowl. Then whoever is your favourite daughter-in-law give her the water from the bowl and make her drink it. Thus shall I come (back). Now go off by your own road to your own country."

months". We should say "forwards" but the point of view is the end of the twelve months and one reckons backwards towards commit.

IB *zuvvalan mumu* — is perhaps absolute: "a rain-cloud having come into being in the sky" i. e. 'a rainbow will appear in the sky and I shall turn into a drop of rain and fall from that cloud'.

IB *gu.iv gurahin* — 'your daughter-in-law (wife) of your son.' *-rahin or *-zrahin alone means 'daughter-in-law'.

534K

The father went off to his home and there began counting the days. When a twelvemonth of days from that day were accomplished he took the bowl and went up on to his roof. Thereupon a cloud came up in the sky straight over his roof and a drop of rain descended from the cloud into the bowl. That (drop of) water he carried off and gave to the wife of his son named Aba Dumbu, and she drank it.

After drinking it the woman became with child and she kept a reckoning of the days of her pregnancy from the date of her conception. Twelve months passed and she was not delivered, but when those twelve months were passed her labour came on and a voice came out from her inside: "Where the ibex bear their young, there I am to be born." His mother went up to the crest of the mountain. "Now here," said she, "the ibex must certainly have their young." Then being tired she sat down there and went to sleep. As she slept her labour came on and again a voice came from inside her: "Mother, where the fish are born, there I am to be born. Take me thither." When the voice had thus spoken, the woman came down with great difficulty from the crest of the mountain to the river beach. Then, being tired she lay down and fell asleep.

As she slept her pains came on and the voice again came saying: "In the place where the horses have their foals there I am to be born. Take me there." So she rose up and groaning and grasping her knees she came to the horses' stables. When she got there she was utterly exhausted and became unconscious. Again the voice came saying: "Where the cows calve there I shall be born, take me thither." So she bore him off to the enclosure where the cows were kept. On her arriving there again the voice issued from inside her saying: "Take me to the place where the sheep have their lambs." So she took him to the sheep's lambing-fold. When she had done so, again he called out: "Mother, mother, I am to be born in our own house. Take me there." She then took him to her own home. Thus having made her wander round all these

[1] *fat* ususo — this may mean "making her finish off (the business") or, perhaps "exhausting her". *fat* ctas appears to be used also in the sense of "to search" v. Vasah.

6 *i·tɛ ho·lə* — 'out of it' i. e. 'out of his mouth'.

21 *Kisərɛ* — the original 100 Animal-headed Brothers, sons of *Duŋpa Mi·ru*. The term apparently means the Kisərɛ Brethren, or Kisərɛ Clan. It is not a Burushaski plural form.

The *Pa·ŋču* of the present story is Kisər and later on is called so, and occasionally Liŋpikisər or Liŋkpikisər.

The hero of the corresponding Ladakhi and Mongol stories is "Kesar" and "Gesser Khan".

22 *si·ŋgɛ ɛ·s* — As the verb is x agreeing with *ɛ·s*, the exact meaning must be 'his was a lion's heart' rather than 'he was lion-hearted'. This is borne out by the genitive of Abu Kituŋ in *Abu Kituŋ si·ŋgɛ ɛ·s bi·m* p. 114 l. 2.

24 *ma bušai.ɛ traŋ ma·čam* — 'I shall divide your land for you' v. §§ 249. 3 and 261 I. b.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

539

places and leave nothing out he had brought her home again. When she arrived there she was worn out and fell asleep.

As she slept the child who had spoken inside her made his way out and sat crouching (on the ground) outside. Once more her pains came on and she woke up. She looked and saw the child that had spoken inside her (now sitting) outside. Again she was delivered and another son was born to her. As soon as it was born, the child which had first come out from inside her put the child that had now been born in his mouth. His mother seeing him swallowing the other one was frightened and screamed out. On this the one child put the other out of his mouth and cried: "Mother, mother, may the responsibility for this brother of mine fall on you! If you had let matters alone for a little my brother's whole body would have become iron. (As it is) my breath did not reach his armpits and under his armpits has remained (ordinary) human flesh. All the rest of his body has become iron. Nothing will have any effect on him and no one will be able to injure him. Only, if anyone knows about his armpits and hits him there, then he will be injured."

After the children had been born their father came and saw them and was pleased (that) his wife had given birth to twin sons. The mother suckled and reared them. The boy who was born first day by day became weaker and weaker and more and more ill-favoured. But the later-born one day by day grew bigger and became stouter and stronger. The wife said to her husband: "Give names to these two sons of yours." So he gave them names. The first-born, ill-favoured weak one he named Pāngchu, and the later-born, strong one he named Būmlĭftan.

In the course of some years they grew up. Now all the hundred Kiserè (brothers) prepared to separate. The senior of them was Aba Kitung. He was a man of might and lion-hearted and he feared no one. He assembled all the Kiserè and said to them: "Come along, I shall apportion your land among you." Then he divided up the land among all the hundred of them and allotted it to them. To Pangchu he gave nothing. Pangchu rose up and said: "O Aba Kitung,

1 *ka* or *kə* — a frequent variant of *kɛ*.

7 *kuˑɛ uyoˑntsum* . . — Note the ellipsis common in statements of comparison. 'This place you have given me (is) better than (what you have given to) all these'. *kuˑɛ uyoˑntsum* — the Ma. has *kuˑo*.

12 *oˑrutas* — negative *a* + *hərutas*.

23 *rač nɛ bam* — a quasi imperf. 'was keeping guard', but really "he, watching, was there" cp. p. 88 l. 12 *iˑltumal nɛ bam*.

duˑšər — present base + *ər* of *duˑsas*, denoting purpose, intention.

24 *ɛˑgičər* — probably to be regarded as Causative of *giyas* v. i. 'to enter, plunge into' etc.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

there is me too, isn't there?" "Yes, there is you too. I shall give you something," said Aba Kitung, and he gave him the site of the graveyard. "I thank you," said Pangchu. "This burying place that you have given me is better than (what you have given to) all the others."

Again after this Aba Kitung divided up the (family) chattels. To Pangchu he gave nothing, but he gave things to all the other hundred. Pangchu rose up: "O Aba Kitung," said he. "There is me also. Give me something too." "Yes, there is you too. I shall give you something. Instead of chattels I give you the ford in the river." "O Aba Kitung," said Pangchu. "You have given me a better share than all these others."

Then Aba Kitung divided up the houses among them. To all he gave houses, only to Pangchu he gave none. Pangchu got up and said: "O Aba Kitung, there is me too. Give me the house that is my due." "Very good. I shall give you one." Now there was a very foul uninhabitable (isolation) hut and (pointing to it) Aba Kitung said: "Let that be yours," and gave it to him. Up rose Pangchu and said: "O Aba Kitung, you have given me for my share better places than you have given to any of these others."

(It happened that) one of the Kiser clan died and they took (his body) to the graveyard and buried it there. Pangchu came and took the dead body out of the grave and carrying it along threw it down through the smoke-hole (in the roof of the dead man's house). Thus he refused them (the use of) the burying-ground. "Aba Kitung," he said, "has given it to me as my share. The place is mine. Why do you bring your corpses and bury them in my land? The place is mine and I won't give it to you." So they deposited the corpse in their own house, for there was nowhere any place to bury it, as Aba Kitung had given the burying-ground to Pangchu.

Aba Kitung set out to go to his own land, but Pangchu was keeping guard at the ford. Intending to cross the ford and proceed to his land, Aba Kitung set his horse to cross (the river) but Pangchu sprang up and cried: "Ah Bastard, Aba Kitung has given me this (ford) as my portion. Who are you who appear in the skin of my

1 *jak daˑl nε* — this *jak* I have not recorded elsewhere. Its exact meaning is doubtful as I glossed the whole expression as "he snatched him up"

5—6 *mumanumó, mumanasər* — in Ms. spelt with *mo-*.

7 *mutˑoˑtulo duˑn* — for the use of *-ulo* after *duˑnas* instead of the usual *-tsε*. Cp. *ošumutsulo duˑn*, p. 206 l. 9.

13 *uyoˑnaŋε* — Ms. *uyoˑŋaŋε*.

14 *guˑčam* — probably a narrator's slip for *gučˑiˑam*, or *gučˑičam*, as both *bušaiˑi* and *ha* are y sg.

19 *amanam* — anticipatory pret.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

539*

Aba Kitung and proceed to cross over my allotment?" So saying he snatched him up and flung him on the ground. Aba Kitung had a lion's heart, Pangchu took it out and put it in his mouth. Then he took a fox's heart and shoved it down (Aba Kitung's throat). As the result of this Aba Kitung became feeble-hearted. And overcome by fear, he turned and went back.

Later on a woman among the Kiserè was afflicted by her menses and they sent her off to that foul isolation hut. Pangchu came and beat her, and seizing her by the hand threw her out. Thus he neither let them have the ford to cross by, nor the burying ground, nor did he surrender the foul hovel for them to put their women in.

On this Aba Kitung summoned all the Kiserè and said: "O brothers, let us make a new distribution and give Pangchu land and chattels and a house." "Yes, Aba Kitung," said they. "Make a redivision and give him a share too." Aba Kitung addressed Pangchu saying: "O Pangchu, I am going to divide up everything and give you land and a house the same as to all the others." "O Aba Kitung," replied Pangchu, "This that I have got is excellent. Did I not say so to you before? What I have got must remain mine." And he refused to be persuaded. "Look here, Pangchu," said Aba Kitung. "I shall give one share to all these together and one equal share to you alone. Be content." "Very good," said Pangchu, "if you will give all of them jointly one share, and then to me an equal share of land and houses, in that case I agree." "Very good," replied Aba Kitung, and he proceeded to give one share to all the others and then one share to Pangchu.

Pangchu then resigned to them the graveyard and the ford and the foul hovel, and settled down on his own land. Then they buried the corpse which Pangchu had taken out of the grave and thrown down through the smoke-hole, and the women when they fell ill went and took up their abode in the foul hovel, and they passed to and fro over the ford in peace. Pangchu now settled down at his ease on the land which had come to him, saying: "Now it has become mine."

1 *i·tsi nuqas do·γašam* — 'they laughing at him, used to laugh'.

3–4 *Pa·ŋču.ɛ . . . doyɛluman* — This sentence is probably corrupt. *yɛtsuman* was possibly a mistake of the narrator's which he intended to be replaced by *doyɛluman*.

14 *d'o·oru·tuman* — The exact meaning of this passage is uncertain. *d°-a.uru·tas* means 'to have one's heart fixed on, be attached to, be fond of'. When the obj. is expressed it takes the case ending *-ulo*. Here it was translated by the Hindustani *dil laggiya*. It seems to mean either that the princesses took a fancy to Paŋču personally, or that they took pleasure in watching him.

17 *i·mo dɪr . . . bilum . . .* — Apparently *dɪr* is the subj. and *thamkušɛ* a dependent gen.; that being so *bilum* should be *bim* for *dɪr* is x.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

The people of the country seeing Pangchu laughed at him because he was ill-favoured and stupid. Now the King of the country had seven daughters. They heard it said by those who had seen him that Pangchu's appearance was a sight worth seeing. Amongst the Tham's daughters there was one who was very beautiful. She was the eldest of all the daughters and was very lovely. She gave orders saying: "Bring Pangchu here; he will make a show for us." They went off to where Pangchu was and summoned him, saying: "The princess calls you," and brought him along. Now Pangchu was covered with lice; they streamed off him behind and they streamed off him in front, so foul was he. (Just as he was) he came into the presence of the very beautiful Langa Brūmo, and her sisters saw him and she herself saw him. "What sort of a man is this?" said they on seeing him, and they mocked at him and laughed.

(Meanwhile) Pangchu, working magic, cast a spell on the princesses to make them laugh, and he caused them never to let him go from them. Thus Pangchu remained with the daughters of the King. They were much delighted with watching the spectacle of Pangchu and he was constantly with them day and night. Presently he determined in his mind to marry Langa Brūmo. (Accordingly) he wrought magic and the King made up his mind to give his daughters in marriage (to people) in his own country. As far as the bounds of his kingdom extended he notified to all: "I propose to give my daughters to men in marriage. Assemble together on such and such a day," in these words he made notification. To his daughters he said: "I am going to give you in marriage. Marry whomever you take a fancy to in this my country."

Next morning all assembled and the King said: "My daughters, look about you." Then the daughters kept thinking in their hearts: "Shall I marry that one? Shall I marry this one?" Then Pangchu wrought magic saying: "May the King's daughters go early to

22 *(a)yuʷgoš̌ʌnts* — The Ms. has *yuʷgoš̌ʌnts*. The initial *a-* has probably been lost in the final *-a* of *padša*. Otherwise we must read: *yuʷgoš̌ʌntsʊr* "*ma barenin*" *senimi* 'he said to his daughters . . . .'

7 *ya·r ya·r* = *yər*, 'before'. The force of the reduplication is not clear, 'long before(?)', 'just before(?)'

mo·rimi — "he caused L. B.'s sleep to go (for her)". The alternative being: "he caused L. B. to go from sleep".

10 *go·ku an negučan bi* — This is what resulted after one or two alterations in revision, but it is still unintelligible to me. *negučan* is the p.pc. act. of the Ca. or Trs. verb *-*agučaiyas*. The pc. of the Intrs. verb *gučaiyas* is *nukučen*. It could be: "a donkey having laid down a foal, it (the foal) is (there)".

11 *akil ečubo* — probably: 'she says thus (as follows)'.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

sleep," and thereupon they went to sleep. When they were asleep Pangchu got up and went out. Now in a stable there was a donkey big with young. He went up and kicked it and caused it to drop its foal. Then taking the donkey foal (all) slimy (as it was) under his arm he brought it with him, and raising Langa Brūmo's handsome silken upper and under bedclothes he put it to sleep along by her side.

Before it was dawn he woke her sisters and they got up and went to wash their feet and hands. After they were gone he roused Langa Brūmo from sleep and wakened her up. When she woke up there was a donkey foal lying at her side. On seeing it she kept beating her breast and saying: "What is this that has happened?" "O Langa Brūmo," said Pangchu, "why are you so surprised? Haven't you brought it here and made it lie with you of your own desire?" "O Pangchu, don't say so. I protest. Don't say this. I did not bring the donkey foal here." "Well," replied Pangchu, "assuredly someone has brought (it) and put it down beside you." "O Pangchu, this is a calamity that has befallen me," said Langa Brūmo. "Don't tell anyone about it. I have a high reputation, so don't tell anyone this story. I shall deeply resent it (if you do.)" "As a matter of fact," said Pangchu, "you sat there and did this thing. I actually saw you. So why should I not tell other people about it? I will tell." "O Pangchu, don't tell anyone and I will give you whatever you ask." "Will you give me whatever I say?" "Yes, I'll give you whatever you say." "Well then," said Pangchu, "if you are going to give me something, give me no more than this: marry me." "O Pangchu, I'll marry you, only don't tell anyone about this affair." "I will never tell anyone of it, if you will marry me," said Pangchu. "Give me the donkey foal and I will hide it." Langa Brūmo gave him the foal and he took it up under his arm.

17 *menolo oʀʌn* — this strange use of *-olo* instead of *-ɔr* or *-ʌlɛ* only occurs in this passage (twice).

18 *afset* — explained as: "regretting a thing as unjust".

19 *mʌgɔr* — is here glossed as "in fact", "*wʌrqí*".

24 *ayau* — 2nd. sg. impv. neg. of **-wyʌs* with 1st. sg. pron. prefix.

26 *ja atsuča kɛ* — ja is probably only due to the *ɛ* of *jɛ* being affected by the following *a-*.

531k

Now the King commanded his daughters saying: "Go now and take for husbands whomever you fall in love with." Thereupon they went out, and the King's six other daughters, choosing young men from among those who were assembled, took them as husbands. Pangchu was also in that assembly with the donkey foal (hidden) under his arm. Langa Brūmo got up, saying to herself: "I will take (some other) man, I won't take Pangchu." And she did not look in the direction of Pangchu, but fixed her eyes on someone else and advanced towards him. On this, Pangchu, without letting anyone else see it, showed her the donkey foal. She saw it and turned towards Pangchu. "For," said she to herself, "he will otherwise tell someone the story of the donkey foal." So she approached Pangchu. On her doing so the fine fellows who were near Pangchu started beating him saying: "You get out of the way. She has come to take us." So Pangchu retired into a corner.

The King saw Pangchu being beaten: "Don't beat him," he said, "let him be." Then Langa Brūmo came and sat down beside him. The King was vexed at this. The affair greatly disgusted him. "She has taken this hideous Pangchu," said he, and rising up (in anger) he left the assembly. Langa Brūmo married Pangchu and Pangchu carried her off to his own house. There he sat down in his own proper hideousness. Then Langa Brūmo was vexed saying to herself: "I have gone and married this hideous fellow."

Now the King gave orders to his sons-in-law who had married his daughters, saying: "Go off and hunt Brūngkapurdōno. The six sons-in-law made their preparations to go hunting. They took food to eat and bread for the journey and their under and upper bedclothes and their guns and things and set out. Pangchu also started out and followed them. "O Pangchu," said Langa Brūmo, "how can you go in this powerless and miserable condition? What will you be able to do? Don't go!" "My power and condition are as you see," replied Pangchu, "(but) I shall just go and watch the show in case any of them kill (the calf)," and off he went.

'whether' or 'if any of them' and may depend on either *tamaśaw* or *bareyam*. *Kwli* probably duplicates *ki* and is curiously placed. *Tamaśaw* may be governed by either *bareyam* or *nicam*, but the latter is probably independent.

1 *Laŋa Brumo u·ɛam . . .* — The Ms. appears to have *Laŋa Brumone*.

3 *mərakane* or *mərakantsum* — I understood this to mean 'by a circuitous route *Mərak* means essentially 'bend, twist' and appears to be used for a "bend in the road" at lines 20 and 23.

5 *bar'e·rmi* = *bəre·rme* — present participle.

10 *mumanumo* — Ms. has mo-.

12 *ti·š ka* — *ka* = *ka*.

13 *γunikišɛ* — equivalent to *γunikəškəš*.

15 *mi·lčinər* — note the singular *°-lčin* with the plural pron. prefix *mi-* cp. § 128. III.
šu.ai — *-ai* for *-a* is probably due to the following *y-*.
yetsam — 1st. pl. plup.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

Langa Brūmo said to her foster mother: "Mother, come along and let us hide ourselves by the road and sit and watch how he gets along." "Come on then, my daughter," said her mother, and proceeding by another road, by a circuitous route they came out ahead (of Pangchu). Then they posted themselves in hiding and sat watching the road by which he would come. Presently Pangchu came into view and they watched him. He was (in the guise of) a very distinguished king. His horse's name was Changi Hirpal. He was a very fierce-looking king and he came galloping (his horse) over the stones. The two women saw him, and Langa Brūmo on seeing him was greatly pleased. "What a fine man my husband is!" she said and was delighted beyond measure. Langa Brūmo and her foster mother showed themselves and when Pangchu saw them he dismounted from his horse and brought forth a whirlwind of rain and dust and hid his horse in his sleeve. Then in the midst of the dust he threw himself into that hideous skin of his. When the dust had passed by, Langa Brūmo and her mother saw that it was just Pangchu himself and were vexed: "We had seen him looking handsome," said they, "but this is his same old self," and they were vexed.

Looking straight before him, he passed on in silence, without casting a glance at them. "Mother," said Langa Brūmo. "Let us go on ahead and see him again." "Very good, my daughter, come on," said her mother, and they went on. Proceeding by another road, they came out ahead (of Pangchu) and sat hiding at a bend in the road. Presently he came along, riding on his horse in fine style and making it caracole. He had entered again into his real skin. They remained where they were on the *qui vive* without stirring. He approached them and then Langa Brūmo came out from the bend in the road and seized his horse's reins. Pangchu dismounted and said: "O Langa Brūmo, I am your husband. Go back home now and enjoy yourself and live in comfort. I have lots of wealth. Spend it and give to

2 *umɛnɛ dəljuman?* — 'which of them will slay it?' but I understood that it here means "who are they that they should slay it?" and that suits the context.

4 *nimiše* — static pc. of *niyas* with pl. suffix.

5 *di.usimi* — one would expect the intr. *dusimi*.

7 *amitale* — this form occurs twice in the text: here and on p. 156 l. 1. It is probably the y sg. form of the pronoun *amin* with the suffix *-ale*. 'On some (way)', 'on any (way)'; or here it may be interrogative 'by which way?'

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

5391

others too. Eat and drink and give yourself a good time. I shall slay Brūngkapurdōno. Who are they that they should slay him?" The women went back, and Pangchu mounting Changi Hirpal rode him away.

Proceeding by another road he came out ahead of the six sons-in-law of the King who had gone on before. Pushing on ahead of them he dismounted and putting his horse in his sleeve he entered into his evil-looking skin. From behind, the sons-in-law saw that he was on in front of them. "Look," said they (to their servants), "that bogle has come by some way or other and got in front of us. You go and see what he is eating, what (bedclothes) he spreads over him, and what he has brought with him. Go and see." The servants went off to look at him and sitting down at a distance in hiding they watched him: What good food he is cooking for himself! He has nice cold water. He has comfortable upper and under bedding and everything else. He is saying to himself: "I have come by this road before. I know it. It is a road of great hardship. Tomorrow morning I shall go on. Ahead there is a spring. I shall take water for myself from that spring, because at the next stage there is no water. So I shall take that water with me and at the halting place I shall prepare food for myself and then I shall drink and take my ease."

The servants heard these remarks of his and they went off to the King's sons-in-law and reported to them: "He has lots of food to eat and lots of water to drink. He has under and upper bedclothes of the best. He says: 'I have once before come by this road. It is a road of great hardship. I shall go on tomorrow. There is a spring on ahead and I shall take water from it for myself. At the next halting place there is no water, so I shall take it with me. I shall cook some food there for myself and then drink and take my ease.'" (The King's sons-in-law) said: "We too will take water for ourselves from the spring, for there is no water at the next stage."

Next morning they got up and went on their way. They arrived at the spring and said: "We shall take water; shan't we?" "Yes, we

21 *daiyam ba* — *daiyam* an example of a 1st. person form of a static pc.: 'I am in-the-position-of-having-come', cp. § 229. a.

1 *uɛ uyo·natɛ ganuman 'oyɛnuman uɛ* — The juxtaposition of the two verbs is peculiar, and the exact sense obscure. Perhaps *oyɛnuman* was intended to replace *ganuman*. Cp. however p. 134 l. 6 note.

3 *tsilɛ bɛsan diš api* — 'there is no room for (more) water'.

4 *mai.imulɛ ni·m* — this is an expression of abuse *ma* + °-*ai* + *mu* + *ale* 'to your daughter(s)?' The meaning seems to be "you who have gone to your daughters", i. e. have committed incest; but the sense is possibly optative v. § 380. Possibly: "Damn you!" would be a fair equivalent.

6 *tis 'tumana bɛ 'tuman kɛ* — explained as 'have you misunderstood, or what have you done?' The *kɛ* in a direct question is unusual and probably gives an indefinite sense *bɛ . . . kɛ* 'whatever?' 'what else?' *kɛ* frequently appears in indirect questions. Cp. § 467.

10 *daŋ ɛtasɛ doγuruški·nai* — *doγuruški·nai* usually takes the dependent infin. with *-ər*, so *ɛtasɛ* here may be a slip for *ɛtasər*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

shall." So saying they took water from the spring and loaded it up on all of them and proceeded. In the evening they arrived at the halting place, and there they saw that there was no end of water, it was abundant, but there was not a stick of firewood. The King's sons-in-law said to their servants: "O you blackguards, there is unlimited water here but there isn't a stick of firewood. How are we to cook our food? You bastards, have you misunderstood what he said yesterday? Or what have you done? There is no firewood here; how are we to bake our bread? Go, have a look at Pangchu again (and see) what he is doing."

The two men on being sent off went and looked. They saw that Pangchu had excellent firewood and had lighted a fire and begun to cook his food. He was again talking to himself saying: "There is no firewood in this place. I brought wood for myself with me from the last place. I shall now bake bread for myself." The servants heard what he was saying and went off to the King's sons-in-law. When they came to them the latter enquired: "How is Pangchu? Has he firewood? How is he?" They replied: "O blackguards, yes, he has firewood and he is burning it and cooking bread in comfort." "What is to become of us?" said the sons-in-law. "How are we to cook our bread? What are we to eat? Go again and listen to what he says."

They went off to listen. Pangchu was talking to himself and saying: "I shall go on tomorrow. On ahead there is a good spring. It is a very sweet spring and I shall have a good drink. But then at the evening halting place there is no firewood so I shall take a good supply of wood from the jungle near the spring. I shall take the wood with me to the halting place and I shall light a fire and bake bread for myself and I shall halt there in comfort." The men who had been sent by the King's sons-in-law, having heard this, returned to them. The King's sons-in-law asked them: "What

12 *pfiti daŋ čam.* — The narrator here lost his way and introduced a passage referring to a past episode. It is practically a repetition of p. 124 ll. 14—16. ---

9 *akareta gaiyam* — 'I shall take on myself' i. e. 'with me'.

9 *uṇiṇčume* — present participle of *u* + °*-iṇčum*, 'in the condition of dying'. No direct translation is possible. They had almost copied under the effort of making up and carrying the loads.

11 *nime* — short p.pr. active of *mi* + °*-aṇm*. Causative 'having made to make'.

12 *ene eenae čayn* — a curious use of the infinitive form. Cp. § 404.

14 *ekere* — the regular form of prefix is *i-*. The *e-* is a slip in pronunciation or hearing.

16 *manuman* — 3rd. pl. pret. for 3rd. sg. Less probably the static pr. + *an*.

19 *i-lan* — short form of the 3rd. pl. pret. cp. § 314.

20 *miltumal* — the use of the 1st. pl. form of the pron. prefix with a noun where the meaning is really impersonal 'our ear' = 'one's ear', 'the ear'. Cp. § 198. III.

4: Lorimer 1-3 (1920-4; 1934-5) 1936 AV7 Barnho AV7

does Pangchu say?" They replied: "He says 'I shall go on tomorrow morning. I shall have a good drink at the spring which is on ahead and then go on. At the next stage (however) there is no firewood, (so) I shall take wood for myself from the jungle (near the spring) and I shall light a fire at the halting place and bake bread and then go on in comfort.'"

Next morning, getting up, they proceeded on their way. As they went along they came to the spring of which Pangchu had spoken. They drank water from the spring and then they went to the jungle and made up loads of wood for the next stage and took them with them. Proceeding on their way, they arrived at the evening halting place. Arriving there (they found) there was unlimited firewood (while) they had nearly killed themselves making up loads of wood and bringing them along from behind. There was a jungle at the place, but not a trace of water. "Ah, bastards," said the sons-in-law, "for a place where there is no water he made us make up and bring loads of wood; for a place where there is water he made us make up and bring along loads of water. You certainly misheur what he says or else you misunderstand it. Now be very intelligent and go and watch Pangchu and listen to what he says and see too what he is doing." So saying they sent them off.

When they got there Pangchu had arrived at the stage. He had brought water with him and he was sitting at his ease and preparing food and when he felt inclined he drank water. He was speaking to himself saying: "Tomorrow morning I shall get up and go on. I shall come to Brüngkapurdhan, for he is now near. I shall come to a spring. There is no other spring like it anywhere. If one soaks raw hide in it, it will become soft like one's ear. I shall take water from that spring with me and (in this manner) I shall arrive at the halting place. My leather foot-wrappers have become hard. I shall soak my boots and foot-wrappers the whole night in the spring water. Then in the morning they will be nice and soft. When they have become so I shall put on my foot-wrappers and boots and go on."

6 *hik mi-urm* — *hik* is here probably the adjective 'full'.

12 *n'ultan nult'an* — there is a difference in the participle according as the object is sgl. or ypl. *kere* (a) *n'ultan*, *n* + *'n* + **-ltan* < **-ltaiyan*. *ta.očią* (y) *nult'an*. The latter appears to be from a form of the verb without the pron. prefix, *ltaiyan*. Otherwise with a ypl. object one would expect: *n* + *i* + **-ltan* as in an alternative given: *ta.očią n'ilin* from **-lilan*. 'Putting on a single [illegible]' is [illegible] *nult'an*.

15–16 *mi eke* — in the Ms. *mi.eke*, is a little doubtful. It is probably *mi* + *eke* 'those of ours'. The context would be better served by 'ours also', but this would be *mi ke*. I know of no authority for a genitive of *mi* '*of us, ours*' of the form of *mi.e*.

20 *i-te imo* — 'from them' i. e. the *ta.očią*, *i-* is ypl.

4: Lorimer L-3 (1929-4; 1934-5) 1935 AV7 Burusho AV7

Having heard what he said the servants came with the report to the King's sons-in-law. They said: "Pangchu brought water for himself to the camping place and he has settled down there in great comfort, cooking and eating food and drinking water as he feels inclined. Then he spoke to himself and said: 'Tomorrow morning I shall go on from here. A little further on, as I go along, there is a spring. I shall go to it. It is very sweet and I shall drink my fill. If one soaks raw hide in that spring it becomes as soft as one's ear. (As) my boots and foot-wrappers have become hard, I shall take water from the spring and coming to the camping place I shall put my boots and foot-wrappers in it. Then I shall plant my stick there in the ground and take the boots and foot-wrappers out of the water and hang them up (on it) all night. In the morning when they have become soft I shall put them on, and (go on till I) come to Brūngkapurdōno.'"

(The King's sons-in-law said:) "We too will take water from the spring and soak our boots and foot-wrappers in it and they too will become soft. Then in the morning we too will get up and go on." Getting up next morning they proceeded to the spring and drew water from it and went on taking it with them, and arrived at the evening halting place. On arriving there the King's sons-in-law said: "Go to Pangchu and see whether or not he soaks his wrappers and boots in the spring water." The servants went off to look at Pangchu and they saw him put his boots and foot-wrappers in the spring water and then they saw him fix his stick upright in the ground and put his boots etc. on it. They saw the water dripping from them. It seemed to them that he had put them in the spring water, (but) he had (really) put them in oil of ghee and had then left them (hanging) on the stick.

Returning with this report they came to the King's sons-in-law and said: "We have seen with our (own) eyes that he put the things (in the water and then hung them) on his stick." The King's sons-in-law said: "We too will soak our boots and wrappers in the water like Pangchu." So saying they put them in the water and after that they hung them on a stick and having done so slept all night.

7 *nukatumər* — p.pc. active of *gatamorɣas*.

11 *guči* — i. e. *goči* 3rd. sg. fut. of *gu* + *-*atas*.

14 *je kɛ maza daʿatsam* — glossed "*ja ka maza dirmi.*" *Daʿatsam* is probably 3rd. sg. plup. of d*-*atsas* with 1st. sg. pron. infix. This idiom is to be compared with *-*mors* d*-*atsas* 'to make angry', to 'worry someone'. The corresponding intrans. expressions are *-*mors duzuryas* and *-*mors juryas* with which compare *mam dirmi* above.

The sense is 'to cause someone to "bring" any kind of sensation' i. e. 'to cause him to experience or feel anger' etc. But what is here the subject of *daʿatsam*?

17—18 *Lap a* — short form equivalent to *Lap aʿti* the 2nd. sg. impv. of *lap* *-*atas* with 1st. sg. pn. pf. "put it in my mouth for me". So also *Lap ʿɛtimi* (l. 19) 'he put (them) in B. K.'s mouth.' *Lap stas* is 'to put something in one's own mouth'.

21 *belatɛ doljuma kɛ . . .* — this sentence is obscure and the translation uncertain.

(While) they slept, before it was yet dawn, Pangchu rose up and putting on his boots and foot wrappers, which he had steeped in the oil and which had become soft, he went on his way. Afterwards at dawn when the others got up their (boots and) foot-wrappers had frozen hard and they had become like stone. They found difficulty in putting them on. "Now," said they, "what are we to do? What are we to put on? These are frozen." As there was nothing else they could do they lighted a fire and heated the things at it. Then they dried them and wrung them till they had made them soft. But now the sun was well up, midday was upon them.

Meanwhile Pangchu came up with Brūngkapurdōno. He called out "Uncle, uncle." "Āu," said the calf. "My mother has sent me," said Pangchu. "She said: 'Go to your uncle. An army has come, he will hide you.' Now hide me." "Good, come along, sister's son," said the Calf, "get into my ear and I'll hide you." Pangchu went and got into the Calf's ear. Then he ate something, making a crunching noise with his teeth. "Nephew," said Brūngkapurdōno, "what are you eating?" "O uncle, my mother had made flapjacks of bitter buckwheat for me. It is they I am eating." "Nephew, I have got the savour of it too. Give me a little, so that I may eat it too." "Uncle, it is very bitter." "All right, just put it in my mouth as it is, nephew."

On this Pangchu put three pieces of poisonous bread in the Calf's mouth. As he did so he said: "Uncle, shove me up with this golden horn of yours on to this mountain. The army has come up against you. Give a buck and somehow or other you will defeat them." On this the Calf pushed Pangchu with his horn up on to the top of the mountain. Then he bucked up and down on

24 *zavavts dam d'evtsimi* — This presents difficulties. If there is a noun *zavvuṭ* = 'power, potency', we can take *zavavts* as the subj. of *devtsimi*: 'the power of the poison caused him to struggle for breath' (*dam dosuyas* = 'to draw breath'). This suits the the *d*-*atsas* idiom as we have seen it in the note on l. 16.

We have, however, a noun (or adj.?) *zavu* = 'power' or 'powerful' and an adj. *zavdav* = 'fierce', 'wrathful' "гневливый", *zavavts* might therefore be *zavu* + *ats* an instrum. form giving: 'by the power of the poison', or with adverbial force: 'violently', 'powerfully'. *Čemalīgo* would then be the subject.

6 (*da·l nɛ oyʌnomi*) — *oyʌnomi* is hard to explain. There was no one whom he could compel to take the things up. One would expect *yʌnimi* or *tsu·mi*. The original version *da·l o·timi* is straightforward as the *o·* refers to the things.

This seems to be an instance where the cs. form *-ʌyʌnʌs is used as a simple trs. verb, 'to take up', 'load up' cp. § 247.

7 *ti·nj'ovlom* — (in Ms. *tiŋj'o.olom*) = 'being-in-the bones', *duwʌq nɛ* refers to breaking the 'bones'. I have noted as a synonym *ti·ŋ nikər*, *ti·ŋjo nukər* (from *-xərʌs). The repeated ŋ in these examples must, I suppose, be accepted as a variant for the usual n.

10 *sa ya·ri·tsɛ* — *sa* was explained as "sunshine" and *ya·ri* as "first light in the morning", but it is not elsewhere recorded and one is tempted to connect *ya·ri* with *yər*, *yar*. But whence the *-i?* *Sa·atsɛ*, *sa.atsɛ* is used for (to sit etc.) "in the sun".

15 *u·i u·i* — 'they each separately', 'each by himself'.

18 *Aminɛ dɛli ba·n kɛ ye barɛ·nin* — one would expect *bərɛ·yen* 'let us see whether any of you', or 'which of you, has slain it'. *Ye barɛ·nin* might be *for ɛbərɛ·nin*, but "make him see" would not suit the context.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

the meadow and dug his horns into the pasture and tossed up the divots. Then the power of the poison made him gasp for breath and becoming giddy he fell down with a smack. When he had fallen Brūngkapurdōno said (to Pangchu): "Ho, there, come down. In my ear is a knife. I am 'halāl,' slay me." Pangchu came down (from the mountain) and went up to Brūngkapurdōno. When he came up to him Brūngkapurdōno said: "My mother said to me: 'You will die by the hand of Kiser.'"

Forthwith Pangchu slew him and flayed him and taking up his golden tail, mane, forelock and hoofs, carried them off. He also smashed up his bones, and extracting the marrow took it (with him). Then he mounted on Changi Hirpal and went his way. The hair on the skin, which shone like gilt and gold, he left with the skin. That hair on the skin glittered on (the mountain of) Diāmer in the early sunshine.

Just after this the King's sons-in-law arrived on the spot and saw (the skin lying) shining there. They fired off their guns at it and it did not stir. Then, shouting "ha ha" they rushed up to it. One said: "I shot it," another (said) "I shot it." When they got up to the skin they each tore out its hair and shoved it into their leather travelling-bags. They also took its flesh. After which they went off in the direction of their home.

There they came to the King. "Hallo, sons-in-law," said he, "see whether any of you has killed (the Calf). Each of them said: "I have killed it," "I have killed it," but they did not convince the King's mind. He said: "If anyone has killed it I shall recognise

19–20 *Padša ɛsvlo aiy'ɛbišačan* — 'they do not convince the king'. This is undoubtedly the meaning, but the exact force of the verb is open to question.

*-*ABišaiyAs* should properly mean 'to cause someone to throw something' and there is at least one example of it with this meaning. The question is whether it can also be used with the same meaning as the simple verb *bišaiyAs* 'to throw' of this use there is also one probable example (see Vocab s. v.).

The alternatives are therefore:

1. they caused the king to project it into his mind i. e. to accept it.
2. they projected it into the king's mind v. §§ 239 and 242 ff.

20 *ba* — is 2nd. sg. *ban* is probably to be read as in l. 18.

its trophies. Take them out of your bags." Each pulled out the hair belonging to the skin and the hair glittered and shone. "Sons-in-law," said the King, "none of you has killed the Calf. You are lying. Someone else has killed it. Where are the tokens that were on it? Where are its golden tail, and golden horns, and golden hoofs, and golden mane, and golden forelock?" "They weren't on it," said the sons-in-law. "You are lying. You haven't killed Brūngkapurdōno. Someone else has killed him. Go, be off with you!" said the King.

(Meanwhile) Pangchu had returned to his home, after having first gone back into his hideous form. Langa Brūmo said to him: "O Pangchu, you said: 'I will kill (the Calf)'. What has happened to you? Have you not killed it?" "My strength and condition are as you see. What should I have been able to do?" Langa Brūmo was much annoyed. "He said: 'I will kill it' and here he is back again in this (hideous) form of his. At the time when he went away I saw him looking very handsome," said she, and she sat in aggrieved silence.

"Langa Brūmo," said Pangchu, "take this present which I give you to your father." "Very good, I will take it." Into half a walnut-shell he stuffed all Brūngkapurdōno's marrow and gave it to her, saying: "Take this to your father." "I am ashamed to," said Langa Brūmo. "How can I take him (so small a thing as) this?" "My power and condition are as you see, where am I to get more from?" said Pangchu. "Now take away what I have given you." "It is a great deal. Good, give it to me. I will take it," said Langa Brūmo. And she took it and went off to the King.

Going to the gate of the King's palace she sat down there. The King's Wazīr came to her. She said to him: "O my father's Wazīr, go and take me to my father to pay my respects to him." "Wait here a little," said the Wazīr, "and I shall go and get permission." The Wazīr went to the King and said to him: "O King, your eldest daughter has come to pay her respects to you. May she come and

5394

make her salām to you?" "Yes, Wazīr, she may come, bring her," replied the King. The Wazīr brought her in and coming up she salāmed to her father and kissed his foot and hand.

Then she set the half walnut-shell of marrow before the King. The King scraped it with his finger and licked it, and he also bit his finger at the same time. It gave him a very pleasant sensation and it filled his mouth and passed with difficulty down his throat (though he had put only a very little of it in his mouth). He became intoxicated. He presented the marrow to the Wazīr. He also scraped it with his finger and licked it and he also bit his finger, but he concealed the fact. Then he too became intoxicated. To all in turn they presented the marrow in the walnut cup and all in turn licked it and bit their fingers. The last man of all (similarly) scraped it with his finger and licked it and bit his finger. He said: "Hallo, I've bitten my finger." Thereupon all those in the assembly began saying, one: "I've bitten my finger too," and another: "And I've bitten mine," and the King said: "And I too have bitten mine." Everyone in the whole assembly was satisfied (and yet) the marrow in the walnut-shell was not exhausted. They were astounded.

The King said to the Wazīr: "Ask her what this food was made of." The Wazīr inquired of Langa Brūmo: "What was this food made of?" "Wazīr," said she, "I didn't make it of anything. Pangchu made me take it and bring it." "Call Pangchu," said the King. They called Pangchu and brought him along. He came up and salāmed to the King. "Pangchu," said the King: "Of what did you make this food?" "O King, my power and condition are as you see them, whence would I get anything good and sweet?" Then he pulled out from his bag Brūngkapurdōno's things, his tail and mane and forelock, and his horns and hoofs and laid them before the King. "Pangchu, you have slain Brūngkapurdōno," said the King. "My power and condition are as you see them. What could I have done?" "No, Pangchu, no one but you has slain him. It is you who have slain him."

The King was greatly pleased and said: "Tell me what you would like and I will bestow it on you." "My power and condition are

---

2 *beruman tsučai.i ke eʿmanuman* — glossed "so much as he can, he may take away". This seems to suit the context but cannot easily be extracted from the words.

3 *eʿmanuman* — appears to be the static pc. of *i* + **-amanas* with the suffix *-an*. This might mean 'that-which-he-has-been-able-(to-do)'.

5 *akuʿruman* — 'this much' (indicated by the narrator as a little taken up in the fingers).

6 *tuʿre* — I do not understand the *-e*.

7 *asbaʿbanlu gʿiʿman* — somewhat obscure. *-lu* is for *-ulu*, *giʿman* must be the static pc. plus *-an*, and *ju.an* must be understood after it.

9 *hik oʿmaibitsa* — the subject is *pfalo* understood, which is y pl. The preceding *oʿmanimi*'s are also y pl.

The idiom with hik 'full' is that the content is the subject and the vessel is put in the general oblique, or in the genitive form:

kuʿto.e hik omanumi — line 10, but we have also

kuʿto hik oʿmanumi, p. 142 l. 1, where perhaps *kuʿto* is the subject.

The idiom is similar in Shina and Khowar, the containing vessel being expressed in the locative.

guʿr bitsuman tiši.uʿlum — 'the wheat that was in the grainpit.' For *bitsuman*

i [Errata: for Ka read beska. cf. p. 419, cat. 116 ;- Analyst.]

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

as you see them. Give me a little grain (and) give me some ghee." 539*
The King commanded: "Turn him loose in the wheat pits, turn him loose on the ghee. He may take away as much as he can." The King's steward took Pangchu away (to the stores) and said: "See now I leave you free (to take what you please)." "Give me grain in this little lambskin bag," said Pangchu. When he said this the people there clapped their hands and laughed at him and they put a little grain in the bag for him. There was a sound in the little bag as if grain were being poured through the smoke hole of a house. There was a noise as of something being poured it into a big dish. One man poured (the grain) in. He became tired and the bag wasn't filled. Then another poured it in and still the bag wasn't filled. Then another poured it in and still it wasn't filled. All the King's grain in the pit was cleared out and yet Pangchu's bag was not filled. All were astonished. They said: "We'll give you the ghee (now); the wheat is all finished." "Very good, give it to me," said Pangchu. Then they poured all the ghee there was into the bag and it was not filled.

On this the steward and the people present said to Pangchu: "O Pangchu, all the King's wheat and ghee are exhausted. There is nothing left. Get out of here and go." Weeping and crying out he held the bag up suspended from between two fingers: "You haven't filled even this for me," he cried. "The King gave me a free hand and you haven't given me (what I could take)." Then he went off to his home. The King heard Pangchu's outcry. "Why is he crying out?" he asked. "He has cleared out all the wheat and all the ghee you had and carried them away and his bag has

v. §§ 389—390. *Tiši.u·lum* is probably the adjectival locative rather than the ablative locative. The *i-* preceding *-u·lum* is probably for the *-s* of the general oblique v. § 65.

The word for 'pit' is *tis* but the plural is normally *tišants* (also once recorded *tišaiyo*). It seems probable that the *s* always changes to *š* when followed by a vowel.

12 *i·ns MALIAŠ* — *i·ns* must mean 'the king's'.

13 *bAMAN sise* — v. §§ 389—390.

16 *aystomAN* — 'you have not made it (full)'.

000

not been filled. On this account he is carrying it off crying out: "You haven't given me (what I was to get)." The King was amazed: "Has he really carried off all that wheat and ghee of mine?" he asked. "Yes, he has cleared out the whole lot and gone off with it. There is nothing (left)." The King was astounded.

(Meanwhile) Pangchu went off to his own house, taking all the stuff with him. Then the wheat and ghee in his house were beyond reckoning. "Ah, Langa Brūmo," said he. "I have reduced your father to beggary. I have brought here all the wheat and ghee he possessed. Consume it in comfort yourself and give it to others."

In this manner Pangchu and Langa Brūmo abode for some time in that country. He projected himself into his real skin and said to her: "I truly am your husband." Thus they lived together in great happiness and contentment. "Langa Brūmo," said Pangchu, "I am going to give you an order." "Very good, my husband, tell me what you have to say." "I am going off now," said Pangchu, "on a journey. You stay behind here and make your self comfortable and do yourself well." Then Lingpikiser set out on his journey.

When some days had passed he arrived in the country of Haihaiyūl. The Kings in Haihaiyūl (were) Sha Tham, Bokhā Tham, Nōn Tham and Lali Tham. These were the *thams* of Haihaiyūl. There was the sovereignty. Kiser arriving there drove these rulers out and possessed himself of the sovereignty of Haihaiyūl.

For twelve years Kiser abode in Haihaiyūl enjoying the sovereignty. Now there was a princess (there) whose name was Būbuli Gas, and her Kiser took to wife. His place of residence was Alti. (After this) news came to him from his own country. They said: "The King of Horyūl has carried off Langa Brūmo. Your land has been laid waste. What are you doing here married to Būbuli Gas?" He sprang up to go off, but Būbuli Gas laid hold of him saying: "What are you going to do with me?" "I shall go away tomorrow and come back yesterday," said Pangchu. "When the grinding stone and the rolling pin have got beards I shall come back. When horns have grown on a donkey I shall come back. When the river flows uphill I shall come back." So saying he gave her a measure

5 hol — nagen should probably be supplied after hol.

7 /a·ru akuvila — this is the correct form for a + gu + °-ačila 3rd. sg. y neg. pres. of °-ačas with 2nd. sg. pron. prefix.

For this idiomatic use of °-ačas v. § 261. II.

8 dašqalčer — As a rule with this verb the pronoun-infix refers to the subject. V. § 207. Here the er is either a slip for ar, or the er form has been generalised.

15 o·sumo — the Ms. has o·suman.

17 šatin — a doubtful form. Tsat manin would be the usual thing.

19 fat etin — i. e. fat ehin (not čin).

20 dčlj manamas api — manamas (°-amanas — 'to be able') is here the noun of action, not the noun agent, as is shown by the verb api (a + bila) v. § 405.

23 besate — i. e. besr tai 'why thus'.

4: Lorimer L-3 (1933-4; 1934-5) 1935 AV7 Burusho AV7

(2 or 3 lbs.) of small millet seed. He also gave her a fowl. Then shoving her up on the top of Būbuli's Peak (he said to her): "Every twelve months throw down one grain of the seed for the fowl. When the grain is exhausted I shall come back." Having said this he left her there and proceeded in the direction of his own country.

The King of Horyūl's name was Pahārdang Galpo. With his army he came to Lama and took possession of it. Having done so he carried off Langa Brūmo. Aba Dumbu said: "O Aba Kitung, can't you do anything about this? He has carried off Langa Brūmo." Aba Kitung went off in pursuit of them. When he had nearly come up with them he shouted out: "O King of Horyūl, stop. I have come." The King of Horyūl said to Langa Brūmo: "O Langa Brūmo, what sort of a fellow is this?" "He is a poor-spirited creature. Shout out "Ha ha" and he will take fright and run away." All the army raised a "Ha ha" and Aba Kitung was frightened and turning back went off to his home. On his arrival there Aba Dumbu asked him: "O Aba Kitung, were you not able to do anything?" "No. They raised a 'Ha ha' and I was frightened and turned and came back."

"O Bumliftan," said Aba Dumbu. "You will perhaps be able to do something. Will you go?" "Yes, father, I'll go," said Bumliftan and he went off and shouted out: "Stop there. I've come." They stopped and the King of Horyūl asked: "O Langa Brūmo, what sort of a fellow is this?" "Leave me behind," said she. "He is very powerful. There is nothing that has any effect on him. He is made of iron. You won't be able to get the better of him. Make a Pahlawān sit in hiding near me and then this man will come to me." The King left a Pahlawān with her saying to him: "Sit here in concealment beside Langa Brūmo." The Pahlawān did so.

Bumliftan came up to Langa Brūmo "My sister," said he, "Why are you behaving thus? My brother will come back to you." "O brother," replied Langa Brūmo, "If you will marry me I will

1 *je* — for *je* cp. p. 118 l. 28 note.
ayctsuča — i. e. *aystsuča*. Also in l. 3.
esumo — Ms. *esum.ga*.
4 *tailan* — cp. § 45.
maiyam. — i. e. *maiyam*.
7 *iriŋgiŋ* — instrumental with *dum*. *Iriŋgiŋ* is again to be understood with *waq ne* in the sense of 'arms': 'spreading out his arms on either side and laying hold with his hands on the cliff'.
13 *dum'oyus* — p.pn. active of *d'-ayusas*. The pronoun-infix *-mu-* is a sort of ethic dative 'pulling out her sleeves for her' v. § 249. 3.
18 *mo imo* — i. e. *mo.imo*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burmbo AV7

come back with you. If you won't marry me I won't come." "That is a thing I cannot do. I will not marry you." "Very well, if you won't marry me I won't come with you." Bumliftan then said to her: "If you have any bowl or vessel with you, give it to me. I want to drink some water." "Brother," said Langa Brūmo, "There is water coming out of that cliff there. Drink from it. I have no vessel with me." He went and stretching out his arms on either side he grasped the cliff and began to drink the water. On this Langa Brūmo said to the Pahlawān who was hidden with her: "Now shoot him with your bow under the armpits, where he is flesh." The Pahlawān drawing his bow shot him with an arrow under the armpits. The arrow did not come out on the other side, but remained sticking in his vitals.

Thereupon Bumliftan mounted his horse and seizing Langa Brūmo by the hand threw her on to the horse behind him. Then pulling her sleeves out (beyond her hands) he tied (the ends of) them round his neck in front and whipped up his horse. But Langa Brūmo had a knife and she cut her sleeves off and threw herself down backwards off the horse. Meanwhile Bumliftan whipped up his horse and made for his home. He came to Aba Dumbu who said: "My son, what's happened to you?" "Father," said Bumliftan, "they have wounded me. Examine my pulse and see whether I shall die or recover." Aba Dumbu examined his pulse and then said: "You won't die. You'll get better. As you are going to recover I shall go and avenge you." So saying, Aba Dumbu departed.

Now there was a river and the King of Horyūl and his army had crossed to the other side of it. Aba Dumbu called out: "O King of Horyūl, stop. I, Aba Dumbu, have come. I have arrived." The King of Horyūl asked Langa Brūmo: "What sort of a man is this?" "He has become an old man," said she. "He won't be

5 *d'u·iyɛn* — short form of 3rd. pl. x pret. of *ju·yas*. The sense is the perfect "have come", or as we should say "are coming".

6 *du·yan* — alternative of *du·iyɛn* just above.

7 *jamɛkatɛ* — These forms with the *-ak*, *-k* suffix are ordinarily used in their simple state with the verb *delas*. E.g. *jamɛk delas*.

12 *bɛ·sanɛtɛ mɛib'a* etc. — This and following similar passages present several difficulties and the translations are tentative.

bɛ·sanɛtɛ — 'on what' or 'with what'; from the answer it appears to mean 'with what are you armed?'

bɛ·sanɛ xa — 'down (on) what part?'

4: Lorimer L-3 (1930-4; 1934-5) 1935 AV7 Baruku AV7

able to do anything." "O King," said Shamtu Mīru the Wazir, "I will wait and confront him. You go on." The King went on. Aba Dumbu called out: "Ho, Shamtu Mīru, have you stayed to match yourself with me?" "Yes, Aba Dumbu, I have stayed behind (for you)." "O Shamtu Mīru, up above you three ibex are coming along. Watch the middle one." Then with his bow Aba Dumbu shot the middle ibex. "Aba Dumbu," said Shamtu Mīru, "Over your head some pigeons are coming along. Look at them." Watch the middle one. Look." Then Shamtu Mīru shot with his bow up in the sky at the middle pigeon and brought it down. Aba Dumbu shouted out: "Ho Shamtu Mīru, I am not inferior to you and you are not inferior to me. We are both equal."

Again he called out: "Shamtu Mīru, I have given you another chance. Tell me what weapon you are using, where you are going to hit me and what you are looking at." "O Aba Dumbu, I am looking at your eyes. I am going to hit you so as to divide your heart in two. I am using a bow." In front of himself Aba Dumbu set up twelve stones (one in front of the other), and putting (only) his head out, watched. Shamtu Mīru Wazir fitting an arrow to his bow and drawing it, let fly. The arrow passed through the twelve stones and its head penetrated a little into Aba Dumbu's heart. It hurt him. "O Shamtu Mīru," he cried. "You have hit me." "I have done what I could, Aba Dumbu," replied Shamtu Mīru. "Now it's my turn," said Aba Dumbu.

"What weapon are you using? Tell me that," said Shamtu Mīru. "Where are you going to hit me? Tell me that too. What are you aiming at? Tell me that too." "I shall look at your eyes," replied Aba Dumbu, "I shall strike you on the centre line of your head and split you down. I am going to use a sword." Shamtu Mīru threw a handkerchief over his head. "His sword will never reach me here," said he, "he is lying." Aba Dumbu mounted Pūniki Furfūr. His sword was an Egyptian one. "O Pūniki Furfūr,"

14 *gre ḫ-aq* make — 'dividing your heart in two for you'.

18 *ṭai du.ini* — he is probably for *ḫ.ṭ*, but conceivably it is the suffix *-ini* attached to *ṭuṭi*. *du.ini* — is the pret. of *d'-ādgur* or, of *dugur* 'to stand up'.

"Lei Pirnki Pfurpfur, gute dištem hal nidilin ire epaćer nukarte da i-ljum pati gulmo dišer i-lji garte. Akumanima ke urqar lerat manij. Pirnki Pfurpfur mano akuwnjan. ---

1 akuwnjan — 'may they not say to them!' a + ga + *-uwnjan (from *-uwan). The meaning seems to be: 'may no one call you P. Pf.!' or 'may no one speak of you as P. Pf.!'

4 Šamta Mirru ke hayur ke — 'Sh.M. and the horse together'.

10 otimi — rather grammatically to pfutiq (y pl.). If hanjil (x pl.) were considered the verb would be etimi. Normally the nearer noun is the governing factor.

11 jowanc — probably jowanjo ne.

12 traq umanćan — Ma. umanćan.
manićan — or, manij.

14 ešto traq — out of place and redundant in view of the following traq.

17 kiru ya akuwnćtem — probably for kiru akuwnćtem. akuwnć — 'this month'.

22–23 nuwlum ke — Ma. nuwmin. The n is either a slip or due to phonetic assimilation. V. § 218.

4: Lortmer 1-3 (1930-4; 1934-5) 1935 AV7 Burnho AV7

said he, "leap from here and gallop up to him. Then gallop back again to your own place. If you fail, may you be accursed! May no one speak of you as Pūnīki Furfōr! O Egyptian sword, if you do not cleave Shamtu Mīru and his horse together into two halves, may you be accursed! May no one speak of you as the Egyptian Sword! And if I do not strike my blow may I be accursed and may no one speak of me as Aba Dumbu!" 5394

So saying, he gave him a cut with his whip and Pūnīki Furfōr sprang forward and galloped up to Shamtu Mīru. Then Aba Dumbu smote with his sword and cleft him and his horse in two. Aba Dumbu flayed the horse and flayed Shamtu Mīru. Then he stuffed the horse's hide full of ashes and charcoal and he did likewise with Shamtu Mīru's skin, and he mounted Shamtu Mīru as if he were alive on the horse's skin and gave it a cut with his whip. Then working magic he said: "May the horse carry him away to the King and then may horse and man together fall in two halves and may the ashes and charcoal be scattered!" (So saying) he made the (stuffed) horse gallop and it carried the Wazir to his King, and as soon as they reached the latter Shamtu Mīru and the horse, both together, split in two. The King was amazed and said: "O Langa Brūmo, what miracle is this?" "King, this is the extent of their skill and knowledge. He will not be able to do more than this (that he has done). You go on" said Langa Brūmo. The King went on to his palace, taking Langa Brūmo with him. And Aba Dumbu returned to his home.

When Aba Dumbu came back Aba Kitung had pulled out the arrow (which was sticking in Bumliftan's armpit), but on his doing so Bumliftan died. If he had extracted the arrow (by pushing it through) forwards, Bumliftan would not have died, but he pulled it out backwards and on his doing so Bumliftan died, for the tip of it had barbs pointing backwards and when it was pulled back-

w *ḫrmo* — the preceding demonstrative I originally wrote as *ṭū*, to which I added an *a* so that it might read *ṭūa*. This cannot be, however, as *ḫrmo* is not a pl. cp. *ḫm gatiwi* p. 149 l. 17. The narrator after giving it as *y ṭū*, must I think have felt a doubt that it should perhaps have been *a* and corrected himself to *ṭwo*.

1 *ev ṣat ne* — the Ms. has *ene* which would be 'his kidney', but we have *ev ṣaṭ ne* on p. 154 l. 9. It seems that the subject of *ne* is 'he' or 'it': 'he, or, it breaking his heart, (he) died', but it is conceivable that '*ṣaṭ ne*' is intransitive and *ev* the subject: 'his heart breaking, he died'.

2 *oforši* — one would expect the interrogative particle: *oforši.e*. As it is we have two positive assertions contrasted.

4 *gute* — i. e. *gute ker*.

5 *gajat mor* — i. e. *ma* + *°-a* short form of imperative of *ma* + *°-ates*. In this and the passage following *mor*, *numo·tan*, *numo*, *mo·uwdiš* might be taken as being dusative in meaning: 'make her pluck off', 'let him make her throw (it) down', but it is pretty certain that the pronoun prefixes are rather to be regarded as ethic datives: 'pluck off her nose for her', 'let him throw it down for her'.

This is supported by the use of the plain *wašimi* in the parallel passages p. 154 l. 19 (where *mo-* is optional) and p. 178 l. 20.

6 *nosin* — i. e. *nosin* p.pc. act. of *ewas*.

9 *bepay iṣ̌u·mi* — § 183.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

5342

wards it broke his heart and he died. To the people who were present when he died, his brothers, he said: "Brothers, will my brother not come back? Yes, he will come. He will come and he will fetch Langa Brūmo. Then do you say this to him from me: 'Bring Langa Brūmo to my grave and cut off her nose there,' for (in that case) I shall come to life. If he grudges to do this, then let him make a nose for her out of oil-pressings and put it on her nose and let him pluck it off and throw it on the grave."

Some days later Kiser turned up. His own yāk was out grazing (lit. loose) on the *pasnir*. Entering into the skin of a bear he devoured his own yāk. News reached Aba Dumbu that a bear had eaten Kiser's yāk. "Foul fall its daughter! Give me my bow! Aba Dumbu has become an old man," he said. "My Kiser is lost." Taking his bow Aba Dumbu went off. He came close up to the bear, and fitting an arrow to his bow, he drew it. As he did so the bear said: "Aba umā," (that is to say), "It is I." "Well, eat yourself up," said Aba Dumbu. "The King of Horyūl has carried off Langa Brūmo, and has slain Bumliftan, and you (merely) eat your own yāk."

Kiser, returning to his own skin, came up to Aba Dumbu. "O Father," said he, "assemble the astrologers and say to them: 'Where is my Kiser?' Come on, let us go home." Kiser now assumed the form of a human being and following Aba Dumbu came to his home, and Aba Dumbu collected the astrologers and

---

10–11 *cwe ci dumurimen* — this is an abusive expression of which the exact meaning is not clear. *A. D. jal imaximi* is probably a parenthesis of the narrator's.

12 *dumurimen* — the form of the static participle of *durimen* (*d*ᵊ*-imi*), either with *-mm-* infix and with optative force v. § 890: 'may he take out its (the bear's) daughter' or 'may its daughter be taken out'; or it may be the static pc. with active meaning: 'he who has taken its daughter'.

The bear may be the subject, but then one would expect *ewe* before *ci*. Cp. *mutimmin* mim p. 136 l. 4 note.

14 *ābin ownīr* — said to be Balti and to mean *je ba* 'I am', but this is not supported by the "*Linguistic Survey of India*".

19 *hamirdimo halter mihin* — Kiser was already in his own human form cp. line 17. It appears that he now assumed a human form not his own in order to test the powers of the astrologers. When he has accomplished this he returns again to his own true form, p. 154 l. 1.

000 ba, hal gopačim kiᵛnɛ hilɛᵛ baiᵛi." Kisɛr iᵛmo batulo manimi. "Lɛᵛi nujuᵛmtiŋ, gutɛ kᵛl aiyɛtᵛam ki batulo pfɛtiŋ matsičam tɛc. Ma han guntsanulo jaᵛr derkaᵛr baᵛn, bɛ kɛ pfɛtiŋ mᵛatsičam tɛc."

---

2 *batulo pfɛtiŋ matsičam tɛc* — 'I would have pressed, crammed, ashes into your skin' i. e. 'I would have stuffed your skins with ashes'.

4 *čaγa amaᵛtiᵛa* — cp. p. 144 l. 7 note. *amaᵛtiᵛa* is the short form of the pret. 3rd.sg. y with neg. prefix and interrog. suffix: *a* + *ma* + **-ati* + *a* from **-atas*.

12 *jiᵛndo damaiyam* — this use of *d*-maiyar* is, as far as I know, unparalleled.

ɛsnaiᵛi — unnecessarily duplicates *mɛsnaiᵛi* and obscures the sense.

13 *nᵛičimi kɛ* — a rare variant for *nᵛiᵛi kɛ*.

14 *iᵛlji* — i. e. after the king's arrival with Laŋa Brumo at his palace v. p. 160 l. 18.

15 *Kisɛr bɛᵛtkan bai kɛ* — the *kɛ* indicates that the question is dependent on *čaγa ɛti*, while *šakalɛ* is also dependent on *čaγa*: 'tell us what kind of a man Kisɛr is, and give us an account of his appearance'. The second *kɛ* is out of place. If, as we could appear, it means 'also', 'and'.

18 *juᵛtiŋ* — the *y* pl. of *jat*. We have a curious outbreak here of plural adjectival forms.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

brought them up. "O astrologers," said he, "Where is my Kiser? Is he dead? You look and see." The astrologers replied: "Either you yourself are Kiser, or else this boy with you is he." On this Kiser appeared in his own form and said: "O astrologers, if you hadn't discovered this, I would have stuffed your skins with ashes. One day, however, I shall have need of you, otherwise I would stuff you with ashes." 537X

Kiser then enquired of his brothers: "Brothers, tell me how the King of Horyūl carried off my wife, and when he took her from you before he carried her off, was none of you able to do anything?" "O Kiser," replied his brothers, "they struck down your brother by treachery. Aba Kitung was frightened and came back. Then Aba Dumbu went out and Shamtu Mīru Wazir wounded him. When Aba Dumbu came back (they) had drawn out the arrow the wrong way and had broken his heart and he had died. When he was dying he said to us: 'He, Kiser, won't bring back Langa Brūmo, will he? Yes, he will. Then if he cuts off her nose and throws it on my grave here I shall come to life again. Tell him this'."

Kiser set out to (seek) the King of Horyūl. As he was going along (he came to where) two cliffs kept clashing against each other. Afterwards the King of Horyūl asked Langa Brūmo: "What sort of a man is Kiser? Describe his appearance. Describe him to my Pahlawāns." "Very good. Bring them here and I'll tell them", said Langa Brūmo. The King called up his Pahlawāns and presented them. "Now, Langa Brūmo, tell them what he is like." "Very good. I'll tell them. Firstly, mark this, his feet are small. Secondly look at his waist, it is very slender. Then look up at his back, it is very broad. Look at his teeth. One of his teeth is blue. Look at his eyes, he is cat-eyed. Look at his forehead, it is small. Look at his head it is big. Now if any person of such appearance comes along this road, do not let him go. Kill him." The Pahlawāns said: "Very good" and went off. They made for the bridge. There was no other road (of approach), so he was bound to come by the bridge. The Pahlawāns arrived at the bridge.

20 mi mamʿa jot baiyam 'Gʿoʿltačər bersan aiyʿaiye.am (*or*, ataʿayurkam).

1 *ti amitale gan apim* — *amitale* has been noted on p. 124 l. 7.

2 *ise bašatə ju.as bilum* — *bašatə* general oblique 'by that bridge'. For the infin. with the verb "to be" v. § 401.

3 *iʿtse hanaʿntse* — the Ma. has *ise*. The second *iʿtse* is scarcely necessary.

6 *dunimi ke* — The subject understood being *čərko* x pl. the verb should be *dun(im)i.e(n)*, *duʿimi.e(n)* and so on. The narrator was, however, consistent in using the x sg. or y sg. and pl. forms cp. *čərkoʿwe duʿnimi* and *duʿimi* ll. 8—9, but he returns to orthodoxy with *čərko.e duʿnir* l. 10.

11 *hayər isumal* — should be *hayəre* . . .

13 *hal fat etin* — *hal* is an obscure word. In certain cases it seems to mean 'or' 'either . . or', and probably in indirect questions 'whether' (Hindustani *agar*?). Replies to later inquiries by letter-state that it means only 'or'. On the other hand "ok" does not seem to suit the present context where I have glossed it "all right", and elsewhere I was told it meant "of a truth", "in fact", "verily". *aiyʿeʿča ba ke* — one would expect the *ke* to follow *etin*.

17 *bašatum* = *baš* + *ate* + *um* — adjectival, 'being on-the-bridge'.

18 *iʿne hine* . . . . *iʿne hiʿne* — seems to be used as English 'the one', 'the other' or 'one, another' there were several pahlawans, cp. *upone* l. 20, page 158.

Meanwhile Kiser came to the cliffs which clashed against each other. 5394
"They are doing this for my benefit," said he. "Now the arrow from this bow of mine and my horse are equal (in swiftness). If I shoot this arrow and if the cliffs catch it they will catch my horse. If they cannot catch the arrow then they won't be able to catch my horse." So saying he shot the arrow and the clashing cliffs closed on its feathers. Said Kiser: "They will catch my horse's tail." He gave his horse a cut with the whip. It (shot forward) raising its tail up behind and the cliffs closed on its tail. Kiser dismounted and drew his sword to cut off his horse's tail. "O Lingpikiser!" cried the cliffs. "If you cut off your horse's tail how will you go to the city?" "Let it go then and I won't cut it off." "Well," said the cliffs, "the King of Horyūl married a woman and two sons have been born to her. If you bring us the head of one boy for one of us and the head of the other boy for the other of us we will let go (of your horse's tail)." "By all means," said Kiser, "I'll bring them for you." Then they let him go and Kiser went off.

He concealed Changi Hirpal in his sleeve and came to the Pahlawāns at the bridge. They saw him and one of them said: "This is he. Look, his feet are small below." Kiser said: "What you say is true. My mother told me: 'When you were small I found nothing to put on your feet and I (had) shod you with raw hide. The raw hide squeezed you and (your feet) became small like this.' Another said: "Hold your tongue. He is an unfortunate creature, let him go." The first one said: "This is he. His waist is slender." Said Kiser: "To be sure you are all intelligent men aren't you? My mother told me: 'When you were put in swaddling clothes I had tied you up with a leather strap.'" The other Pahlawān said: "O shut up, this is a poor fellow, let him go." The first said: "His back is broad, this is he." Said Kiser: "Through carrying people's loads my back became big."

20 *mi mama* — this use of *mi* with names of relatives, with the force of "my" is to be noted, v. Vocab. s. v. (2) *mi*.

gəlitəw — present base + *w* apparently of a verb **-ilitiyas*, based on **-litiyas* with the meaning 'to put (shoes etc.) on to someone else('s feet)'.

aiy'aiyəsəm — 1st. sg. neg. post. of **-yaiyas*.

1 *dukoˑtsin* — *d* + *gu* + °-*atsi* + *n*, p.pc. act. of *d*°-*atsi.as* which is referable to °-*atsi.as*.

8 *aˑščiŋ* — should be *ja balgičiŋ*.
iyai.iŋ — i. e. *yai.in*, *yaˑin*, pl. of 3. *ya*.

13 *γəriˑpiˑs* — also at line 15. I cannot explain the final *-iˑs*, *-is*.

14 *huruˑtamulo* — the static pc. 1st. sg. + *ulo*.

18 *efati* — i. e. *ifati*.

17 *ma hɛˑnasə nazər* — The singular *hɛˑnasə* is peculiar. The meaning seems to be 'you knowledgeable ones'. *nazər* is said to mean *çərbaˑn* 'sacrifice' but in

The other Pahlawān said: "Come shut up and let the wretch go." 539
The first said: "One of his teeth is blue." Said Kiser: "Alas, you speak truly. They were playing polo and I was (sitting) on the wall. A dreadful man hit a stroke and the ball struck my tooth and thus it became blue." The other Pahlawān said: "Shut up you and let the poor fellow go." Said the first Pahlawān: "Look he is cat-eyed. This is he." "You speak true," said Kiser. "My mother used to say: 'When I was pregnant with you I had fallen in love with (*or*, looked at) a cat. And so you became cat-eyed,' so she told me." The other Pahlawān said: "Shut up, let the poor fellow go." The first said: "She said his forehead was small." "Well may I be your sacrifice!" said Kiser, "you wise men. Indeed you are all very wise. My mother told me: 'I could not find a head-bandage, so I had bound you with a strap." "Shut up," said the second Pahlawān, "don't treat him like this." The first said: "'He is big-headed' she said." But all (the rest) said: "He is a poor fellow, shut up and let him go." So they let him go.

When he was some distance from them he mounted Changi Hirpal and galloped off. He came to a *pamir*. Some herdsmen, bringing their flocks, came to the *pamir* and he went up to them. The herdsmen were from his own country and were servants of Langa Brūmo. There were also others. Going up to them he brought down a shower of rain from the skies. It rained heavily, and fetching a large boulder he propped it up on his stick. All the herdsmen rushed in under the boulder. Those who were of his own country he plucked by the clothes and pushed about and flung out. The other lot (remained) crowded under the stone. Kiser

himself was left out in the rain. "Look here," said he, "It is I who have propped the boulder on the stick. I am out in the rain and you won't let me in, will you?" "Have you propped up this boulder on this stick?" asked the men. "Yes, I have propped it up." "Very good, now then take it off, just as you have propped it up." He gave the boulder a jerk and pulled it off. It fell on them like rats caught in trap and ground them to powder.

Then he made the sky clear, and those who were outside, and he along with them, became dry. They were the men from his own country and they recognised him. They salāmed to him and Kiser said to them: "I would stuff your skins with ashes, only one day you will be of use to me!"

Then he proceeded on his way and came to the city of Horyūl. There was a (Goldsmith's) shop there and he went up to the door of it. Inside, the Goldsmith was tapping away. Kiser (said to himself): "The man in there is starting work on a needle, may it turn out a sword in his hand!" So saying and willing, he entered the door and the needle became a sword in the Goldsmith's hand. The Goldsmith was astounded. His daughter was blowing (the bellows) for him and he said to her: "O Katīsh Malchūcho, whoever this is he has come to us as a bringer of great good luck! I will give you to him (to wife)," he vowed.

Kiser came in from outside, having (first) entered into that former hideous skin of his and become like a dumb Dēu. On seeing him the Goldsmith was vexed: "He is very ugly," he said, "and my daughter is very pretty. It would be a shame. I won't give her to him." "Father," said Katīsh Malchūcho, "you have made a promise don't go back on it. I'll marry this man." "May I be your sacrifice, my daughter!" said Germahalmas, the Goldsmith, "I grieve for you. (But) if you will marry him well and good." (Then to Pangchu) he

---

There may be a question of x and y involved: *sel* is y; *doctsak* in this connection is probably x, *asbep* I have only recorded as y, but it is probable that like *doctsak* it may be x when used of individual articles.

We have again at p. 162 l. 11 *dere* (y) *dumanimi*.

1 *Paŋču* — notice this name again in association with the inferior form ep. note p. 142 l. 14.

6 *mana* — i. e. *mano*.

15 *ɛtimi* — the *ɛ-* refers to *hanjil* (x pl.).

17 *d'wsa* — *dusas* means both to 'go out' and to 'go up' to 'climb up on to'. With the low flat roofs often running into the hill side at the back, it is an open question which rendering is preferable.

19 *dusɛ·ko* — short form 3rd. sg. h.*l.* pret.

bɛ padša bai kɛ — 'what a king he is!' *kɛ* seems here to convey merely emphasis.

25 *sərə baldaŋ ɛčai.i* — Either *ɛčai.i* is Cu. or else the object must be understood to be *hanjil* (x pl.). In l. 24 *ɛčai.i* implies that the object is *baldaŋ* (y pl.).

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

said: "Hallo! I will give you my daughter; will you marry her?" 539A
"Very good, I will," replied Pangchu.

Germahalmas gave him his daughter and said to him: "Can you blow (the bellows)?" "Yes," said Pangchu. "Now get up (from the bellows) my daughter," said the Goldsmith to his daughter, and she got up and Pangchu went to blow. The Goldsmith put an article on the forge and Pangchu blew with the bellows, and whatever the article the Goldsmith proposed to make, it came into existence of itself in the forge. The Goldsmith was amazed: "The thing came into being of itself without my once taking it out of the forge and hammering it," he said. Then he put on another article and with the blowing it too came into existence of itself.

The Goldsmith was greatly pleased and delighted. All the work he had in hand was completed. No work remained with him (to be done). "O son-in-law," said Germahalmas, "will you bring a little charcoal. Can you get it?" "Yes, I'll get it." Germahalmas gave him a big sack, saying: "Bring it in this." Taking the sack he went off to bring the charcoal. In a moment he made a hundred similar sacks of charcoal (out of the one sack). Then fetching those men of his own country he made them carry the charcoal. Mounting Changi Hirpal he went ahead of them while they followed him.

Germahalmas said to his daughter: "Go up on to the roof." She went out on to the roof and looking at the road she saw that Pangchu (in his kingly form) was riding ahead on Changi Hirpal and that behind him a hundred men were following him carrying charcoal. She came down to her father and said: "Father, what a king he is! What a handsome man he is! What a fine horse it is that he is riding on ahead of them!" "May I be your sacrifice, my daughter, are you speaking the truth?" "Yes, father, I am speaking the absolute truth." "I'll have a look too," said Germahalmas. "I'll just go up on the roof." And his daughter also went with her father. Germahalmas saw that Pangchu was carrying the loads by stages. He kept putting down one load on ahead and running back (for another). "May I be your sacrifice, my daughter. Isn't he a strong man? He is carrying the loads by stages." "What's

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burushe AV7

the matter with you, father? A hundred men are following him carrying the charcoal." "You bastard!" replied Germahalmas. "I don't see them. Why do you lie?" "No father, what I say is true. I see them just as (I say)." The father and daughter could not agree and came down into the house.

Pangchu brought the charcoal to the door and called out: "I have brought the charcoal." From inside the Goldsmith said: "There is a house for putting the charcoal in. Put it in it." Pangchu put the charcoal in it and the house was filled. He called out again into the (dwelling-) house: "There is a little over." "There is another house, put it in that," replied the Goldsmith. Pangchu put it in that house too and it too was filled, and again there was some over. Again he called out: "That one is full too." "There is still another room. Put it in it," said the Goldsmith. That also was filled and Pangchu came to the Goldsmith's shop and the latter said "Hallo, son-in-law, are those three houses full?" "Yes, they are," replied Pangchu. The Goldsmith was greatly delighted. "There is no one like this man," said he. "He went (only) once and he filled three houses full of charcoal."

The Goldsmith had no work to do and Pangchu went outside and sat down in the sun. Now Langa Brūmo came out on to the roof of the King's palace. On her breast was a delicately-wrought brooch which had been made in Kiser's shop. It was very handsome and beautiful. Pangchu, taking a grain of millet on his finger, (flicked it and) hit the brooch in the middle. The brooch broke into little pieces and fell on the ground. Langa Brūmo was astonished; while it was on her breast it had broken of itself. Picking up the little fragments of the broken brooch she took them to the King. "O King," said she, "while it was on my breast, (the brooch) broke of itself." "Germahalmas will repair it," said the King. "He won't be able to," said Langa Brūmo. "Yes, he will," replied the King. So saying he sent it to Germahalmas.

They took it to Germahalmas and said: "O Germahalmas, the Queen's brooch broke of itself while it was on her breast. The King commands you: 'Make it as it was before'." "Very good,"

2 *γauyum* — i. e. γəγyum.

6 *iri·ṇum* — a rare example of adjectival -um being added to the simple form of a noun. It is evidently a synonym for the genitive *iri·ṇc* a few words further on: 'the right hand', 'left hand', 'bellows'.

8 *tatas dimanimi* — the Ms. has: "*taq imanimi*".

7 *ši·γum* — this word does not occur elsewhere. It was said to be equivalent to Shina *šuf* '[it] is not known', but it may only be so in an indirect way. The sense was also given as: 'perhaps you are K.'.

13 *dum'o·yo* — is the short form of the Ind. sg. hf. pret. = dumo·mo, here equivalent to the Perf.

20 *o·sum diśulo* — the static pr. as an adjective, falsely attached to a noun v. § 377 d. 'in the placed place' i. e. 'in the place in which the brooch had been placed'.

22 *ja c·s* — "my that" i. e. 'that thing of mine'.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

said Germahalmas. "I shall do so." "Ho, son-in-law," said he, "blow up." "All right, father. I'll blow." Germahalmas put the brooch in the forge and Pangchu blew the bellows. He blew with the right-hand (bellows) and the brooch of itself took shape in rough form. Then a tune came out of the left-hand bellows and the brooch broke. "Blow just once again, son-in-law," said Germahalmas and Pangchu blew. A tune came out of the righthand bellows and the brooch took shape. Then a tune came out of the left-hand bellows and again the brooch broke.

"Son-in-law," said Germahalmas, "one would think you are Kiser." "Who is Kiser you bastard?" replied Pangchu and intimidated him. "All right then, son-in-law, blow just once again. Pangchu blew once more and the brooch took shape in a rough form. Germahalmas took it away, but he left it as it was and did not begin working on it. Some days passed, and Pangchu, without showing it to anyone sent it off to his own country (with a message) saying: "Make it as it originally was and send it back to me." They took it away to Kiser's shop. (There) they made it (as it had been) and sent it back and gave it to Kiser.

Langa Brūmo came along saying to herself: "Has he repaired that brooch of mine?" They told Germahalmas, saying: "Langa Brūmo has come to your shop." Germahalmas carefully swept and cleaned his shop and then sat and waited. (Presently) Langa Brūmo came into the Goldsmith's shop: "O Germahalmas," she cried, "have you not mended my brooch yet?" "May I be your sacrifice! I have worked it up in a rough state." "Bring it here and let me look at," said Langa Brūmo. Germahalmas looked for it in the place where he had put it. It wasn't there. He turned everything upside down (searching for it), but the brooch was not to be found. He was amazed: "O Langa Brūmo," he said, "I had left it here after working it up in the rough. Now wherever it has gone to, it isn't here." "Where have you taken that thing of mine to, you bastard?" "You base-born creature," struck in Pangchu, "who has taken it? This thief of a woman has stolen it herself. People of this sort are thieves. Let her stand up!" Langa Brūmo

---

1–2 γi·nɛ, γiyantɛ, γiyaŋ — all these were originally written with a post-velar g. This was altered to γ which was also marked as post-velar γ.

The ordinary natural plural of γi·n is γiyo or γiyantɛ.

Γiyaŋ which was given and repeated is a most surprising form of the y type. I have no other h. pl. to compare with it.

2 mɛnɛ ḫa — the -a is unusual. Perhaps it is the -a sometimes used with the Imperative.

4 museγutɛ ɛa — explained as: down along her "naked side" inside her clothes.

7 akuriki — 'he will make your flesh (into bits) so big for you' (indicating little pieces).

19 berukutsan — V. Vocab. ká·r, bɛrɛ.

22 sɛnabatɛ — sɛnɛ bɛ + atɛ v. § 497 a.

26 ḫiŋ sam — v. § 97.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

stood up. Now, without letting her know, he had thrust the brooch into her bosom (under her clothes) and immediately when she stood up it fell down along her side to the ground. She saw that her brooch had fallen down from her side and she clutched at it and picked it up. "Ah Germahalmas," she cried, "You have brought Lingpikiser here and he is with you. I shall tell the King and he will chop up your flesh into little bits, like this." So saying, she went off taking the brooch with her.

"O son-in-law," said Germahalmas, "you have set fire to me. You are Kiser." "You base-born creature, what do you know? She won't be able to mention this (to the King). She won't be able to say: 'It is Kiser.' She will (in fact) sing your praises. She will commend you and the King will send you presents. Sit still and hold your tongue."

Langa Brūmo went with the brooch to the King and said: "There is no craftsman like Germahalmas. He has repaired my brooch excellently." And she praised him highly. The King was very much pleased with Germahalmas and sent him a present. They took the present sent by the King to Germahalmas and he was very happy. "O Germahalmas," said Pangchu, "didn't I tell you so?" (After that) they remained where they were in great happiness.

Some days passed and then the King summoned Germahalmas and said to him: "Come to my court tomorrow morning; Kiser's bow is to be drawn." "Very good, I shall come," said Germahalmas. "Father-in-law," said Pangchu, "take me with you too." "No, my son. There are none so ill-favoured as you. If I were to say: 'This is my son-in-law,' they would all laugh at me. You sit here and keep guard on my door and the smoke-hole," replied Germahalmas. "Very good," said Pangchu. Next morning Germahalmas went off to the King's court. He took his seat in the court and then he saw that Pangchu had come carrying the door-frame and the frame of the smoke-hole slung on his neck. Germahalmas went to meet him. "Son-in-law," said he. "Why have you knocked down my house and brought this door-frame of mine and the smoke-hole frame here? Take them back." Pangchu went back with them and Germahalmas returned to the Court.

2 *tworaŋ* — the Ms. has *tawran*.
čši — v. § 66.
7 *jwči kr* — originally given as *jwčimi kr* cp. *nirimi kr* note p. 184 l. 13.
10 *baliči-la* — a curious use of the present tense. It most mean, 'why should it fall down?'
13 *ayowmai* — one would expect *ayowmai* cp. *ayowmi* p. 146 ll. 1—3.
beya — what exactly the *ya* is I do not know, but it seems to give emphasis to the asseveration. Glossed "No. I'll certainly take you". Perhaps, however, *ya* is the imperative 'shut up' as in the next note.
17—18 *ya šorum* — Glossed Hindustani *hai, šorum hai*. *Ya* must be the imperative "shut up".
22 *izači* — the alternative *iriŋ* 'into his hand' is given, but as far as I know *izači* can only be referred to *izaf* 'his mouth'.
23 *adeljumana* — originally *adeljama* was given, which would be the 3rd. plural imperfect interrogative 'would anyone beat me?'

6: Lortzner L-3 (1933-4; 1934-5) 1935 AV7 Surmbo AV7

5344

Then in turns they drew Kiser's bow. Germahalmas drew it a little further than the others. After drawing it he got up from the King's court and returned home. When he came (to the house) the door-frame was there undisturbed in its proper place, and the smoke-hole frame was there undisturbed on the roof. "Son-in-law," said he. "You had taken out this door-frame, but even this mud (at the side of it) has not fallen down." "Why should it fall down?" said Pangchu.

The King again sent for Germahalmas saying: "Come tomorrow again. There is again to be a drawing of Kiser's bow." "Very good, I shall come." "Father-in-law," said Pangchu, "do take me tomorrow. If you don't take me I shall come bringing the whole of this house with me." "No, don't," replied Germahalmas. "I'll certainly take you with me tomorrow."

Next morning he took him with him, and they arrived at the King's court. The people drew Kiser's bow in turn. The turn came to Germahalmas and they gave him the bow and he drew it. "Father-in-law," said Pangchu, "give it to me too for a turn." "Son-in-law, these strong men cannot (draw it). You won't be able to. Hold your tongue. You should be ashamed of yourself." The King overheard. "What does he say?" he asked. "He says: 'Give me a turn too,'" replied Germahalmas. "People like him are good men," said the King. "Give it to him." Germahalmas gave him the bow. So Kiser's bow came into his own hand. He gave it a couple of sharp tugs. "Father-in-law," he said, "if this bow breaks, will anyone beat me?" "What does he say?" asked the King. "He says: 'If this bow were perchance to break, will anyone beat me?'" "No," said the King. ("No one will beat him.") "If it breaks and in breaking a splinter strikes someone and someone is killed, will they beat me?" asked Pangchu. "What does he say?" (asked) the King. ("He says," replied Germahalmas), "'If the bow breaks and a splinter strikes someone and he dies, will anyone kill me?'" "Blessings on you!" replied the King. "Let them all die! Tell him to draw the bow."

1 *ṭimilicą* — may be a plural form, but is possibly meant for *ṭimilicen*.
yaiyi — short form 3rd. sg. or pl. y pret. of *paiyan* equivalent to *yami* l. 8.
2 *mien* — p.p. act. of *paiyan*.
4 *gutiṇe xerṇe* — the exact meaning is uncertain, v. Vocab s.v. *xer*. Here glossed Hind. "*tumhare pur ko sadaqa*". Perhaps the general meaning is: 'may they all die by way of a sacrifice for you!'
5 *taskrmar* — 1st. sg. form of the static participle + *er*.
6 *akure* — this *a-* added to the ordinary *kure* (not elsewhere occurring in the texts) is to be compared with the *a-* or *ā-* preceding the proximate demonstrative base in *akirem*, *akirte* etc.
9 *ure uyem . . . ser etimi* — The literal translation of this sentence is uncertain.
12 *mo gute* — sc. *want*.
19 *ete* — short form of 1st. sg. pret.

Then Pangchu drew the bow and he worked magic saying: "When I draw it may this bow break in pieces and may it strike all these present, but may it not hit the King, and may it not hit me and may it not hit this my father-in-law. Otherwise may all these present here be wiped out!" So saying, he drew the bow and it snapped and flying in pieces it struck all those present in the court and caused the blood of all of them to flow in a flood and they all perished. The King was pleased and said: "Bravo to you!" Then he said: "There is one called Kiser who is my enemy, will you be able to tackle him or not?" "Bring him here," said Pangchu, "Bring him here now and I'll slay him this very instant." "He is not here now." "If he will come, summon him and bring him here." "No," said the King, "if I sent for him he would not come. Should he ever come, he will come of his own free will." "Well, if he ever does come," said Pangchu, "I'll slay him." 53¾

The King was pleased with Pangchu and said to him: "I'll give you whatever you wish. I'll make you a present of it." "If I find favour in your eyes, give me a little iron," said Pangchu. "Take him to the treasury of iron," said the King. They took him to the treasury of iron and again he wrought magic, for, without letting them see anything, he cleared out and carried off all the iron (that was there). He carried it off to Germahalmaa's shop. Then he made use of the charcoal that he had previously brought there and fashioned an iron palace. There was a room in it for Katiah Malchücho to sleep in, and a room for food-supplies, and a room for drinking-water, and a room for firewood, and a kitchen, and a privy, and a bathroom. After this manner he fashioned the iron palace and he settled Katiah Malchücho in it, bidding her: "Sleep in this place, cook your food in this place, fetch water for yourself from this place, wash your feet and hands here, and make water

17 'ots w'o — for *ots* is a phonetic corruption not usually permitted by Imam Yar Beg.

20 *gyami* — from **-LAMI-AS*.

21 *KLAS zorokev* Aos etc. — 'a room for food-to-eat', 'a room for drinking water'. By this I understood was intended 'a room in which to eat food' etc., but this is grammatically impossible. What is actually expressed is 'rooms for (storing) food and water'.

1 ǎaṇaličiṇ — is the plural of *ǎaṇal*, but is here used to denote a single chain. The plural *irkr* is used with it in l. 9, but the singular *irkr* in ll. 7 and 10.

10 gati ertimi — probably causative: 'made them collect all the property'.

'e.i.eyar — or *e.i.er* the present base of **-eyanar + ar*. What is the exact meaning is difficult to determine, as between:

1. causative 'in order to make him carry the load';
2. transitive 'in order to load up the load on him'.

In line 19 *narrna . . . irarrtr* 'e.iyrnimi is most probably: 'he loaded up the treasure on him'. It is less likely that *irarrtr* is here instrumental.

In line 24 *eyrnimi* may be 'he loaded them (the heads) up' or 'he made them (someone not specified) carry them'.

**-eyanar* — is very difficult to explain in some of its uses. It was often rendered

Gesamtausgabe I-3 (1920-4; 1934-5) 1936 AV7 Barnabo AV7

here." Thereon, working magic he set down the palace and Katiah Malchtcho in his own country, (that is) he put them down in Lama. Next morning his father saw the palace. "This is the work of my Kiser," said he.

After this (Pangchu said to) Gernahalmas: "Make me a chain of 100 cubits (in length) and make me a ring at the upper end of the chain." Gernahalmas made the 100-cubit chain and Kiser went off with it and proceeded to the foot of the King's palace. In the King's palace there was a beam which projected out (from the wall). He threw the chain up to the beam and the ring caught on it. Then he climbed up the chain and went up on to the King's roof and all the palace shook. "Kiser has come," said Langa Brtmo. Kiser entering into the skin of a cat (came and) miaowed round the smoke-hole. "It's a cat," said the King. "A cat isn't as powerful as that," said Langa Brtmo, "Linggikiser has come."

Kiser (now) went back into his own skin. "Ah bastard," said he (to the King), "If you are sleeping, get up. If you are up, get ready." Then Kiser jumped down (into the room) and the two of them commenced wrestling. In a moment Kiser flung the King to the ground and tore him in pieces. Then he had all the property in the palace collected and to carry away the loads he brought a Dtu there was, whose name was Galdang Galpo. Then clearing out all the treasure he made the Dtu take it up and proceed in the direction of his own country.

There were two sons (of the King and Langa Brtmo). Langa Brtmo took them with her and they set out and proceeded along the road. On the way Kiser said: "Bastard wife, give those children to me here." He took them from her and, cutting off both their heads, had them carried along. After which he proceeded on his way.

Going on he came to where there was a big river and the Dtu with all the goods proceeded to ford it, but he halted in the middle of the stream and didn't come out. Kiser said: "My wife is with

by Hindustani sipahiyana. Some examples of the use of *-ayanas* will be found in § 247 and in the Vocabulary s.v. Cp. note on p. 184 l. 6.

6 *mi mitindo eunar doljam* — 'we being then six persons are going to beat him'.

17 *eru.e* — this may be a mere slip for the normal genitive *eru.e*, but v. § 46, note.

18–19 *mumupušan* — Note how this as yet impersonal noun, having to have some pronominal prefix, is periphrastically given a mu-.

21 *tail morsimi* — 'he made her pour water' v. § 249. *Morsimi*, may simply be an accidental variant of *mortimi*, but it suggests a possible causative made from the transitive verb *ofar*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burushō AV7

5374

child. Five sons are going to be born to me. When they grow up they are going to plant willow trees. On these trees will grow sticks. My five sons will each cut a stick for himself and they will also cut a stick for me and they will bring those sticks along. Then the six of us will beat this Dêu." The Dêu heard this speech and taking fright came out of the river, and Kiser came out after him and beat him.

Then he made him go on and he came to the Pahlawāns and cried out: "Ho, Pahlawāns, you said some excellent things, otherwise I would have stuffed your skins with straw. Now I have let you off. I am Kiser, the slayer of many famous monsters. I have killed the King and brought away all his treasure." Kiser then came to the (clashing) cliffs: "You made a condition," said he, "Now take (these heads) I (have) brought for you." "Yes, we wanted these heads and you have brought them to us."

Some days later Kiser arrived in his own country. He came to Katish Malchūcho. Langa Brūmo he made take a water-skin on her shoulder and fetch water. Then he took her to the grave of his brother, Bumliftan, but he hesitated to cut off her nose. So he put on her nose a nose (made out of) oilpressings and then cut it off and threw it on the grave. (Straightway) a monster came up out of the grave. Its name was Gān Singē.

For twelve months Kiser made Langa Brūmo pour water on the hands of Katish Malchūcho. Then at the end of the twelve months he asked each of them: "What is your (particular) accomplishment?" "I, out of one lump of dough," said Langa Brūmo, "will make broth for an army of 100 men, and out of one cocoon of silk I will make a shawl-cloth 100 cubits in length." "I," said Katish Malchūcho, "have no accomplishments. I can do nothing." "How do you know when day is going to break?" asked Kiser. "When day is coming," replied Langa Brūmo, "in my nostrils I feel a sweet perfume." "When day is approaching," said Katish Malchūcho, "I feel a desire to make water."

ñeil ofas — 'to water'.

ñeil mo.sfas — 'to make her water'.

27 *daisōs ka* — v. Vocab. s.v. *d*-gōyas.

§00

Laŋa Brujo taxtatɨ dum'uisimi. Katiš Malčučo mu.imo čumarɨ taŋučlo m'ɔrutimi. Kisɨrɨ padša.i ctimi. But uyu'm padša bam, se.ibam.

1 *dum'uisimi* — from *d'-isar* v. § 303.
4 *senaiya* — apparently equivalent to *senaiɨ ko* 'if he has said . . .

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Buruslo AV7

On this Kiser brought Langa Brūmo out (and set her) on the throne. Katish Malchūcho he made to dwell in her Iron Palace. Kiser (thereafter) ruled as King. They say he was a very great King.

I have heard this story from someone. If what he said is true, then what I have said is also true.

If he has told the story wrongly, the responsibility rests on his shoulders.

I have told you this story, may you go to your own country in comfort and gladness.

Mūnulum Dādo.

5294

I shall tell the story of a man called Faqīr Alī. He had a son whose name was Derbēsho. Derbēsho was staying at the Shishper grazing ground. One day he took the goats to graze in the direction of Hanuman Mūn. Leaving the goats in the pasture, he lay down to sleep. When he had lain down and gone to sleep, a shout came: "Derbēsho, Derbēsho." He woke up. Waking up he saw that a very beautiful maiden had come up to his head. She said to him: "My father is calling you." When she had said this he followed after the girl and came up to the foot of the Hanuman Mūn. On his approaching it a door opened in the mountain.

When he went in a man with a golden moustache was sitting (there, and) seven very beautiful women were sitting there with sitārs (in their hands). Derbēsho, entering, salāmed. The man responded to his salām. Then he said to his daughters: "Play a tune for Derbēsho on the sitār." The seven (women), taking their sitārs,

---

regarded as the general oblique termination of the hf. noun *dasin* than as the pronominal prefix with *-ini*. Are the two *-mu-* in origin one and the same thing?

8 *ʒēje* — may be taken either as the Gen. or as the gen. obl. with locative force.

9 *hawdem hai.i* } the Static pc. + the verb *be* cp. § 379 *d*.
10 *hawdem hem* }

11 *dumerimi* — *dumer.a* ordinarily means 'to demand, ask for'. Here the context requires 'to grant, to accord'. Perhaps the form is to be referred to the verb *dumay.a*, *dumay.a* (*d°-mayas*) 'to be on good terms,' 'to suit,' 'to fit'. *y* is an elusive sound. Incidentally we have the combination of the two ideas in the English "accord" meaning 'to be in harmony' and 'to grant'.

---

1 *uṇ̌ṇ̌ṇ̌ ka* — *-ṇ̌ṇ̌ṇ̌* may mean either 'voice' or 'sound' and either interpretation seems legitimate here. For the use of a plural prefix with a sg. noun v. § 128. III.

2 *ar akumanum* — 'not being afraid' static pr. neg. of *-akumanṇ*, *a + ga + -m.num*.

7 *biṇ·stṇ* — *-ṇ̌ṇ̌* (v. § 78. II.) here indicates 'means' or 'material'. Perhaps the radical idea is: 'on' or 'with' a basis or foundation of (her) fat.

11 *ditsumaṇ* — pl. for sg. *ditsumo*, whether through oversight or politeness. Other similar cases have already been noted.

14–15 *i·ṇe M. D. . . . čayṇ oṇ·r ṇ·timi.* — A perplexing and probably ungrammatical sentence. *i·ṇe* may be either the demonstrative adjective qualifying M. D., or it may be a pronoun referring to *Darbeṇ·o*.

Munulum Daṇdu.ṇ probably starts as being the genitive dependent on *haṇ·lar*, but then comes to be the subject of *noṇ·yar*. In that case a subject has to be imagined for *nitsum*. Otherwise *M. D.ṇ* may be the subject of *nitsum* and *noṇ·yar*: 'M. D. having taken him to (his) house and having made his daughters play . . .'.

After this one would expect a finite verb with M. D. as subject, but the construction changes and becomes dependent on *čayṇ*.

eṇ·siruṇṇ and *eṇ·siruṇṇ* appear to be genitives dependent on *čayṇ*. They are static participles of Causative verbs, but whether they are to be taken as passive or active in meaning is not clear: 'he told the story of his having been

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

(sang) with very sweet voices (and) played a tune. Mũnulum Dãdo said to Derbẽsho: "O my son, dance without fearing. I am your grandfather. My name is Mũnulum Dãdo. These are my daughters. This one is my wife. I married Kiser's grandmother. This is my house. Dance!" he said to him.

Upon this Derbẽsho danced. When, having danced, he sat down, Mũnulum Dãdo said to his wife: "Make some *diram* bread with ibex fat for my Derbẽsho." His wife made *diram* bread for him. When he (Derbẽsho) had eaten it, Mũnulum Dãdo commanded one of his daughters, saying: "Take Derbẽsho away to his own place and leave him there and come back." One of his daughters took him from the Hanuman Mũn and brought him to the pasture ground to the goats. Having brought him (there) she left him and departed. The (man) Derbẽsho, taking the goats, came to the camping place. Having arrived there he became for a short time unconscious.

When he came to his senses the herdsmen asked him: "What became of you?" He told them the story of their taking him to the house of Mũnulum Dãdo, and of (M. D.'s) making his daughters play on the sitãr and of his being made to dance and then being fed with *diram* bread made with ibex fat. They were all astonished.

There was also an old-time story that Mũnulum Dãdo was in the Shtahper nullah.

They say that this Mũnulum Dãdo had married Kiser's grandmother. Kiser's grandmother said to Kiser: "When you marry

---

made to dance ...'. or: 'he told the story of M. D.'s having made him dance'. On the whole I favour the passive.

For the use of the Static pc. as a noun v. § 382.

The whole passage is of interest as a valiant attempt to face the difficulties of indirect speech.

14 ասպեր — °-ԱՂԱՐԱՍ is usually a simple transitive verb in the form ՍԱՂԱՐԱՍ 'to play (music)', but here it is unquestionably causative: 'having made them play'.

15 ԳԻՐՈՒՄ ԷԱՂԱ ... ՍՈՍԵՌ. — This might be taken as following on ՀԱՅՐՈՒՆ ԱՄԱՆՈՒՄԱՆ. 'All were astonished, saying': "there was formerly a story that M.D. lives in the Š. nullah".

Only the narrator, I think, could say which rendering is correct.

18 *Dardo* — more correct: *Dardնs* with ՍՈՏԱՎԱՄ.

Kisere epi — said to have been Kiser's paternal grandmother. For the story of Kiser and his marriage with *Burbeli Gas* see No. p. 142 l. 20.

epiɛ Kisarɛ ɛsumo: "Uŋɛ Burbuli Gas mutsuča kɛ jaɛ kɛ hiran ɛɛ ditso. Šiišpar Berulo γeniič salataŋɛ hiran bai.i, seibaɛn. Iɛnɛ ɛɛ ditsu kɛ ja gar kɛ uŋɛ gar nala eičen."

Essar Kisar niči kɛ hin γeniič salataŋɛ hiranɛ hiskatɛ nuɛrut pfilaman gistačai.i. Iɛnɛ hiɛ Kisarɛ ešatɛ pfal nɛ imo haɛlar ditsimi. Kisarɛ epi yatɛ tsiatɛ hurutum boɛm. Kisarɛ γeniič salataŋɛ hiɛ ditsas nistain, "čiič xa sokečam" nusen, xa nemuɛl muyalmuɛyo gali biɛm, seibaɛn. Beruman guntsiŋtsum Kisarɛ epimur milɛnta numo, waɛrta numoɛtan. Munulum Daɛdu.ɛ ka gar ɛtimi. Iɛmo kɛ gar ɛtimi, seibaɛn.

Darum xa Šiišpar berulo Hanuman Muɛntsum lavo mai.i biin. Muto xa doyɛljaɛn.

---

1 *sutsuɛn kɛ* — perhaps to be taken in its original sense: 'when you bring away B. G. (to marry her)'. Otherwise one may suppose the sense of intention common with the present tense v. § 249. 4: 'when you propose to marry B. G., when you are going to marry B. G.'

jaɛ kɛ hiɛn ɛɛ ditso — the redundant use of the two pronominal forms is not uncommon.

7 *ditsu nistain* — for this use of the Infin. see § 293. b.

sokečam — i. e. *sokiičam* from *sokas*.

nemuɛl — p.pc. active with 3rd. sg. hf. prefix of *°-muɛlas* 'to fall'; 'from the ladder' would be *čilatsum*.

9–10 *epimur milɛnta numo* — *milɛnta* is the plural of *mili*, meaning 'medicines, drugs'.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burushо AV7

Bübali Gas, bring a husband for me too. In the Shiahper nullah, they say, there is a man with a golden moustache. You fetch him for me and we shall celebrate my marriage and your marriage at the same time."

On her saying this to him Kiser (went off and) when he came (to the place) a man with a golden moustache was sitting at a loom weaving a piece of *patta*. Kiser threw the man over his shoulder and brought him to his home. Kiser's grandmother was sitting up on the roof. When she saw Kiser bringing the man with the golden moustache, saying to herself: 'I'll go down the ladder,' she fell down and her ribs were broken, they say. After some days, when he had applied remedies to his grandmother and made her well again, Kiser married her to Münulum Dädo. He also effected his own marriage, they say.

Up to the present day a halloo comes from Hanuman Min in the Shiahper nullah. People still hear it.

In *uemo* the *-mo-* infix (*ue* + *mu* + *°-a*) must be a kind of dative, duplicating the *ergiuer*.

A local method of treating broken ribs is to apply paper with paste or gum over them.

11 made *zis* — The narrator, Jemadär Imäm Yär Big, claimed to have heard it. *Dodeto's* experience took place some 80 or 90 years ago.

---

1 *Šon Gukur* — means apparently "The Blind Puppy", and *Huke Mamo* "Dog's Milk".

uwaščer — *waši.ar* (= Hind., *darāna*) is used with *bitan* in the sense of 'putting a bitan on to practise his craft, to make him operate', cp. p. 316 l. 11.

8 *i·ekili* — i. e. *i·ekila*.

9 *balila* — "has fallen" i. e. 'is hanging'.

No. VI.

Shon Gukŭr and Hŭkè Mamo, the Rival Bitans.

In the spring time they had brought Shon Gukŭr and Hŭkè Mamo to Áltit to make them act as *bitans*. Both were famous in Hunza as bitans.

The two of them were sitting (together) when a piebald cow came down from Baltit by the Karagudimuta. The bitans saw it and Shon Gukŭr said to Hŭkè Mamo: "This cow is in calf." "Yes," said Hŭkè Mamo to Shon Gukŭr, "and there is a white patch on the forehead of the young one in its belly." "You are wrong, it is not a white patch," said Shon Gukŭr, "the tassel on the end of its tail is white and is hanging down over its face, and so you see it like that." The two disagreed.

Then presently a man brought the cow in to Áltit. Some days later the cow gave birth and a calf was born to it. The tassel of its tail was white and it was hanging down over its face.

What Shon Gukŭr had said turned out true. The people were filled with amazement.

---

9 *ŭtz ta.i gayu ha* — 'you seem to see it so'. This use of [illegible] in the sense of 'to regard as', 'reckon as', 'seem to see' with the pron. prefix referring to the subject is very peculiar. There are not many examples of it, but it is, I think, sufficiently attested, cp. § 249. 4 and Vocab. s.v.

10 *hawru da.[illegible]* — 'remained astonished', [illegible].

No. VII.

Šun Gukuʷr Ber.

Tsorum zamaʷna.ulo Šun Gukur Bitanr han čaγan ctam, se.ibaʷn: "Beʷrum dennŋteum hikum kutuʷiko qaltačʼamuts nuyʼoʷlin, ʒikiʷlišo sisik paida me.iman (or, juč̣uman). Uʷr burt msaʷf ečuman. "Aʷq'arar inr γsriči, γsraʷs iʷn aʷq'arči iʷljum beltsr" senam, se.ibaʷn.

Faqat, čaγa dakuʷrum bila.

This prophecy is held of course to refer to the British.

2 *ʒikiʷlišo* } *ʒikiʷl* and *burdu* were said to be synonymous 'fair, fairish'; *burdu* (lit-
4 *burdutrŋ* } out-eyed), I think, primarily denotes the possession of light-coloured eyes, and *ʒikiʷl* was first explained as describing fair, grey-eyed people. *γsrʷs* is, I understand, used of persons with a reddish colouring, with eyes and hair darker than those of the *burdu*.

apiʷm ganr — "by non-existent road(s)" *apiʷm* being the static pr. It would be possible to take *sis* with *apiʷm*, "road(s) on which there are no people," "unfrequented tracks".

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

No. VII.

Shon Gukūr's Prophecy.

539A

They say that in early times Shon Gukūr, the Bītan, had made a prophecy. They say he had said as follows: 177

"After some years there will appear a handful of fair-complexioned men wearing short coats. They will do great justice and Hunza will become very prosperous. These fair folk will go where there are no roads. They will construct iron bridges. Moreover in the place of privies there will be stables. In the place of stables there will be privies." They say he said: "In those latter days the man who should hold his peace will speak, and the man who should speak will hold his peace."

That is all: the story is this much.

The last two sentences indicate changes in customs and the social system. I do not understand the exact implication of the confusion between stables and privies; but *yowu*, I think, means a man who has a right to speak in public assemblies, i. e. a person of social standing, while *ayawas* is the humbler individual who is not expected to air his opinions in the presence of his betters. 178

A note elsewhere says that Shon Gukur prophesied that Hunza would be conquered by people wearing "topees" (sun-helmets, hats) and good clothing.

2 *išuco bo·m.* — Note the use of the *-*huyas* form of the verb 'to eat' when the object eaten is human v. § 252.

7 *hin bilasan* — presumably the same *bilas* who has just been mentioned.

9 *dam nɛ* — there is a break in the construction and *bilas* is not the object of the *dam nɛ*; sense carries on to *gi·li mudelimi*.

12 *i·latɛ* — *čərɛ*, or *mərtɛ*, is to be understood before *i·latɛ*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Ruxusho AV7

No. VIII.

The Bilas of Ganish.

They say that in early days there was a Bilas in Ganish. She dwelt at a certain spot and if one person came along she ate him up. If two people came along she used to let one go and eat the other. If three people came along she used to eat two and let one go. In the course of a number of years she thus devoured many people. 539

At that time Shon Gukūr, the Bitan, was living. They told him about it, and he went off, they say, to Ganish.

There was a place of which the name was Lato Her. There was a Bilas there who used to devour people. Shon Gukūr got them to make an iron peg. Having done so he made a spell. Now there was a boulder there. They called it the Guyō Būn. There was a man called Guyō and it was in his garden. Shon Gukūr pegged her into that boulder.

The boulder still exists, but it has fallen down from its original site which was on the edge (of the cliff). The iron peg is still there.

1 *Hindilo* and *Hindi.* — These cases are suspect. It is possible that the narrator changed his mind as to what exactly he was going to say. One would expect: "a story of Hindi", and "a tower in, or at, Hindi".

4 *nišun ... fat očoboˈm* — this anticipates the discovery that the disappearance of the guards was due to the cannibalism of some female being.

5 *kam abaˈd bam* — Hindi is said now to comprise 100 houses.

6 *Thamo* — "the Thams" either vaguely meaning the ruling family, or a complimentary plural for "the Tham".

12 *ha ha oˈčumɛ* — the meaning of *ha ha etas* seems to vary between raising the shout or battle-cry with which one attacks, and actually charging or attacking.

No. IX.

Dadi of Hindi.

539/

In Hindi there is a story current of former times. There was a tower at Hindi. Its name was Jandu Shikāri. They say that men used to sit on guard in the tower at night. If two men went (on duty), in the morning there was (only) one remaining. If three went, (a *bilas*) ate one and let two go.

The people of Hindi, who were a small community in those days, were perturbed. For some years out of shame they kept the matter secret from the Thams. In the end the Thams heard of it.

At that time there was in Hunza a bītan called Shon Gukūr. They sent him to Hindi. When he had gone there and looked (he saw that) there was a bilas in the tower; and there were also her seven daughters. Her name was Dadi and it was she who kept eating the guards.

Shon Gukūr thereupon made the people of Hindi take guns and swords, and making them keep shouting the battle cry and himself reciting spells, he advanced towards the tower. On his approach Dadi with her seven daughters quitted the tower. One of the latter got separated and fled from the fort in the direction of the river. There was a large boulder there and she flung herself into it. Shon Gukūr, coming up, and making an enchantment, fixed her in the boulder with a peg.

---

13 *dam 'sčume* — the exact meaning of *dam* is also doubtful. It is no doubt the Persian word which begins by meaning "breath" and passes on to "incantatory verses" (Steingass). In Burushaski it may be taken as 'charm', 'spell', 'incantation', 'enchantment'. The phrase is here glossed "praying" (i. e. probably H. *du'a· karke*).

---

1 *iˑser giˑmo . . . gili mudɛlimi* — Such beings as bilases have the power of hastily entering into boulders and in the normal course could no doubt come out again, but if an iron peg is driven into the boulder and a suitable spell employed they can be kept shut up for at any rate a long period.

Dadi's eventual escape is said to have been predicted by Shon Gukur: *amɛlę yasurmər Dadi duˑši*, "when my jaw-bone has rotted Dadi will come out". But the jaw-bone is a very durable article. Cp. also the tale of *Qaŋ Jakun*, p. 202 l. 1.

In this and other stories iron evidently retains its magical qualities, which is not surprising as it was comparatively rare and precious in Hunza till quite recently. A couple of generations ago the important Baltit 'Ali.ābād irrigation channel was dug with ibex horns used as picks.

2 *giˑli mudɛlimi* — I don't think this is to be taken as meaning that the peg was visibly driven into her. She was imprisoned by simply driving the peg into the stone.

5 *buˑndo buˑndo.ulo* — the plural is surprising, but the meaning is obvious.

7 *dumu.isuman* — from *d*-isas* ~ *d*-usas* 'to take out extract'. Here glossed "made her climb" which suggests a point of contact with the intransitive *duˑsas* cp. § 303.

modɛlimi — from here on the prefix *mo-* replaces the previous *mu-*. As the text was recorded at one sitting there was probably an actual difference in pronunciation by the narrator, not merely a variation in my hearing. So we have **-adɛlas* being substituted for **-dɛlas*. Cp. §§ 242—243.

8 *guyam* — "I have given you" the anticipatory Pret.

[Errata: for duˑši read duˑšo, cf p. 419, cat. 116 — Analyst.]

539A

Another daughter fled towards the Upper Fort. There was a boulder there and she flung herself into it. Shon Gukūr proceeded thither, and making an enchantment secured her with a peg. Dealing with them in this wise he pegged down the seven daughters in separate boulders.

Then they pursued (and caught) the mother, and bringing her to the col facing the Hindi Fort, they made her climb from the col up on to the spur. There Shon Gukūr pegged her down. When he had done so she said to him: "What am I going to eat?" "I shall give you twelve goats," said he, "drink their blood. Then every year we shall bring you (the like). If we cannot manage twelve goats, we shall give you at any rate seven, but I lay this duty on you: whenever we go anywhere to battle, you must go in front of us, then (on that condition) we shall give you from twelve to seven goats."

Having so addressed her he wrought an enchantment and pegged her down in the mound with an iron peg. Then from the time that she was pegged down, every year they took 12 or 7 goats and with guns and swords and shouting as they went, they led

---

10 *tʌlo kwli* — the precise meaning of *kwli* is uncertain. The phrase was explained as H. *sat hi* "exactly seven" (?). This may be correct as we have "twelve or seven" later on at line 14; but one would rather expect "at least seven" and this would be borne out by "from twelve to seven", l. 12.

gwčʌn — in the MS. *gwčʌn*.

bʌp — usually means "tribute", "tax", cp. the double significance of English "duty".

11 *hoʳlgwčʌ nimʌn ke* — 'if we go to war', or 'battle'. One would expect *hoʳlgwčʌr*, but we have *hoʳlgwčʌ niʌs* again on p. 252 l. 17.

aʳltatsatsum — *aʳltaʳts* + *tsum* The accentuation must have been peculiar as I originally recorded: *torma aʳlta tsaʳtsum*.

15 *giʳli iwora . . . dwʳčumʌ* — the idea of circumambulation v. Vocab. s. v. *-*wora*. *dwʳčumʌ* is the present participle of *dwʳtsʌs* (*d*-tsʌs*).

An explanatory diagram shows the goats as going round the peg against the sun (widdershins), but that may be only accidental. It was further stated that first the men and then the women danced round the boulder as a compliment to Dadi.

000 kaš oč'am. Multan i·sɛ gi·li.atər ga·rtsumər gi·li fərfər mai.i bi·m se.iba·n.

---

1 *fərfər mai.i bi·m* — I gathered that the peg waggled round in its socket, the top describing a circle.

3 *kin Tham . . .* — lit. "up to some years of this Tham's sovereignty".

5 *Dadi·mur ʂu·čam* — either: "they sacrificed them to Dadi" or literally: "they feasted on them in honour of *D.* *ʂu·yas* appears sometimes to be used in the sense of "to slaughter" when a feast is going to follow v. Vocab. It appears that the people consumed the carcases of the goats. It was assumed that Dadi would only drink the blood (v. p. 194 l. 9), and the blood was poured over the peg (line 1).

The "bleeding sacrifice" has distinct economic advantages for the worshipper, over the "burnt offering"

the goats round the peg and slaughtered them. And they say that when the blood flowed on to the peg the peg used to revolve.

From that time until the present Tham, Mīr Muhammad Nazīm Khān, had been Tham for some years, the people of Hindi used to take goats to the spur at Hindi and sacrifice them to Dadi. They used to call the ceremony the *Sherēs*, and they call it so now.

About ten or twelve years ago Mīr Muhammad Nazīm Khān and Wazīr Humāyūn Big made the people of Hindi give up taking goats to the spur and celebrating the *Sherēs* in honour of Dadi. Otherwise for some years after the taking of Hunza by the British Government they used to celebrate the *Sherēs* in Hindi according to the instructions of Shon Gukūr. They used to say: "If we don't celebrate the *Sherēs* Dadi will come out."

For a long time all used to see the iron peg that Shon Gukūr had driven in; it was (still) there. Now it is not there. They say someone has stolen it. Only the flat stone that was put by Shon Gukūr over the peg is still there.

---

7 *ten or* twelve years ago i. e. in 1914 or 1912 A.D. British suzerainty was established in Hunza in 1891—2.

9 *bɛ kɛ* — here seems to be equivalent to "but", the sense being: the practice was stopped 12 years ago, but it had gone on after the British occupation for a number of years.

13 *i·lji ɣa* — exact meaning doubtful.

uyoma i.eɨ̈.ɹm bim — *bim* is independent of *i.eɨ̈.ɹm*.

Kulio Laskīr and the Dangalatas of Harèng Gashèng.

539/

Kulio Laskīr was one day running water on to his field. It was night and the turn for the water had come to him. He was alone and the night was dark and moonless.

At this point a fire appeared on the Harèng Gashèng. The fire came moving along in Kulio Laskīr's direction. It came up to Kulio Laskīr, and when he looked he saw that there was a Dangalatas. The two began to wrestle and he threw her. There was a dagger at his waist and when he had thrown her he smote her on the breast with it. He knew nothing more; she (simply) vanished somewhere.

He returned to his home and told his family about it. He said to them: "A bīlas from the Harèng Gashèng and I had a wrestling bout in the "Round Field." I threw her and stabbed her with my dagger. The dagger has remained behind in the field. You people go and fetch it. Take note: if the dagger is sticking (upright) in the ground I have had the best of it, (but) if it has fallen over, then she has had the best of it."

On the morrow when they went (to the field) the dagger was sticking in the ground. They brought it back from the field.

There was this much of a story.

The nature of the *Amíte* is obscure. It may be compared with the equally obscure *Amitʌle* v. Vocab. s. v.

meltʌlik . *sulama dunʌm* — 'the two of us had wrestled'. Supply: *je ke*, 'and I', before *meltʌlik*.

No. XI.

The Braying Donkey of Berashalè.

5397

They say that in the Berashalè (lands) in Hunza there was a walnut tree, and that on it there used to sit a bīlas. At night if any two people went there she used to eat one and let the other go. In this manner for some years she devoured people. (The authorities) gave orders, saying: "Cut the walnut tree down from the roots."

All the people of Hunza having assembled they hacked at the tree with an axe, whereupon blood issued from the gash made by it. They felled the tree and then there appeared a braying donkey. It would not budge a step for anyone.

In those early days there was a man called Kulio Laskīr. He was the Wazīr and he was also a strong man. Besides him there was a strong man of the Ghulwātīng and in addition to him there was still (another) man. These three came on the scene, each carrying a thick stick. They say that when Kulio Laskīr brought his stick down on the donkey it took twelve steps (forward); and when the Ghulwā man brought his stick down it advanced five steps. Going on beating it thus they brought it to a boulder there is, called Khūrias Būn. When they had got it there it entered into the boulder.

There were in Hunza two bītans, and when it had gone into the boulder, they wrought magic, and made a spell and did not allow it to come out again. They said to the people: "When we

1 *gutɛ Gi·ltsum* — "from this Gilgit" (where the story is being narrated).
di bam — here, as frequently, the verb "come" is used where we should use "go".

5 *yɔrčər* — ɔ is a mere variant of ə. The infinitive was given as *yɔrras*. The word does not occur elsewhere in the texts.
tsak pfataŋ nɛ — refers to the opening in the side of a waterchannel by which the water can be allowed to escape. Such an opening enables water to be turned on to a field, but in the case of a mill it is I think used to deflect the water from the mill-race. In the fields such openings are closed by blocking them with mud, but for a mill there is a small wooden frame into which a bit of board can be vertically slipped.
ki·tɛ pa — is presumably the other side of the mill from the sluice.

7 *meniko* — v. § 151.

XII.

Bulchutōko and the Dangalatas.

534

They say that a man called Bulchutōko had come from Gilgit here to Hunza. They say he possessed magical powers. Coming to Gerèlt he settled there.

After some years he once went, they say, to the Gantsūper jungle. When he entered the Burōndo Nullah, a Dangalatas was grinding gold (there) in a mill. Seeing this he went to cut off the water, and opening the sluice (so that the water flowed away to waste) he hid himself on the near side of the mill. The mill immediately came to a standstill. On its ceasing to work the Dangalatas came out to stop the water (from escaping). When she got out (she found that) someone had opened the sluice. While she was closing it Bulchutōko flung the gold into a skin bag and ran off with it. When the Dangalatas came back again (she saw that) someone was running away with the gold. She pursued him. He (however) had magical powers and continued to run off with it.

The Dangalatas, chasing after him, was near to overtaking him. Now there was a big stone at the lower end of the Uyūm Das, and Bulchutōko turning round smote at the stone with his sword and cleft it in two. The Dangalatas saw this and said to herself:

---

7 *detsaǰ xu·* — the MS. has *detsas xu·*, but the infin. was given as *detsiyas* and it must be the *-ǰ* form of the verb.

10 *dreqalēr* — seems to be a lapse for *dumreqalēr*. The pron. infix in *d*ᵐ*-aḳqaltas* normally refers to the subject cp. p. 144 l. 8 note.

11 *ḃatas* — *ḃaf* is ordinarily used of a thin flat stone. In p. 206 l. 1 however, the Dangalatas calls it a *burn* i. e. "large stone" or "boulder".

1 *ku·riap aiyači* — only recorded in this passage. Glossed: "he will not let me off". She realised that he was stronger than she.

9 *očumutsulo du·n* — for the *-ulo* with *du·nas* cp. *mutortulo du·n*, p. 114 l. 7 note. *hin hin očume* — is probably equivalent merely to "one at a time".

11 *du·ralašo ja·nawərik* — "flying animals".

Gare·ltum Hɛray (or *Hərə·y*) — i. e. the "Gerelt Tribe".

These birds are said to be black and to have long necks and to fly and sit in lines. They must be passing migrants, perhaps some kind of cormorant.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

"He has cleft the boulder in two, he will not spare me." So saying she turned back from there.

Her name, they say, was Mëri Duwëni.

Bulchutōko came with the gold to Gerèlt. All the people saw it and they said: "While Bulchutōko has been procuring gold, what has been happening to us? Let us too go and get some." And they gathered together and set out for Gantsūper.

When they got there the Dangalatas was grinding gold. Imitating Bulchutōko, they too went to throw open the sluice, and they opened it. When the Dangalatas came out (she found that) some men had opened the sluice. Seizing them by their necks she took them one by one and twisting their necks flung them down the mill-race. The water carried them out by the escape channel; whereupon they became a flock of birds.

Their name is Gerèltum Hera. Up to the present day, when it is the time of ploughing at Gerèlt, they come out and they come and light on the cliffs or the strand at the edge of the river. They call them Gerèltum Hera.

It is said that Bulchutōko's grave is at Shiskīn in Ganish. There they have put up flags and there is still an enclosure.

6 *sɛ·at ɛtas i·nɛ* — the basal meaning of *sɛ·at ɛtas* seems to be 'to be the first to do a thing'.

554 In the present case the idea is that the function should be performed by a suitable member of the most original tribe in the country. The Diramiting claim to be the most ancient and the senior tribe in Hunza, and Puno's family was considered the most deserving of the appointment.

tsučai.i — he carries the bowl on his head.

9 *bopfau nɛ* — "having done the Bopfau" i. e. 'after the Bopfau is over'.

dyu.asuman — Static pe. + *an* of *d*·*u.asan* v. § 304. This form is x sg. agreeing with *šapik*. The *y* form which would be required by *čap* would be *dusuwum.ɛn*.

10 *dii.am* — is also appropriate to *šapik* x sg.

This meat and bread are given by the Mir and are called *šano* v. Vocab. s.v.

No. XIII.

The Story of Pūno and Shiri Bersi Baghertham.

There is a custom in Hunza from ancient times. In the month of Dalv on the fifteenth (day of the month) they carry out the Bopfau. There is a large wooden bowl (which has come down) from olden days. There is also one like it in Yasin. They say that these bowls have been in existence from the time of Alexander the Great.

Now when the Bopfau has to be performed, the man who has precedence among the Dirāmiting takes the bowl and carries it from Bāltit to Āltit. Again, when the Bopfau has been completed, he takes it and brings it to Bāltit.

In former times there was one, Pūno by name, the son of Gerib, and he took the bowl and carried it to Āltit for the Bopfau. The meat and the bread which were left over after the Bopfau he used to bring back in the bowl to Bāltit to his own home. Then when he had drunk wine and become intoxicated he used to present himself to the Tham. Returning to his home he used to say to his family: "There are bread and meat in the bowl. Handsel them." When (however) his wife and sons uncovered the bowl and looked there was nothing in it. They said to Pūno: "You are out of your

1 *nukoʳšen* — and *neršan* p. 208 l. 11 are p.pc.s active of *-aršaiyas*.

3 *tale denolo* — note the unusual singular with a numeral.

4 *o·minum*—the static pc. of *minas* with active meaning the *o·*- is the negative prefix, v. § 339. *Xarum Bat* — 'the Split', or 'Broken Stone'. *xarum* is the static pc. of *'-xərʌs*.

6 *han uri·ŋan* — the u- prefix here has an indefinite sense "a hand of theirs" i. e. 'a hand of someone'.

9 *gor jap aiyamaiyam* — glossed "I cannot stay with thee", but I do not know the exact significance of *jap*.

11 *Širi Barai.i Baγərtham* — so written down, but how many words the name consists of I do not know, nor whether the final *-tham* is the word *tham* 'ruler'.

14 *je apaiyamate* — static pc. of *bo* 1st sg. + *ate* v. § 391.
γun — is appropriate to the object *ta.očiŋ* (ypl.), but not to *ifaγo* (xsg.). The reverse is the case with *jo* on p. 212 l. 5.

16 *uri·rumə ha·lər* — "to the house of those who have died" v. § 379 c. It is equivalent to the English "to the house where someone has died" or "to houses where people have died".

539

senses. You have gone mad. You have got drunk and dropped the food somewhere.". Pūno was quite confounded. He hadn't dropped it. In the same way throughout the course of seven years no food (ever) remained in the bowl.

Then one year he returned with the bowl from the Bopfau without having drunk wine. On the road there was a stone of which the name was the Kharum Bat (the "Split Stone.") When he came to it a hand approached the bowl. Pūno promptly seized the hand. (The owner of it) tried to release it, but Pūno would not let it go. Then (the owner) said to him: "O Father, I cannot stay with you. Let me go." When Pūno looked (he saw that) there was a very handsome youth and that his stick was of copper, and that his leg-wrappers also were of copper.

Pūno asked: "What is your name?" "My name," he replied, "is Shīri Berai Baghertham." Pūno took his stick and leg-wrappers from him, and Shīri Berai Baghertham followed along after him.

In due course Pūno came to his house and he said to his wife: "Put these leg-wrappers and this stick of his in a box, and if he asks you for them in my absence, don't give them to him."

After this Shīri Berai Baghertham stayed there with them. (Once) he said to them: "Father and Mother, don't send me to a house where anyone has died, because there, if the wife has died, the husband casts his eye on the women who (have come) bringing food to offer condolences to him. And I will know it and will laugh and they will say: "He is laughing at us." If the husband has died the woman casts her eye on the men saying to herself: "Shall I marry that one? Shall I marry this one?" Therefore do not send me to the house of those people (who have had a death.")

From the time that Shīri Berai Baghertham came to Pūno's house they say that Pūno's flocks and grain became abundant. For about

---

16 *aiyawin* — negative impv. of *-ʌrʌs with 1st sg. object.

17 *ditsum* — the static participle with active meaning v. § 378 b.

The present tenses in this passage I have translated by the English future. The speaker, to make a hypothetical case vivid, expresses it as actually occurring.

18 *daγʌša ba* — The MS. has *da γʌša ba*, but the pres. base of γʌsa's is γʌsi'č-.

21 *dimtsum* — the MS. has *dimtsum* for which there is no grammatical parallel.

5 *jo* — see note on *ɛˈγun* p. 210 l. 14.
balda diˈmərčam — glossed: "I shall take his load from him". The literal meaning is probably: "I shall demand his load of him (to carry it for him)".

8 *diˈusin iγˈunumo* — both verbs are again determined by the ypl. *ta.očiŋ* understood as object.

14 *dyuˈasumAn* — vide note on p. 208 l. 9.
ɟi.amAn — 'what-has-been-eaten-by-me', 1st sg. static pc. of *ɟiˈAs*, 'to eat' (x sg. obj.) + *An*.
ɛšumɛ — pres. pc. of *i* + *-*AsAs*.

16 *XuˈwAtɛ* — I am not sure whether this is a nominative form, or whether it is *xuˈ* + *Atɛ*. In a rough sketch map drawn on a different occasion I have the same place apparently entered as *XuˈAtɛ*, but it may possibly be *XuˈAtɛ*. *XuˈAtɛ* might be a plural of *Xuˈ*.

21 *Həri Siŋ* — the family tree is *Həri Siŋ* son of *Muˈko* son of *Puˈno* son of *Gəriˈb*. *Həri Siŋ* was an old man in 1923.

twenty years Shīri Berai Baghertham remained in Pūno's house 53¼ but he did not become attached to it.

One day Pūno had gone for firewood and Shīri Berai Baghertham coming into the house said: "Mother, Mother." "Yes," said Pūno's wife. "Give me my leg-wrappers and stick. Father has not come back; he is late. I shall go to meet him and take his load from him." (Now) Pūno had charged his wife, saying, "Perhaps Shīri Berai Baghertham will ask for his leg-wrappers and stick. Don't give them to him." (But) losing her head she took them out of the box and gave them to him.

Putting on the leg-wrappers and taking his stick Shīri Berai Baghertham climbed up the mountain. Meanwhile Pūno came in at the door of the house bringing the wood. Shīri Berai Baghertham was not there, he had got up on to the mountain. He made off, saying: "Good-bye, Mother and Father." Pūno, shouting: "Heigh, son!" gave chase to him. Shīri Berai Baghertham said to him: "What is left over be your portion, what I have eaten be mine. You just stay where you are, Father." While he said this he ran on, and Pūno pursuing after him would not let him go. Getting further and further away Shīri Berai Baghertham, they say, crossed over the Khu. Pūno, turning back, came again to his home.

Then after Shīri Berai Baghertham had left Pūno's house, Pūno, they say, became indigent.

Pūno was of the Diramiting tribe. At the present day too one 53¾ of his descendants goes with the Bopfau bowl from Bāltīt to Āltīt. His name is Heri Sing. They make him carry the seed that is to be scattered at the Bopfau from the Tham's palace and bring him along in front of the Tham to the Mamutsa field.

That is all; The story is on this wise.

---

22 *pfau stas bo* — 'the seed that is to be thrown up', or 'scattered' by the Mir.
Tham yor ne . . . dišan — I am not sure of the meaning of this. *yor ne* may, I think, mean: 'forwards', 'ahead', 'in front' or 'putting him in front', 'making him go ahead' *Tham* may be accusative, or it may be genitive or general oblique (the *-e* being lost before the following *y*). It is said that they whiten the man's face on the occasion with flour.
Mamutsa — probably the gen. of a nom. *Mamuts*.

---

1 *zamana·tsum* — this unusual form of the word is due to the concentration of stress on the third syllable: an apparently arbitrary proceeding.

Kəramo Dərbəš — i. e. *Dərbəš*, son of *Kəramo*, is, as will appear, the present owner. He was still living in 1924 as an old man of the Diramiting. The *Mano Baγərtham*, mentioned below, l, 6, also belonged to the Diramiting.

4—5 *u.i·liki bam* — it is difficult to know how exactly to translate this. "Worship" probably implies too much, "pay consideration, or attention, to" is perhaps nearer the mark. In practice people put down food for the Boyo.

[82]

The word is also used of appeasing or placating ordinary human beings or of doing them honour, and seems to correspond very closely in use with the Shina *šilo·rki*.

6—7 *čərap ɛtasɛ ka tɛ·lɛ i·rimi* — I think it is meant that the moment he perpetrated the deed he fell dead on the spot.

No. XIV.

The Story of the Bōyo Juniper.

From ancient times there was a juniper tree in the garden of a man called Keramo Derbèsh. They called it the Bōyo Juniper.

They say that from of old people used to relate that animals like puppies came out under the tree. The people of Hunza used to do worship to them. They called them Bōyo.

They say that a man, by name Mano Baghertham, cut the juniper down. Having cut it down they say he died on the spot. The juniper grew up again from its stump. There were two stems (growing) in a fork. A man cut down one of the stems, and he, they say, became paralysed and an idiot. A man, called Mamad Shah, cut down the remaining stem, after which he fell down from a cliff.

When these men had perished in this fashion the people took fright and left one stem (growing). Last year and the year before, that stem was (still) there. Then a man called Yaqin got permission from the owner and cut it down and brought it home to his house. After doing so, at night he saw some women in a dream.

7—9 *dwsilom, st'ʌm, imʌnʌm* — are all unnecessary pluperfects.

8 *avlto jʌkər šərko bim* — *šər* is the ordinary word for a branch, but here it refers to stems which have sprung up from the root. *avlto jʌkər* is used as an adjective "forked" but here the meaning must be, "two stems (forming a) fork".

9 *hʌn . . . ivsi* — the combination of *hʌn* and *ivsi* both qualifying *šər* is interesting.

11 *hʌn dʌmuvʌn* — this 3rd. bough has not been mentioned, but must have been there, as the juniper is extremely slowgrowing.

12 *tʌmini yər dən* — i. e. 1923 and 1922.

Yʌqin — was a mulla still living in 1924.

00C guśiŋentsik uyˈɛˑtsimi. Da uˈɛˑ: "Mi gal bɛˑsɛ dɛli ba?" nusen ɔr ɛtuman. Er ɛtasɔr iˑsɛ damo damanɔr, Kɔramo Dɔrbeš senasan baī.i, iˑnɔr yuˑmi.

Faqat, čaγa dakuˑrum bila.

4: Lorimer L-3 (1929-4: 1934-5) 1935 AV7 Burusho AV7

539

They said to him: "Why have you cut down our juniper tree?" and frightened him. Upon this he gave the bough back to the (original) owner who is a man called Keramo Derbèsh.

The wood of the Bōyo Juniper is still in his house. Fearing [824] (what might happen) they do not burn it.

This Juniper was in Dirāmiting territory.

That is all the story there is.

8 *čup mɑnumər* — "on (the noise) becoming silent", or, perhaps, "on silence supervening".

No. XV

The Story of Aiyèsho Malik.

539k

In former times, they say, there was a very powerful Tham, called Aiyèsho Malik.

He fell ill, they say, and on this occurring he said to his elders: "I am now going to die. When I am dead put my dagger also with me in the grave, for I am going to wrestle in the grave with Nakir and Munkir. When you have buried me and put the covering stones (over the grave, then go and) sit down at a distance and listen. When I and they (lit. 'he') come to grips there will be a noise in the grave. On its ceasing remove the grave-stones and look, and if my dagger is sticking up in the ground, then I have had the best of it; but if the dagger has fallen down and they have turned me over and I am lying on my back, then they have had the best of it. So you will know (how it is)."

They say that he died some days later and that they then buried him. They put the stones over (the grave) but did not fill in the earth and then they sat down (keeping watch) over it. Right enough, a noise arose in the grave. When it ceased and they removed the stones, the dagger was (there) plunged in the ground, and Aiyèsho

---

8 *fʌteŋ* — is *pfʌtʌŋ*.
gʌtum — Ms. has *gʌtuŋ*.
9 *yʌtɛ fər na* — "turning me up" i. e. face up.
10 *senʌm, seibə·n* — i. e. 'they say that he had said' (what precedes).
12 *tik akim* — static pc. of *giyʌs* with active meaning and negative prefix.
14 *yortsu bilum* — as originally written, would be the plup.

000 Malɪk ɪm'u·škɛnə bam se.iba·n. Ho hera·n nu·man mazərɛtɛ batɛŋ nyu·ər yatɛ tik niki·n tsil nuti·n du·man se.iba·n.

3 *da ki·rumanɛ* — v. § 180.

6 *u·tis galji bim* — i. e. each of them used to sustain the fracture of a leg. *u·tis* is in order, but *galji bim* (x sg. or pl.) seems to be a mistake for *galji·lum* (y sg.) as in l. 5. Possibly *bim* is x pl. under the influence of the pl. *etsɛ*.

8 *tɛ·ruman* — "so much (as formerly)", or, perhaps, absolutely "so much (as all that)". *dɛ·šam* — the enclosure round an important grave is called a *panji*. Cp. p. 206 l. 16.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

539k

Malik was lying on his face. Astounded, they replaced the stones over the grave, filled in the earth on top, and poured water over it, and then returned (to their homes).

Some people say that Aiyèsho Malik was possessed of magical powers. After his death they say that if anyone mounted on his grave, there and then his leg or arm broke, and if a goat or a cow got on to it, its leg broke.

Up to the present day Aiyèsho Malik's grave is in the field of a man called Dōlo, but no one now pays much attention to it. The grave is enclosed round about.

That is all the story there is.

---

1 *bim* — Chil Gazi was of the order of "Jinns", demons etc. and so falls grammatically into the category x.

Xaibər — for the Nominative v. § 59 V.

3 *ta·ŋičiŋ* — cp. the plural *ha·kičaŋ* again on p. 224 l. 7. Apparently there is a collection of buildings (or caves?).

ta·ŋ and *tɛ·ŋuš* are both used of a King's or Tham's residence. Neither "palace" nor "fortress" is quite the appropriate word. "Residence" is not sufficiently royal.

4 *du·stsak* — y pl. "things" in general v. § 25. A note says that there is a cave in the cliff in which there is said to be treasure. Also that there are said to be big rooms, but people are afraid to enter and explore them even when roped together.

No. XVI.

The Story of Chil Gazi.

They say that in former times Chil Gazi lived at Khaiber. At the present day his dwelling place is (there) in the cliff at Bārè Dan in Khaiber. They call it Chil Gazi's palace.

There is an old-time story that there were many articles of property in Chil Gazi's palace. People were afraid to go to it.

Then they say that Chil Gazi set out from Bārè Dan to go to the Gilgit Yachèni. He misconducted himself, they say, with the Gilgit Yachèni. Some say she was his wife.

Chil Gazi, coming down through Hunza, and coming to Tsil Bish, had stayed the night there. While he was asleep some wolves came and ate seven cubits (off) his stick and he had not been aware of it. Arriving at Gilgit Chil Gazi proceeded to Kerga to the Yachèni and slept with her.

She asked him: "What has happened to you today? Your stick has become short. What have you done to this stick of yours?"

---

5 *ɐpʌči.ər* — here means "to it (the palace)" and not the more usual "to him", v. § 79. The narrator explained that they were afraid to go to Ch. G.'s palace after his death.

7 *tis* — 'error', 'fault' "there was an indiscretion on the part of Ch. G. with the Yachini".

10 *tʌle kʌš* . . . . — probably rather *qʌš*. One would naturally translate this: "had eaten his seven-cubit stick", but it appears they only ate a bit off the end.

ifʌγo — this appears to be a euphemism. In place of **-fʌγo* the Vernac. MS. has throughout **-šʌf*, 'penis'.

11 *lel 'ɐmʌnʌm* — it looks as if *lel* were here used with an active meaning "knowing", "aware", but perhaps *a* + *imʌnʌm* is impersonal: "it had not become known to him".

000 kε talε kaš api. Bεsanε čərap 'e·ti bi. D'ε·γurusumo: "U·ŋ amulo gu·čạ bam?" Čıl Gazi.ε sεnimi: "Tsil Bišulo basa mana baiyam. Tε·lε kikış̌ ju.an a·ti bim," mosimi, se.iba·n.

10 Faqat. Čaγa daku·rum bila.

---

1 *api* — "non est", is constantly used in the sense of "it is missing", "wanting", "absent", "not to be seen" etc. cp. *api* l. 7 below.

3 *kikrş̌ ju.an a·ti bim*:

1. *kikrş̌* — means "tickling of the soles of the feet"; *kikrt* tickling of the body. This differentiation seems strange, but I was on two separate occasions informed of its existence.
2. *ju.an* — must be taken as meaning: "something like . . .", "a sort of . . .",
3. *a·ti bim* — "had affected me" i. e. "I had felt . . ." This idiomatic use of *°-ATAS* has been noticed in earlier texts v. § 261. II. Is *kikrş̌* y in spite of the x verb? Vide note *post* § 25.

1 [Errata: for mu'to read mut'o, cf. p.419, cat.116 -- Analyst]

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV

When he looked (he saw that) seven cubits of it were missing. Something had cut (a piece off) it. The Yachèni asked him: "Where did you sleep?" Chil Gazi replied: "I spent the night at Tsil Bish. There I felt a sort of tickling of my feet."

After this they say he returned from there to Khaiber. Some years later, by God's will, Chil Gazi died at Bärè Dan in Khaiber. His grave was in the Bärè Dan nullah. Formerly people used to see the grave, now it has fallen into ruins, they say, and disappeared. His living quarters, however, are still there in the cliff.

That is all there is to tell.

Concerning the Diratsīl Bat.

537x

There is a place in Ūlter called Diratsīl. There is a flat stone there. From olden times they relate that when any man or woman dies secretly-practising Bīlases carry off the body and cut it up into bits on the Diratsīl Bat and, apportioning it among them, devour it.

A certain man, Mahmad Shāh by name, used to say (as follows): "I (used to) divide up the meat for the Bīlases and I was their chopping block (*or*, servitor?). I used to live in the Berber cave and when anyone died I became aware of it. Then the Bīlases used to come, bringing the dead person's body, and carry me off with them."

It will be 10 or 15 years since this Mahmad Shah died. Everyone knows of him, and the Diratsīl Bat too is known to all. It is in the grazing ground. It is greasy. They call it the "Bīlases' Chopping Stone."

That is all: Such is the Story.

The Story of the Chaprōt Bear.

5394

In former times, they say, a bear used to come to the houses in Chaprōt and violate the women. The men of the place were afraid and would not go to any house into which the bear had gone.

One day when a certain man came home the bear was lying in his house with his wife. The man's pride was roused, but there was nothing he could do. He thought to himself: "I'll go up on to the roof and give the bear a fright." So saying he got up on to the roof and bending down over the smoke-hole he shouted out: "O wife, has that bear come here? Is it there? (If it were) I would smite it on the head with this penis of mine and split it in two."

The bear, listening, heard the man say an amazing thing, and it went out of the house thinking to itself: "I have heard of slaying people with gun and sword, but this is a strange thing that this man is saying," and it ran off in a fright.

Running on and on it was coming to a certain place when an old woman met it. She asked the bear: "O bear, what's happened to you? Why are you running away?" "O Sweet Grannie," replied the bear, "get out of the way. I have heard an amazing thing to-day. I was lying in a man's house with his wife and he came on to the roof and shouted out: 'Is the bear in my house?

---

late *pe śśu* as "should the bear be there". It must be taken as a simple question, failing actual proof to the contrary.

1 ga . . . bi.a ni — I cannot explain the *bi.a ni* unless it be an inversion of *ni bi.a* 'has it gone?' but I know of no other such inversion. It is probably a simple error.

4 *ju·an ne deamay* — the two expressions duplicate each other and, both being transitive, an object has to be supplied.

6 *ŝu.a ke* — This phrase occurs only thrice in the texts. From the contexts one would take it to mean "so much so that . . .", but here it is glossed: '*anqarib*, 'almost, approximately'.

7 *ru ju·čumz* — *ru* was explained as the "joining of a wound", "scar"; 'the mending of the wound has come to here'.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

(If it were) I would smite it with my penis on the centre line of the head and cleave it in two.' I had never heard such a thing said before, and so I am running away."

The old woman, adapting (her words) to what the man had said to the bear, said to it: "Welladay! My life be your sacrifice! Run for your life! A man had struck me too with his penis and cleft me in two. I practically became an old woman. The healing process, (proceeding) from the crown of my head, has reached here," and raising her skirt she showed the bear her vulva. When the bear looked and saw that it was cleft, it was frightened and after that, they say, it did not come again to the people's houses.

That is all. This is how they tell the story.

The Laconic Man and Wife.

539k

In early times a man and his wife had learnt to converse without a lot of questions and answers.

At home one day they had put on a (goat's) head to cook. It was nearly cooked when a party of guests came to the house. On their arrival the husband said to his wife:

"Speed the guests;
I have told you;
You listen;
Look at your children."

When he had said this she [had] set out the four feet along with the head. To the guests she gave the feet; to her husband she gave the tongue; to her children she gave the eyes; and she kept the ears for herself.

The guests departed marvelling.

The man's name was Shamshēr Bèg, son of Puyēs, and the woman's name was Ghuno.

That is all. The story is told thus.

The Man Who Supped with the Pfūts.

539*

A Story of Former Times.

One day a goat belonging to a man got lost. (As he went on) looking and looking for it night came down on him. He was returning to his home without having seen it and as he came along there was a light in the Būri Būn and there were Pfūts dancing. He also went in, they say, and mixed with them, and danced, and then sat down among them.

After dancing, the Pfūts brought food for a wedding party and at the end when they had eaten they brought a skin. Then they demanded from all the bones of their shares of the meat, and collected them. There was one rib short. That rib the man, to whom they had given it as his share, had hidden from them. Then they made a rib of wood and threw the bones into the skin, and on shaking it up the goat came to life. When the man looked he saw that it was his own goat. The Pfūts drove it out and then they went off as a wedding party to the house of the Sughūralo Pfūt.

When the man, having departed thence, came to his home that goat of his was there at the door. On the morrow, when he slaughtered it, one rib was missing and in its place was a wooden rib.

Besides this, the man had brought a dance tune from the Pfūts [533] house. They still call that tune the "Pfūt's Tune" and they play it even at the present day.

---

1 *ɪskˈiˑkum* — here obviously means "a set of three", "a triplet", but the same word used of shoes etc. means "three sets" i. e. "three pairs". v. § 197.

These three tribes are said to be the descendants of people left by Alexander the Great when he was on his way down from China.

4 *ṣečam* — cp. *nuṣe* and *ṣeman* in line 6. All these forms are from *ṣeˑas* 'to eat' (a y obj.) which is frequently used in some such sense as "to benefit by", "to enjoy possession of", "to use for oneself".

4. Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

No. XXI.

The Three Original Tribes of Hunza.

539*
173

There were three tribes settled in Hunza — the Tapkients at Bāltīt; the Hamachātīng at Ganēsh and the Usèngumuts at Āltīt.

In those days there were no Thams. These (tribes?) collected the taxes, and dividing them amongst themselves, appropriated them.

The Thams arose in Hunza from among the descendants of Gīrkis and took to themselves the sovereignty and the taxes.

(Later) Aèsh Maiyūrè Tham massacred the Tapkients, Khisrau massacred the Hamachātīng, and Shabōs massacred the Usènguts.

No. XXII.

The Fate of the Tapkients and the Origin of the Diramiting.

Awal Hunzo Baltitulo Tapki.ents aba·d bam, se.iba·n. A·ltitulo Ɔsɛ·ŋuts aba·d bam, Ganišulo Hamača·tiŋ aba·d bam. Dira·mitiŋ i·tɛ zama·na.ulo Baltit kam huru·šam. ---

2 *Dira·mitiŋ* — These are here represented as existing before the events which in this account professedly gave rise to them. They were possibly one family or clan of the original Tapkients.

6 *zizi ba·ba* — These terms for "Mother" and "Father" are only used in Royal families. For commoners to use them is insolent arrogance. They are said to have come down from the time of Alexander the Great. Here they should be reversed to suit *u· u·mi.ər*.

10 *Usɛ·muts* — the *m* is probably only the common variant for *ŋ*. The name also occurs with the initial H-.

nuku·škin — p.pc. act. of *gušuginas*, v. vocab. s. v.

11 *doγa·ačan* — The form is puzzling. It is glossed as meaning "separating out" from the verb *doγa·atas*: *doγa·aš-* which appears to mean 'to separate out' (intrs.) 'to be chosen, selected'.

No. XXII.

The Fate of the Tapkients and the Origin of the Dīramiting.

Originally, they say, the Tapkients were settled at Bāltīt in Hunza, the Usènguts at Altīt and the Hamachāting at Ganish. At that time there were few Diramiting living at Bāltīt. The nullah in behind Hasanābād was at that time very populous and warm. There was no glacier. Thence inwards as far as Shishper there was habitation, and the Tapkients lived there. Living there they became very arrogant. They used to call their fathers and mothers "Bāba" and "Zizi."

The Tapkients had fostered a gushpūr called Aiyèsho Maiyūri Tham. Now on their displaying arrogance this Aiyēsho Maiyūri, who had become Tham of Hunza, took counsel with the Hamachāting and the Usènguts and the best men of Hunza, and decided to slaughter them. (The Tham) having arrived at this decision, selected men armed themselves and took up their lodging (secretly) in Aliābād.

The sense probably is "men having been chosen (for the job) took up their post in Aliabad". But for the p.pc. one would expect the form *doγaʿatan*. Perhaps there is an alternative Infin. *doγaʿčaiʿas*. Cp. *hurutas* || *huručaiyas*.

The text gives as an alternative *doʿsqat* p.pc. active of the corresponding transitive form from *dᵊ-asqatas*. This would give: "A. M. T. having chosen men, they took up their post at Aliabad".

I at first took the meaning to be that the men were scattered about through Aliabad, but I now think that the separation is that of selection.

12 *huručaman* — glossed "sat in secrecy", i. e. the whole scheme was kept secret.

080

1 *Tapkiˈɛntsər dutsasər* } *qauwər = qau ɛčər*: "he sent a man to call (to) the T. and to bring them".
2 *qauwər eˈrimi*

hir sis . . . nusɛn — The *nusɛn* must be regarded as being dependent on *eˈrimi* 'he sent out a man saying to him . . . .'

It would have been simpler if the clause had been made independent by using *eˈsimi* instead of *nusɛn*.

3 *jatpat* — *jatbaˈrtš* is given as an alternative. *jat* is 'old' of man or beast. The second element *-pat*, *-phat* is found also in *jotphat* 'young people'. In my MS. *o* is entered over the first *a* as though an alternative pronunciation, which it cannot well be. Perhaps both words were used and were telescoped by me in ignorance.

jatpat baman, jotpat baman, da huruˈtam gušiŋɛnts kɛ . . 'the old folk, the young folk and the pregnant women'.

This would be nearer what the context requires, *viz* the massacre of all the tribespeople remaining behind after the ablebodied men had obeyed the Tham's summons.

4 *huruˈtam* — should probably be *huruˈtum*.

8 *uyoˈnɛ* — why the *-ɛ*?

tačap bɛl — for what is known about these two words v. Vocab. s. vv.

4: Lorimer L-3 (1929-4: 1934-5) 1935 AV7 Burusho AV7

On the pretence of (holding) a fête Maiyūri sent a man to the Tapkients to call and fetch them in. He instructed him: "Say: 'the Tham summons all the male persons there are,' and bring them here." Then secretly he despatched a party of men to Shīshper with instructions to kill all the old people and pregnant women.

When the man sent by Maiyūri Tham came to the Tapkients and said: "The Tham summons you," all the able-bodied men mounted their horses and came along. When they arrived at the Būrum Mōs at Aliābād (Maiyūri Tham's men fell on them) without warning and slew them. They exterminated all the males (of the Tapkients). Nor did they bury their corpses, but strewed them over the Būrum Mōs at Aliābād and left them there.

(At that time Aliābād was not inhabited, but was waste land. Some years later, in the time of Shah Silum Khan, he brought a water channel from Bāltīt and made them occupy the place).

Then without warning it rained and a mud flood came down and overlaid the dead bodies of the Tapkients. And so up to the present day they call it "On the White Mud-Flood." (Būrum Mōsatè). (That is) the place beside the Government Fort up to the Dispensary they call "Būrum Mōsatè."

After that, they say, Maiyūri Tham lived in peace.

After the slaying of the Tapkients (when) they cultivated corn in Hunza, the corn came up with black ears. For some years they remained at a loss (what to do) and a great famine arose. Then

13 *gotsil* — This word is x though the *-tsil* is surely the word for 'water' which is y. The category of the compound is fixed without regard to the category of its components according to the nature of the actual thing denoted. A "water channel" is not necessarily of the same category as "water". V. § 25.

ivno ravati (*rai* + *ate*) — 'of its own accord, spontaneously'. One must suppose it here to mean 'suddenly, unexpectedly, without warning'.

14 *Burum Mosate* — One would expect the simple *Burum Mos*.

17 *korki*(*čiq*) *ashman* — *korki* appears in the first instance to mean a 'plough', *korki ates* 'to plough', but the meaning is extended to cover 'to plough and sow', 'to sow' and generally 'to cultivate'. *korkiciq* is also probably used in the sense of 'crops'. *ke* is to be supplied after *ashman*.

18 *matele ču* — *matel* is explained as "black grains", *ču* is an 'ear of corn'. The disease referred to is perhaps some kind of "smut".

1 *uguˈman* — from **-guyas* explained by Hindustani *ḍa·la* 'they put them on (to work)'. Elsewhere we have **-waši.as* used to express the same idea.

2 *wa* — an exclamation to call attention.

3 *ɛ·gi.ɛn* — from **-agiyas* 'to make someone throw' (i. e. 'sow') but what part of the verb is not clear. Probably it is the 2nd. plural of the short form of the pret., in which case *kɛ* must be supplied after it to make it conditional: 'If you made (i. e. make) him sow the seed Hunza will become fruitful'.

5 *aula·dan maimi.ɛ* — The MS. has *maimi.ɛn* but the *-n* is probably due to liaison with *nusɛn* which is a frequent source of spurious final n's. *maimi.ɛ* should, I think, be *maimi.a*. The *-a*. (Interrog.?) indicating a sort of indirect question suggested by *hazaʳ*.

In line 10 below we have *hazaʳ . . . maimi.a barenin*; but the *-a* there is probably due to dependence on *barenin*: '. . . see (whether) . . . .'

6 *Tapki.entsɛ wsan* — 'a wife of the Tapkients' (*u* + **-us*).

7 *Pfɛkərum oi* — 'a daughter of Pfeker' (*u* + **-a.i*). A woman is described as "the daughter" of her father's tribe or locality, and "the wife" of her husband's tribe.

8—9 *Tapki.ents . . . yər nɛ* — This clause probably goes with *ni bom*, and not with *tai.aʳ bom*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

they made the Bītans dance and then the Bītans sang: "Ho! If you get from somewhere a descendant of the Tapkients and make him sow the seed, Hunza will be fruitful again. If not, year by year this smut will continue to appear." Thus, it is said, they sang.

On this the people said: "Perhaps somewhere there may be some descendant(s) of them," and making enquiry they sought for them. There was a childless wife, they say, of the Tapkients, she said to them: "There was a woman with child, a girl of Pfèker. Some days it would be before the slaying of the Tapkients, she had gone to her father's house. She was approaching child birth; her time had come. See whether perhaps a son may have been born to her."

When the woman had said this they sent men to Pfèker. When they got there the woman has been brought to bed and a boy had been born. She had given him the name of Dīram Chūram. They demanded him from his mother's people. The latter refused to give him to them. They said: "You will take away this grandson of ours too and will slay him. You have destroyed his father and uncles and you will murder him too." So saying they did not surrender him to them.

Eventually, having taken many oaths and given many undertakings to them, the Hunza men brought back Chūram, who was in swaddling bands, and along with him his mother. Having done so they put wheat seed into the child's hand, and gave it a knock (so that it was scattered). Then that year the disease of the grain

9 *moʀamots* — i. e. *moʀamots* v. *-ʀamots.

ǵiʀ bim — apparently from *ǵiyuiʀs* not *ǵiyʀs*, probably 'her period of pregnancy had elapsed, come to an end'.

10 *mʀnumaiya* — 3rd. sg. hm. perf. + -a.

15 *yurtaʀuʀ* — "his fathers". The paternal uncles reckon almost as fathers, or at any rate used to do so, cp. p. 284 l. 18.

tʀʀq — cannot well be *trʀq*, *trʀk* v. Vocab. Is it a mishearing for *tačʀp* (*tačʀp?*) cp. p. 240 l. 8.?

18 *neogyin* — p.pc. act. of *-ʀǵiyʀs* with simple trans. sense "putting, pouring". The pron. infix probably refers to the child. 'Putting seed on his hand for him . . .' v. § 245.

20 *ʀwa ki* — here glossed "so much so", "to the extent that". cp. p. 230 l. 6 note.

2 *nɛˑətan* — Causative v. § 240.

7 *buč fat ɛtin* — for the same idea cp. p. 262 l. 8.

12 *biranč̌ rač̌ no* — *rač̌* *-*atas* here used as a transitive compound verb. The use of *no* indicates that she was keeping guard over the mulberry fruit (x pl.), not over the mulberry trees (y pl.), as the latter would require *ne*.

20 *amuˑitsuman* — 3rd. pl. pret. neg. of *mu* + *-*itsas*, *-*itsas* 'to see her'.

21 *tsilaŋɛ mumanumuˑa* — The *-a* seems to denote uncertainty or assumption. She has probably been drowned but it is not actually known.

The idiom *tsilaŋɛ* *-*manas* is only recorded here. Its exact force is not known. The passage is explained as "she will have fallen into the water", "she will have been drowned". V. Vocab. s. v. *tsil*.

mutsiˑɛtɛ — v. Vocabulary s. vv. *-*tsi* and *iskikuts*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

became less. The following year Chūram had grown up a little, to this extent that he began to go about creeping on all fours, and when they put the seed in his hand he (waved his hand about and) scattered it. Then making him touch the seed and lead the way, they sowed (their fields). After two or three years he was a sturdy child and sowed the seed himself. After that no more disease appeared.

(In course of time) Dīram Chūram grew to be a youth on the verge of puberty. Upon this Aiyesho Maiyūri Tham issued orders saying: "Let Dīram Chūram go free about every village like a he-goat. If he enters any one's house do not kill him." And he assembled the people and laid injunctions on them with the object of obtaining progeny of Chūram from all of them.

One day Dīram Chūram set out in the direction of Ganish. As he went along on his way (he came to) a place there is called Soghūralè and there a very pretty girl was keeping watch over the mulberries. She was a daughter of the Hamachāting and was unmarried. Dīram Chūram promptly fell in love with the girl, and without letting her father and mother know he took her up on his shoulders and carried her off to Bāltīt. In Bāltīt too he let no one know. "For," thought he, "the Hamachāting will hear of it;" and the Hamachāting were very malignant people. So, being afraid, he carried her off to a cave there was in the cliff above and settled her there. Her name was Bulūki.

Down below the Hamachāting kept looking for Bulūki. For some days they searched for her. They did not see her anywhere. Nowhere did they find her. Then they said: "She must have got drowned somewhere" and they lighted the three-day lamps for her.

Up above in the cave Chūram and Bulūki dwelt in peace. After some years Bulūki became with child, and she was delivered and a son was born to her. They gave him the name of Dīram Daltas. Again after two years another son was born and they called him

1 *Diram Daltas* — This and the three following names are kept in currency by the Wazir's family, but for ordinary use they employ aliases. They are descended from *Daltas Pfuno*.

The narrator said that in fact there wasn't a fifth son, hence there was no *Dašaman Xurdik*. Why he admitted him to the story I do not know.

6 *Buluki ΓaŠ* — γaŠ is said to mean 'track', 'path'.

7 *bəru hərki.ɛ ken* — 'the time of sowing (Pers. *kišt*) buckwheat', the seventh of the month of *Asad*.

13 *u·imo bušai.ulo* — I have taken this with what follows, but it may go with *du·tsun*.

14 *bapo·tsəru·ɛ* — *bə·bo* or *bəpo* is 'mother's father' but, like *bə·ba* and *zizi* is used only in the Ruling Family. It is insolence for commoners to use it among themselves, cp. p. 238 l. 6 note. The plur. denotes the father and his brothers. Cp. p. 242 l. 15 note.

The literal translation of what follows is doubtful.

15 *gasa·nts* — is the plural of *gasanč*.

![[Errata: for NAN'ETSIRU'E read NANETSIRU'E. Cf. F.Y.19, CAT.116 -- Analyst]

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

Dīram Maltash. Again two years later another was born and they called him Dīram Haider Ali. Another was born and they called him Dīram Pfūno, and yet another whom they called Dashaman Khurdik. So five sons were born to them. Until the five sons had been born Bulūki and her children remained up in the Bulūki Ghash cave.

The sons grew up into young men. Then (one year) the time for sowing the buckwheat came round and Chūram and Bulūki said to their two eldest sons: "Sons, our relations' oxen are loose, grazing in Ulter. Go and bring them here." The sons went off to fetch the oxen. There were seven yoke of oxen in Ulter and they drove them along and brought them in. In their land there was a field called Būl Mal ("Spring Field.") They were ploughing it for the buckwheat sowing. Chūram had not come (with them).

Now Bulūki had counselled her sons saying: "Our relations are a bad lot. Perhaps they will come and do you hurt. As you drive the oxen keep saying: 'May I be a sacrifice for the ox of my mother's father and his brothers, may I be a sacrifice for the hawks of my mother's brethren! I go round you, oxen!' Keep repeating these words as you plough. If they come and question you, say to them: 'We are your sister's sons. We are the sons of Bulūki. Our father is Dīram Chūram.'" Thus did Bulūki counsel her sons.

Then they took away the oxen and were ploughing with them in the field. That day the Hamachāting too had sent their sons from Ganish to Ulter to fetch the oxen. When they got there the seven yoke of oxen were not to be seen. When they examined their tracks (they saw that) they went downwards. They came along, following the trail downhill. There were the tracks of the oxen outside (the nullah) on the Būa Gan ("Cow Road"). The

15 *taleyam ga kav* — glossed: Hindustani: *lo, abhi kam phirta hail*, "Take, now I go round you, ox".

Ga is apparently taken as being the singular of *gaiin* v. Vocab. cp. also *korpa* s. v. "Circulating round" contains some notion of respect, possibly of protection. The same idea is presented also in Khowar by ґаґаwm. 'I go round' which is equivalent in sense to *taleyam*.

1 *ho·lɛ* — probably means "outside the nullah". The ruins referred to are on a spur which forms one side of the entrance to the nullah.

6 *u.i·likiɛmɛ* — means, "propitiating", "appeasing", "doing honour to". It is here glossed "praising (their oxen)".

nudılin taq o·čan — or *taq ne doljen*.

8 *doγərus do·ljen* — these words logically should follow oγərša·n l. 9.

nimɛtsin — from *-atsi.ar.

10 *pərčat* — I understood to mean "the outer edge of a plateau or terrace". The field was no doubt of the terraced variety, but coming down hill one would not have expected that they would approach it by the outer edge.

How the word stands grammatically in the sentence is obscure.

13 *myu·tsɛ* — *mi* + *-ar + tsɛ* — v. § 72. III.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

men too coming out by the Bũa Gan, looked from the Sherai.ing, and saw that some people were ploughing with the oxen down below in the Bul Mal.

As soon as they saw them they rushed down full of anger. Coming to the Herśahũng they listened and heard them saying: "May I be a sacrifice for the oxen of my mother's father and his brothers! May I be a sacrifice for the hawks of my mother's brethren!", as they ploughed. When they heard them saying this and doing honour to their oxen as they ploughed, they said: "Let some of us go and beat these people and smash them up." But one of them said: "No, brothers, wait a little. Let us first ask who they are who oppress us, the Hamachãting, by bringing our oxen from Ulter and then do us honour while ploughing with them."

When he had said this they came out over the edge into the field. On their appearing Chũram's sons left the oxen and said to them: "Salãm, Uncles." The sons of the Hamachãting said: "Who are you? Why have you brought these oxen here?" "We are the sons of Bulũki," said Dtram Chũram's sons, "and our father's name is Dtram Chũram."

"Where are they?"

"They are in the cave up in the cliff."

"What are they doing there? Why don't they live (down) here?"

"From fear of you they have taken up their quarters there."

After this the Hamachãting went up (to the cave) and when they came to it both Bulũki and Chũram were there. The Hamachãting were delighted and they took Chũram and Bulũki and returning (home) they gave them the seven yoke of oxen.

Then taking Chũram and Bulũki and their sisters's sons (with them) they proceeded to Ganish. And they celebrated a fresh marriage and arranged a dowry and gave Bulũki to Chũram.

There are Diramating in Bãltit now, descended from that Chũram.

That is all. Thus do they tell the story of Chũram.

[Errata: should ... them, and then let us best. cf. p419 -- Analyst.]

15 *be* — i. e. "No, this won't do".

No. XXIII.

Khūru and Khamer.

<394

They say that in former times there were in Bāltit two brothers called Khūru and Khamer. Khūru had one son and Khamer had seven sons.

Khūru and Khamer quarrelled and could not come to terms, (so) they divided up their land. Khamer had a large family of males, and he intimidated Khūru, who had no family (to back him), and took the bigger share of the land for himself.

Khūru said to Khamer: "Brother, you have taken all the land for yourself and given me too little. Let us divide up the land equally." "Not at all," said Khamer, "the fact is you have got too much. If you don't believe me let us take oath on it." Khūru agreed to taking oath and said to Khamer: "Brother, the Sahāla Bō.in and the Hālaza Bō.in are very powerful. They are quick to wrath." "If we swear by them," (said Khamer,) "they will (afterwards) work us evil. Let us go to the Bērishalè Ghūku and swear on the water there." Khūru agreed and they went off. Proceeding to the ravine they took oath on the water and returned again.

Some time later they again quarrelled and Khūru said to Khamer: "No, let us divide the land afresh." "No," said Khamer, "we won't divide it. Come along and let us demand the opinion of the land. It will tell us which of us has too much."

---

18 ḥeṛ *eṛan* — ḥeṛ *°-ṛan* (Causative) is explained as "enquiring from someone under pressure" i. e. I suppose, "to force an answer out of someone". The narrator said they would beat the ground to make it give the answer.

1 niru, niru — etc. five consecutive participles must be approaching a record even for Burushaski.

ir iri yarr ctum maler — cp. § 377 d. Several other examples will be noted.

3–4 doyarusumar — 'they enquired', but it was Xamar who actually asked the question.

5 ir yar ctam — ctam is the plup. One would rather expect the static pr., yar' ctam ir.

12 aru ctimi — The subject must either be "the valve" or "his son" aru is explained as hru.

16 eirmi — negative prefix er + hrmi, from hran.

17 horlgut nirar — cp. p. 194 l. 11 note.

18 alam gai.i baru — a note says they are given goats for their service. Some went with the Gilgit forces to Chitral as far as *Lowpar* (in 1919?)

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

Khūru agreed to this. At night Khamer taking one of his sons with him went and dug (a hole) in the field, and after giving him instructions he buried his son there and went home. 539A

Then he took Khūru with him and they went to the field in which his son was buried. On arriving there they put their question (and Khamer said:) "O land, look and see whether I have got the larger share or Khūru." Khamer's son whom he had buried answered from below the ground: "No, Khūru has got too much." On this Khūru, being convinced, returned home. "For," said he, "the land said so too."

When Khūru had gone home, Khamer went off to the field to extract his son. He went to the place where he had been buried and opened it up. His son was not there. Then he called him by name, but he was not there. On ahead there came a call "Hallo!" He went forward and dug, but his son wasn't there. Again he called, and on ahead (the voice) called "Hallo!" Going on in this way it made him dig all through the field, but nowhere did he find his son.

After that he returned to his home. At home there were his six sons. Both they and Khamer, it is said, died and Khamer's land was left heirless. Khūru did not make use of it. It is said they brought in a man named Datu Sīng and settled him on that land. In Hunza when it is necessary to go anywhere to fight, the descendants of Datu Sīng carry the standard. [539]

In Bāltit there are at the present day the Khūrukuts descended from Khūru, and on Khamer's land there are the Datu Singkuts.

There is also the following story about Khamer's descendants. 539A There is an animal called the marmot. There are none in Hunza, 225 but they are found in Misgār, above the Khān Wāli Fort, at Murkush. 173

---

22 *Misgar* — the intention is probably: "In the Misgar Valley, above the Khan Wali Fort, at Murkush".

23 The Miṭṭaka and the Killk are passes above Murkush, leading over to the Tagdumbash Pamir.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

bi.ɛn. Da i·tsɛ Kašmi·rɛ hʌγučo Tra·gbal xa· mai.i bi.ɛn. I·nɛ Xāmərɛ i· ti·kya·rɛ ɛtumtsum i·nɛ i· ai.inʌq i·lt'ʌlanʌm seiba·n.

Čʌγʌ qʌdi·m zama·na·tsum daki·latɛ ɛča·n.

1 hʌγučo — the *Burzil*, *Kamari* and *Tragbal* Passes are probably meant.

2 ai.inʌq — Whether all existing marmots are derived from *Xamər's* son, or whether he joined the already existing race of marmots, was, unfortunately for science, not made clear.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

---

2 *Hərə·šuŋɛ dal* — *Hərə·šuŋ* is itself the name of a road or track v. Index of P. N. *'o·qušɛljam* — the road would be injurious to the cultivated land it crossed, because animals passing would damage the crops and roll down stones on to it and break the revetting wall.

The x pl. prefix *o·* indicates that the narrator had a multiple object in his mind e. g. "land, crops and walls", but these are all y.

3 *šatili.a·r* — this occurs as an abstract noun ('strength') in Shina, in which language *-a·r*, *-i.a·r* is a regular nominal ending. The Shina adjective is *šati·lo*.

4 *Šadun Kapu·ri* — she is said to have been very ugly and generally undesirable (*na· lariq*).

Hərukutsɛ — I give the *kh* initial to Khurukuts throughout the translation, as I have taken *Xu·rə* to be the name of the founder of the tribe v. p. 250 l. 1.

[Errata: for uš'u'šan read uš'u'šan, cf. p. 419, cat. 116. -- Analyst]

No. XXIV.

The Khūrukuts and the Hamachātīng.

In former times, they say, the Ulter grazing ground belonged to the Hamachātīng. There was a road to Ulter up the Herāshūng above Bāltīt. This road used to do much damage to the land, (but the owners) were afraid to say anything to the Hamachātīng about it. The Hamachātīng were very powerful.

There was a woman called Shadun Kapūri, a wife of the Khūrukuts, and one day they made her sit down on the Herāshūng and said to her: "When the Hamachātīng come from Ulter, jostle against them and then start shrieking out 'They have laid hands on me,' and we shall come (to your help)."

Presently the Hamachātīng came down the Herāshūng carrying long juniper poles. Shadun Kapūri was on the road and they said to her: "Get out of the way!" She didn't budge. The Hamachātīng are quick-tempered and one of them gave her a shove. On this she raised an outcry, shrieking: "May the crows eat them! They have laid hands on me." From one side and the other men ran up and caught hold of the Hamachātīng and banged them about.

---

7 *eti ke* — v. § 356. 3.

8 *dirāu* — *dir* is described as a "long branch", but the juniper has no branches to speak of. It is the main stems that are meant. Such timber, up to four or five inches in diameter, was formerly used as rafters for roofs. Cp. p. 214 l. 8.

000 Ho Baltitum wa·lti giram gati numa Hamača·tiŋɛ ka ast'am ɛtuman. Ast'am nɛ Šadun Kapu·rimo m'ayulo Hamača·tiŋtsum U·ltəre ter g'anuman. Bara·taliŋe 'o·i bom, Hurukutsɛ u·s bom. Dəramitiŋ sa·ju numa Hamača·tiŋ kɛ u·ər ast'am ɛt'am.

5 Ho Hurukuʼts ke Diramitiŋ ke Bərataliŋɛ hərəŋ U·ltare huye·s o·rutuman. B'eruman dɛniŋtsum 'ilji Ultare tɛ·r Thamo.ud'i·matɛ ganuman. Mu·to xa Thamwalɛ bila.

---

1 *wa·lti giram* — the "four tribes" of Baltit are the: *Diramitiŋ*, *Xu·rukuts*, *Bərə·talin* and *Burow*, but at that time the *Diramitiŋ* were living in *Šišpər*. *ast'am ɛtuman* — It is always difficult to get an exact English equivalent for *astam* which is an elusive word v. Vocab.

2 *mayulo* — the correct form of this word is, I think, *mayo*. This is supported by the Shina form *mau.u*, for Shina simply omits the *y* in Burushaski words.

4 *sa·ju* — explained as "*xa·liŋ*", "unprejudiced third parties". It is therefore "persons qualified to act as arbitrators" rather than actual "arbitrators".

5 *hərəŋ* — in this use denotes "sharing in something", "having a joint interest", "being partners", v. Vocab.

7 *Thamwalɛ* — i. e. *Thamo* + *ale*. It is in the exclusive possession of the Mir.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

After this the four communities of Bāltīt assembled and instituted a case with the Hamachāting, and by way of settlement they took the Ulter grazing from the Hamachāting as a fine on account of Shadun Kapūri. She was a daughter of the Berātaling and a wife of the Khūrukuts. The Diramating, as disinterested parties, had decided the case for them and the Hamachāting.

After that the Khūrukuts, the Diramiting and the Berātaling in partnership settled their flocks in Ulter. Some years later the Thams took the Ulter grazing ground for themselves and up to the present it is in the Thams' possession.

2 *mɛn thamuˑɛ hukəm . . . apim* — 'there was no authority (or rule) of any Thama'.

hukumat nɛ . . . bam — *nɛ* is probably to be taken as immediately preceding *bam*: 'he was ruling over the people'. V. § 368.

3 *abaˑd* — Here and elsewhere this is a very difficult word to get at the exact meaning of. The sense is that the population was small.

4 *mariŋɛk* or *mərinɛk* — The *-ɛk* is probably the collective suffix *-ik* v. § 44. II.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

No. XXV

Sīng of Hindi and his son Daltas Manūko.

They say that there was in Hindi a man called Sīng. He had three sons. At that time there were no Thams ruling over Hindi. Sīng exercised authority over the people of the place. There were few people settled there.

His sons were very fine fellows. One day they went off to the mountain to hunt. There they sat down at a place where there was a view. Down below in Hindi Sīng was lying on a bed at his door; up above his sons said: "Look here, let us each perform (*or*, display) an act of skill. Down there our father is lying on the bed. Don't let us hit him." "I'll hit the leg of his bedstead," said the eldest. "I'll hit a leg of the bedstead" said the middle son. "I'll hit the spout of his water jug," said the youngest.

So saying, the eldest, putting an arrow to his bow, shot at the leg of the bed. The arrow hit it. The other son also shot and he also hit a leg of the bed. The youngest, whose name was Daltas Manūko, putting an arrow to his bow, hit the spout of the jug.

On this Sīng woke up. When he looked he saw two arrows sticking in the legs of the bed, and one sticking in the spout of the jug. "My sons," thought he, "have plotted to kill me." And he notified all his people there and pursued after his sons intending to kill them. Pursuing and coming up with them he seized two of

1 *uya·rum* — I take to be "from before them" not "from below them". *dusimi* — may mean "crossed over to", but here probably rather "escaped to".

5 *tsil bu·l* — i. e. the spring water available on the terrace for drinking and irrigation, as opposed to the abundant water in the Hunza river down below.

4 *i·ski·čo* — probably a slip for *i·skičuk* cp. p. 266 l. 15.
The description is too brief to make the system of apportioning the available water between the various users clear, but apparently the time required to grind three "*Čuk*" of millet in the water-mill was taken as a unit of time.

8 *bu·č fat ɛ·čan* — cp. p. 244 l. 7.

12 *Siŋɛ Daltas Manu·ko* — the genitive *Siŋɛ* indicating paternity.

13 *čəra·ti nɛ šak di·usin* — glossed Hindustani: *juda· hoɾkar nikalkar*. *šak* I have taken to be *šak* or *šaq* 'slipping', 'sliding' etc., but then the transitive *di·usin*

1 [Errata: after aiyɛ'sqaiyan insert a full stop. cf. p. 419, cat. 116 -- Analyst]

4: Lorimer L-3 (1920-4: 1934-5) 1935 AV7 Burusho AV7

5394

his sons and slew them. Daltas Manūko, fleeing before him, escaped over to Pisan. Sīng, returning with his handful of men, remained in Hīndi.

The Hīndi spring of water was scanty, and Sīng had made a system (of apportioning it). Putting three *chuk* (72 lbs.) of millet in the hopper of the mill, when it was finished he used to change the turn of the water(?) Making the reckoning in this way and turning the water on (to the fields) he used to cultivate Hīndi.

On this side in Pisan the people greatly liked Sīng's son, Daltas Manūko, because he was very handsome of face and a fine upstanding youth. They all made an agreement saying: "None of us will kill him, we shall all, make him free of our houses as a male goat. A good breed will come from him," and so they left him at liberty. They gave him the daughter of a certain man (to wife) and settled him there.

After some time all the women folk came together and said to their husbands: "Daltas Manūko, son of Sīng, has no thought of lying with us and producing offspring. Holding aloof and slipping off, he runs away." On their saying this all the men of Pisan assembled and determined to kill him.

Daltas Manūko's wife was with child. She said to him: "They are going to kill you." Upon this he fled. Now in Pisan there was a weeping willow and under the willow there was a tank. He climbed up into the willow tree and sat there hiding from his pursuers. Following after him, when they arrived there, his face appeared in the tank. They all said: "He is in the water here," and they emptied all the water out of the tank. (But) he was not below; he was up on the willow tree. The image of him had been reflected (lit. had fallen) in the water.

At this point an old man appeared on the scene. He asked: "What's the matter with you?" They said: "Sīng's son, Daltas Manūko, fleeing from us, came here and has plunged into this tank.

is difficult to explain. It is tempting to identify *ʃak* with the Shina *ʃak* 'neck' when we should have "extracting his neck (from the yoke)".

20 *d'ermimʌn* — v. Vocabulary s. v. *dermiyʌs*.

5 *mu asqai.i ba·n* — This is probably to be taken as a conditional clause, in which case *kε* is to be supplied after *ba·n*.

8 *dεnantsum* — v. § 43. 5.

11 *sε mama* — v. Vocab. s. v. *sε*.

18 *guwtsəro* — plural of *-uy* used to denote 'father's brother' as well as 'father'. In the MS. *guwtsəro* is preceded by *gu·y* which seems to be out of place, but may be the genitive.

23 *lel εti kε* — *kε* is here probably the connective 'that'.
('If you hear him snoring) know that he is lying down (but not necessarily asleep').

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

We are endeavouring to get him out from below." "O you silly fools," said the old man, "he isn't down in the water, he is up in the willow tree. Look. (It is only) his reflection that appears below." On his saying this, they looked, and there he was up above. They pulled him down. When they had done so Daltas Manūko said: "(If) you are now going to kill me, take me opposite to Hīndi and kill me there." So they took him to opposite Hīndi and killed him in Pisan.

The wife of Dàltas Manūko, son of Sīng, was with child. When she was brought to bed a son was born to her. Some years later he went out to play with the (other) children. They said to him: "O you fugitive interloper, why do you beat us?" On this he came back to his mother and asked her, saying: "O Mother, the children call me "interloper" and "fugitive." Tell me how I was born, where I came from, and where my land is."

His mother said: "My son, it is true this Pisan is not our land. Your father had come from Hīndi. He married me here. Your father's land is Hīndi. You were born here. The people of Pisan killed your father."

The boy said to his mother: "I will go to my father's land.' "O son," said his mother, "Sīng is an evil man. He killed your father's two brothers. Your father, fleeing from death (at his hands) came here. If you now go, Sīng, who showed no mercy to his own sons, will kill you too. Don't go." "No, I will go," said her son, and he persisted.

Eventually she said: "Well then, go. But if Sīng is lying down you will hear the sound of his snoring from a long way off, then know that he is lying down. Then go near and look, and if his eyes are open, he his asleep. Otherwise, if they are shut, he is awake and he will kill you. Keep that in mind when you go."

On this the boy went from Pisan to the river. In those days, they say, the river was small. There were vines on either side

24 *eyenai.i* — 'he has gone to sleep' i. e. 'he is asleep'.

25 *iter nuporʌn* — 'looking at that' i. e. 'keeping that in mind'.

27 *šun* — There were apparently two vines, one growing on each side and intertwining in the middle over the river, but the narrator regards the double growth as a unity.

000 (*or*, i·ti) du·simi. Du·sin i·mo yuyɛ bušai.ər ɛ·pi hai.i yakalatər niči kɛ Si·ŋ guča bam, xɔrɛ ičər jučilum. Lɛl ɛtimi guča bai.i. Asi·rər ni·či kɛ ilčumuts zat bim, ni·nin 'eyɛnumatɛ Si·ŋ kaš ɛtimi. Kaš nɛ yatis tɛlɛ pfat nɛ day'ami.

---

3 *kaš ɛtimi* — *kaš* is used ordinarily of slaughtering animals and probably implies cutting the throat and cutting off the head, hence the statement that he left the head behind.

6 *žo·niŋ* — was originally preceded by *utsi* referring to the unknown murderers: 'they reviled them'.

15—18 *yər ɛ·pi.ɛ . . . yɛ·lja·n* — cp. p. 262 l. 4. Again it seems impossible to give an exact translation and explanation of the water-system. The new system was based on the *sa*; and *sa* means 'sun', 'sunlight', 'daylight', 'day'. I have a note that it was "on the basis of days". The word *-sa* 'month' may be ruled out.

I am suspicious of the phrase *tsilɛ galt yɛ·lja·n*. The ordinary phrase is *tsil yalas*. Perhaps *nɛ* should be supplied after *galt*.

20 *Hunzamo Thamo* — These Thams are said to have been a dynasty preceding the present one, which was initiated by Girkis, a great-great-grandson of Azur Jamshed. This earlier dynasty is said to have been of Persian origin and to have died out.

173
643

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

which interlaced (over the middle of the stream). He crossed the vine to the other side. When he had crossed and gone towards his grandfather's house on his father's land, Sing was lying down and there came the sound of his snoring. He knew that he was lying down. When he approached near, Sing's eyes were open, and he went up to him and killed him as he slept. Having slaughtered him he left his head there and concealed himself. 539*

Presently Sing's sisters and the people of his house heard (of his death), and when they looked they found that someone had murdered him. They cursed the people of Hindi. All marvelled saying: "Who has murdered him?" Thereupon the son of Daltas Manūko, son of Sing, came out (from his hiding place): "O aunts," said he, "it is I who have slain grandfather. He had killed my father's two brothers, and my father, fleeing from death (at his hands) had escaped (*or*, crossed over) to Pisan. There he married my mother and I was born. The people of Pisan slew my father. I have now come and killed Sing because he had without justification killed his sons. In revenge for that I have killed him."

Having said this, he settled down in the place of Sing in Hindi and abode there exercising lordship.

Formerly his grandfather had put three "chuk" of millet in the hopper of the mill and had fixed the distribution of the water (supply) for the people on that basis. Now the son of Daltas Manūko, son of Sing, abandoned that system and allotted the water on a basis of days. Up to the present time they divide up the days and allot the water according to that system of his. 539* 312

They say that this Sing was of the Hamachāting tribe. In the time of the son of Daltas Manūko, son of Sing, the Thams of Hunza came with an army to Hindi and took possession of it. It is said that they then slew the son of Daltas Manūko, son of Sing. 539*

The Burōng Girl's Lapse.

5274

In former times there was a man of the Burōng and he had a daughter. She had become marriageable, but she had not been married.

He used to make his daughter take the flocks to Irkishi to pasture them. She misconducted herself with a certain herdsman and became with child. Nine months passed and she was delivered at Irkishi and a son was born to her. She took him and returned home. Her father and mother said to their daughter: "Where have you brought this child from?" The girl said: "O Father, I found him in the thorn bushes."

When she said this they were much annoyed and said to her: "Somehow or other you have given birth to a bastard, and now you have made it impossible for us to go out (of the house for shame). Tell us the truth about it."

"I have seen no one with my eyes," said the girl. "Only one day I had taken the flocks to Irkishi and I became thirsty. There was (rain)water in a hollow in a stone and I drank it. (Now) a

2 *Kutoʷr* — is said to be a Wakhi word and the equivalent of the Burushaski word roʷm.

5 *nʷsʷγuran* — the only part of this verb recorded. The infinitive must be *-γuʷzz or, if the -an of the past participle is taken seriously, *-γuʷzuś.an, cp. the noun γuʷzś 'human excrement'.

6 *ʷoʷi kz . . . farq ayʷtsum* — This is very confused and confused. The other object of differentiation must be "women and men not within the prohibited relationships". From such father(s) did not distinguish their daughter(s) or brother(s) their sister(s).

yas is perhaps a nom. in which case we have: "and a sister did not distinguish her brother from permissible men".

No. XXVII.

The Story of Baskam.

They say that in early times there were people of Hunza settled in Baskam. They called them the Bakhti Kutōr. Baskam was very prosperous. After kneading dough in the kneading-tray oil used to flow out at its lower end. Eventually in Baskam the people became extremely presumptuous. They say that a woman after making her boy stool finally wiped his buttocks with a piece of bread. And they say that, fearing not God, they made no distinction of daughter and sister, and sister and brother; they committed incest with them.

Then by God's command Baskam all at once boiled up and people and land were all submerged. Only a man called Bakhti, escaping, had come to Shimshāl, they say. There have now come to be some ten or fifteen houses of the descendants of that Bakhti in Shimshāl.

In addition, two tribes, the Ghāsi Kutōr and the Bāqi Kutōr who came to Shimshāl from the Chaprōt direction, have become established there.

There are these three tribes in Shimshāl: the Bakhti Kutōr, the Ghāsi Kutōr, and the Bāqi Kutōr.

That is all there is to say.

The tribes of Gulmit are Wakhi and are the following: the Burt Kutōr, the Rūndōr Kutōr, the Chārshambi Kutōr and the Bōdulē Kutōr.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

No. XXVIII.

The Raskam Salt Tribute.

In early times there was a road from Baltistān to Shimshāl by way of the Biraldo Nullah. They say that there still is.

A man of Hunza called Khush Bèg had come in the time of Shah Ghazanfer from Shigir over the Biraldo with a pair of small drums.

In very early times there were people settled in Raskam, and they say that they used to take a tribute of salt from them to Shigir in Baltistan over the Biraldo. The Baltis imposed the Raskam salt tax.

Then after the destruction of Raskam Bakhti had come from Raskam to Shimshāl. The Raskam salt tribute they (then) paid to the Thams of Hunza. Up to the present day they bring in as tribute from Shimshāl a hundred moulded blocks of salt in autumn and a hundred blocks in spring.

The Story of Basèng Gairi.

In early times, they say, there was in the Nagir district a tyrannical Tham called Basèng Gairi. He practised great oppression on his people. He seized them to make them construct a water-channel to Masōt at the lower end of Ghulmit. Assembling all his subjects he commanded them, saying: "Bring wrought mud from Chalt and bring flat stones from Guwach."

For some years he thus put them to great trouble. They were unable to carry the channel through. Their backs became galled. Then they took counsel together how they might assassinate Basèng Gairi. He was making them do forced labour on the water-channel and all at once the men attacked him and rushed upon him with intent to stone him.

Basèng Gairi had his horse with him, and he mounted it and they say he made it leap from there to Mōri Dās. Then he escaped up that side of the river to Hunza. He proceeded to Bāltīt in Hunza and up the Mamu Her, and climbing up the Dōdōng Murkū he galloped his horse thence to the Khūro Pferi. Dismounting there he thrust his whip into a tiny spring there was, whereupon both he and his horse sank (into the ground).

The idea of 'murder, assassination' is probably always implicit and may predominate, so the passage is glossed: "they plotted to secretly-assassinate B. G".

9 *hivriki* — originally written *hivri ki*. It is probably *kivri* + *ik* (+ trans. nom. suff. *-i*, which is unnecessary) cp. § 44. 1.

11—12 *ivle pAči* — 'the other side' sc. of the river or valley.

900 Iˈsɛ hɑɣur ɣurtsum čərɛ hoˈlɛ, hɑɣurɛ iˈsumalɛ hoˈlɛ, buˈl duˈsimi, se.ĩbaˈn. Iˈtɛ buˈlər: "Basəŋ Gairi.ɛ Buˈl" se.ibaˈn (*or*, se.ibam). Muˈto kɛ bila. Da Basəŋ Gairi.ɛ čaˈm ɛtum turtsum tɛˈle buˈltsɛ čɑɣučiŋ duwaša bitsum. Muˈtu kɛ biˈtsa. Da Basəŋ Gairi.ɛ dˈoˈgusum

5 *čərtsum sasɑŋɛčiŋ* — probably refers to the revetting walls built up to carry a water channel across the face of a cliff where excavation is impossible.
čərtsum adjectival, *čər* + *tsɛ* + *um* 'being-on-the-cliff'.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

*539
173

From the hillside into which the horse had sunk, out of the horse's tail, issued a spring of water. They used to call the spring "Basèng Gairi's Spring." It is still there. Furthermore, from the whip which Basèng Gairi had thrust (into the ground) there at the spring, canes had sprung up. They are there now. Also the water-channel which Basèng Gairi had constructed and the revetments on the cliff at the lower end of Ghulmit are there to the present day.

Some say that Basèng Gairi was a Tham, some say he was a supernatural being.

That is all. They tell the story thus.

No. XXX.

The Story of Ba·ba Ɪwundi.

000 Yərum ʒama·na.ulo Čupu·tsan bu·t aba·d bilum se.iba·n. Gi·ltum Th'a-mu.ɛ Čupu·tsantsum bʌp su·čam. Traxana·tiŋɛ Thamkuš bilum se.iba·n.

---

3 *pfəri.ɛn* — might be a "lake", but the small dry hollow pointed out to me could never have deserved that title.

4 *u·ɛ sisɛ . . . yu·čam* — *bʌp* is 'tribute, tax', and *ma·ri* are 'supplies furnished without payment' to Thams and high officials. One may take them as being in apposition: 'tribute-supplies'.

5 *sisanɛ* — is dependent on *bʌp ma·ri*, and so therefore are the preceding nouns. *bʌp ma·ri* should therefore be the object of the verb *yu·čam*. In that case *ma·ri* must be x. But it is possible that by the time the narrator has come to the verb he feels *bepʌy*, *pusoʼri.ɛn*,[1] *sisanɛ* to be the objects. The x-ness of *ma·ri* cannot therefore be considered established by this one passage.

hiŋ tsir nɛ — *hiŋ* 'door' apparently used for "household", *tsir* 'a line of individuals', 'a succession', 'one after another'.

[1] [Errata: for pusoʼri.ɛn read pušoʼri.ɛn - cf. p. 419, cat. 1163 - Analyst].

No. XXX.

The Story of Bābā Ghwundi.

They say that in former times Chupūrsan was very populous. The Gilgit Thams used to take tribute from it. The Thamship was in the hands of the Trakhanāting.

In Ishkūk, they say, there were seven villages. There was a pond there, and in it there was a dragon. The people of the place — each household in turn — used every day to give the dragon as tribute in kind a bull yak, a lump of ghee and a human being. For a number of years they gave to it after this manner.

Then the turn for (furnishing) the supplies for the dragon, came to a certain man. In his house he had a wife and he had a daughter; with himself there were three of them. He said to his wife: "Look here, wife, today the turn for furnishing supplies has come to me. I am going. They have warned me for the dragon's supplies.', When he said this his wife burst into tears. Then she said to her husband: "O husband, don't you go. I will go. Don't you go." On this the daughter said to her mother and father: "O Father, O Mother, don't you go. I will go, because if the dragon devours me a son and a daughter will again be born to you. I will go. Get ready a set of clothes for me."

---

8 *ivi ke ka* — 'himself also along (with them)'.

12 *eiye* — "his daughter said to her father and mother".

13 *ʌ̃ṵvi* — 3rd. sg. x of short form of pret. of *a* + *-*ju.as*.

mai.iyen da maiyen — i. e. my death won't signify: you will be able to have other children and the family will not become extinct. It is curious that she should limit their procreation to "a son and again a daughter".

[Errata: for daughgther read daughter.

534

On their daughter's saying this they prepared a set of clothes for her and making her take with her a bull yak and a lump of ghee they sent her off as the (required) tribute to the dragon. She went on her way weeping.

When she got there a white-bearded man met her. She salāmed to him. The man replied to her salute and enquired of her: "Girl, why have you come here? And what are you doing here?" The girl replied in tears: "O Father, may I be your sacrifice! Today the turn had come to my father to furnish supplies for the dragon and I have come. The dragon will now eat me. I have come in place of my father and mother." When she had spoken thus the old man said to her: "I am going to sleep for a little. Rummage through my beard for lice." (He went to sleep and) she searched for lice in his beard.

Presently the dragon was on the point of coming out and the man had just gone to sleep. The girl was afraid and wept and one of her tears fell on his face. He woke up and when he looked he saw that the girl was crying. He asked: "What's the matter with you?" "O my Father," she replied, "the dragon is now going to eat me. It has put its head out of the pond." As he looked the dragon came fiercely forth. Then the old man drew his sword from the scabbard and hewed the dragon in pieces. Then he commanded the girl saying: "You go off now to your father's house. I have slain the dragon."

She went off and when she came to the house her father and mother saw her and said: "She's taken fright and come back!" They said to her: "Why's this? daughter. Now the dragon will come and eat us. If you were so much afraid, you shouldn't ever have gone." "I haven't come back because I was afraid," replied the girl. "A holy man appeared and he has cut the dragon in pieces.

---

22 *yor ne oni* — the meaning is clear from the context: "if you were so much afraid, you shouldn't have gone in the first instance".

I know of nothing that *oni* can here be except the imperative. It would not help to take it as a past base v. § 407. 6.

The imperative would be natural if the sentence were cast in the present tense: "if you are afraid, don't go", and perhaps it has been illogically used here for simplicity's sake.

1 *to·rumots* — "large fragments", the notion conveyed by *to·ri* being, more or less, "a quarter".

3 *ašdər d'ɛ·lumɛ čʌγa* — 'the story of the dragon being killed', cp. *ɛgirʌtumɛ čʌγa* p. 182 l. 15, note, and § 382.

10 *ʌbʌšʌn subʌsʌn* — The words *ʌbʌš* and *subʌš* are Shina. The two prefixes occur in a number of pairs of words to express contraries, the *ʌ-* being a negative prefix and the *su-* doubtless the Sankrit *su-* 'good'.

There is no point in the *subʌšʌn* here, the phrase is used as a 'cliché': "anything unfavourable, contrary or difficult and anything favourable, or propitious".

14 *ju·či.a be kɛ* — This I think is dependent on *bare·yɛn* which would better follow *ečʌn*.

22 *o·tsimo* — i. e. *u·tsimo*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

The pond is filled with (its) blood and bones. If you don't believe it, come along and I'll show you."

They went off and when they came (to the place they found that the holy man) had strewn about the fragments of the dragon in the pond. They gave thanks to God. Then they came back to the village and summoning all the people assembled them together and informed them of the slaying of the dragon. The people of the village, (however), did not believe them. So they took them to the place and made them look and they saw (everything) with their own eyes. Then all the people returned to their homes rejoicing.

The holy man after cutting the dragon in pieces had vanished. Now that night all the people in Chupursan saw in their dreams the man who had slain the dragon. He said to them: "I have slain the dragon. Now if at any time weal or woe come on you, call me. My name is Bābā Ghwundi. I am the fifth Imām."

After this they dwelt in peace, and they became puffed up. One day those people of Chupursan gathered together and said: "Come now and let us call the man we saw in our dreams and see whether he will really come or not." So saying they went off, and raising lamentations they called to him. No sooner had they done so than the old man appeared, dressed in green garments, riding on a horse and carrying a lance. He searched all through Chupursan from the Irshād down to Raminj at the lower end, but he saw nothing and again he vanished.

Again the next day too the people of Chupursan, making a sport of it, called him. Again he came out, but there was nothing. There was no enemy and they were not in any difficulties. Three times in this manner they called and fetched him out. (Then) he entered into the skin of a poor man and (so) presented himself. They all made game of him and, howling and shouting, pelted him with earth and ashes. He became very wroth with them and invoking curses (on them) he determined to overwhelm Chupursan.

---

5 *hamalɛ ha·kičaŋulo* — the singular *hamalɛ* must be regarded as adjectival "neighbour houses".

7 *bɛsan yɛ·tsa kɛ yɛ·šuma* — "you will see what you have seen" (pret. = perf. tense).

9 *ya·rum yatɛ numa* — explained as "turning upside down", but literally it contains the idea of bursting or boiling up from below which would fit in with *bapayimi*. Immediately after, however, we are told that it was a mudflood that came down and overwhelmed the place. This would be quite in accordance with nature.

16 *maper jat gusmər* — *jat* was probably meant as a correction for *maper*.

gira·mər — *gira·m* or *giram* was here explained as an "enclosure for keeping goats in", equated with a Shina word *giro·m* which I do not know in that

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

Then he went to the door of an old woman's house. There was nothing in her house except a sheep that had lambed. She milked it for him and took the milk out in a bowl to the door to welcome him. He blessed her and said: "O Grandmother, blessings be on you! Tomorrow morning do not go out of your house. Look on at what happens from the top of your roof. If you have any belongings in your neighbours' houses fetch them into your own house. Leave nothing outside. Tomorrow you will see what you will see." With these words he vanished from the sight of the old woman.

Then on the next day all Chupursan of a sudden turned topsy-turvy, and spontaneously boiled up, and all the people were overwhelmed. The Holy Man, riding on the mud-flood with his lance in his hand, drew near to the old woman's house. The old woman's house and land remained; all the rest was submerged. When the old woman looked she saw that her sieve was missing and that it was in the flood. She called out to the Holy Man and he threw it out for her with his lance.

The name of the old woman's house and land is Kampīrè Di.ōr. In the Wakhi language they call an elderly (or) old woman "Kampīr," and they call a settlement "Di.ōr." The ruins of the old woman's house and her land are there now; they call them Kampīre Di.ōr.

The Holy Man's name was Bābā Ghwundi Merd Wali. Hence the name of the shrine also is Bābā Ghwundi. This holy man had originally made his appearance, they say, at a place called Ghund in Wakhān, and for this reason they have called him Bābā Ghwundi. Some say he was the fifth Imam. His (personal) name is Muhammad Bāqir.

At a certain place in Chupursan he has left the pattern of his embroidered horse-cloth. It is there still at the present day. It is

sense. It is presumably the ordinary word of which the essential meaning in Burushaski seems to be 'any community living together'.

Laqēa — there is said to be a flat thin stone marked like a leopard skin.

4 *del duwas dan* — i. e. "the oil-coming-out-stone" i. e. "the stone from which oil comes out".

6 *hiri.e* — note the extended nominative with a present tense. Similarly *gušiηantse. uriη eltalai.i bam* — v. Vocab. s. v. **-altalanas*. Women wave their hands with a circular motion as a token of respect to the Tham.

8 *xudai.i ečam* — On such occasions the animal is slaughtered and its flesh distributed as alms. Whether the proceeding amounts to a technical "sacrifice" I do not know.

No. XXXI.

The Misgār Shrine, Aqtash.

At Misgār there is a shrine of which the name is Aqtash. In Turki they call a white stone "aq tash." The Kirgiz had given it the name.

Then they say that oil used to come out of the stone. Its proper name in Turki was "yāghtash." They call oil "yāgh." They used to call it the "Oil-Exuding-Stone."

In early times the Kirgiz were settled in Misgār. They had made this stone into a shrine for themselves. Even now the Misgāris go to it, and the men salām and the women wave their hands. And the Misgār people take goats and go there and sacrifice them. From old times they have fixed up horns on (the wall round) it, after they have been hunting.

Oil exudes from the stone.

That is all there is to tell.

---

8 *ierte* — a note adds: *hritse dali hawa* 'they fix them on the wall'. It is a common practice to fix horns on the enclosure walls of shrines and mosques.

10 *ier dawalewa* — possibly means: 'from the environs of the stone' as opposed to *dawalewa* (l. 8) 'from the stone itself'. But perhaps *dawalewa* — 'from inside the stone' — was intended.

The Story of Saiyid Shāh Wali.

They say that in early times a man called Saiyid Shāh had come with his wife out of the Ulter Ber in Hunza. The people were amazed saying: "Wherever this man has come from, and however he has come, there was no road (for him) anywhere." Saiyid Shāh and his wife settled down happily in Hunza.

Saiyid Shāh possessed supernatural powers, they say. One day he said to the people: "O men of Hunza, the water of Bālti is scanty; a Dēu is drinking up all the water. I shall get the Dēu out for you, and do you slay him." At that time the people were afraid, so Saiyid Shāh shot (at the Dēu) with a gun; whereupon a considerable spring of water gushed out. Saiyid Shāh said to them: "If you had slain the Dēu much (more) water would have come out. I shot him just now in one tooth. The spring will remain to you for ever." The spring is there now. We call it the Pfurū̂ Bul (the "Reed Spring.")

Then after some days Saiyid Shāh was annoyed at something and determined to quit Hunza. On his so deciding the people assembled and petitioned him saying: "Don't go." Saiyid Shāh did not agree and taking his wife he went out from Hunza. But Saiyid Shāh had taken a liking to a place in Hunza called Shikakiants. They say he gave the people there some of his hair, saying: "Bury this there." And he had said to them: "When there have come

(99) *trail* — for about three-quarters of a mile the track crosses the face of a steep slope consisting of broken stones, shale etc. which is covered by cliffs from which stones big and small are constantly rolling down. These "stone-shoots" are a common feature in the Gilgit and Chitral area and one which adds to the excitement of travel.

This particular specimen between *Ashurdas* and *Ziliker* to Sagir is a very fine one.

(100) 2 *ene bore* — is not wanted here.

dusir ne — i. e. *dusir ne*. As a magician S. Ñ. would employ "a spell" or "enchantment", but as a "holy man of God" he presumably had recourse to "prayer". So *dusir* probably bears its orthodox meaning.

6–7 *ñiqa dirm bun* — "the boulder which had come as a rolling stone".

10 *berum saxmo* — cp. note p. 292 l. 12, and § 170.

12–14 *Hunzurwar dura . . . tallate him* — Note the common difference of point of view as regards "going" and "coming" between Burushaski and English: "having

4: Lorimer L-3 (1930-4; 1934-5) 1935 AV7 Burushо AV7

to be seven Saiyids' graves in this place Hunza will become very prosperous."

After this, Saiyid Shāh, crossing over to Sumaiyer went down (the valley). The stone-shoot between Shayār and Hakīcher was raining down stones, and on Saiyid Shāh's coming level with it, it sent down stones. A big boulder came down from above. Saiyid Shāh, saying a prayer, spat upwards and made the stone, which had come rolling down, halt on the face of the slope. The boulder stopped by Saiyid Shāh's prayer is there on the slope to the present day.

Saiyid Shāh and his wife then came to Tōl. The place pleased them and they settled down there. After some months Saiyid Shāh fell ill and he said to the people "I am going to die. Go and ask for a shroud for me from Hunza and bring it here." It was a short time to sunset when he despatched them to ask for a shroud from the Thum of Hunza. It was still that hour, the sun had not set, when they arrived (back) at Tōl after going to Hunza and getting the shroud and returning. Saiyid Shāh was a holy man of God, and they say he had kept the sun from setting. On their bringing him the shroud Saiyid Shāh Wali died.

He had said to the people of Tōl: "Bury me here," and he had showed them the place, saying: "I have chosen this spot." Up to the present day the place which he chose and showed them is kept as a walled enclosure in Tōl.

Presently the people of Ghulmit learned what had happened and came to carry off Saiyid Shāh's body from the people of Tōl. And they did carry it off, for the people of Ghulmit were many and the people of Tōl were few. Overpowering and beating the people of

---

come to Hunza, having taken the shroud, having turned back till they went to *Tōl* that *gwi* so, not having become sunset, was as it was (when they started)".

10–11 *ze ḥuv ayshow ewwrtim* — "he had stabilised, kept, the sun unset".

16 *ḥwyuser* — again the point of view is Hunza, not *Tōl*: "when they had completed carrying it away (from Hunza to *Tōl*)".

18 *ewshin* — "throw me down, deposit me" i. e. 'bury me'.

19 *ḥewk ne ḥilz* — must be explained as: "(people) having enclosed it, it is there".

---

1 nidirw — must be from ɪrwγas. If it had been from *·drwγas it would have been ·ɪdirw.

2 *Hunzokuteer ki o·uwam* — This clause seems to be related to the following one: "they had not given up the body 'though' the Hunzukuta had attempted to force them to do so".

o·uwam — 3rd. pl. plup. neg. of *·eγas, $a + w + *·uwas$ 'they had not given to them'.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

Töl they carried off the body to Ghulmit, where they buried it and made a tomb.

To the Hunza people too, it is said, they did not surrender the body, (though) some years after Saiyid Shāh had died the people of Hunza had come up in armed force against Ghulmit.

One Chōro Nūr Shāh, by name, stole from the grave Saiyid Shāh's own lance which was on it and brought it (to Hunza). The lance is still in the Masjid at Ali.ābād.

That is all there is to tell.

---

3 *Ho S. Š. nivin . . .* — A very marked example of the less common absolute use of the p.pc. active. An almost identical example occurs in l. 10 p. 344. *ivumiżuma* would be more normal v. § 287.

5 *Čoro Nur Šu* — *Nur Šu*, son of *Čoro*.

6 *nizu* — People accused of theft etc. used to swear to their innocence on this lance. This has now been stopped.

---

gərɛ dastuɪ — *gər stas* was given as an alternative for *gərɛ*, and *mirus* for *dastuɪ*.

3 *gəruˈrum sisan* — "a warm person", cp. the English, "a warm friend".

6 *ja aiyər* — Ms. *ja iyər*, doubtless owing to the running together of the *ja* and the pronoun prefix *a-*. There are other instances of *a* + *i* > *ai* as well as > *e*.

7 *bər* — seems here to be used in the sense of "promise", as in English "he gave his word".

9–10 *daγowaŋ mudəljai.i* — a note adds that he sprinkles the flour on her head.

10–11 *dau.u waščɛn* — A sort of technical term also denoting a ritual act. I take it as meaning literally: to put the griddle on the fire.

585 171

The griddle also plays an important role in the Shin marriage ritual. The term used in Shina is *fuo dorki*, 'placing the griddle (on the fire')'. It is rather surprising that the words used in the Burushaski account for "Marriage" "bridegrooms party" "bride" and "bridegroom", *gər*, *gərəmi* and *gəruˈmo*, are Shina (or shared with Shina).

No. XXXIII.

Marriage Custom in Hunza.

When a man proposes to get a wife for his son, and decides to enter into marriage-relationship with someone who has a daughter, he sends one of his own relations or a personal friend to the man's house as an intermediary to ask for his daughter. The delegate they call a "herangush."

The intermediary goes to the man's house and says to them politely: "Today such and such a man has sent me, in accordance with the command of God and the Prophet, to ask for your daughter for his son. He says: 'Give me your daughter for my son.'" That day the man gives the intermediary no promise to give him his daughter. He dismisses him saying: "Well we shall see what will happen."

The next day too the intermediary goes to the house and then the man promises to give him (the girl). The intermediary standing up says: "Bring me a dish (of flour)." When he has got them to bring it he himself sprinkles the girl with the flour. Then they consult together saying: "We shall celebrate the marriage on such and such a day, and on such and such a day we shall 'put on the griddle,' and on such and such a Friday we shall fetch the dishes (of food, from the Bridegroom's house)," and they betroth the girl to the youth.

---

1 *ſukuro pſul λʌnik diſen* — Friday i. e. the day before the marriage; all marriages being celebrated on Saturday.

From a note I gather that the *pſul λʌnik* are taken from the bridegroom's house (presumably to the bride's) and contain: *diraʌmpſi·ti*, apricot oil and ghee; and that the bridegroom's representatives take with them (on their persons?) two sets of clothes, one of which is kept and the other sent back.

Ho gərər manoteki dorčaʼn. Xamali.ər iʼ, šərbatər iʼ, qistaʼr iʼ. Aʼlto talečuqiŋ xamali.er, tsindi čuqan šərbatər, gul ke ečukoʼnər doʼrčai.i. Ho saʼatər nobaren dʼau.u waščaʼn. Ho sa pari.en dyʼuʼasumər Thamu e hukum bila gəroʼni baman uyoʼn ite guntsulo mərakaʼr duʼišaʼn. Qadiʼmtsum miraʼs bila uyoʼntsum uyər mərakʼaʼr Diramatiŋe gəroʼni uyər di.ušaʼn. Ho ilji iski

1 *manoteki doʼrčaʼn* — These and the following supplies appear to be prepared by the Bridegroom's father. They are presumably those produced and consumed in the Bridegroom's house when the guests and the Bride and Groom have gone there after the conclusion of the actual marriage ceremony by the Akhund in the Bride's father's house. V. p. 304 l. 21.

iʼ — is probably the Corroborative Pronoun, "for the *xamali* itself" i. e. 'by itself, separately'.

2 *aʼlto talečoqiŋ* — a *čoq* or *čok* is said to be 12 seers i. e. 24 lbs. avoirdupois. So 2 × 7 × 24 = 336 lbs.

Otherwise, a *talečoq* is said to be = 2 maunds
= 160 lbs.
in which case 2 *talečoq* = 320 lbs.

gul — i. e. *guʼl* as in l. 2 p. 298 and also in a note. Here glossed as "Bride's party" consisting no doubt of her family connections, corresponding to *ečukoʼn* the Bridegroom's "tribal brethren, the members of his tribe related to him". *saʼatər nobaren* i. e. 'the mullahs look for a (favourable) time for making them'. The day or days for holding marriages are, however, fixed by the Tham.

4 *daŋ oʼčaʼn* — a note says that "baking is carried on in both houses".

5 *šuʼčaʼn* — is here probably used in its special sense of 'slaughtering (with a view to eating)'. It here explains what meat they cook. The number of goats depends on the means of the household.

6 *tišk neʼəyan* — The dagger is stuck in the waistbelt at the left side.

7 *hik nika biluʼmane* — glossed as "a once-married woman who has had a child", but it must be a 'once-married man', having regard to *ʼeʼəbiljai.i.*

The phrase is interesting grammatically. The Bride, a note adds, is also dressed up and oil put on her hair, etc.

Then they grind the *manotèki* (flour) for the wedding — for the *khamali* separately, for the *sherbat* separately, for the *qista* separately. He grinds two *talèchuqs* (= 336 lbs.) for the *khamali* and five *chuqs* (= 120 lbs.) for the *sherbat*, for the Bride's party and the tribal brethren of the Bridegroom. Then having made the (mullahs) look out an auspicious hour they put on the griddle. And they bring in the (female) relations and get them to bake the *khamali* for two days, and one day they make them bake the *qista*, and then they cook the meat. They slaughter four or five goats and they cook the *sherbat*.

Then they make the Bridegroom dress up and put on a cotton over-shirt and don a turban and carry a dagger. A man who has been once married helps him to dress up, and they make him take in his hand the ceremonial axe. Then he assembles his tribal brethren at the house and makes them drink wine and gives them bread, and they fetch the musicians and sing and amuse themselves (hold festival). Then they put white and blue spots round the Bridegroom's eyes.

When some time remains to sunset on the day ordained by the Tham they bring out all the bridegrooms to the public assembly. It is the custom from ancient times that they bring out the Dirāmiting bridegrooms first to the assembly before all the rest.

Both Bride and Groom have an ornament suspended at the cheek — the *gərɛ mojok* "marriage tassel" — which consists of a tassel with a pearl or piece of coral strung above it and above that a piece of mother-of-pearl.

The Bride's adorning is mentioned again on p. 304 l. 11.

9 γəriŋ — the songs are in Shina.

10 *tikomots* — *nil* must be the genitive of *nil* 'indigo'.

A note says that white, red and blue spots are put round the sockets of the eyes, the object being to make the man look ugly and so protect him from the Evil Eye.

gərɔni — originally written *gərɔno*. I am not clear what it means here.

11 *gərɔni* — is here and on p. 302 l. 2 used as the plural of *gərɔno*, 'bridegrooms'.

12 *ite gontsolo* — cp. note to line 2. The Tham fixes a day on which all marriages must be celebrated, or two days if there are many.

13 *mərʌk'aw* — this is in front of the Fort at Bāltit.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

---

2 *tsir numan* — glossed "forming a circle with the tribespeople round about", but *tsir* actually only means a 'line', or 'row'

3 *Šɛniskulo* — 'in the Shina language'. When songs are required on ceremonial occasions recourse always seems to be had to Shina.

Bitans also, I think, use Shina. There is very little Burushaski verse; at any rate I was able to get hold of very little.

4 *duˑmərčaˑn* — glossed "take from them", "take up and repeat song". For a few other examples of this special use of *duˑmərar* v. Vocab. s. v. *dᵊ-mərar* The first party are the *Diramitin* and *Bəratalin*; the second The *Hurukuts* and the *Bərorn*. The second party repeat what the first party have sung.

5 *γərin . . . ɛčumɛ far manumər* — *ɛčumɛ* can scarcely be dependent on *far manumər*. There is a grammatical break: 'Going on singing songs' — 'when that is finished they play . . . '.

534 6 *Bapoˑɛ Dani* — v. Vocab. s. v. *dani*. For this big drums, kettle drums and pipes are all played. For the preceding singing only the two kinds of drums accompany.

8 *(gəroˑni.ɛ ka)* — this was a later insertion in the text and I do not know what it means.

Bərorn — i. e. *Bərorn*.

[Cf. Lorimer: Singing and dancing mentioned on p. 303 -- Analyst]

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

Then afterwards the (grooms of the) other three tribes come out. Then the Tham also comes out to the place of assembly, and all the bridegrooms of all the four tribes come out on to the dancing place and, forming a circle, sing songs about all the former Thams in order. They sing the songs in Shina.

One party start a song and the second party take it up from them. So doing they sing songs for a longer or shorter time. When they have finished singing in succession the songs of the Thams they then play the (slow time tune) *Bapo.è Dani* and a man of the Terakuts tribe dances before them, and the Diramiting bridegrooms dance with him. When they have danced for a little they salām to the Tham and sit down. Then the Hurukuts (bridegrooms) dance, and then the Burōng, and then the Berātalīng.

In this way they amuse themselves till evening. Then when evening comes the bridal parties — on the Bridegroom's part twelve or six men — go off each to the house of their respective brides. When the party enters the house they count them and slaughter a kid and the party go inside the house and sit down and sing songs for a little. Then they set food before them and, when they have eaten, the Akhond recites the Khutba in order to effect the marriage of the youth and the girl.

Then they make a relation stand up on the part of the Bridegroom, and they make a relation stand up on the part of the Bride as their representatives. They call them *wakīls*. The Akhond when he has recited the Khutba and fixed the bride-price first asks the Bride in a low voice: "Are you content with this man?" and she

10 *gəroni* — here glossed: "*H. bərətwa'e*, groom's party; each lot go to their bride's house".

11 *gəroni hilsə* — i. e. the Bridegroom. Similarly one may say *gəroni dʌsin* for the Bride. *tərma altʌn* — a note says that the Bridegroom's party consists of 6 or 12 persons, and the Bride's of 12.

12 *nətsʌn* — 'counting them up to six, or twelve'. For the larger number perhaps the allowance of kid is increased.

17 *nəq'ʌtʌn* — past participle of γʌtʌnʌs here, and often, written *nək'ʌtʌn*; but I have generalised *q* for the unvoiced equivalent of γ.

18 *gəronilsum* — *gəroni* is here used for "Bridegroom".

---

2 *šiša·nulo* — glass tumblers not being generally known in Hunza *šiša* has come to be applied to a 'china cup'. After the ceremony the Mullah appropriates the cup as a perquisite.

7 *tsundo rupi.a* — the sum is only fixed. It is not paid except in case of divorce.

7–8 *thamu·ε ka gər* — glossed: "if chiefs marry among themselves".

11 *itse* — One would expect *i·ke* agreeing with *gatuŋ* (y pl.) It is probably attracted into the category of *gatu* which is x sg.

mo·uwaščа·n — this and the following verbs are probably to be taken as simple transitives the pronoun prefixes being indirect objects or ethic datives. Otherwise the verbs may be causatives. V. §§ 245—7.

12 *mujuk* — this is presumably the tassel referred to in the note on p. 300 l. 7.

13 *gəro·ni.ε* — "the bridal party sing" (?) or "they sing bridal songs" (?)

16 *tomal* — Originally *maltaš* was written after *du·mər*, and I am not sure whether it was meant to remain.

tomal is the smoke obtained by burning *supandər* or *ispandər* (Syrian rue?). It figures largely also in the Shin marriage ceremonial.

As *xamali* is here noted as "thin bread smoked with *supandər*", *tomal* is perhaps to be taken as qualifying *xamali*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

in a low voice replies: "I am content." Three times he asks the Bride and three times he asks the Bridegroom whether they are content. Then, reciting the Khutba, he gives a little water in a cup first to the Bride who drinks a little, and what remains over he gives to the Bridegroom, who drinks it all down at a gulp.

They perform the marriage in the house of the Bride's father. For poor people in Hunza the bride-price is not large. It is twenty four cubits of sized cotton cloth of which the price is five rupees. They fix the bride-price at five rupees. When the Thams marry among themselves the bride-price for them is very big. They fix (it at) a thousand rupees or five hundred rupees.

Then they go out to the Bridegroom's house. They make three or four sets of cotton clothes for the girl. They call them "Tosh Gatu" (the New Clothing). They put a veil (over her head) and they put earrings in her ears and fix a tassel on her cap and then they bring her out of her father's house. As they bring her out they sing bridal songs in her honour and the girl weeps, and her father and mother weep.

Then the girls, children and women collect and come (along with her) to the Bridegroom's house. When they have arrived at his door (his people) bring out *Tomal* (smoke of Syrian rue) and *Khamali* to them and the Bridegroom and Bride touch the hearth-stones (with their fingers) and kiss them, and taking each other by the hand they each simultaneously put a foot down inside the threshold in the house. The Bride, entering the house, first touches the hearth-stone with her fingers and kisses her fingers. Then they take the Bride and make her sit down at the upper end of the room at the foot of the main pillar of the house. They bring trays to the Bride's party and they eat food. When they have eaten they go off to their own houses.

17 *tsrise uʼlo* — both must step over the threshold at the same moment. The one who may chance to step over first will be inferior. The hinder one's star will be "buland" i. e. he or she will be dominant. A sly man may push his bride over first.

18 *sutinate tsap ne . . .* — touching with the fingers and then kissing the fingers is a demonstration of respect. Here the Bride's thought is said to be: "God bless this house to me".

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

---

2 *mokaˈtum dasin* — is in effect a "Bride's Maid", but the precise meaning of *mokaˈtum*, from **-akaˈtum*, is doubtful. It is used of a person in one's service.

8 *dawatɛ* — *dau* + *atɛ*.

13 *dau daɣo.aŋɛ nidilin* — "striking the griddle with flour" the idea is probably "sprinkling it with flour", as in l. 9 p. 298.

14 *moˈbišai.ɛs* — i. e. *mu* + **-abišai.as*, the agent form of the Causative.

[55] 16 *iskikutsum aŋaro* — Tuesday: because marriages are always celebrated on Saturday.

17 *tumišɛliŋɛ pfu* — vide Vocab. s. v. There is a difficulty here as *tumišɛliŋ* appears 805 to be a period of a few weeks about midwinter, and the fire appears to be connected with the *Šiˈri Badat* myth

This would seem to imply that marriages only take place within a fixed period at midwinter. Perhaps the marriage fire is only similar to, or derived from, the *tumišɛliŋ* fire.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

5394
585

One of the brothers of the Bride's mother or one of the Bride's own brothers stays with the Bride, and one girl stays with her. They call this girl the *Mokātum Dasin* (bridesmaid). Then after sleeping (the night), in the morning the (bride's) mother-in-law takes the Bride away to fetch flour from the flourbin and to make her bake *khamali*. On the bin the Bride leaves a shirt, or an article of silver, for her mother-in-law. It is the custom for the mother-in-law to put on the garment.

They bring flour in a bowl and give it to the Bride. She kneads (dough of) it and begins to cook *khamali*. (As) wife of the Bridegroom she rolls out the dough and throws it on the griddle, and then the Bridegroom turns it. If the Bride spoils the *khamali* the Bridegroom gives her a rap with the bread-turner. If he fails to turn it and spoils it his wife gives him a rap with the rolling pin. This is the custom existing from former times.

When they have baked three or four pieces of *khamali* they throw a little flour on the griddle and take it off. After this the Bride's aunt, or sister, who has made her make the *khamali*, and the bridesmaid depart to their own homes.

Then three days after the marriage, on the Tuesday, they make the wife and husband lie together. On the Tuesday morning it is the custom in Hunza for them to set (lay? light?) the Tumishèling fire. And the Bridegroom, after lying with his wife, washes himself and comes out to dance at the Tumishèling fire. When he has danced and gone home his father and mother make *mūl* (gruel) for him and he eats it. They call it *Ōtiki Mūl*. It is a custom obtaining from ancient times.

For the Bride they prepare two or three large bags of parched grain and dried apricots (and bring them) for the wedding from

---

18 *isu'state tsil sutin* — lit. "pouring water over his body" an idiom for "washing oneself". It is noted that he does this in private.

22 *sormutsiŋ* — A note states that the supplies mentioned are brought by the girl's relations to her father's house one day before the marriage.

očai.ab — v. Vocabulary s. v. *-ai.

1 u.i·ruman — A departure from the usual practice of making the verb agree with the last element of a compound subject.

di.u·waamer — An ambiguous form being as it stands, the 3rd. pl. pres. + -er, but it is probably to be taken as di.u·wamer the 3rd. pl. static pt. active + -er.

4 (t)ser očai.ɛ — glossed "he cuts (the cloth)", but the meaning is probably rather, 'he tears off a piece' (the right length).

6 γusulu.ɛ ni.at — glossed "the washing prayer for the dead". The -u.ɛ is puzzling. Perhaps it is merely the pron. "they", "the people present".

7 ɛner — dat. dependent on γusul očai.i.

e·dilumer — Caus. form with simple trans. meaning.

8 n·capin — v. capi.ab. After being dried the body is rubbed with oil.

4: Lorimer L-3 (1920-4: 1934-5) 1935 AV7 Burusho AV7

No. XXXIV.

The Custom in regard to Funeral-Rites for the Dead.

5392
744

When a man or a woman dies, on their giving up the ghost (their relations) put them on the ground stretching them out with their forehead facing the Qiblah. Then with their hands they close their eyes and for a little they bend and straighten their legs and arms. Then the relations fetch water and heat it, and the mullah comes and measures the shroud and tears it off. He makes the shroud of twenty-four cubits of cotton.

According to the Sherist custom some relation of the man's, repeating the prayer for the washing (of the dead), lays the dead man out naked on a plank and washes him. Then having washed him and dried him they put him in the shroud.

Then the men and women collect together and weep. After weeping for a short time they fetch the bier and placing the body on it and tying it there the women and men take the body out of the house, weeping as they do so. The women, after going with it about 200 yards, turn back.

The mullahs together carry the corpse to the grave, repeating prayers as they go. There they take it down from the bier and recite prayers. Then when the grave is ready a relative or mullah lowers the body into it, and they lay the body down, turning it to

---

9 *kafan stamditen* — This is the original reading and probably stands for *kafanib waditen*, 'they put it down on the shroud'.

10 *gili sema* — probably here means "all together", "jointly" rather than "having assembled".

11 *dosirf'ai* — It seems an arduous task for one man.

later for netan jek netan, 'iakilatum kafan fataŋ n'ɛtan d'oγum iriŋ 'eśki ne.ɛtan γanγum iriŋ 'ɛpatatɛ jɛ'k nɛ'tan fat ɛčʼan. Han γ'usan kɛ ditsum 'eśki ɛčʼan.

Masoratum da'l manum sis ha'ler jučan. Ha'ler du'mer suk'uyu.ɛ dando.'er dusučʼan, nasi'pa očʼan. Ša'mer sukuyu.ɛ ha'lum u.i'rumo
20 ha'ler šapik dišʼan. Ho iskikuta manu'mer čira'qo huy'ɛs qaš ɛčʼan.

1 doγum — I take the correct form to be doγum.

2 ɛśki } *'ɛśki was twice explained to me as "bed-head" i. e. where one's head is
3 ɛśki } when one is lying down. The Hind. equivalent was given as sirhāna. *'ɛśki was also given me as the equivalent of "pillow". It is probable that the hand is put beside the head, and the clod under the head as a pillow.

2 ne.ɛtan and ne'ɛtan — The long vowel suggests that the pron. prefix is doubled: "they put it for him" v. § 240.

3 masorɛ kalib — glossed "they mark out the shape of the grave with earth and pour water on the mound". The word here undoubtedly denotes the 'mound' over the grave. It is of course the P. Ar. *kalib*.

7 maser — requires a verb "dug", "prepared", dusu'mantsum relating only to bateŋ.

dusu'mantsum — The form is that of the 3rd. pl. pret. + form and is probably to be regarded as the static pr. active + -an + -tsum. Cp. §§ 320, 322 g. 'They ask pardon of', i. e. 'they thank, those who have done the work'.

8 da'l me.ibʼan — probably, "they remove from the vicinity of", not literally "they get up from on".

9 šaŋ, šaŋ — probably this should be the *fatiḥah*. A note adds that the mullahs ask for forgiveness (*karāmat*) on the tomb.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

face the Qiblah, and undo the shroud from over the face and put the right arm under the head and lay the left arm along the side of the body, and so they leave it. They also bring a clod of earth and put it as a pillow. 534* 764

Then the mullah, obliterating the marks of his feet in the grave, comes up out of it. After that they place flat stones over the grave and throw earth on the top. And they make a mound over the grave and pour water on it. Then the mullah recites verses from the Qur'an and offers up supplications. After this (the relations) ask pardon of those who have (dug) the grave and brought the stones. Then they withdraw from the grave and when they have gone seven paces the mullahs cry out the call to prayer over the grave.

It is said that when they have gone seven paces from the grave two persons come to the dead body in the grave. The name of the one is Nakir and the name of the other is Munkir. When they come and say to the corpse: "Arise with God's permission," it gets up. It starts up with a shout in the dark grave and its head strikes against the stones over the grave and then it sits down again. And it calls out: "Father, Mother, Uncle, Brother!", but answer comes from no one. Then Nakir and Munkir interrogate it. For this reason the mullahs cry out the call to prayer, saying: "Perhaps it will count for merit to the corpse." 534* 775

The people who have left the grave come to the (deceased's) house. On their arrival there the relatives bring them *demdo* and put it in their mouths. In the evening they bring food from the houses of the relatives to the house of the deceased. Then when three days are up they slaughter the *chirāq* goats ("Goats of the Lamp.") 534* 765

11 *hin ēk* — i. e. *hine ēk*.

18 *Ḥasuv iw gulasov* . . . — or possibly: "perhaps the deceased has some merit".

19 *nasīpa ot'an* — glossed: "put it in their mouths by force".

20 *iskikuts* — apparently comes to be a technical term: "The Three Days" or "The Third Day". So also *Čirauṛ* the "Day of the Lamp" being also the third day, and *taloikuts* "The Seventh Day". If *iskikuts manumov* means "on the three days being completed" then the day in question would be the fourth day; but my impression is that the phrase means: "On its becoming the *iskikuts*". Similarly for *taloikuts*.

Gur hitukan thalhavn. Huyewn šapr ka dehistavn, šarhat ehen, gori espaljavn. Čirayę espalasnlo axwnar čirayę navma[1] yatali hali. Faqat.

---

1 thalhavn — from thawra.

2 gori — a "light" here means "oracle" translated with herself oil and cotton wick, but it is officially a čirayę, P. čirayi.

espalasnlo — 'at the time when they light the lamp, the mollah reads . . . This is not very satisfactory, perhaps the meaning is: 'while they burn the lamp', 'while they keep the lamp burning . . .'.

3 *fite taloa* — a note elsewhere states that: "prayers are read by the mollah and an assistant till the lamp goes out".

5 šapik šiḥavn — this is the wheat and goat or sheep-flesh mentioned above. A note elsewhere says: "13 seers (i. e. 24 lbs.) of wheat are pounded up and salt, ghee and the mutton are added. When the lamps are exhausted this is eaten. The sheep (before being killed) has its legs washed and antimony put on its eyes".

7 raḥ no — implies a plural object. Perhaps: "looking after them (i. e. the people of the house")

8 talakute — vide note on talakute, p. 212 l. 20.

! [Errata: for čirayę na'ma read čirayęna'ma, cf. P. 313 l. 14 — Anklesaria]

4: Lorimer L-3 (1930-4; 1934-5) 1935 AV7 Barnako AV7

They pound one *chag* of wheat and cook it with the goats flesh and they make *sherbat*. And they light a lamp and the *akhond* then reads the *chirāg-nāma*. They practise this custom in accordance with the commands of Pīr Shāh Nāṣir i Khisrau. The *akhond* reads until the wick is burnt out. When it is finished they put the ashes of the wick in water and pour it out in the *sūnkā*. Then they eat the food, and for the *akhond* they make a dish of the breast of a goat and they give him its skin and head. 5314 765

For seven days the relations remain keeping watch in the house of the deceased, and they do whatever work turns up for the people of the house. When the seven days are up they prepare the "Qur'an Food." Having eaten of this they divide and take (what remains) and depart from the house of the deceased to their own homes. At the end of the seven days they also fetch the master out of the house. Then, after respectfully kissing his hand, they depart.

At the "Lighting of the Lamp" they used to eat one goat, and after the seven days reading of the Qur'an they used to slay three or four goats and cut up ten pieces of ghee. They used to be at great expense. (But) From last year (i. e. 1923) by order of the Agha Khān the Thaw has made them give this up. He has permitted the eating of one goat for the Chirāg, and for the Qur'an Food he has permitted one piece of ghee and one *chag* of grain.

That is all.

---

12 *ṣāfān* — perhaps in its special sense "daughter".
ṣāḥibānu — is probably adjectival, rather than adverbial ("after 7 days").
13 *ṭawwān* — is glossed "ten pieces", otherwise I should have taken it to be "so much", "that much", "the same number (i. e. 3 or 4) of . . .".

---

1 *iski.ulo* — Note the regular use of the cardinal numbers in stating the day of the month, sometimes with *-ulo* and sometimes with *-er*.

niłin — the special use of *ni.er* in the sense of 'killing for a feast'.

3 *Thame ke* — here and in line 11 on page 318 the MS. has *Thamko*, but the final vowel of the *ke* has probably been affected by the initial *u-* following. There is no evidence for a plural *thamko*.

Humzure uyore . . . guiiqante — This phrase is rather obscure *ka'mado* can hardly be taken as meaning "going to see" or "in order to see". It is an agential adjective 'those who go to see', *uyore* probably qualifies *hiri ke guiiqante* and not *Humzure*. It usually follows the noun it qualifies, but not always.

7 *ǎaryora ditai* — *ǎaryora* was explained as "archery", but *ditai* refers to the bows. The general meaning is: galloping down the ground and shooting at a mark with a bow and arrow.

No. XXXV

About Nauröz.

They hold Nauröz on the third of Hamal. The Tham slaughters an ox and prepares food and brings it out to the polo-ground. He gets them to make three marks of silver (for an archery contest).

The Tham and the notables and all the men and women of Hunza who go to see shows put on their best clothes and smarten themselves up. The Tham provides Nauroz clothes for the Wazir and some of the elders.

Then they come to the polo ground and make a heap of earth for the mark and set it up. First of all the Wazir gallops down (and shoots his arrow at the mark). Then the Gushpurs do so, then the elders. If anyone hits the mark (the Tham) gives it to him; on which they kiss the Tham's hand. If the horsemen in three shots are unable to hit the marks then it is the custom to give them to the bandsmen.

They also do tent-pegging and play polo. And they put on a female Bitan (to perform). And the women and girls take ropes and go to the gardens and tie them to the boughs of tall apricot trees and swing. And the people dance on the polo ground.

---

9 *ḍāḍ* — originally written *ḍāḍ*.

11 *wonderwi* — It is said that till the British came in 1892 it was the practice, while carrying the lance under the right armpit, to take the peg on the near side of the horse; which must have been an exciting performance.

mamaktum — glossed H. *ḍarīb kar*; alternative *marpiṭaben*.

13 *gur* — this diversion is said to have been originally taught by Fatima.

Tsor Turakutsan Thame hukum ne giraśar d'eričai.i. In nikirrat bas'urmar B'altite Tranfa giraśai.i. Da Yarpa giraśai.i. ---

7 *bano diśan* — Note: "It is brought from the Masjid near the end of the polo ground or above it". I don't know if two masjids are here referred to. There is one on the hill side just above the polo ground and somewhat to the West of the middle of it.

Each of the twelve sections is called up by name in turn and its share is handed over to it.

12 *bukak* — Bones have been associated with the spirits of the dead in the beliefs of some peoples, e. g. the Romans.

[2] In Hunza on this occasion necklaces of beans are made and put on the children. Children not so provided try to snatch the necklaces of the more fortunate.

[1] [Errata: for giraśai read giraśai, cf. p. 419 cat. 116 -- Analyst]

[2] [i.e. the day of Nauroz 13 -- Analyst]

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

First the Tham gives the word and makes one of the Terakuts stand up to dance. When he has danced and sat down again the Trangfa of Bálút dances. Then the Yerpa dances; then the Trangfa of Ganésh; then the Trangfa of Álút; then the Trangfa of Haidarábád, and then the Trangfa of Alíábád. In this manner they make the Trangfas of all the twelve villages dance, one after another. And then the Tham makes whomever he pleases dance.

Then when the show is over they bring the Bano. They give it first to the people of Bálút; then to the people of Ganesh; next to those of Álút, and to those of Haidarábád and to those of Alíábád. They give the Bano to them in succession (one lot after another) from Miagár down to Maiyún, and they give it even to the people of Matum Dás.

When they have distributed the Bano the Mir and notables go off to their houses.

On the day of Nauroz they cook beans in all the houses.

That is all. From ancient times such is the custom.

1 doxᵊerčumɛ — An instance of the rather rare use of the Absolute Pres. pc.

137 132 The opening of the blossom begins first in the lower and warmer parts of the valley and gradually extends up the valley and up the hill-sides as warmth increases with the advance of the season. On the hillside facing Nagir one may see the apricot trees at the higher levels still in full blossom when those at the lower levels have shed their flowers.

giramulər — i. e. when the trees on the boundary of the lands belonging to the Zuŋᵊtiŋ community came into blossom. All this part of Nagir is in full view of Baltit and the adjacent populous tract in Hunza which contains the villages of Ganesh and Haidersbad, Allabad and Hassanabad.

660 The custom is described as a Hunza custom. I do not know whether it does, or did, exist in Nagir.

4: Lorimer L-3 (1920-4: 1934-5) 1935 AV7 Burusho AV7

321

No. XXXVI.

The Shikamating.

539 In Hunza when the apricot trees are coming into blossom and
527 the blossom has come (up the valley) to the village of Zungátin there was from of old a custom which they call the Shikamating.

For the Shikamating the people of (each) house make a *pṡiti* (a thick cake of bread) for each person. In the middle of the *pṡiti* they make a slight depression and into it they pour a few drops of oil. They call the *pṡiti* "Kèehi Kichāli."

For some years now they have not kept the Shikamating in Hunza.

---

6 *ṡiam* — "they used to make" — the custom being now obsolete.

8 *yeirpyas* — the hollow is made by pressure with the thumb.

ćulas dal — *ćul* and *til* both seem to mean much the same thing 'a drop', 'a very small quantity of liquid'. With *ćlas* each seems to be used in the sense of 'to pour a few drops'.

7 *maaVi* — 3rd. pl. *y* of the short form of the pret. of *maaru*.

ṡiy'eirsu — It was stated that the custom was abandoned in 1892 as an excessive or futile expenditure, "*fazul sarf*".

---

O·di ṇsərkas — altered from *ṇsərkas* which appears in the following note: "He shouts from a high place: *Lar tsordinər O·di ṇsərkas bila. Wa mamu tsir čau.n aiyo·tin*"". I do not know the exact meaning of the phrase. The only explanation I have of *O·di* is that it is the "day" on which milk is collected etc., but that must only be a secondary usage of it.

None of the known meanings of *°-ṇsərkas* or *ṇsərkas* is obviously suitable: 'to bring' (a weapon etc.) 'down'; 'to strike (a blow) with'; 'to leave' (behind), 'to put down'; 'to divorce' and perhaps 'to let', 'permit'.

Possibly the idea is 'to leave' i. e. not to take the milk for oneself, or 'to keep' it in deposit.

In either of these cases *o·di* would refer to the 'milk'; but we have *o·di.e mamu* "the Odi milk" in l. 9 below.

The plural prefix of *ṇsərkas* might be because the *o·di* was conceived as being in large quantity. *O·di* would have to be x.

3 *mai.i mai.imo . . .* — Literally: "Don't you yourselves milk your own

No. XXXVII.

The Odi Custom.

On the fifteenth of May they take away the Hunza flocks to the grazing grounds. When four days remain to the (time for) taking them away the Cherbu calls out: "Ho, tomorrow the Odi is to be kept. Do not milk your goats for yourselves!"

Then the Dirāmiting milk their goats and collect the milk and every day they bring two or three pumpkin-vessels (full) to the Wazir's house. They boil the milk and making a Dirāmiting herdsman carry it and some bread, in company with a brother or son of the Wazir they take it to get the Tham to handsel it. They take it to the Tham's house and get him to say "Bismillah" and taste it.

After that they bring the Odi milk of Ganish, of Altit, and of the New Settlements to the Tham.

For four days the Dirāmiting milk their goats and collect the milk at the house of the Wazir and make four or five vessels of

---

goats", but the sense and a gloss make it 'don't milk your goats for yourselves'.

The alternative given in the first note above is even more indefinite: 'let none of you milk goats!'

hire mamu gali ṭau ne — This appears to be an attempt to telescope *hir ṭau ne* and *mamu gali ne*. But possibly it means "milking their goats all together".

ilite ewir — *ilite* appears to be *-il + te* 'on his lip', *ewir* in the causative of *ilas* 'to make him put' v § 208.

(69) wa·lto tsundowan d'iltəriŋ netan, da maska ke d'iltər nuk'a Wazire ha·lum Thamər tsuč'an. Ho Thame or bezan mirma·ni (or, mermaˈni) ɛčai.i. U·imo ha·lar jučaˈn. Ho Diramatiŋe huy'ɛ·s terminər tsuč'an.

5 O·ditsum yər ne mene huy'ɛ·s terər tsuman ke han baskarate jərpa očaˈn.

1 *diltəriŋ* — is glossed as "bowls of buttermilk".

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burnho AV7

butter milk and carry the butter and buttermilk away from the Wazir's house to the Tham. Then the Tham gives them some present and they return to their homes. After that the Dirāmiting take away their flocks to the grazing grounds.

If any people take their flocks to the grazing grounds before the Odi they fine them a ram.

2 *Gɪnani* — It is held later in *Gujhal*, the Upper Hunza valley. The term *Gɪnani* seems to apply originally to the small quantity of barley which is torn up and brought into the house, see line 8, page 238, and to the grain of it which is eaten, see line 11 page 238, and then generally to the festival associated with this sampling of the crops.

4 *pfal nuka* — *pfal gaman* seems to be the idiom for "coming into grain, developing grain".

halɛ iwat — appears to be literally "fox's body" (*-anaf). It was explained that the term is used to describe corn when the ears have turned yellowish or reddish i. e. the colour of a fox's fur.

5 *ak'abirtiŋɛ kɛ doγ'arušai.i* — *kɛ* was here substituted for the original *ka* ("with").

The Gināni Custom.

539
527
241

It is the custom from ancient times that the Gināni be held on the fifteenth of Seratān if the year turns out hot, but if the year is cold they celebrate the Gināni on the twentieth.

When the barley has formed grain and the ears have turned yellow, the Tham, after consulting the Wazir and Elders, makes the Akhond look for a favourable time, saying: "Which day should we hold the Gināni?" The Akhond looks in his book and fixes a day.

Then when eight days remain to the Gināni they bring the musicians and make them play the Gināni tune at the Tham's door. The musicians play till ten o'clock and then go away.

When two days remain the Cherbu calls out: "Ho, on such and such a day the Gināni is to be eaten. Go to the distant grazing-grounds and fetch in the *burūs*. All night till daybreak the musicians play music so that all the poor people may hear and rejoice.

Then, until the eating of the Gināni, rubbing the barley between

---

Perhaps the narrator had originally had some other verb in view, as *dayarwas* is not elsewhere accompanied either by the general oblique or by the postposition *ko*.

-11 *Granā ṭi.ao bi* — *bi* agreeing with *granā* v. § 401.

12 *bas ko . . . sesen* — the grammar is rather confused. The meaning is: "in order that the poor people may be happy", but actually *bas ko* 'because' appears to introduce *sesen* "because they say (lit. 'saying') 'let the poor people be happy!'"

bewas — a chance variant for *bawas*.

13 *cṭṭi ze* — negative *a* + *i* + *-ṭṭi*.

---

1 *momus* — Note the sg. noun with the pl. pron. prefix cp. § 128. III.
ma·či = *ma* + **-ati* from **-atas*.

4 *teordimo* — is glossed "first" but I think the correct meaning is "in the morning" as in line 13.
Thamo — this seems to be a gen. sg. in *-o*. Otherwise it is the pl. less the *-e* of the gen. See also line 14.

5 *yate uyo·n* — This is 2. *yate* = *yor* 'ahead', 'in front' etc. I take it here as meaning 'next'. Otherwise, taking it with *uyo·n*, 'all beyond this', 'all the rest'.

[72] *Dekha·n Pir* — elsewhere recorded as *Pir Dekaŋ·n* and *Diqarai Pir*. He is said to be that multiple and ubiquitous personality *Xuarja Xuar*.
hori — barley is used for the Ginani in Baltit and Altit: elsewhere, it is said, wheat.

8 *duwačan* — the object being *hori* (y). Originally *diłoru* was written *ginani* (x) being understood as object.

9 *nɛqul* — MS. *nɛalul*

11 *kapanulo . . . gičai.i* — The sentence is not very clear. *Hine* 'one person', 'someone' is the subject of *gičai.i*. What is meant is that some buttermilk is put in the dipper (*kapan*) and a few grains of barley are added, and this is

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

the hands is not permitted; and they warn the small children, saying: "If you rub the barley the Tham will cut out your tongues for you," and frighten them. 534A 527 241

Then when it is time to bring in the Gināni, they play the Gināni tune in the morning on the balcony of the Tham's palace. First they go from the Tham's palace to bring in the Gināni. Then when they have brought the Tham's Gināni from the fields it is the custom next for all to go away and bring in their own.

They go the fields and say "Bismillah" and pray to the Dēhkān Pīr and then they tear up a little barley by the roots and bring it home. Bringing it to the house they tie a little of the barley to the main pillar and a little they roast at the fire and rub it between their hands. Then they bring buttermilk in a bowl and three times in a spoon(ful of it) one of them puts 3 or 7 grains of the barley for the principal person of the house, and he laps it up. And in like manner all the people of the house in turn handsel the Gināni grain. [176]

Then the next day they hold the Gināni sports. In the morning they play polo at Bāltit. After playing polo the Tham and the Elders come to the Tham's upper outside garden to make the people give a display. After they have arrived there they bring bread and *barūs* for the Tham from the houses of the Hunza Elders. The Tham sits down on a seat in the place of assembly and the Wazir and Elders sit down in their respective places and then they eat the bread. When they have eaten, the people assemble for an entertainment at the outside dancing-place, and the Tham and Elders come out and make them dance. First the Tham makes

then given to the senior person in the house who laps it up. This procedure is gone through three times. The word is more correctly *ḫapen*, but when the accent as here is on the first syllable the quality of the second vowel is not clear.

14 *ḫaṣor* — called the *Šimʿal Bay*.

15 *berwe* — here and in l. 9, p. 330 written *berwd*, owing no doubt to the influence of the *ā* of *ḫapik*.

16 *ka* — for *ka*.

1 uyo-kičiṇ — v. Vocab. s. v. *-gey.
Ikamiṇ̄ kuṇ̄in — i. e. 1933 and 1934.

11 *Pi.akmar* or *Pi.akmar* — originally written *Pi.ammar* is said to be the word *pairamber*.

12 *nipiṇ̄ar* — ppn. act. of *hiṇ̄rkas*.
darte gičan — the exact meaning or meanings of *darte* are doubtful. The primary meaning is probably "crops that have been cut and brought and deposited at the threshing floor". I get it originally as the equivalent of "threshing floor". All recorded examples of its use will be found in the Vocab. s. v.

4: Lorimer L-3 (1933-4; 1934-5) 1935 AV7 Burushe AV7

one of the Terakuts dance and then they make the *Trang/as* and Elders dance in turn. 539; 527

The women and children deck themselves out to come to the display. And the men used to come, after they had produced mulberry spirits and drunk and become intoxicated. This year and last year by the order of the Agha Khan, (the Tham) has made them abstain from drinking wine and spirits. Then they dance till midday. 241

When midday has come the Tham leaves the place of assembly and (goes and) lies down. After lying down for a little he gets up and they go off to Altit in the evening to play polo. The people of Altit also bring bread and *baris*, and when they have eaten they play polo and then go off to their homes.

Two days after holding the Ginâni they celebrate the Piakmer. Then they cut the wheat and barley and prepare threshing floors and stack the harvest.

---

1 *gati ne* — the grain is collected and put in a pit.

3 *Iškašum berkat* — I do not know why Iškašum should be regarded as particularly blessed or fertile nor why this small and remote district should have specially attracted the attention of the people of Hunza. Perhaps the Dehqan Pir was associated with it.

sermutsulo utibaʿn — utibaʿn is used where in English we should use "fill", but the Burushaki idiom is "to fill something into something". The real meaning is probably "to pour" and the verb is probably connected with the ordinary verb šinas 'to pour'.

6 *oʿstaqačaʿn* — A note says that this is in order that they may not cast the "Evil Eye" on the grain.

9 *sumʿan berkat* — I do not know whether *sumʿan* is the 2nd. pl. pret. or the Static pl. passive + -an, of *seγas*.

I think the stress on the last syllable would be less unusual in the pret. than in the pr.

No. XXXIX.

Harvesting.

In Hunza first they thresh the harvested barley. Having done so they collect (the grain) and make some thin bread and a cake of thick bread. Then they take big bags to the threshing floor and fill them (with the grain). 539% 243

As they fill them they say thus: "I crave a blessing from the Diqūni Pīr. In the name of God! O God! Fill my belly, O God! Fill me full, O God! Grant the blessing of Ishkāshum, O God!" Saying (these words) they fill the bag.

Two men do the filling. One man holds (up) the mouth of the bag and the other fills it. They make all the others hide themselves. Then the two men, when they have filled (the bags), call to the (concealed men) and bring them up, and the latter, coming up say: "You have brought prosperity!" And the filler replies: "(It is due to your) luck and fortune!" 539% 243 251

Then they have some food and bring the bags to the house and empty them into the grain-bin. Subsequently they bring in the wheat harvest too, and then the buckwheat. And, setting aside wheat and barley for seed-grain and for funeral rites, they take

---

11 *hewa* — not recorded elsewhere; it is perhaps for *hewo* a possible plural form of *ho*. *wāji gwiw* — exactly corresponds to Shina *gw fāla* inverted. It is glossed Hindustani *orpe pīche* which confirms the natural identification with the words *-āji and *gw* but does not elucidate the sense in which they are used. Compare the term *-āti.ālo (Vocab. *-āti) also meaning 'funeral rites' which also seem to contain the idea of 'after', 'following'.

The grain is distributed as alms, *zakwāt*, after a death.

1 *yai.iŋki n'stan* — glossed "sifting", but literally: "making it millable, i. e. fit for grinding".

4 *er ečan* — in such cases it is not easy to decide whether *ečan* is to be taken literally 'they make', 'prepare' or in some specialised sense such as 'they allot', 'assign', 'present'.

6 *taγay ne* — the mud is used in some way to render the bin air-tight, whether [37] by sealing the junction of the lid and body or plastering over the whole article must depend on the exact nature of the *taγar* of which I am not informed.

4a Lorimer L-2 (1930-4; 1934-5) 1936 AV7 Burushe AV7

the year's food supply out (of the bin) and they sift it in the sun. Then they put it into bags and take it away to the mill to be ground.

It is the custom to ladle out a *ḫiṭṭuli* (2 or 3 lbs. of grain) per bag for the miller, and they also make for him one piece of bread.

Then when they have ground it they bring it back and pour it into the bin and stamp it down with their feet, after which they seal the bin with mud and leave it.

They grind separately their daily rations for consumption during autumn, and then at the Tūmishbling they begin on the barley bin and in spring they begin on the wheat bin.

In Gilgit grain is kept in a *ḫuṭul* consisting of a wattle frame which is plastered over with mud. In Persia large clay vessels *zum* are used for similar purposes. The mouth is closed with a lid and the junction is sealed with mud.

? *ḫeṭer* — if the idea in the mind is "flour"; *ḫiṭṭw*, if it is bread.

wɣ'wzki — v. Vocab. s. v. *-ɣwzki.

---

Thamu.er — was a later addition to the title and the result is probably incomplete and ungrammatical. The intention is: "The customs observed when the Tham visits Herber".

Herber — I have written as one word as it is usualist, but it is no doubt. *Her Her* 'the Her Valley'. It is the upper portion of the valley of the Hunza river and, at least outside Hunza, is usually called Gojhed.

[4] *ailtaner* — is the term for 'headman' among the Wakhis who form the bulk of the population of Upper Hunza. Wakhi influence is also apparent in some of the place names.

[7] *Čafa Hara* — *Čafa* is said to be a Wakhi word meaning "hurry up quickly". The name is given as *Čafa Her*, leaving the *-a* to be explained.

[10] *iriater* — *ri* is the 'edge' above a declivity, e. g. the top edge of the earth cliffs formed by the cutting of a river through an old alluvial or glacial deposit. It might, I think, also be the edge of a terraced field.

No. XL.

The Custom in regard to The Tham's Annual Visit to Hirber.

Every Autumn, in September or October, or on the 15th. or 20th. of Sambula, the Tham sets out for Hirber taking with him eighty followers and Elders. With ten or fifteen Elders, fifteen men of superior rank, twenty minor servants, seven or eight huntsmen, eight bandsmen and four grooms, thus he sets out.

It is the custom for the Elders of Galmit and, in addition, a number of young men, to come as far as Chaman Gul to receive the Tham. Slaying a goat and loading it along with a supply of bread in a panier they bring it to Bulchi Das for his reception. It is called *Otag*. Then the Tham stops there and eats it. When he has eaten and has gone on to Chacha Hera the women come out on to the edge of the terrace and wave their hands round in the Tham's honour.

(Proceeding) thence they keep playing music in front of the Tham (until) he dismounts at the Galmit dancing place. When the Tham has dismounted they present an ox before him. In former times it was the custom for the Tham to give orders to a distinguished Elder, upon which the latter, they say, seizing the ox and pulling

---

[1] *ŝaiŝaiwa* — probably from *ŝeiz* 'there' and not from *ŝail* etc. 'such'. There seems to be a verb or two missing in this sentence: the party proceeds, music being played in front of the Tham until the Galmit dancing ground is reached, when the Tham dismounts.

[2] *ŝeiŝiwa* — "they make an ox stand", "they stand up an ox", or "they keep an ox standing for the Tham", a sort of technical expression for presentation.

1 γatundate . . . . — This passage is full of difficulties. The first γatundate seems to be 'do trap'.

dorugem — 'missing'; *djl.er jari* or 'pulling it to behind or backwards'. A note explains "pulling out by the horns and tail", but it is difficult to see how one man could pull it in two directions, or even one, and at the same time give it an effective blow on the neck with his sword. He probably has assistants who hold the animal and cause it to stretch its neck out. He then strikes it on the neck just in front of the shoulder. The explanation is probably that *dorugem* is causative.

gur — was explained as the 'front edge of the shoulder' but the word is not recorded elsewhere. V. Vocab. s.v.

γatap ne — was glossed as 'straight down'. It is perhaps identical or connected with γatarp ofar 'to wipe' and so possibly means "making a sweeping cut" or "following the line of the front edge" etc.

2 *hir duriyer* . . . . — the exact sense is not clear. *hir duriyer* is glossed H. *pakarnake* i. e. 'in order to seize' which would be the ordinary meaning, but does not make obvious sense. And why does *hir* not have the suffix *-du* ordinarily required by *durier*? The idea seems to be that they still lay hold of the ox but do not slay it on the spot.

4: Lorimer L-3 (1930-4; 1934-5) 1935 AV7 Burnbo AV7

539A
643
574

it backwards smote it with his sword straight down the front line of the (shoulder and) forelegs. Now the present Tham has made them give up this practice. (As) for laying hold of the ox, they still lay hold of it.

Then when the Tham, having dismounted, has taken his seat on the platform at the dancing ground, they bring a small bowl of milk to him. The Tham, saying "Bismillah," drinks a little and enquires of the Headmen: "Are you well?" and they, standing up, reply to the Tham: "You are welcome."

Then the Tham goes into the fort and the servants and elders go off to their respective lodgings. When they have done so the Wakhis bring them *Kurutè Dandan* (a form of food).

Then on the evening of the same day the Headman kills two goats at his house, and then cutting up a lump of ghee, which may be 30 lbs. in weight, he makes *sherbat*. Then, having prepared 15 *chaqr* of wheat bread he conducts the Tham, accompanied by his followers, to his house.

There are two Hunza Trangfas and they go and cut up the bread and meat and prepare the dishes of food. They roast the breast of the one he-goat for the Tham and bring it to the place of assembly, and they convey the breast of the other to the Tham's consort. The kidneys they take to the senior Gushpir if there is any. One liver they give to the Wazir, if he is there, or, if he has not come, to one of his brothers or his son.

When the Tham goes to the house and when he has arrived at

---

4 *ḫarə ḫarwa?* — said in Wakhi which is said to be "*ḫaſirya?*" i. e. *ḫaſ*, 'good'; *ḫrə*, 'now'; *a*, interrog. particle.

The equivalent Wakhi for the Persian *Xuš amadi* was given as *ḫakar wi.ca*.

6 *ḫarqar* — The Tham's official residence. It is scarcely a 'fort' and certainly not a 'palace' in the ordinary acceptance of the term.

9 *qaiqar* — Shaw gives Wakhi *qai* as "household, quarters, camp". It is also used in Sh. and Khow. It is here glossed 'inhabited house', but seems to mean "lodging".

11 *nikar* — past participle active of **-xwrə*.

16 *ferq* — i. e. *ḫaq* refers I think only to the meat, cp. l. 12, page 340 below. It was glossed "cutting up".

18 *ḫaskərdə* — usually 'ram'; here glossed 'male goat'.

19 *dərə:qp* — a note adds that the Tham puts a little flour on his head.

7 *wołhałtar* — causative: 'to make the Tham wash his hand'.
9 *aświ.e* — glossed "Gojhali assistants".
xam — the *x* is marked here as peculiar and *gh* is given as an alternative.
11 *han pfatanło pai.i* — 'crude in a bowl', i. e. a bowlful of crude.
16 *altalyu.er* — 'for each lot of them' i. e. the musicians, the grooms and the bustamen.
19 *ołwułwn* — "they make them take away" i. e. 'they send' or, 'from the house of the entertainer'.
20 *xonindoke* — a Wakhi word *xon* is 'house'; *xonin* is probably for the ablative form *xonen*; *dak* was explained as 'hospitality'. Another note gives the combined word as meaning 'the person in whose house the Tham is'. So here and in l. 23 one might take *xonindaqe*, *xonindaqe* to mean 'master of the house', 'host' or 'entertainer'.
In that case *xonindaqitiq* in l. 12, page 342 apparently means 'hospitalities', 'acts of entertainment', and is probably the pl. of an abstract noun *xonindaqi*.
21–22 *aale jowi berkat* — Wakhi *aale* (= *ava*?) 'your'; *jowi* life.

the door, they bring out a bowl of flour, and *ispandar* smoke, and 594
a dish of ghee. The Tham touching these and kissing (his fingers) 643
enters the house and sits down on the large dais. The master of 574
the house and his brothers, standing in the centre part of the room, say: "You are welcome!" "God bless you!" replies the Tham.

Then he makes the Elders and followers sit down for a little at the door and he calls up the Wastr and then he calls up the Yerpa. Then they bring the Elders one by one into the house, and then they bring in the *inferior* followers, and they make them sit down in their appointed places. After this a personal servant brings water for the Tham to wash his hands, and when they have made the Tham wash his hands they make the Elders wash theirs.

Then they set food before the Tham. The Head Cook and the 262
assistant cooks prepare vegetable soup for the Tham and put the 539
hindquarters of a sheep and *sherbat* with bread before him. Also 643
four cakes of thick bread, and curds in a bowl, and cream in a cup. 574
The Head Cook cuts up the meat for the Tham.

Then they place dishes of food before the leading men, and the meat that is in front of the Tham they dispense to the Elders and followers. There are also the two heads of the goats: one of these with some bread they give to the musicians; the other they give to the grooms. To the huntsmen they give the fat tail (of the sheep) which is in front of the Mir. They give two dishes (of food) to each party separately. To the Bodyguard they give five dishes.

Then to the Tham's womenfolk also they send bread and dishes of food and to the Gushpurs they send one dish each. The Gushpurs are not allowed to come to the host's house with the Tham and Elders. They send the food for them to their various lodgings.

When he has eaten the Tham comes out. He says: "Blessings 594
on you!" and they reply: "On your life blessings!" The master 643
of the house comes out in front of the door with the Tham. 574
576

22 *ka-kow* .. *kanik ki* — the sentence is grammatically obscure and probably faulty, *ka-kow* unless it is adjectival, seems to require a verb, such as "they carry away from ...".
wasiwski — an alternative reading is: *wasiw kan* . . .
uyulas — is the p.p.c. active of *bilsipas* used absolutely.

4 šorbatatum — oil comes up off the šorbat when it is cooked.
oči.as — It is to be noted that the object in del (y) not ier (s) the idiom being "oil fall in it" and not "it fall of oil". If ier were the object, the verb would be uyas not oči.as.
in'e — presumably refers to the 'host' or 'entertainer'.
tsordinar — probably goes with dosordaru 'in the morning' they bring food which they have set aside . . .
7 čurbaru — is sg., but here used with collective force.
pfalu.e — depends on šapik 'bread of 15 choqs (of) grain'.
8 netan — governs both šapik and šorbat.
10 iyuri baru — i. e. the local inhabitants give.
14 učim bila — this is equivalent to a finite passive tense: 'it has been given them by the Thams'.
ilban — This tax is paid when the Tham is leaving at the end of his visit.
19 šabar — is Wakhi for 'four'.
walti — ground "four measures". It probably stands for "four hičuti".

4: Lorimer L-3 (1920–4; 1934–5) 1935 AV7 Burushо AV7

Then from the house of entertainment there is (sent) a dish on which they put as the Wazīr's portion, a leg (of mutton), and *sherbat* along with bread; and also there is a dish apiece for the Headman and the two Hunza Trangfas on which they put a leg. Then for the cooks there are the fat of the two goats and their necks and skins. And for the musicians there is from ancient times a wooden jar which it is the custom to give to them filled with the oil from the *sherbat*. From that evening's food they set something aside and in the morning, and they bring it with *qurūt tuzwik* from the host's house to the place of assembly. 539* 643 574 262

When the Tham stays thus for a month or two months in Herber every day the people who are exempt from carrying loads bring to the Tham's house two goats and a lump of ghee and bread, which they have made with 15 *chaqs* of grain, and *sherbat*. And every day the Tham gives green grass to the Elders for their horses. To the Wazīr grass is given from five houses and they give the Wazīr one *chati* of grain (for his horse). For the horses each village gives (him?) a rope. 539* 643 574 431

When the hospitalities have come to an end they give a goat and bread (made) of five *chaqs* of grain. This is called *Otaq*. The custom of *Otaq* is as follows: One field has been given to each of them by the Thams and on that they have imposed the *Otaq* tax. Further the exempted man every year gives the Tham as *ilhas* four animals viz. one he-goat, one ram, one she-goat and one yearling kid. Followers of the second rank and load-carriers give every year three animals viz. one she-goat, one sheep and one yearling kid. These are the tax (imposed) on load-carriers. Further, each household gives the Tham four (measures of) grain, which they call *sabir jiti* and each household gives a *hichati* of barley, which is called *yashi yūrā*. It is the custom also for every village to give one rope each for as many dogs and horses as there may be. 539* 643 574 651

The Khudā-abād *ilhas* is (assigned) to Gushpur Nafīs, and the Nazīmābād *ilhas* to Shāhāz Khān and the Miagūr *ilhas* is vested 539* 173 651

19 *yashi yūrā* — Wakhi for "horse's barley"; *yāl* 'horse' and *yūrā* 'barley'.

21 *Nazimabad* — the older name of this place was *Ālāh Das*.

---

1 *guŝpu·re.iki* — "gushpuri" must mean either that it is assigned to all Gushpurs jointly, or more probably from what follows that it is assigned to one or another Gushpur according to circumstances. The preceding *Xodo.abad* and *Narimabad* are both "gushpuri" inasmuch as each has been allotted to a Gushpur.

5 *tobaqiski* — the only example of the suffix *-iski* unless *digiski dalse* 'to kick' is to be reckoned a second. Functionally it is to be compared with the suffix *-ak* added to *ŝw* 'whip' and other words.

8 *mirce* — as a thing which should pass to his heirs i. e. 'in perpetuity'.

11 *nivin* — the past participle active used absolutely.

yol ati bilum — 'a year had not come (round)'. 3rd. sg. *y* neg. of perf. of *yo·yan*.

14 *Tura Beg* — he was an elder brother of *Humayun Beg*, but they had different mothers.

20–21 *Hunzo ulo* — "inside Hunza" probably meaning "through Hunza", cp. the temporal use of *-ulo* in the sense of "in the course of", "during" a period of time.

4: Lorimer L-3 (1929-4; 1934-5) 1935 AV7 Burushe AV7

in the Gushpurs. During the Thamship of Ghazan Khân it was given to Wazir Asadullah Bèg, because (the Tham) had sent his two sons in command of an army to Seriqôl. The name of the one was Khairullah and the name of the other Faizu. The Kirgiz had shot both at Wachó in Seriqôl, and they had brought them back and buried them in Misgár. It was the hot weather, and in autumn Wazir Asadullah Bèg exhumed them and, bringing them to Bálitt, he made a grave and buried them there in coffins. For that service Ghazan Khân had granted Wazir Asadullah Bèg the Misgár tax as a permanent inheritance. After Asadullah Bèg's death Ghazan Khân had bestowed the Wazirship on Humáyûn Bèg.

A year had not passed after Asadullah Bèg's death when Ghazan Khân, who had a son called Bapo, despatched Wazir Humáyûn Bèg and a Bridal Party, with his son, by way of the Irshad to fetch a daughter of Amán-i-Mulk of Chitrál (as wife) for the latter. After they had arrived at Kirmin, Tera Bèg conspired with Safdar Khân against Ghazan Khân and they murdered him. Then they banished Wazir Humáyûn to Chitral, and bringing back the Gushpur, Ghazan Khân's son, they murdered him in Shimshál. Then Safdar Khân possessed himself of the Thamship of Hunza and Tera Bèg became Wazir.

When five years had passed with Safdar Khân in possession of the sovereignty the army of the English Government advanced against Hunza. They say that an officer of the English Government, called Lockhart, had come to Tera Bèg and Safdar Khân. They had shown him great disrespect, and when he had said: "Give me right of way through Hunza to China" they had subjected him to great insults.

Hunza and Nagir, joined together and made war. But Safdar Khân and Tera Bèg found themselves unable to fight and fled away to Chinese territory.

---

21 ههلا ته — 'when he said' an unusual expression instead of the normal هه‌ل‌ته‌ر.

22 ئه‌وه‌ل‌ه‌ه‌ه‌ن — lit. "were unable to" but the sense is more active: "they failed to. In fact I believe they at once fled without making any pretence of fighting.

Hó Wazir Humayun Big Čitrartsum Sorkar Angrez ka Hunzu.er dimi. Da Sorkare Waziri itimi. Balke gavernori.e ixti.ar iči bam. Thamo uyon Safdar Xanz ka ni bam, mon kr apam. Da Tora Beg kr yure ka ni bam. Tora Begre bušai.e ke Sorkar Angrez Wazir Humayun Begur iči bam.

Ho Mir Muhammad Nazim Xanz Mingare bap guspure.iki toi Wazirer itimi. Da Haiderabade guspure-ki bušai.e ke itimi.

---

1 *Sorkar Angrez ka* — *S. A.* here and in what follows means of course the "British Authorities", "British officers locally in charge".

6 *xat nusen* — The messenger was a man of the *Burum* tribe called *Nuro*. *Safdar Xan* apparently got hold of him and is said to have tied him up in a (bush?) *sewakin* and left him in the cold. He survived this, however, and was said to be still alive in 1934. There was also a son of his in the Mir's Bodyguard and another in the Gilgit Scouts.

9 *toi* — glossed 'alvah', but it might equally be an adjective qualifying *Wazirer*: 'to the new Wazir'.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

Then Wazir Humāyūn Bēg returned from Chitral with the English authorities to Hunza, and the Government gave him the Wazirship. Indeed they gave him the powers of Governor. All members of the Ruling Family had gone off with Safdar Khān; there was none (left in Hunza). Tera Bēg too had gone off and his sons with him. The English Government also gave Humāyūn Bēg, Tera Bēg's land.

Then Wazir Humāyūn Bēg represented to Government that Mīr Muhammad Nazīm Khān, who was at that time in Sariqol, should be made Tham. He sent a letter to him and brought him to the Government and the Government gave him the Thamship.

Then Mīr Muhammad Nazīm Khān gave once more to the Wazir the Miagār tax, which was *Gushpuri*, and the *Gushpuri* lands of Haidarābād he also gave to him.

Gute maru.e bap Maiyorteum Ata.abard xa bila. Her Bere Galmit(t)eum Misgarr da Čapurran xa marure dasturr ap'i. U aiyerčarn.

---

1 *ap'i* — Note the idiom. *Diramitiqe* is probably the subject of *maru ctas* and the phrase cannot be translated literally. The nearest is: 'there is no Diramiting gold-washing'.

3 *Thamo . . .* — similarly *Thamo* is the subject of *niyas* and *niyas* is the subject of *manimi*.

614] 4 *qawaš oye.ibarn* — is causative: 'they make the Diramiting carry the Treasury Bag'.

5 *zur'arbgurin* — the "*jemadar* of Goldwashers", the man who directs and controls the operations. There is one in each of the "three tribes", which are the *Herakots*, *Berqq* and *Berstalig*.

651] 6 *datu garu.e* — perhaps "in Autumn and Spring" as in line 8 below.

8 *manduri ne* — the tax has to be paid in cash, which may be acquired in any way, and not in gold. The *bai.i* is traditionally Rs. 12, but is now reckoned as Rs. 16.

10 *maru ctas ure . . .* — A curious study in the employment of grammatical number.

No. XLI.

Gold-Washing in Hunza.

From ancient times the Diramiting have not (been required) to wash for gold for the Thams, because they are the seed of the original inhabitants of Hunza, and the Thams give them precedence in everything.

When the Thams have to go anywhere it is the custom for the Diramiting to carry the Tham's bag of gold. The remaining three tribes they make carry the gold-washing tray. The three tribes, each taking, along with the Chief Gold-Washer, two assistants of their own tribe, proceed to the edge of the river and carry out the Autumn and Spring gold-washing for the Tham.

There is a tax of a *bai.i* of gold on each Chief Gold-Washer, Twelve rupees are (a *bai.i*). Every autumn and spring they either wash for gold or work for hire and bring in the tax.

Those (only) are gold-washers whose fathers and grandfathers have from of old been carriers of loads. They do not make people who have done superior service, wash for gold.

This gold-washing tax is in force from Maiyūn up to Ata-abād. In Hèrber from Galmit to Misgār and the Chapūrsan there is no custom of gold-washing in force. They do not make the people (there) do it.

---

but the sense is clear and is re-inforced by a note: "gold-washing is only imposed on coolies, low-class people and retters".

In Gilgit and Chilas gold-washing is carried on by a separate community, the *Sewaiard*, who are looked down on but are fairly prosperous. They are probably of foreign origin.

10 *yuy ayi* — is equivalent to "ancestors".

11 *aiyrwiew* — the Causative of *°-afas*, as also *aiyrwfew* in line 18.

No. XLII.

Tsil yelase Dastur.

190 Garumo tsil yelase dastur. U-ltare Bore tsil Ganitkuta ke Altikuta, Aliabadkuta, kure iskikumar harkitsum i-lji yate tsil ze traŋ galt bila.

5 Baltitkuta ke Haiderabadkutaar Burlulu.e tsli ke burle tsil heraŋ bila. Haiderabadkutaar taor Hurt girmar Baltite tsil hori.e hurki.er yaljaen. Harki.e tsil niryal Baltitar devčaen. Baltit harki.er niryal

---

This text was the last written down and the narrator was at the time somewhat ill. It was not therefore very carefully revised.

1 *tsil yelase* — *yelse* is presumably the same as the verb meaning 'to break'. It perhaps refers to making a breach in the side of an irrigation channel — this is, in effect, opening a sluice — by which the water is allowed to escape into a field that is to be watered or into another channel. It seems to mean in general: 'to turn water on to land' and so, simply, 'to use water', or else 'to let it pass on to others'.

2 *traŋ galt* — 'a half' 'divided' or 'part', 'turn' and so 'an equal share'.

3 *tsil d'usumtsum* — 'after the water has come out' i. e. when with rising temperature the ice and snow higher up begin to melt and come down the channel as water. *Borbore* — is possibly locative "in the Borber channel".

The matter depends on the relation of the Borber channel to the Ultar supply. To all appearance the Borber channel comes out of the Ultar nullah, but it appears to have its own supply of water derived from *Burlulu* wherever whatever that exactly is.

4 *tori.e tsil* — The exact meaning is doubtful. *Tori* refers to a stone with a hole in it, through which the water is allowed to pass. Presumably it acts as a measure or regulator. *Tori* itself in this connection appears to mean the "stopper" or "plug" with which the hole can be closed.

No. XLII.

The Distribution of the Spring Water Supply in the Bálti Region.

The custom in regard to distributing the water in spring-time: The people of Ganish, of Alíti and of Ali Abád, these three communities, have equal shares in the water of the Ulter Nullah from the (time of) ploughing till the second watering.

From the time that the Ulter water begins to flow the people of Bálti stop a little of the Berber water. It is the custom, from the beginning of Spring, to turn the water on to Kartmabád for the Thum, through the regulator.

The snow-water and the spring-water of Bílulo is shared by the people of Bálti and of Haiderábád. First, at the commencement of the month of Hói they release the water to the Haiderabadkuts for the barley sowing. Having released the water for the sowing, they (then) direct it to Bálti. After supplying water for the Bálti

---

6 *swat* — The exact sense is here also doubtful, lit. 'to place' or perhaps 'to turn on to', but it can also mean 'to keep' which might give the sense 'to retain for Kartmabád'.

8 *-ladar . . . ḥawq bila* — the form of *ḥawq* must here be something like "property common to both".

7 *ho ḥarkiz ṭal* — i. e. when the Haiderabadkuts have had what they required the water is given to Bálti.

The subject of *dewdrew* can hardly be the Haiderabadkuts as Haiderabad is lower down on the course of the channel than Bálti.

The difference in level is not sufficient to make a very appreciable difference in temperature, but there must be something in the situation which makes the agricultural season slightly earlier in Haiderabad than in Bálti, otherwise Haiderabad, being the less important place, would not get the first turn of the water.

---

7 *d'usai.i* — the perfect used to state a historical fact of which the results persist.

8 *mi.er* — present base + *-er* (*or* due to accent).

10 *Baltite tailate* — i. e. the *Burbule* supply.

abad bilum — lit. "was prosperous (*or*, inhabited, populous"). One would expect *maximi*.

11 *Xarum Batale dewqatam* — *dewqatam* (property *dewkatam?*) is transitive and *ŝa Salim Xaru* must be the subject.

The word means to 'choke', 'block', 'stop', 'hold back' and it is a question whether it is the same word as *d^w-aqatat* 'to choose out', 'select'. It is glossed here "closed". The meaning is probably: 'he had stopped' the channel at the boulder.

13 *i-ijikan* — written in two words and glossed "behind"

Once elsewhere I have recorded *aijikaq* 'behind me'. What this *kan* or *kaq* is, I do not know.

4c Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

sowing, they give it to the Haiderābādkuts for the second watering; when the second watering is done they despatch the water for the Bāltit second watering. 539A 312 221

When the Haiderābādkuts have used the water for seven days, the Bāltīkuts use it for fifteen days, then when the Haiderābādkuts have used it for fifteen days the Bāltit people use it for a month. This custom has been in force from olden times.

The Berber water (supply) is famous in Hunza. Wazir Asadullah Bèg constructed the Berbér water channel in the time of Shah Ghazanfer. So long as the Berber was not in existence there was great scarcity of water in Hunza. To get drinking water the women used to go to Herchē and fetch it. Hunza was made habitable by the Bāltit water. 539A 312 173

The Hamachāting constructed the Hamachi water channel to Ganish and the Altitkuts took a channel off from the Ulter Nullah. Shāh Salim Khān had constructed a channel for Alī.ābād from Herchē and bringing it along had stopped it at the Kherum Bat. He had been unable to carry it beyond that.

For some reason he had dismissed Wazir Pūno from the Wazirship. Pūno was living at his own home. One day, taking the Khurukuts with him he went by night and made them dig behind the Kherum Bat. Making them play on drums he got them to carry the channel through. Shāh Salim Khān, being pleased at this, gave him the Wazirship again.

Asadullah Bèg constructed the Murkū channel. He also made the Murtazā.ābād channel and the Khudā.ābād channel.

Wazir Asadullah Bèg had also laid out the trace of the Mōrē Dās channel. Mir Muhammad Nazim Khān carried it out on that trace.

10 *dowyowimi* — I have taken here as being Causative, as it is glossed Hindustani (infra.) "*nikalwowa*", but the verb seems ordinarily to be a simple transitive with the same meaning as *diwaas*.

No. XLIII.

The Birth of Twin Calves.

Dakil dastuᵛr yərum dir hərangulo bilumulo qau.u eč'am.

Faqat.

---

2 niᵛn — Ms. nuᵛn which is not strictly speaking correct with the singular menane.

6 ke — probably the negative: 'otherwise', 'on the contrary', 'on the other hand'. But it may be the indefinite pronoun "if he said something evil . . . ".

7 γunikiš — "ma γuᵛni numerγuᵛ!" is given as an example. Cp. p. 64, l. 18.

9 iᵛlatum — Somaiyər stands on a terrace which terminates in a precipitous face of alluvial deposit descending to the Nagir river near where it joins the Hunza river. Ganish is somewhat similarly situated on the further side of the Hunza river.

11 yərum — probably the ablative: 'from former times'.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

No. XLIII.

The Birth of Twin Calves.

It was formerly the custom in Hunza that when anyone's cow calved and gave birth to twin calves he used to go to Ganish and shout out to Somaiyer: "Ho, uncle! Ho, uncle!" When he did so, a man on the other side would answer: "A.u." 539A 231

On this the first would say: "Ho, my cow has calved and given birth to twins!" Then if the Somaiyer man said: "Ho, may it be blessed to you!", they say that it used to turn out well for the Hunza man. On the other hand, if the Somaiyeri said something evil, then evil befell him.

Again, if any Nagir person's cow calved and gave birth to twins, he used to come and shout out from the edge of the cliff at Somaiyer: "Ho, my cow has calved and given birth to twins!"

Thus it was the custom for them formerly to shout when there was a closed boundary between (Hunza and Nagir).

That is all!

---

11 *dir* — glossed "closed boundary", "hostility". This was when there was perpetual active hostility between Hunza and Nagir and there was not free passage from the one to the other.

I do not know whether *dir* which means a 'boundary' can really be used as a synonym for "hostility".

bilumolo — v. § 391.

538

The two texts No.s 44 and 45 were all the response received to my demands for Burushaski poetry or verse.

It is commonly alleged that there are no poems or songs in Burushaski, the songs sung on special occasions being in Shina, but Leitner has clearly shown that this is not literally true by publishing five songs in his "Hunza and Nagyr Handbook", to which I now add these two.

At the same time versification is not I believe a really indigenous, or at any rate popular, art in Hunza. No one who had lived among the Chitralis or the Bakhtiari Persians would be likely to report that *they* had no popular poetry. Where there is tradition of verse-making the fact is, in my experience, plain enough.

In Hunza I have heard of no traces of epic or ballad poetry. The few songs recorded deal with love, which I think is normally a later development. These and others which may be presumed to exist, are probably due to the efforts of individual adventurers, inspired by foreign examples.

My two specimens seem to me to show some poetic feeling, but if they are supposed to be in verse it must be the free-est of *vers libres*.

Of these two texts I can give only an imperfect rendering. I made enquiries and notes at the time that I took them down, but I intended to return to them later and with greater knowledge. Lack of time in the end forbade this and points remain obscure which might have been cleared up.

Verse, however, is always difficult to deal with. The language often contains archaic or elliptical expressions of which the people themselves do not know the

XLIV.

A Hunza Song.

5394

Vir loq. A distant journey has fallen to my lot,
O thou my healer,
I have come forgetting my amulets,
May they be funeral alms for me!

Puella loq. Why dost thou outrage thyself,
Saying "funeral alms?"
May this foolish husband of mine die!
He has burnt thee up in the forge, alas!
When a hawk has appeared in the country
What peace is there for the partridges?
If there be friendship between me and thee

---

exact meaning; and poetic expressions are not easily to be paraphrased in an imperfectly known foreign language, the less easily perhaps if they have been reduced to conventional *clichés*. 538

A further possible obstacle to comprehension is that lines may have been forgotten and have dropped out or been altered. These losses are particularly liable to occur where there are no rhymes and no fixed metrical form.

ژبر — the alternative of the plural ژبرِیِ suggests that the meaning is something like "verses" or "lines", but it seems more probable that the word is connected with ژبرِوِ 'to speak' and denotes something that is recited. 640

1 ىىا — seems to have no very special meaning. It represents perhaps an effort to command attention.

5 ىىِ *kىىِ* — written in the Ms. as one word appears to be really *ىىِ kىىِ*, the *ىىِ* being used for *ʃا* as in other cases with names of relations, v. Vocab. s. v.

ىىىىِ — the static pe. form with optative force is very common in these two texts.

ىىا — was said to be an exclamation denoting sorrow.

000

Wa jɛ kɛ uŋɛ du·sti mani· ke bu·šai.ulo šo·r o·maimi.
Bɛs tai.i me.iba? Lɛ· ja gufi·nišo daltas.

Puella loq. Wa mi a·ya kɛ ma·ma hi·ranər yu·wa·n se.iba·n.
Wa zaru·r be.ɪsa (*or*, be·sə), aya.
Mu·kɛ ki·rtants 'a·yeljai.i.

Vir loq. Wa pəritiŋə ʂu·ŋər da jɛ ni·čam nusɛn.
Wa jɛ tis nɛ na·nin ja·tsɛ ti·šan yami.
Wa ti·šər mili bɛsan mai.ɪmi? so·mo le·i.

Amicus loq. Wa Šo·i Pəri·mo γoyaŋ hazar mili maimi.ɛn, ñi·?

Puella loq. Ja dina·r di·a nusɛn xabər daiyɛla kɛ,
Γuyaŋ e·r ɛ·skəršam gan e·r tham e·čər.

---

3 *bɛ* — glossed "why?", if that is the meaning then the verb ought not to have the interrog. suffix *-a*.

4 *as tap manu·mulo* — *as tap* is glossed "the middle of the back behind the heart" and this is confirmed by another isolated record of the word as meaning "between the shoulders at the back". Otherwise one would be tempted, for the sake of *mašu·mulo* to take *tap* as the ordinary word for "night" — "in the course of the night I received a wound in the heart".

5 *ai.ɪtsum* — static pc. act. neg. of **-ɪtsas* — 'to see', 'not having seen'.

6 *sa kɛ* — *kɛ* pronounced as if belonging to the preceding word with reduction of the vowel; so also l. 15 *daiyɛla kɛ* and p. 360 l. 4 *dəγarosə kɛ*.

9 *be.ɪsa* or *be.isa* — originally written *bɛsə* seems to be the same as *be.ɪsa*, p. 84 l. 9, and is, at any rate, as enigmatic. Here the passage is glossed "certainly there is no remedy" and the further illustration added.

Akil sen be.isa 'you must say so'. On the evidence all one can say is that the word seems to denote 'necessity', "must". V. Vocab. s.v. *bɛsəa*.

aya — seems to be used here in the sense of "O beloved". Cp. also l. 7 & p. 364 l. 3.

10 *a·yeljai.i* — the pres., probably with fut. meaning.

11 *pəritiŋɛ ʂuŋər* — I suppose means the lane to his mistress's house.

14 *Šo·i Pəri* — the name of a particular fairy which the friend applies to the heroine.

There will be no unrest in the land.
Why art thou thus? O my beloved with the beautiful locks.
O this sweet mother of mine,
Has she not born me for thee?

Vir loq. O, I have received a bullet wound in the middle of the back.
Nowhere have I found a cure for the bullet wound and I am doomed to die, alas!
O, the fair sun that looks on lovers, it too has departed,
O, the black night that burns up the souls of lovers, it has come, O my father(?)

Puella loq. O, my father and mother have given me to a man, they say.
It needs must be(?), my beloved.
He will break in pieces my limbs of pearl.

Vir loq. I said: "I shall go by the Fairies' Lane,"
And going astray a blast of (Fairy) wind struck me.
What remedy is there for the (Fairy) wind? O friend.

Amicus loq. Perchance the hair of Sho.i Peri may prove a remedy?

Puella loq. If I should hear news that my beloved has come,
I would cut off my hair for him to sweep the road for him.

---

14 *maimi.n ñi* — should probably be *maimi.a ni*, the subject being ypl. Imam Yar Beg's Ms. which I have, reads *mai.imi mia ni* ميّمى ميا ني. I take this as due to his having written the usual *mai.imi* with a final ى and then having found that he wanted to add an ا to it; so he rewrote the termination separately and then went on.

ñi — was explained as indicating a question or suggestion. Cp. *yā bi.a ni?* p. 230 l. 1. I think by the mark over the ñ I meant to denote that it was emphatically nasal.

15 *dinar* — glossed "a kind of bird". Steingass gives it in Persian as "name of a large bird, kind of falcon".

daiyela ke — 1st. sg. of short form of pret.

16 *er eskorīam* — IYB.'s Ms. *ja eskorēa ba*.

Ja dinaʷrər iʷkɛ kam kɛ,
Ja gusə dutsanum adiʷm eʷr kursi dəljam tse.
Duʷnaʷtɛ miraʷs, lɛ mi šakər yaʷr baʷr.

Vir loq. Ja dinaʷrɛ duγarusu kɛ, "Buʷt bidam bai.i"
5 m'oʷsu.in.

Puella loq. H'erčumatɛ jɛ šoʷn amana.
Wa bɛ jig'a goʷr saphəren manimi.
Dinaʷrɛ gu.ikɛ nazər!

3 *baʷr* — I do not know what this word is.
7 *bɛ jiga* — probably: "for what a long time".
8 *dinaʷrɛ* — probably: *dinaʷr ɛ!*

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

5397

If for my beloved my hair is too little,
this straight body of mine
I would place as a chair for him.
The heritage of the world, O my beloved friend,
(be thine?).

Vir loq. If my beloved asks for me, say to her
"He is very weak."

Puella loq. I have become blind from constant weeping.
O what a long journey thou hast had to make.
May I be a sacrifice for thy name, O beloved!

Bɛ xuda·yɛ hər̥alt boʼwa kɛ maiyoʼnər tsər mumai.imo?

---

5 *du·ʌm* — probably the 1st. sg. static pc.

7 *guyər umʌnom* — "May they be before thee!" This is glossed as meaning "die before thee", but I think it may be taken literally, "be before you" meaning either: "surpass you", "take precedence of you", or "be in front of you", so as to prevent your going.

The former would fit in best with the man's reply.

8 *mi hubaʼlɛ gutsuʼm* — The phrase is obscure to me, owing to ignorance of the exact meaning here of *hubaʼl* v. Vocab. s.v. *Mi* probably = my.

9 *xʌbərʌn suʼa* — glossed "bring me news, neighbour's wife, that I may be your sacrifice", in which case *suʼa* is the impv. with the suffix -a.

nʌnʌmo — appears to have passed from the vocative to the genitive under the influence of *nʌzər*. In line 8 page 364 a similar double rôle is apparently played by *ariʼkmo*. *nʌna* is used as a general term of address between women.

Song.

Vir loq. The morning star of youth ever rises 5394
And sets in the "mansion" of my beloved.
I have seen from the book of Sa'di, O Lēli,
What is said to lovers. Yes, I have heard it.
I say "I shall go on a journey," and at the time of my departure
The soul goes out from my body and clings to the door of my Beloved.

Puella loq. Why art thou thus? May thine enemies be before thee!

Vir loq. Do not exalt my enemies. May the wrong thou hast done me(?) carry thee off.

Puella loq. Bring me news, neighbour mine, and I shall be thy sacrifice.
If thou bringst me true news I shall take thee as my foster-mother.

Vir loq. All the youths make songs in honour of my Beloved.
What! Is she God's rain that she should fall on all of you?

---

12 *be . . . bowa ke* — glossed "What! She is not God's rain (i. e. common property)". The verb, however, is interrog. and not negative. *ke* seems to be merely a connective "that", "so that", introducing the second clause.

Dušm'a·yo baman uyo·n ja·tɛ ulčin ɛča·n.
Bulbulmo mu· iho manu·m, be mɛnər dər ne bo·wa?

Puella loq. Ai.asaljubo, kot ja·r o·san, aya.

Ayamo galiŋatər i·n ja ji di bam, se.iba·n.
U·ŋe e·itsuma sɛ ari·kmo gu· ho manu·m.

Vir loq. Ja ji·mo ɛk či·ki.ɛ γoyaŋ ɛk ja bu·kər nikin
Da mula·mačər na·n ja ji di.ušam. Ja ji Bi·bi Anji·r.

Puella loq. Maltumal ɛtina, wa ma·matsəro.
Ja in hɛ·niŋ daltaško Go·hər di·a se.iba·n.

---

2 *mɛnər dər ne bo·wa* — glossed "she will not give a chance to anyone". I do not know exactly what *dər* means here. IUB. gives *dər* as meaning *forṣat*, i. e. 'leisure', 'opportunity', and it has been recorded in Shina as equivalent to 'desire', 'intention', 'power of choice' or perhaps 'leisure'.

3 *aya* — "O father", said to be here applied to the lover.

4 *tap fat ɛti* — i. e. "don't speak of the night; I see you even in my dreams".

6 *čanəm kanɛ* — the "tight" i. e. congested village.

bər dərbɛš — the idea is, I think, that it is not safe to talk, there is a danger of what is spoken getting about, and so she keeps silent.

galiŋatər — i. e. "the steps leading up to my father's house". *galiŋ* are steps of stone or earth, not the notched log used for climbing on to the roof.

ja ji·mo . . . — IYB.'s Ms. has *ja ərma·nmo(?) či·ki.ɛ γoyaŋ*. *ərma·n* I suppose in the sense of "desire", transferred to the "thing desired".

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

539*

All my enemies turn (hostile) eyes on me.
May my Beloved's father die! What! Does she
favour others?

Puella loq. "She does not look at me," O, do not say that
to me,. Beloved.
Let the night alone, I am with thee (even) in my dreams.
What! have I no desire to talk?
May the seed of the cramped (little) village perish!
(But) The spoken word is a (wandering) derwesh.
They say that that lover of mine had come on to
my father's staircase.
Did you not see him, Madam sister-in-law?
May your father die!

Vir loq, Throwing my Beloved's musk-scented tresses round
my neck
Then shall I betake me to her lap and breathe
out my life.
Bibi Anjīr is my soul (*or*, beloved).

Puella loq. Harken to me, O ye mothers,
That sweet-spoken Goher of mine has come,
they say.

---

13 *hʷniŋ dʌltʌško* — *hʷniŋ* (v. Vocab.) appears to have some such meaning as "sayings", "speeches", but has not been recorded elsewhere. The two words are used as a compound adjective, an unusual phenomenon in Burušaski. Cp. p. 358 l. 2, *ja gufʷnīšo dʌltʌv*.

136 [197] These two versions of the Parable of the Prodigal Son were made from the text of the British and Foreign Bible Society's "Persian Urdu" translation of the New Testament (Luke XV, 11—32).

The first version, A, was produced by a committee of whom the leading spirit was Nazer of Aliābād, Hunza, and the secretary Sarferāz, a literate Yazkūn of Gilgit with a Nageri wife and an acquaintance with Burushaski. I eventually wrote it down to someone's dictation. Sarferāz's vernacular Ms., which I possess, is a somewhat ambiguous document, as it is not very carefully written and he had not arrived at a fixed system of correlating the sounds of Burushaski with the symbols of the Arabic-Persian script. For instance he uses ج regularly to represent ts, but also on occasion to render č, j, š, or rather, as far as can be judged, the post-alveolar or cerebral forms of them č̣, j̣, and ṣ̌.

The second, or B version, was made some four months later by Jemadār Imām Yār Bèg and was recorded with his own hand, but it is probable that he consulted the previous translators who were on the spot. The Ms. is fairly clear and consistent.

No. XLVI. A.

The Parable of the Lost Son.

539k

And he said:

A man had two sons. The younger of them said to his father: "Father, give me the share of our property that comes to me."

The father divided up his property and gave it to them.

Then when not many days had passed, the younger son collected all his belongings and proceeded to a very distant country. In that country he exhausted all he possessed in evil conduct. When he had done so there came a very severe famine in the land and great adversity came upon him. He went and settled with a man of that country, and the man sent him into his fields to feed the swine.

He longed in his heart, saying: "Would that my belly might be (filled) with the things that the swine eat!" And no one gave him anything.

Both versions show traces of the influence of the Urdu original. The B version occasionally indulges in amplification and paraphrase. 176 177

In both, alterations were made during the process of dictation, and the vernacular Mss. and my transcriptions (especially in the case of the A version), are not identical.

Title. This in fact was supplied only with B. It is a translation of the Urdu rubric: *Khoye hure berṣe ki tamsil.* 180

1 *kr* — this particle, introducing the words of a speech or thought etc. occurs constantly in this text, probably owing to the influence of the Urdu *kiā*.

5 *ownitsum* — v. § 407. b.

7 *yunikrī dorovolo* — Urdu *badčalani mī*.

9 *walimi* — The Urdu is: *ek baīrade ke hawn jarpayu*.

10 *kwkrīo* — vernac. Ma. has *xwkrīo*.

1 *čərči* — suggests *čər* + *tsi* (= *tsu*). For *čər* cp. *ačəra* 'confused', 'perturbed'. But there is a Shina word *čərč-* (?), 'senses', of which only the loc. *čərčər*, dat. *čərčəl*, and abl. *čərčejo* have been recorded.

niwal — 'having fallen'. This was substituted for *dim*.

2 *ate·γanum* — Urdu *zfrat se*; glossed. 'generously', 'ungrudgingly', but the actual meaning is probably 'inexhaustible', v. p. 54 l. 7. n.

učɛ.i — the vernac. Ms. added "or *uyačum*" i. e. *uyačuman* for *uyačan* 'they obtain' from **-yaiyas*.

4 *gulčinər* — Urdu, *nazər mi*.

5 *u·ŋɛ* — Vernac. Ms. here and elsewhere *ums*. The form um is, favoured in Nagir, and here was probably due to Sarferaz. Nazer used to say u·n and Imam Yar Beg u·ŋ.

sɛnas — apparently used with the force of the past participle active *nosen*; but the vernacular Ms. differs and perhaps there has been an uncompleted change of construction from that which appears in line 11 on which see note.

6 *gukɛ čaγamiŋ* — vernac. Ms. *khukɛ bəriŋ i·mo ɛ·sulo se.ibam*.

7 *čaγa duro* — seems to be a translation of the Shina *čagai.i mor* "the word or matter of the story" i. e. 'as the story goes' or 'to continue the story'.

to·lum — a note states that Nazer gave instead, *alemum*, cp. *ɛlɛ·mo* line 16.

8 *ra·m dusu·mi* — vernac. Ms. *jark dimi*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

Then, coming to his senses, he said: "To how many labourers does that father of mine give bread without stint, and I am dying here of hunger. I will arise hence and go to my father, and I will say to my father: 'Father, I have become wicked in the eyes of heaven and in your eyes. I now cannot say: "I am your son." If you will pardon me, then make me as (one of) your labourers.'" Thus he spoke (to himself) in his heart. 539k

As the story goes: Arising thence he went to his father. While his son was still a long way off, his father seeing him was moved to pity, and he went running (to him) and threw (himself) on his younger son's neck and kissed him.

The son said to his father: "Father, I have become wicked in the sight of heaven and in your eyes. I have now become unworthy to say again 'I am your son.'"

(But) the father said to his servants: "Bring out quickly the best of clothes and put them on him, and put a ring on his finger and shoes on his feet, and bring the fatted calf and slay it. For this son of mine had died (but) now he has come to life again; he had become lost (*or*, I had lost him), (but) now I have found him (again)." After that they began to make merry.

In the meantime the elder son was in his field. On coming home when he looked he heard a sound of singing and music and

9 *ṡ̌ṡolo wasḑçai.i* — the vernac. Ms. seems to have: *i·mo jot i·i i·mo ṡ̌ṡolo ninasin buk ṡ̌çai.i.* The object of *wasḑçai.i* is apparently the son, the neck being the father's. Cp. p. 66 l. 14.

bam ṡ̌çai.i — the Ms. has: *iśki·lete ban ṡ̌çubai.i.*

11 *yaśki aiyamana ba ke* — vernacular Ms.: *mu khuts yaśki fat aiyamana ba ke . . . senas.* In the earlier passage, l. 4, the Ma. also has *fat*: *khuts senasir fat aiyamana ba ke.* The meaning seems to be: "I have not remained able to say . . . cp. *atsuasa ba* p. 373 ll. 8 & 16. The Urdu is: *ze lariq nahī rahā kih . . .*

13 *i·mer* — I think a mistake for *i·ne*, due to the Shina idiom which has the dative: *resit banire.*

e·mitolo — the vernac. Ms. has the plural: *e·mi.antsolo berondomots.*

15 *iram* — vernac. Ms. *i·rubam.*

18 *kaler* — vernac. Ms. *ka asir.*

19 *deyeljai.i* — vernacular Ms. *deyeljubai.i;* similarly *daṛarṡ̌ubai.i* in this line and *o·tubai.i* for *o·tai.i* p. 370 l. 2.

000

Čaγa faš manimi.

6 *bərči ɛčai.i* — glossed Hindustani *mana·na* ('to make agree', 'persuade', 'conciliate'). The vernac. Ms. seems to have *bərər dišubai* (= *dišai.i*).

9 *aiyawa* — vernac. Ms. *ajo·ba* i. e. 2nd. sg. perf. of **-uyas* with the *ja-* prefix, preceded by the negative *o-*, v. § 255.

10 *aminɛ* — vernac. Ms. *mɛnɛ*.

7

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

dancing. He called to one of his servants and asked him: "What is this?" The servant answered him: "That missing younger brother of yours has come back, and your father has made them kill the fatted calf, because he has got back your young brother safe and sound." 539*

The elder on hearing this became angry and refused to go into the house. But his father went out and (tried to) persuade him. To what his father said he replied: "Father, for many years I have done you service, but you have never given me a kid that I might eat it and make merry with my friends. Now this younger son of yours, who has dissipated your property in evil doings, has come back, and for him you have made them slay the fatted calf."

The father replied to his elder son: "Son, you are always with me, and all that I have is yours. It was right that we should make merry and rejoice, for this your younger brother was dead and now he has come to life again, he was lost and now we have found him again."

The story is ended.

No. XLVI. B.

Wa·lum i·i.ɛ mɪsa·l. (By Jemada.r Ima·m Ya·ɪ Beg).

00 Da i·nɛ sɛnimi:

"Ho mɛnan hirane a·ltan yu· bam. 'U·atsum jut i·nɛ yu·yər sɛnimi: "Le aya u·ŋɛ ma·ltsum bɛsan ja·ɪ traŋulo a·ɪ ju·či bi kɛ jo," 'ɛsimi.

5 'Ɛsasər u·wɛ i·mo ma·l ha·l u traŋ 'o·timi. Da bu·t guntsiŋ o·nitsum ho jut i·ɛ i·imo bɛsan uyo·n gati nɛtan matan γus'anum bušai.ɛnər gutsə'rimi.

Da t'ɛ·lɛ i·mo ma·l γuni·kiš duro·watɛ xərč ɛtimi. Da b'ɛšal uyo·n xərč ɛtimi kɛ ho i·tɛ bušaiyulo daŋ čaman bali·mi (*or*, di·mi).

10 Da i·n muhta·j im'anasər di·mi, bɛsɛkɛ auqa·t bil'uman γun'ikiš dur'o·watər xərč ɛt'am. Xərč nɛtan ti dyu·asam. Da i·tɛ bušai.ɛ.ɛ hin hurutas hi·ɪanɛ tɛ·lɛ ni·n w'alimi. I·nɛ hi·ɪɛ i·nər i·imo mal'ɛŋulo xu·kišo uy'ərčər 'ɛ·rimi.

Da ki·nɛ hi·ɪɛ rai.i (*or*, ərma·n) bilum bɛsan wat'ɛ·ŋ xukišu·ɛ

---

10 *imanasər di·mi* — *di·mi* is clear both in my transcription and in the vernac. Ms. We therefore have an idiom similar to the English "he came to be . .".

11 *ti dyu·asam* — 'ha had remained empty' i. e. he had nothing left. This phrase is an excrescence on the Gospel.

12 *horu·tas hi·ɪane tɛ·lɛ ni·n walimi* — this follows so closely the Urdu (see note to A p. 366 l. 9) that doubt arises as to its Burushaski orthodoxy. Whether *tɛ·lɛ* can mean "house of" as well as "there". I do not know, but the ordinary Burushaski would be: *hi·ɪanale nin*. This use of *walimi* is also suspect.

14 *wat'ɛ·ŋ* — the original text had *mɛ·ɪou ɛrqa* and in l. 16 *ɛrqa·tsum*, to which I objected. *mɛ·ɪou* was probably due to a misunderstanding of the Urdu *phali.ā* 'beans'; *ɛrqa* ordinarily means 'grass'; *wat* 'bark' (of tree), 'peel', 'rind'.

Da hin nokɛranər qau nɛ doɣʼɛrusumi: "Kɔt bɛsan maiːi bila?"

---

2 *huruːtiʂ* — 'that he should stay, remain'. I have not noted any other example of *ruiːi* being followed by the *-ʂ* form of the verb.

magər — "but no one gave him anything except the husks to eat". Luke implies that he did not even get the husks.

5 *eːramtsum* — The vernac. Ms. has only *eːrastsum*.

8 *dʼaːsɛsɛ ba* — from *dʼaːsɛsɛ*.

14 *namaːtin* — so both Mss. instead of *namaːtɛn*. The clause is an interpolation.

19 *ɣutiŋulo* — vernac. Ms. has *ɣutisulo* as a first alternative.

22 *ʼiram* — vernac. Ms. has only *ʼirum bam* i. e. 'was dead'. Urdu *mardə thə*. The plup. *ʼiram* 'he had died' amounts to the same thing. *ʼiram bam* is, I think, incorrect.

Iṇe nokserane iṇer ʿesimi: "Uṇe gorčo di bai.i, da uṇe gurn.e yuṡam buṡoruṡo kaṡ oṡtai.i. Gute gane xuṡi oṡčai.i ke ṇalum i ṡi.at salamat dʿeuyurkʿai.i," esimi.

126 I have placed this text by itself because it was not, like those that precede it, written down by myself from oral communication.

I received it in manuscript from the Mir of Hunza in 1923, more than a year before I began to work at Burushaski.

It was written out by the Mir's son, Gushpūr Muhammad Ghani Khān, in Arabic script in two versions, one Burushaski the other Hindustani. The two versions do not exactly correspond, neither being a direct translation of the other.

The Hindustani version has been of great help in elucidating the Burushaski; where the two coincide they provide a double guide to the sense, where they differ, it not infrequently happens that the Hindustani throws light on motives or reasons which are obscure in the Burushaski.

Burushaski is, I believe, never written in ordinary life, so Muhammad Ghani Khān's effort must have been something of an adventure.

He had probably to make his own conventions and he no doubt anticipated that it would only be read by some literate Burushaski-speaker like himself to whom the story would be well-known and to whom no very precise rendering of the words would be necessary.

The points are not always clear and are sometimes doubtfully or incorrectly placed, and though vowel-signs are liberally provided they are not always found where wanted.

I think I have, with some labour, deciphered all except words with which I am not acquainted.

000 Muhammad Ghani Khān distinguishes between

No. XLVII.

The Story of Širi Badat, *or* Širi Bəraí Bayər Tham.

(From the Burushaski of Gushpūr Muhammad Ghani Khān).

In ancient times there was in Gilgit a Tham called Shāh Rais. They say that he had a gold horn on his head. This secret was known only to one private servant who used to trim the Tham's hair.

The Tham was very anxious to keep the affair secret. Owing to (the strain of) keeping the matter secret the servant fell ill (of

---

ت and ٹ	*t* & *ṭ*.	ت and تھ	*t* & *th*.
د and ڈ	*d* - *ḍ*.	چ and چھ	*č* - *čh*.

He uses the sign ش but he writes غنس for غنش (*γənis*).

He does not usually distinguish between initial short vowels: *a*, *ʌ*, *ə*, *e* *i*, *u* etc. nor between *č* and *ç*, or *š* and *ṣ*.

Final لا is frequently written like لہ.

Many other points might be noted.

It is interesting to note that *Širi Badat*, known in Shina legend, is identified with *Širi Bəraí Bayər Tham* vide Text No. 13, p. 208.

It is not clear in the Ms. whether *Šir* or *Širi* is intended, but, as far as I know the word is always pronounced *Širi* or *Širi*.

1 *Gilltulo* — here and elsewhere, by a mere clerical lapse, written *G-lil-t lu*.
Ša Ra.is — the name is still preserved by the nominal Ruling Family of Gilgit. The uncle of the present titular *Raja* of Gilgit bears it.

2 *tər bilum* — In spite of the singular verb one suspects that "horns" is intended, especially in the absence of *kan* or the suffix *-an*.

5 *γalis* — this takes the place of a word in brackets which seems to be *muz*. The H. version has *pečiš* 'dysentery'.

1—5, page 378 / 1—2, page 378 / 17—18, page 378 The extraordinary similarity between the stories of *Ša Ra.is* and Midas and their respective servants will be remarked. It is highly unlikely that it is due to even a secondhand acquaintance in modern times with Greek mythology, on the part of the people of Hunza-Nagir or Gilgit.

Hərɛli.ər ni·n ti·kulo qaman nɛtan qau ɛtimi kɛ "Šah Raisɛ kapalulo γɛnišɛ tur bila." Yaṭɛ tik nikin i·lji di·mi.

---

4 The word following *šuqa* looks like *dərustər*. If this could be taken as a slip for *dərust ečər* it would agree with the *dərust ɛtəm* in l. 11 p. 380. On the other hand the H. text has: "giving her a little thread, he said 'mend my choga'". This suggests that the reading might be *šuqa da šutur mu·mi*, *šutur* meaning "thread" in Khowār, but the Ms. will not support this. Perhaps we are to read, *da tsər*, for *da sər*, 'and thread'. The *t* points may be unintentional.

šuqa du·nkɛ təru·mi — the transliteration of the two last words is somewhat conjectural *tərumi* may be compared with *turum*, 'ripped' and perhaps *i·ltərAs* 'to spoil', 'to damage'. The Hindustani, as I read it, has "the choga became more torn". The word however might be read as *tərumi* or *tsərumi*. The latter form would point to *tsər*, 'torn'.

9 *bAliṇɛ bAspur* — *bAspur* means "grain", but only as food given to horses. These horses were given walnut kernels in place of grain.

10 *la·ša* — V. Vocab. s. v. The H. has *dubla* i. e. 'thin', 'emaciated'.

11 *mAnuwaṭɛ* — here seems to be the 3rd. sg. perf. *mAnuwai* + *Aṭɛ*. In l. 6 p. 382 it appears to be the 2nd. sg. perf. + *Aṭɛ*. V. § 407.

12 *oṣɛčama* — another example of the negative prefix *o·*, v. § 339.

13 *Akhi* — probably for *Aki·l*.

daγami — the H. has: "The King said. 'Where is he?', but he had disappeared".

dysentery?). After reflecting about it he went to Herèli and digging a hole in the ground he shouted into it "Shāh Raīs has a gold horn on his head." Then he filled in the earth and returned (home). 539*

A girl was grazing flocks in Herèli and a man came to her there and gave her a *choga* and some thread(?). In a little the *choga* became more torn(?) and the thread remained as it was. She was amazed and asked: "You are surely Shiri Badat, are you not?" He answered her: "Yes, I am Shiri Badat. I am now going to become Tham in Gilgit, and I shall give you a great reward." So saying he vanished.

Then coming to Gilgit he took up his quarters in hiding in Shāh Raīs's stable; and when Shāh Raīs's horses were given their ration of walnut kernels Shiri Badat used to eat it. Eventually the Tham enquired: "Why have all my horses got into poor condition?" After great efforts the groom caught Shiri Badat who said: "Because Shāh Raīs has become Tham am I not to eat horse-food?" The groom came to the Tham and reported: "A man said thus and thus and has disappeared (*lit.* hidden himself)"

In those days *Bitans* used to dance and practise divination and Shāh Raīs (now) gave orders for them to dance. For the *Bitans* they used to play on pipes made of *choṭal*. By a strange chance they had been in the habit of getting the *choṭal* reeds from Herèli, and (now) at the place where the servant had dug the ground and shouted into it, three (clumps of) *choṭal* had come up. On their being played for the *Bitans* the pipes said only: "Shāh Raīs has a gold horn on his head."

---

14 *piṭaiyu* — here and in what follows this word could be transliterated in different ways, but from various indications it is clear that it is intended for *biṭaiyo* the pl. of *biṭʌn*, 'soothsayer'.

The Hindustani has in its place the word دیل with a note saying "in Shina". This must be the Shina word *daīyʌl* which corresponds in meaning to the Bu. *biṭʌn*.

The H. version also clarifies the context by saying: "In order to clear up this mystery the Raja gave orders to play (for) the *daīyʌl*".

nigirʌt — i. e. *nikirʌt* 'having danced', but it can be read as *negirʌt* the Cs.

15 *ʊɣərčʌm* — the first vowel is not marked, but is short. I should expect *oɣərčʌm*

16 *be* — I do not know what this is. It may only be a repetition of the final *-e* of *nokəre*.

000 Tham hairaˑn niˑman nokərər ɛsimi. Nokərɛ saˑf saˑf iˑmo bayaˑn ɛtimi. Hərɛlilu ɛtumate Tham balke xuš manimi.

5 *ayauˑma, ayoˑma (?)* — probably the 2nd. sg. pret. negative of *yaiyas* 'to obtain'. The correct translation is quite uncertain.

7 *yɛ ga . . .* — The H. version makes the King's motive clearer: "If you are to act as Raja, then take this sword".

15 *gusanmutsɛ* — this use of the suffix *-tsɛ* is curious. From the Hindustani it appears that the old woman had had the lamb suckled by another younger woman.

17 *aˑiˑmu* — probably the 1st. sg. form of **-iˑmo*, which is not found in the other texts, its place being taken by *je.imo*. Possibly however the 1st. *aˑiˑmu* is the gen. of *aiˑi* 'my daughter', and the following *aˑiˑmu uša ba* is to be read: *a.iˑ muˑuša ba*, 'I have reared her as my daughter', or 'I myself have reared her'.

uša ba — **-uše.as* seems to be capable of use without a pron. prefix, cp. the use of *uˑš.am* as an adjective.

isɛtsum ilji — the use of the x form instead of the y form in this phrase is unusual. The regular thing is *itɛtsum*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

5394

The Tham was astonished and spoke to the servant about it. The servant made a clear statement of his doings and the Tham it appears was pleased at what he had done in Herèli.

Shiri Badat was also present at the show and the groom recognised him and seized him.

The Tham reviled Shiri Badat and said to him: "When you were in need why did you not come to my house and get something, instead of stealing the horses' food?" Shiri Badat replied: "Because you have become Tham am I not to eat horses' grain?" The Tham losing his temper threw his dagger towards him and said: "Then take this if you need it." Shiri Badat took the dagger and killed Shāh Raīs with it.

Then he proclaimed: "I am Shiri Badat. The authority of the Thamship of Gilgit has now become mine." And he took his seat on the throne of Gilgit (Hunza-Nagir was also included in it). He performed the marriage ceremony with the girl who had repaired his *choga* in Herèli and espoused her. After some time a girl (*lit.* woman) called Nūr Bakhsh was born to them.

Shiri Badat's food was one lamb every day. One day an old woman of Hoper gave him a lamb which had been reared by a woman. On getting the (human) taste of the meat Shiri Badat asked the reason of it. The old woman said: "When the lamb was young its mother had died and I gave it my own milk and reared it as my own (child)." After that a year-old boy was his fixed (daily) ration. The people were much annoyed by this cruelty.

At that time three brothers, Abūl Ghais, Abūl Fāni and Hāzir Jamshed came to the Daiyōr fort. There there was an ox belonging to Shiri Badat's gardener. The others said to Hazir Jamshed: "Let us shoot at it," and the three of them shot (at it) with their

---

yo·lekos — the first two vowels are doubtful. I connect it with *yo·l* 'a complete year' and conjecture that it means 'yearling'.

Ha·zir Jʌmšed — written حاضر جمشد but the name is ordinarily spoken as *Azor Jʌmše·d* or *Jʌmšer*. As the writer does not specially mark the vowel *e*. I have used that as a compromise. The dat. form *JʌmšedʌAtər* in l. 22 is surprising.

---

5 *xarts nɛtan* — the H. seems to have *naˈi bajaˈkər* 'playing on pipes', but in a Shina version of the story I have "*ha ha the hati trap the muti ɔi.i jaˈrɛ baiyɛ tər dɛ bujenən*", "the other brothers both laughing and clapping their hands flew off".

From the Shina version it also appears that A. J. could not follow them because, being of fairy race, he had been rendered impure and incapable of flight by having come in contact with the ox's dung (or perhaps simply with the ox). Cp. the case of the peri *Šahri Baˈno*, p. 14 l. 16.

5—6 *Riˈlɛ Ramal* — *riˈl* ordinarily means 'copper' and perhaps does so here. It will be remembered that in No. XIII (p. 210 l. 9) *Širi Bərai Bayər Tham* had a copper stick and copper leg-wrappers.

From the Hindustani version it is clear that it was the cook and not the groom who had iron hands.

13 *oča baˈn* — probably a slip for *oča ba*. The H. has the 1st. sg.

15 *γuyaŋ* — the following word appears to be a p.pc. active: *negalər* or *nıkakər*, neither of which is known to me. It must mean "fastening" or "tying on to".

[Errata: for this read this. cf. p 419, cat. 116 -- Analyst]

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

bows. The two others missed, but Hazir hit it. They said to him: "You go and kill it and roast its meat and let us know (when it is ready)." 5397

He went and slew it and roasted its liver and called out to them. They answered: "You say 'Bismillah' (and begin) first." He said 'Bismillah' and when he began (his repast) the other two clapped their hands and disappeared. They left behind for him a cook called Rīlè Ramal with iron hands and a groom called Ashtanè, whose descendants are in Ganish to the present day. They said to Hazir Jamshed: "You go now and be Tham in Gilgit."

Hazir Jamshed took (with him) his cook and groom and the flesh of the ox and they came to Gilgit and alighted at the house of the gardener. On looking about he saw the gardener's wife bring in flowers from the garden and begin to make up nosegays. "What are you doing?" said Hazir Jamshed. "I am making nosegays," she replied, "for Shiri Badat's daughter, Nur Bakhsh." "May I make one too?" said Hazir Jamshed. "By all means make one," replied the old woman. Tying(?) some of his own hair on to a very fine nosegay he threw it into the basket.

The old woman presented the basket to Nur Bakhsh, and the latter enquired about Hazir Jamshed's nosegay. The old woman chattered away(?) and told her all the facts of the case. Nur Bakhsh falling in love with him lodged him secretly in the house. After some time Nur Bakhsh having conceived a son was born to her. As both of them were afraid of Shiri Badat she placed the infant in a box and shutting it up put it carefully in the Hanisāri river. The river carried down the box and cast it up at Bul Dās.

The H. has "tying (*bənd kʌr*) his hair on to a bunch of flowers".

17 *bʌtuwər d.* — 'enquired about the nosegay' — an unusual use of the dative. The person to whom the question is addressed is often put in the dative.

bʌk bi·k — presumably based on the H. *bʌkna* 'to chatter', 'to talk at length'. The H. has: *sʌb mar̥ərə bʌyan̥ ki.*

18 *ə·rutəmo* — should presumably be *e·rutəmo.*

20 *sʌndu·qʌnər ulo* — the final *-r* may be only a slip of the pen, but cp. *γölkər ulo* l. 11 p. 384.

3 *salah* — The word following *salah* appears to be *posuˈman*.

7 *'a. m.* — contraction for the Arabic *'alaihi's salām*.

asi — the 3rd. sg. hm. of the short form of the pret. of *a* + *-asas*, 'he said to me! The reading is supported by the H. *mujhe kaha*.

10 *qabal* — I know of nothing this can be except the Pers. Ar. *qabl*.

11 *γulkər ulo* — cp. *sanduˈqanər ulo* p. 382 l. 20.

21 *han band ṭuruˈwan* — the H. has *ṣırf ek kadu* "only one pumpkin".

23 *amna* — repeated in l. 24. I do not know the word.

24 *bərtsilaŋ* — perhaps *bər* 'nullah' + *tsil* 'water'. The H. has *tɛl ke naˈle naˈle jaˈri hue*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

(There) one Ghaḍūsh by name, a gold-washer found it. On looking inside he found a fine boy. Carrying him off to his home he took care of him and reared him. 5394

(Meanwhile) the people collected and took counsel to slay Shiri Badat and they sought advice from Nur Bakhsh. Shiri Badat's wazir was Bercha. Nur Bakhsh said to her father: "Father, why is it that you eat boy's flesh and I don't?" Shiri Badat replied: "My nature is the nature of the Jinns. Hazarat Sulimān, peace be on him, said to me: 'You will only die by fire.' That is because my heart consists of butter and ghee."

On the strength of this statement the people at night took lighted faggots and threw them down round about in front of the fort. Then they dug a water pit near the gate. Shiri Badat becoming disturbed by the fire came out of the house and as he did so he fell into the pit. All she people threw the burning torches in on the top of him.

Disappearing thence he turned up in the Hinzal country. A man was ploughing there and Shiri Badat said to him: "Quick, give me water." "There is no water," said the man, "there is only wine." "If you had given me water," said Shiri Badat, "it would have been a very good thing for you. As you haven't, may there never be more than three houses in this land!" So saying he vanished from the spot and it is not known whither he betook himself.

Hazir Jamshed took his seat on the throne of Gilgit. He sent the Wazir Bercha to Baltistān to fetch the revenue. After a long delay the Wazir returned from Baltistan. The Tham went to Punal Maidān to welcome him. When they had met the Wazir put down only a single pumpkin in front of the Tham. "Where are the loads of tribute?" asked the Tham. "There is just this pumpkin," replied the Wazir. Flying into a passion the Tham slew the Wazir. Then(?) he broke open the pumpkin and they say that streams of oil issued from it. Then Hazir Jamshed in a fit of temper (remorse?) killed himself too.

---

4 *Bulčathuko, Bulča Thuko* — For this gentleman's prowess cp. No. 12, p. 204.

7 *hita·ne phat etin* — The idea is stated more clearly in the H. "Take them to an open space and leave them at play. Then bring the boy who plays aristocratic games, such as riding, constructing stables and large buildings"

9 *sərarŋ* — probably for *tsərarŋ* 'door-frame'.

12 *Sumalik* — *Sumalik* appears in a story I have in Shina which recounts how, having been carried off prisoner to *Badaxšan*, he escaped on a magic horse.

14 *huk eši* — the dog is taken for granted. It must have had some previous history. *tsamarŋ* — it may be *zamarŋ* as the writer uses *ʒ* for both sounds. The H. has *ha·r*. Perhaps the pl. of *čama* is intended.

15 *γeniš* — here and elsewhere written غنس, or what is meant for that.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

The people became divided into two factions; one party said: 5397
"A Tham is not necessary" and the other party said: "No, we must take a Tham." In the end they made search for one.

At that time there was a man called Bulchathuko who understood the language of the birds. A cock crowing kept saying: "The Tham is in Buldās." Bulchathuko sent some men to Buldās saying to them: "There are eight youngsters in the house of Ghaḍūsh. (Take them and) leave them in a place (by themselves) and whichever of them makes for himself a palace and stables and a treasury, bring him here. The rest will make a byre and a door-frame and a field for themselves such as cultivators have."

Having carried out this arrangement they brought back one of the boys; and they gave him the name of Sumalik and made him Tham of Gilgit.

A sister of this Sumalik was the offspring of Hazir Jamshed and they married her to the Tham of Yāsīn. When she was going away Sumalik said to her: "If any trouble comes upon you fasten your necklace on the dog's neck and despatch it to me."

One time in play the Yasin Tham struck her on the hand with a polo stick. The Queen was angry and fastened her necklace on the dog's neck, and the dog running (all the way) came to Gilgit. Sumalik was at the polo ground playing polo. Seeing the dog he put his horse to the gallop and went off to Yasin. There he struck the Tham on the arm and broke it. The Tham said: "Good; I was only playing, but you have struck me on purpose." Sumalik was ashamed and banished himself to China.

After staying for some years in Kāshghar and Yārkand, a longing for his own country came on him and he returned back. Arriving at Tertsi(?) he put up for the night in the house of an old woman. The wife and husband of the house quarrelling, the husband wounded his wife on the arm with a stone. His mother said to him: "O son, why do you too not strike her intentionally? Have you not heard the story of Sumalik — how he banished himself?"

22 *Tərtsi.ər* — transliteration uncertain. It may be *Tərz*, *TərAz* etc. The H. has *Sərḥad WAxan* and later *WAxan ki Sərḥad* i. e. *Sərḥad* in *WAxan*.

---

1 *du·nkɛ* — written exactly in the same way as the word in l. 4 p. 378. The H. gives no help here.

5 *Tərts . . . . gus* — Ms. ترزز ليهس perhaps for *Tərts-tsum, Tərtsum.*

9 *Ґaṭam Sər* — so in the H. and this is I think the correct name. The Bu. Ms. has *Ґanam Sər.*

10 *Ka·ŋgər Malikɛ* — In the Bu. text *Malikɛ* and *Malik* in this line and the next two are followed by a separate word اى or اِى. One might suppose this to be *i·* (his) son, but the H. has only plain *Ka·ŋgər Malik.* It is probably a double writing of the ending *-ɛ.*

11 *giyaman* — in the Ms. indistinguishable from *gi·man.*

12 *hala danaṭɛ* — *hala dan* is the term used for the stones that mark the goals at polo, and must be what is intended here. Otherwise in the Ms. the first word looks more like بدا or بلا. The H. has merely "cutting off his head".

14 *daman* — is used of full relatives as opposed to "step-" relatives. *Nu·r Baxš* and *Ka·ŋgər Malik* were children of the same father and the same mother.

Addendum.

At the end of the Hindustani version there is the following additional passage which has been scored out by the writer, but is worth putting on record:

After him his son, Dalā Shāh. After him, Shāh Malik and Trakhān. From Trakhān's brother, Lali Tham, two brothers were born simultaneously, Girkis and Mughlōt. Trakhān made Mughlōt Rāja of Nagir, and Girkis Rāja of Hunza.

From Girkis there were born one boy and one girl, Maiyūr and Nūr (Bībī?).

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

Sumalik was vexed for a little and three days later he arrived at Gilgit. At the time that he banished himself the Queen was with child and a Gushpūr called Sāhib Khān was born, who had (now) become a young man. 539x

Coming at night to the smoke-hole Sumalik looked and saw that there was a young man in the house. At first he was preparing to slay him, then he remembered the woman and her husband at Tertsi (?) and just at that moment Sāhib Khan said to his mother: "It is not known whether my father is alive anywhere, or whether he is not." On hearing these words Sumalik went into the house and introduced himself.

They held the festival for the return of Sumalik at Ghaṭam Ser. Kānger Malik also came for the festival. Sumalik and Kānger Malik played polo on the agreement that whichever was beaten they should cut off his head. In the end Kānger Malik lost the game and Sumalik cut off his head on the goal-stone and sent it to his own Queen.

As (the murdered man) was the Queen's full brother, she, out of resentment for this action, put poison in Sumalik's (food) and killed him.

Sāhib Khan then became Tham of Gilgit.

Gushpūr Maiyūr played a trick on the Tapkients and had them murdered at 'Ali.ābād and his father was angry with him and had him banished from the country. He wandered about and came to Derwāz where he married and a boy, Shāh Khān, was born to him. 539x

In Hunza Girkis died and Wazir Baṭu went in search of Maiyūr with a view to arranging Nūr (Bībī?)'s marriage. When he got to Derwāz, Maiyūr had died. He brought back his son Shāh Khān and holding an assembly installed him on the throne of Hunza.

From Nagir they enquired: "What are you doing?" Answers were returned from Hunza: "Aiyèsho has arrived from Aiyèsh" that is: "A Heavenly King has arrived".

After that the following rajas, in order, ruled in Hunza . . .

In the above fragment Girkis is written Girkits or Girkiz. With Trakhān, a figure in Gilgit legendary history, compare the Trakhanāting referred to in No. 30. 000

The word following Nūr is doubtful.

For Maiyūr and the Tapkients see No. 22 where he is called Ai.èsho Maiyūri Tham which would ordinarily mean Maiyūri the son of Ai.èsho.

For Aiyèsho Malik see No. 15.

Burušaski Proverbs.

136 Like the preceding text I received these in written form. They were originally recorded for me by 'Ina·yat Öllah Beg and rewritten more legibly by M. Ša·hza·da Yu·suf. I have used both versions. The comments are mostly condensed from Hindustani notes by 'Ina·yat Öllah Beg which were not rewritten by Š.Y. Much more elucidation would be required for the proper understanding of these proverbs.

537X 1. ɣam ɛtas hukər tin.

To the barking dog a bone

H. bhauṇknewa·la kutteko haḍḍi.

P. dahan i sag ba luqma basta bah(?)

i. e. to a ruler who takes bribes, give bribes (otherwise you won't get off).

2. hukɛ tin šiyas asa·nɛ; ja·ri ɛtas do·m.

It is easy for a dog to eat a bone, i. e. eating bones is easy for a dog, but to digest (pass?) them is difficult.

i. e. a ruler may take bribes but it is difficult for his days to be completed(?)

3. Sinda kam a.i·ts (? *or*, ayɛts?); pa·dša jut a.i·ts (*or* ayɛts).

Don't regard the river as small; don't regard the king as young (immature).

H. dəri.a·ko kam najə·n; aur pa·dšahko čho·ṭa xi.a·l nakar.

i. e. If there is little water in the river it will almost certainly increase; if the king is young there is every prospect that he will grow older. Both things are likely to increase so don't despise them.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

5391

4. gu·imo ša·isər nupəran gutis je·k ɛti.
   Stretch out your leg having regard to (the size of) your blanket.
   H. apna kambal dekhkar pa·ō phaila·o.
   i. e. only undertake things that you have the strength or means to carry out. Suit your expenditure to your income.
5. gu·imo diltarər mɛnɛ kɛ ʂuqu·rum o·se.iba·n.
   No one says that his own buttermilk is sour.
   P. kas nagu·yad kɛ du·γ i man turš ast.
   i. e. no one runs down his own things; even if they are bad he considers them good.
   gu·imo is ungrammatical with se.iba·n.
6. qərqa·muts humalkum khaš ɛta kɛ hər han fulγu·wan laŋ laŋ maimi.
   If you kill a fowl quickly every feather will go on moving.
   (i. e. the more hastily you kill it the longer its convulsive struggles will continue).
   H. muryiko jitna jaldi zibaḥ karega, itna de·rtak hilta rahega.
   In proportion as an act is done hastily the longer will its evil results last, e. g. when a ruler without reflection gives an order in a hurry it will be a source of complaint and disturbance in the country for a long time to come.
7. hukɛ me·š mana·s api; aγun tham mana·s api.
   A dog's(-skin) can't be made into a bag, the son of a low-class mother can't become king.
   H. kutteke čamṛeka kalaḍu nahī· ban sakta, aur lawanḍiza·da ra·ja nahī· ban sakta.
8. γa·ka mana kɛ γuraš, gaʂančɛka mana kɛ čhap.
   If you associate with a crow (you will eat) dung, if you associate with a hawk (you will eat) meat.
   H. kauweke sa·th rahoge to gu·, ba·zke sa·th rahoge to gošt kha·oge.
   If you associate with the evil you will get evil, and with the good you will get good.
9. balo·ʂɛ senimi: "ja axa·šiŋ γenišɛ bi." Ši·ɛ senimi: "jɛ amulo baiyam?"
   The pot said: "my bottom is of gold." The fireplace said: "where was I?"

4: Lorimer L-3 (1920-4: 1934-5) 1935 AV7 Burusho AV7

5398 H. ha·ndi·ne kaha: "mera tala so·neka hai." ču·la·hne kaha: "mai̯ kıdhər tha?"

When a man boasts of his good birth, another who knows all about him says "I know all about your root." (I. e. your origin).

10. hərɛ ʂapikɛka maska o·ši; badza·tər qısmat ai.ɛti.

Don't eat butter with barley-bread; don't serve a low-class man.

H. jauki ro·ṭike sa·th makhan mat kha·o; badza·t ʂaxʂki xıdmat mat karo.

Never do good to an evil man. If you do, he will certainly do you evil in return, and will always remain your enemy, and there is no hope of ever receiving good from him.

11 ta.ho·rdimo jilər γa· kɛ gaʂanč.

From early morning till the forenoon the crow is a hawk.

H. ʂubhse dopahər (*or*, ča·ʂt) tak kauwa bhi ba·z hai.

If anyone obtains authority from morning till midday, that is enough. If one is governor for only an hour that is enough, and if only once one fills one's belly that is government (ḥuku·mat).

12. ḍaḍanər nupəran nat.

Dance, keeping your eye on the drum.

H. ḍho·lko dekhkar na·č.

i. e. zama·nako dekhkar ča·l ("jump with the cat"); jaisa de·s waisa be·s (Punjabi bhe·s?).

Whatever country you may have to live in, you must conform to the law of that country. ("When in Rome do as the Romans do".)

13. hukɛ tha iskumuts ta (*or* šeɛ·rɛ) han ke bəra·bər.

A hundred puppies and one leopard cub are equal.

H. sau na·mərdõ·se ek mərd behtar; sau badza·tõ·se ek xa·nda·ni aččha ho·ta hai.

i. e. one man of good family is better than 100 of low birth.

14. ni·m hərɛtɛ gaḍhi.

The rod (is applied) to the ox that goes.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

539k

H. čalnewale bailpar ḍanḍa.

i. e. the man who obeys authority and observes the law is always hardly treated.

15. bušo·šu.ε čaγa: "amu·puṣ napus kε ami· yεrε."

What the calf says: "(even if you) tie up my muzzle (leave me) with (*lit.* under) my mother."

i. e. kill me if you please but leave me in my own country.

16. čhul mε·ṣε tam dεlji, balčum mε·ṣε ε·sfa·imi.

H. ko·i xidmat kare, ko·i gharmē baiṭhkar apni ta·ri·f kare.

i. e. one talks and the other does the work.

17. Supaṭ ya·rum di·šam nusen gopat ya·rum e·tas.

Saying "I shall get from (—?)" you get rid of what you possess (?)

H. ba·hirse kama·neke xi.a·lmē apne ghar ko berba·d karna.

18. hεrε himmat, xuda·ε madad.

The effort of the ox, the help of God, i. e. "God helps those who help themselves."

19. girkise ji·yεr di·mulo buser tama·ša.

The rat at its last gasp is sport to the cat.

H. ču·heki ja·nkani bilko khe·l hota hai.

20. dεrta (Ś.Y. dhεrta) apεrtεa? bu·a apεrta?

Is the corn (that is being threshed) awry? or are the cattle (going) awry?

H. xirman (khila·ta) ulta hai? kih gaε ulte čalte hai?

i. e. Is what I say wrong, or is your understanding wrong?

21. šu·akuṣ nεtan sindar biła.

Do good and throw it in the river.

H. ne·ki karke darya·mē ḍa·l.

i. e. As far as possible go on doing good; (virtue at any price?)

22. tasε (IUB. tha·sε) γaqayum samar lεl.

The pungency of the smoke is known to the smoke-hole.

H. gharka du·ā čhatko ma·lu·m.

i. e. "The inhabitant of a country knows its conditions," said when a stranger to the country sings the praises of its ruler.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

23. hər hʌɣʊrɛ jiˑyər diˑmulo hun dʌn čɛhaŋ (*or* dʌntsɛ haŋ?)

539X When the ox and horse have reached the limit of their strength they —? (every piece of) wood and stone.

H. ŠY. bail ghoˑre ki jaˑn parˑa bʌnti hai(?), to lakṛi pʌthʌr č(h)ubaˑta hai. (IUB. us wʌqt lʌkri aur pʌthʌr ko čaˑp ḍaˑlte haī).

jʌb kʌsipər muṣibʌt aˑti hai to čaˑrõˑṭʌrʌf haˑth peˑr maˑrta hai.

i. e. When misfortune comes on anyone he hits out with hands feet in every direction(?)

24. hukɛ iˑmu haˑlɛ šeˑr.

The dog is a lion in its own house.

H. kutta apne gʌlimẽ šeˑr hoˑta hai.

i. e. every man is very valiant when in his own country.

25. šoˑn ɛˑpači hɛrʌs guˑi(mo) gulčin šoˑn ɛtʌs bila.

To weep with a blind man is only to make your own eyes go blind.

H. ʌndheke paˑs roˑna ʌpni aˑṇkhẽ ʌndha kʌrna hoˑga (*or*, ʌpna nʌzər khoˑna hai. IUB.).

i. e. It is better to stay in your own home than to go to an unjust ruler.

26. ɣʌliˑsɛ (*or*, ɣʌliˑs siˑsər) hʌn thʌp tha thʌpičʌŋ, raˑḥʌtɛ tha dɛniŋ hʌn thʌp.

To a sick man one night is (like) a hundred nights. A hundred days of ease are (like) a single night.

H. biˑmaˑr šʌxṣke liye ɛk raˑt sau raˑtõki tʌraḥ (biˑmaˑri ki ɛk raˑt sau raˑtke bərʌˑbər IUB.) aˑraˑmka sau saˑl ɛk raˑt maˑluˑm hoˑta hai. IUB.

27. likɛ dʌn ixərči.

A bribe breaks stones.

H. paisa (rišwʌt) pʌthər (muškil kaˑm) toṛta hai.

i. e. One who has money gets justice. Even if a ruler is just money dissipates difficulties. Money is the labourer and the ruler is the stone. Just as the labourer has to break the stone so the bribe renders the ruler amenable.

28. gu·imo mo·n gatu daltas jami·pe thoḋetum. 539X
Your own old clothes are better than others' new ones.
H. apna pura·na kapṛa γe·rkı na.ese aččha hai.
i. e. the dry scrape in your own house are better than eating bread by the means, or through the help, of others.

29. har niṭin hayuraṭı balda.
Slaughtering the ox (you have to put the?) load on the horse.
H. bailko ṛibaḥ karke gho·repar bo·jh.
i. e. some one who is well off as he is, gratuitously involves himself in some affair. Then when misfortune comes on him he remembers that he has himself to thank for it.

30. urk (uhurk Ś.Y.) mamu guṭhi·mi kı unı be·lis bi. Be·lis mamu akuṭhi kı unar urk bi.
If the wolf gives you milk it is your sheep. If the sheep does not give you milk it is for you a wolf.

31. huru·tum hik ṭıqar, di·um tha ṭıqar.
When sitting there is one shame, when standing up there is 100-fold shame.
H. baiṭhneka ek ḋarm, uṭhneka sau ḋarm.
Said when a man has got up to do something and is then unable to do it.

32. jamipe hunı, danı hayan.
Another's arrow, a stone target.
H. γe·rka ti·r patharka niṡa·n.
i. e. use other people's property as you please (without regard to the consequences to it).
(Presumably the arrow would be spoilt by being shot at a stone).

33. uṭ api kı, jamı taskı.
If there is no debt, draw the bow.
H. qarz nahī hai to kamа·n khi·nč.
i. e. If there is no debt due to you(?) then make use of other people's property.
The idea seems to be that you should not use your debtor's property, as if you damage it you are damaging what is really your own.

4: Lorimer L-3 (1920-4: 1934-5) 1935 AV7 Burushо AV7

34. ụt nerin galiṇ.

539K

Preparing the road after having despatched the camel.

H. unṭ gum karke (IUB. unṭko marke) rasta banana.

i. e. to do the wrong thing first and then think about it. The idea seems to be the same as in the English "shutting the stable door after the horse has bolted."

galiṇ, galiṇ are steps prepared with stones or cut in earth, such as might be prepared to enable a camel to ascend or descend a difficult bit of track.

nerin variously translated by Ś.Y. and IUB. seems to be the past participle active of *-aras 'to send' etc.

35. ji niṣ buṭar oniṣ!

May I lose my life, but not the kid!

H. jan jau, bakara na jau!

said of a stingy man: "May life go, but may not a penny of money be spent on good works."

V. Vocab. buṭar.

36. gus gorram manu ki thap açuçi (IUB. açuṣ?)

If your wife becomes distasteful to you, the night won't come (to an end).

H. biwi agar napasand ho, to rat xatm (na) hoga.

No translation or explanation by IUB.

Thap açuçi would ordinarily mean 'the night will not come', but in this and No. 37 Ś.Y. has taken it as meaning 'will not come to an end,' unless he uses the fut. with an optative sense.

In both, IUB. seems to have written açuṣ of which the probable meaning would be: (You say) "may the night not come."

37. gupaltiṇ omani ki sa açuçi (IUB. açuṣ).

If you have no trousers the day won't come (to an end).

H. pajama agar na ho to din xatm na hoga.

No translation or explanation by IUB. Cp. No. 36.

4: Lorimer L-3 (1920-4: 1934-5) 1935 AV7 Burusho AV7

38. γa gayu (*or*, gau.u) iltur numan i·mo gutaharas ke til e·lum juwan (*or*, γa·n "gayu iltur mayam" nusen . . .) 539x
Like the crow who imitated the partridge and forgot his own gait (*or*, a crow saying: "I will imitate etc. . . .)
H. kauwa čiko·rka ča·l čalkar apni ča·l bhu·lgiya.

39. gutise go·miš dantse yami ke, guri·ŋe go·miš guxater.
When your toe strikes a stone your finger (goes) to your mouth.
H. pa·ōki uŋgli pathərse lage to ha·thki uŋgli mūh mē.

40. Qirγiz astam o·mana·s! Seriqule astam mana·s!
Don't let us have Qirgiz justice! Let us have Seriqul justice!
H. Qirγiz ka inṣa·f na ho! Seriqu·l ka inṣa·f ho!
Said when a ruler favours the rich and no one does justice to the poor.

41. jamipe ne·ki eti ke, gu·imo bai.i.
If an outsider works good for you he is your own (relation).
H. agər γe·r ne·ki kare to te·ra hai.

42. gu·imo ne·ki ayeti ke, jamip bai.i.
If your own relation does not work good for you he is an outsider.
H. agər xe·š badi kare to te·ra dušman.

43. huye·ltərte mamu xabər, tsi·r ji·e xabər.
The herdsman is concerned about the milk, the goat is concerned about its life.
H. ču·pa·n du·dh ke fikrmē, bakri ja·nke fikrmē.
i. e. The ruler is concerned with collecting the revenue and the subjects are concerned with preserving their lives. Said when the people are dying of hunger and the ruler is pressing for the payment of revenue.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

398k

Proverbs from other Sources.

44. ğuˈʌṭɛ uš̌ api kɛ jʌmiˈpɛ tobʌk yʌn.
    If your father has no debt get some one else's gun.
    i. e. borrow a gun and it will get broken and a claim will be made on your father.
45. hʌmʌlɛka čʌl apiˈ kɛ tsiˈr duˈmər.
    If you have no quarrel with your neighbour, buy a goat.
    i. e. if you want to pick a quarrel with a neighbour get a goat from someone else which will eat his vegetables (and so exasperate him).

---

As all the principal grammatical forms are entered in alphabetical order and explained in the Vocabulary, they are not as a rule referred to in these notes.

This and Text No. II were recorded, with the assistance of Mehtarjan Shāhzāda Yūsuf of Yasīn, from the dictation of Hidāyat Shāh of Thū.i, Yasīn.

The actual stories were said to have been provided by a Yasīni who had lived in Kābul where he had heard them.

2, 3 *mʌšquli* and *bərin̥* — these words were glossed as "business and affairs", but they can, I think, also bear the interpretation I have given them in the succeeding line.

TRANSLATION.

No. I.

How The Parrot Escaped.

In early times there was a trader. He had a parrot. The parrot used to transact much of the affairs and business in his house. Whatever guests came it used to do the talking and entertaining. 539x

One day the man set out for India for trade. In his home there was his daughter, there was his wife and there was his son. They all said to him: "Bring us a present from India." To all of them the trader replied: "Very good." As the man was starting off and went out into the entrance, the parrot called to him: "What present will you bring for me?" "You (are a) bird," said the man, "what present am I to bring for you?" "When you go to the Country of India," replied the parrot, "my fellow parrot(s) are on the tree in India, greet them from me. That is my present."

"Good," said the man, and took his departure. Some years passed, some months passed; at last he arrived in India. He bought merchandise for himself in the bazar. All his needs he acquired complete and entire. All the presents that had to be got for his family he procured. Having procured them he started off back. On his way, coming to a tree he sat down in its shade. Sitting

---

3 *aušiŋ di.a* — is singular, which goes oddly with *berum . . . ks.*

6 *hai.ʌn dits* — note the use of *d*-tsʌs* with a y object, and similarly of *yʌnʌs* in line 14.

14 *bo hai.ʌn yaiyom bʌš dulom ka . . .* — is an imitation of the Khowār idiom: *kovriko bʌš* (*šev*), 'it is necessary to do it', 'it is to be done'.

010 tsɛ totimu tɛ dəraxt yʌtɛ huru·čam bi·ɛm. Mai.aγa se toti.e tɛ bər nɛ hi·rɛ ɛski di·a. Tsura se tɛ salam tsɛ to·timuγa 'ɛti. 'Ečа tsɛ čik sust man'ɛn. But tsɛ ɛs taŋ man'i. Tsɛ hərаŋ sɛ han kat nyu·al yu·ri. Yu·rča nɛ hir but pešman mani. "Gutɛ salam gutsɛ·γa
5 aiyečam tsɪq kha šu·a du·ḏum, gusɛ ai.eyu·rčum tsɪq."

To·lum nɛ hir raehi nɛt berum waxta i·a ha·lɛ d'ɛšqalti. D'ešqalt u·ɛ čika hai.an uč'i. Učiča sɛ toti.e nɛγa doγ'ərusi ki "Ja te hai.an bɛltum ɛt'a?" Se.a ne hire tai.i sɛni ka "Go· tɛ salam ja tsɛ·γa ɛča tse čik taŋ man'ɛn. Han tsɛ hərаŋgum khat nyu·al yu·ri."
10 Təi.i sɛnas nɛ hi·re ha·le se to·ti ke yu·ri. Yu·rča i·a i·aγa "Se nitsu lip ɛt" sɛni·. Se.a nɛ se nitsu ho·la lip 'ɛti. 'Ečа sɛ to·lum jando nima du·w'al gali.

Ni Hindusta·n tɛ šahrule d'ɛšqalti. Dɛšqalča to se yu·rum to·ti akulum ni·ɛm seγa təi.i sɛni kə "Ja akər sust ɛta ka goγa išа·ra
15 mani, u·ŋ ka ja a·ltulum gukər sust 'ɛti. 'Eta ka u·e u·ŋ lip go·čuman. Go·tɛn ka u·ŋ ka təi.iya duwal ak'o gutɛ šahra d'ɛšqalčuma."

---

2 *eski* — *-ki* was explained as meaning "in", but there is no other evidence of the existence of such a suffix. It suggests the idea, however, that the Bu. *-*ʌski* is to be taken as a Locative, and that *-*ʌs* may represent an original *-*ʌsk*.

3 *but tsɛ ɛs taŋ mani* — *tsɛ* is to be taken as the genitive: 'the heart of them became much distressed'.

se hʌn — 'that one'. The parrot probably referred to a particular parrot, the natural rendering of *ja yə·r to·ti* in line 10 page 400. The following *bi.ɛn* is probably a slip for *bi*, or due to a confusion of statement.

5 *aiyečam tsɪq kha* — I know of no other example in W. or Bu. of the use of the conditional particle (*tsɛ*, *tsɪq*) in the protasis of a conditional sentence. *kha*, *ka* is the ordinary conditional particle of the protasis, 3. *ka*.

The second *tsɪq* is doubtless applicable to *du·ḏum* as well as to *ai.eyu·rčum*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

down (he saw that) those parrots were perched on the tree. This being so the saying of the parrot came to his mind. On its coming to his mind he conveyed its greeting to those parrots. On his doing this they all became unconscious. They were very much distressed. That one among them (which was the parrot's friend) fell down and died. On its dying the man was very repentant (for what he had done). "If I had not conveyed this greeting to them," he said, "it would have been well, this one would not have died." 539*

Thence, proceeding on his way in the course of some time the man arrived at his home. He gave them all the present(s). On his doing so the parrot asked him: "How did you do about that present of mine?" On its saying this the man replied: "When I gave them your greeting they all became unconscious, and one among them falling down, died." On his speaking thus the parrot in the man's house also died. On this the man said to his son: "Take it away and throw it out." The son took it away and threw it out. When he did so it came to life and flying away departed thence.

It came to the Country of India. There the parrot who had died spoke thus to the one that had gone from here: "When I made myself unconscious it was a sign to you: 'Make yourself unconscious like me. If you do so they will throw you out. When they have thrown you out, you too in like manner flying off will arrive here in this country.'"

Tsor zama·na.ulo hɛn badša·an bam. Nɛ badša iake yu bam.

See the introductory note to No. I.

1 *temen* — is probably not a phonetic variant for *tuman* (especially in the light of *thum* in l. 20. p. 412) but *ti* + *men* cp. Bu. 2. *thi*.

3 *domo·akal* — cp. line 9. The verb perhaps only means 'to make one do something'. It was glossed Khow. *čake*.

Khow. *čake.i*, *čake* is the ppa. of *čake·ik* 'to fix', 'fasten', but is also used to denote the agency or instrumentality of another person: *hatayo čake hai.a kormo korevim* 'I will make him do this job'.

The principal verb is here itself causative, so that the idiom seems closely to resemble l. 9 *mo domo·wakal bərin mo·čam*.

4 *u·čam* — is equivalent to Bu. *yu·čam* (pn. pf. *i-* + *u·čam*).

No. 11.

The Silent Princess.

In ancient times there was a king. He had a daughter, there were no other children. His daughter did not talk. The king said: "Whoever makes this daughter of mine talk and converses (with her) I will give her to him. Whoever are unable to make her talk I will cut off their heads. On these terms many kings' sons failed to make her talk. He cut off all their heads. 539*

Finally a king's son arrived on this quest. He had with him a talking monkey. The monkey said to the king's son: "By some device I shall make her talk and converse. If you go first to the house I shall stand in the door. Then if you address a question to the door I shall answer you." On its saying this the king's son went to the house, and the monkey came and sat inside the door. The king's son addressed the door: "The king's daughter will not talk with me. Do you entertain me in some way." The door (i. e. the monkey) said: "I will entertain you. There is a story in my ear(s), I will tell it to you." So saying the door proceeded:

In early times there was a king. The king had three sons. At

3 *mene . . . ełan ka . . . nεγa* — grammar and sense require the ag. *menene . . . ełi ka.*

-13 *wγ bo ja mašqul ełi* — the exact sense and translation are uncertain.

13 *g'učam* — is probably for *gočam*, since *wγ* is not in the dative as it would be with **-ωγas*, but why then is it *'ełi* and not *ωł(s)* in the preceding sentence?

14 *kamrenan* — I cannot explain this word, but it is probably *kam* ('a little') + *ren* + *an*('*a*'). It is glossed "a little (amount of story)". Cp. perhaps Kho. *kamro.*

Han waxtulo badša but aulum mani. Yu.e senan ka "Uŋ a·ulum gumana, miγa bo nasi.at 'eti." Badša seni kε "Jε maγa bo nasi.at εčam. Ja aiyu·rum tseči fəla·ni jaγa či ja dust badša·n bai.i. Nε pači ne.in." Nuxat badša yu·ri.

Nε yu nε badša nε dust pači galen. Nε badša doγarisi, "Ma tati maγa bo ɪzzat 'ε·tɪt bam?" Ne nyu i·e seni, "Ja tati hər gučačum kenər jaγa tu(w)'a ai.a·rεki ai.εtɪki ε·tɪt bam." Mačukuša duγariša nε seni, "Ja tati hər pako ke·na hər saxtε pako jaγa εčum tsɪq." Da nε εčuγ'una doγariša nε seni, "Ja tati jaγa hər gunts jaγa toš gatuŋ εčum tsɪqε."

Gutε bərin yεtε badša i·a waz'ira seni, "Ko(w)ε·γa gutε zaila adab 'et." Gunčatε badša yu tsura badša nyu ye·γa doγ'arisi, "Go tati waxt ju·a goya·rɪki goyætɪki gyi·ena?" Nε seni, "Awa təi.i.a gi·en, magam šenjan ai.a·rε waši.en. Tε sabab yatε mušaqqat amana."

---

15 *mos mani ka* — a verb of "saying" is understood before *ka*.

16 *ni·γan gum ba·n* — cp. l. 7 p. 408 *nuγa·nin*. It is doubtful whether the vowels following the *n-* are the pn. pf.s *i-* and *u-*.

In Bu. *gum ba·n* (*guyas*) would imply a pl. *h* or *x* object, but here the logical obj. is *ya·rɪki yætɪki* which is *y*. This would be suitable for *ni·γan* if the *-i-* is the pn. pf.

20 *šu.a bim ka . . . xair di.a* — probably, "if it was good", "though it was good".

22 *nu·ltε* — the *u·* can scarcely be the pn. pf. *u-*. It must simply be a stop-gap vowel. We must on all analogies presume an original verb **-lteyas* which lost the **-l* when it occurred initially, giving *te(y)en* (l. 6 p. 408), but retained the *l*, while giving up the pn. pf., in *nu·ltε*.

Cp. the similar phenomenon in Bu. 2. and 3. *taiyas* and 1. and 2. **-ltaiyas*.

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

one time the king became very ill. His sons said: "You have become ill. Give us some good advice." "I will give you some advice," said the king. "After I am dead, there is, at such and such a place, a king who is my friend, go to him." Having said this, the king died. 539*

His sons went to that friend of the king's. The king asked them: "What honour used the king (your father) to do you? The eldest son said: "My father at every bedtime used to provide new under and upper bedding for me." When he enquired of the middle son the latter said: "At every food-time my father used to provide every kind of food for me." Then on his asking the youngest son he replied: "Every day my father used to provide new clothes for me."

On (hearing) these statements the king said to his wazir: "Pay them attention on these lines." When the king's sons came up in the morning the king asked the eldest son: "Did they put down under and upper bedding as in your father's time?" "Yes," said he, "they did so in like manner, but they put a beam under me. For that reason I was uncomfortable."

The king was angry with the men (saying): "'Why did you put a beam under him?" "We watched what we were doing when we spread (his bedding), and we did not put any beam (in it)." The king sent a man to examine the bedding and when he went and looked there was a hair on the lower bedding. Then the king perceived that the prince was a very sensitive person since a hair seemed to him like a beam.

Then the king enquired of the middle son: "Did they give you good food?" "The food was good," said the youth, "but there came from it an odour of sheep's milk." The king asked the cook: "Why had you put in sheep's milk?" He took oath and said: "There was no sheep's milk. But the (mother) goat died and they took the kid and reared it under a sheep. The kid was reared under a sheep, and when it became a (full-grown) she-goat I had

24 *dusmai.rni* — glossed: "it was reared", but the form is difficult to explain.
se du . . . stam bam — *du* is probably the object, *maltais* being either the general oblique with instrumental or sociative force, or else the genitive dependent on *ispot*.

000 Albat-sɛ bɛlisɛ xer maltašɛ di·m du·a." Badša nɛ mačukuš ye hušya·ri but akiš tsani.

Da nɛ ɛčuɣ'una doɣariši, "Go·ɣa šu.a gatuŋ g'o·w'ɛl̲ɛna?" Nɛ sɛni ka "Gatuŋ šu.a bim, magam tɛ makuči hukkuku·rišo bim."
5 Badša i·a sɛs doɣarisi ka "Hukkuku·rišo besa gum bam?" Nɛ sɛs te(y)ɛn ka "Mi bo hukkuku·rišo ai.e·gum ba·n." Da badša hukəm 'ɛti, "Nama nɛ gatuŋ ɣa·nin." U·ɛ nuɣa·nin ka han hukkuku·rišo han tanɛn ne gatuŋ makučo bim. Badša nɛ te nazuki ni·ɛts hairan mani.

15 ya·nis desali."

Momu gutɛ bər ɛčumɛ saxɛn badša muya mo.i nɛɣa u·i.o.

---

1 *di·m du·a* — is perhaps not for the 3rd. sg. *y* perfect of *žo.as* (*di·m du·a*), but two independent words: "Having come is there".

7–8 *han . . . han* — the first probably also refers to *tanɛn* and so is tautological.

10 *mɛn* — must here be singular.

16 *badša muya mo.i nɛɣa u·i.o* — this is glossed "gave his daughter to him" but this would require *badša* to be feminine. The last words would normally mean "she gave her own daughter to him".

4: Lorimer L-3 (1920-4; 1934-5) 1935 AV7 Burusho AV7

made the kid into *isput* with ghee. The odour of the sheep must have got into the ghee." The king marvelled at the perceptiveness of the middle son.

Then he enquired of the youngest: "Did they give you good clothes to put on?" "The clothing was all right," replied he, "but in the middle of it there was a thorn." The king asked his men: "Why did you put thorns in the clothes?" They took oath (saying). "We haven't put any thorns in them." Then the king gave orders (saying): "Go and examine his clothes." And when they examined them, there was a single point of a single thorn in the middle of his clothes. The king marvelled when he saw his delicacy.

Then (having told this story) the door said to the king's son: "You answer and tell me which of them was the most delicate and perceptive?"

"Assuredly the youngest" replied the king's son, "was the most perceptive and delicate."

At these words the non-talking daughter of the king said: "No. The king's eldest son was the most delicate and perceptive, since a hair appeared to him like a beam."

By reason of her saying this the king's (daughter) gave herself (to the prince).

---

This version of the "Prodigal Son" was made by Bahādur Amān Shāh of Yasīn, and was written down and dictated to me by Mehtarjan Shāhzāda Yūsuf of Yasīn, whose vernacular transcript is in my possession.

pfaki — this word also occurs in the same passage in the LSI. version of the Prodigal Son, but has not been otherwise recorded.

The use of the dative with it suggests that the meaning is "allotted" or "assigned"

4 *nɛtɛ* — The vernacular Ms. has *nɛt*.

5 *de·me·yi* — is the vernac. Ms. reading.

7 *maniš tai.i* — this and the similar *de·γeressiš tai.i* (l. 14 p. 412) are each in the vernacular Ms. and in my own Ms. written as one word. I similarly wrote *hi·li·ki·ništai* where the vernac. Ms. has *hi·li·ki·niš ta·i*. On the other hand I have *stiš taï(y)ɛn* where the vernac. Ms. has *stišta·ɛn*. V. ll. 19 & 12 p. 412.

No. III.

The Prodigal Son

Then he said: A man had two sons. The younger son of them 539*
said to his father: "O father, give me whatever portion of your property comes to me." The father apportioned his property among them.

Then a long time had not passed (when) the younger son, collecting all his possessions, set out for a distant country. There he lost (*or*, wasted) his property in evil work.

When he had expended all, then there occurred a severe famine in that country. The youth began to be in want. Then he went to the house of a man in that country. The man sent the youth into his field(s) to feed the swine. The youth's desire was that "I also may fill my belly with the husks the swine eat," but none used to give (anything) to him.

Then the youth coming to his senses said: "To how many hired servants of my father does much food come, (while) I am dying here of starvation. Getting up I shall go to my father and shall say to him: 'O father, I have become guilty in the sight of heaven and in your eye(s), and now I have not remained worthy of this

---

I think there is no doubt that these forms represent combinations of two words which are, however, closely correlated in pronunciation.

9 *mukʌkɛ* — this word, of which the meaning is unknown, does not appear in the vernac. Ms. which has *bo* in its place. *bo* seems to be necessary in any case. Perhaps, *mukʌk* = Bu. *bukʌk*, 'beans'.

12 *phaʿko* — cp. *pʌko* l. 8 p. 406. The vernac. Ms. has *pʌqo*, which is also recorded by Morgenstierne in unpublished notes.

000 go gulčinuḷɛ gunahgaʷr amana, amʼutuk gutɛ lai.aquḷɛ ʼataw'asa go guyɛʷ siyam. Ja guʷya mazduʷrišu žu.a aʷt.'"

---

1 *gulčinuḷɛ* — here and in line 5 the vernac. Ms. has *nazivuḷɛ* (l is not distinguished in the script from l).

lai.aquḷɛ — also line 6. The locative suffix, which appears in the vernac. Ms., suggests that the word is regarded as a noun. In a similar idiom Kho. uses the locative form *lai.sqa*.

4 *nʼi.ɛtsə* — the vernac. Ms. has *niʼats*.

8 *duʷyeša . . . ɛʷwɛʷliṇ* — the vernac. Ms. has this and the following imperatives in the singular, *ɛʷwɛʷal* etc. In these circumstances *duʷyeša*, (vernac. Ms. *duyuʷša*), v. Vocab. s. v., may be the imperative sg. of a verb *duʷyešai.as* (*dʼ-ešai.as*). More probably it is the p. p. act.

The exact force of *nɛʷγa ɛʷwɛʷliṇ* is obscure. It cannot mean "cause him to put on", nor "cause them to be put on to him". It is probably a simple transitive with a 3rd. person beneficiary: "put them on to, *or*, for, him" *ɛʷ-* referring to the prodigal.

that I should call (myself) your son. Make me like your hired servants.' 539*

After this, getting up, he went to his father. The youth was still a long way off (when) his father seeing him his heart burned (i. e. was moved). Running he put his son under his neck (i. e. embraced him) and kissed him. The son said to his father: "O father, I have become guilty in the sight of heaven and in your eye(s), (and) now I have not remained worthy that I should again call (myself) your son."

The father said to his servants: "Take out the best of clothes and put them on him, (and) put a ring on his finger and put shoes on his feet and fetch the fatted calf and slay it, that eating it we may make merry. If you ask why, (i. e. because) this my son had died and now has come to life. He was lost and now he has returned to me." Then they began to make merry.

But the elder son was in the field. When he came back and approached near he heard the sound of playing music and singing. The elder son enquired of a lad: "What is this that is going on?" The lad replied to him: "Your brother has come back and your father has slain the fatted calf, for this reason that he has returned to him safe and sound."

The brother was angry and would not go in, but his father going out began to entreat him. He, (replying) to his father's words said: "Lo, since how many years do I serve you? Never have I done anything contrary to your command, but you have never given me even a goat's kid that I might make merry with my friends. But when this son of yours has returned, this son who

---

10 *ditso* — vernac. Ms. *dits*.

13 *nur iye* — vernac. Ms. *nur ye*.

19 *bovle* — a curious use of the locative. Cp. the Bu. *menelo* ‖ *menale ovan* 'dont say to anyone'.

22 *aiyanum ba* — 2nd. sg. perfect, "thou hast not given to me". The vernac. Ms. has 2nd. sg. pret. *ayawayar*.

dwstibeya — this dative is probably wrong. The vernac. Ms. has *dwstibeyga* (or, -*ega*), where -*ega* or -*ga* apparently means "with".

ki·nɛ guyɛ diya, ki·nɛ gu·yɛ go mal i dunya šu·m du·ro harəŋ

PREFACE.

The following Vocabularies are based on the material collected in 1923—24, to which reference has been made in the Introduction, Volume I (pp. lvi. ff.), and were completed in 1930—31. 122 128

Thanks to assistance received from the Leverhulme Research Fund, I was able to revisit Gilgit and Hunza in 1934—35, and I then collected a considerable amount of new material.

Of this practically nothing has been incorporated in the present work. The additions, in the way both of new entries and of the elaboration of the existing entries, would have been considerable, and their preparation would have entailed great delay in publication. As matters stand I have not yet worked out the new material[1], and this has saved me from much temptation. 128

The revision of the *Burushaski—English Vocabulary* as it already existed, was, however, one of the many items of a too ambitious programme, which I did carry out, if only in a hasty and perfunctory way.

For this work I was fortunate in obtaining the assistance of Qudratullah Beg (QUB), son of Subadar Muhabbatullah Beg, a literate and extremely intelligent young man, with a remarkable feeling for language and the refinements of phonetics. [115]

A thorough examination of the forms, meanings and uses of the words in even this very modest vocabulary would have been a major task requiring an almost infinite amount of time. I had therefore 128 121

[1] Attention may, however, be called to a note on certain features of Burushaski, published in the BSOS Vol. VIII, 1936, pp. 627—636, which throws light on some grammatical and phonetic devices of the language.

5: Lorimer L-3 (1920-4; 1934-5) 1935
AV7 Burusho AV7

128 to restrict my aims to improving the phonetic representation of
121 the words, principally in regard to distinguishing cerebrals and non-cerebrals, aspirates and non-aspirates, and to clearing up doubts indicated by question marks in the original script, which chiefly related to noun-categories and to plural and pronominal-prefix forms, but also sometimes to meanings. Even these limited aims were not completedly realised; many forms and queries escaped notice or otherwise resisted determination.

128 One point resulting from this revision may be noted. The keyword as given in the Vocabulary, or the first form, where alternatives are offered, is the representation of the word, which from all information available I believe to be the correct one. Many words are misspelt, as regards cerebrals and aspirates, in the Grammar and Texts, which were in print before this revision was carried out. No attempt has been made to correct them in the quotations given in the Vocabulary. The reader is therefore asked to concentrate his mind on the keyword forms.

It will be observed that among the meanings given Arabic and Persian words frequently occur, to all which "H" (Hindustani) has been prefixed. This is for the sake of simplification and because explanations were usually given in Hindustani (or Urdu) in which these words are current.

Occasionally another Burushaski word is quoted under the description "Bu. Syn." (Burushaski Synonym). This is not to be taken as meaning that the one word exactly duplicates the other in meaning, but only that the second was used to explain the first.

This volume began to go to press while I was still in Hunza, and Professor Morgenstierne very generously undertook the unpleasant task of working my emendations into the earlier part of the script and revising the proofs of the first few sheets. This resulted in a very considerable saving of time.

I regret to have to append a lengthy list of corrections and additions. These are due in large part to the upsetting effect of growing knowledge and the alterations in the text which it entailed,

5:Lorimer L-3 (1920-4;1934-5) 1935
AV7 Burusho AV7

For the rest I can only hope that they may be attributed to physical limitations rather than to economy of endeavour on my part. I have made a vast number of corrections in the proofs, but unfortunately this is a case where anything short of complete achievement acquires no merit. 128

I have made no effort to turn this into a comparative philological dictionary, a task beyond my competence, but I have aimed at indicating obvious loan-words, for the benefit of those who may approach Burushaski with a mininum knowledge of other oriental languages 121 192

The bulk of these loan-words will be found to be Arabic-Persian, i.e. Arabic words current in Persian, most of which have probably been acquired, more or less indirectly, from the latter language. 192

The original source of dissemination of Persian in all this part of the world has undoubtedly been the language of the Tajik population of the plains of what is now known as Tajikistan iu USSR territory. This Tajik Persian is now beginning to receive attention (Cp. W. Lentz, "Pamir Dialekte, I" Göttingen, 1933, Introd. pp. 31 ff. and H. Sköld, "Materalien zu den iranischen Pamirsprachen", Lund 1936, Introd. pp. 8 ff.). Work has been done on it in recent years by Soviet scholars, but copies of their publications are not easy to obtain. [113]

What proportion of the Persian words recorded by me in Burushaski are familiar to all Burushaski speakers, I cannot definitely say. Illiterate and untravelled men and most of the women would not, I think use, or know, many Persian words for which there are adequate Burushaski equivalents. Against this, every child in Hunza seemed to know the word *taswi'r* for "photograph". It was a very old man who, when he had lost or damaged his portrait, asked if he could have another copy of the *girm'inum*, the "script".

Other non-adjacent languages which have been laid under contribution are Hindustani and Punjabi.

With Tibetan I have no direct acquaintance but I have noted a few words in Burushaski which can be found in the standard Tibetan dictionaries.

AV7 Burusho AV7

Burushaski—English Vocabulary

192 Burushaski and the dialect of Tibetan spoken in Baltistan possess some words in common, and comparison has now been facilitated by the Vocabulary printed in A. F. C. Read's "Balti Grammar" [113] (RAS 1934), which became available to me only after the greater part of this volume was in print. A separate note on the subject is now appended, v. pp. 532—536.

192 Turkish and Eastern Turki stand in much the same position as Tibetan. They have contributed words to Burushaski, but I have 197 no personal experience of these languages, and have only indicated words that I happened to know or such as were readily traceable. The source of these borrowings has undoubtedly been the Eastern Turki spoken in Chinese Turkistan.[1]

On the other hand, coming to Burushaski's immedate neighbours, I have quoted all the parallels known to me in Shina, Khowar and Wakhi. Except where otherwise stated, these are furnished from my own collections.[2] This is a first step towards a comparison of the complete vocabularies of these languages — at present impossible owing to deficiency of material — which would yield some interesting results. We should learn for instance the extent to which the various vocabularies overlap, the nature and amount of borrowing by one language from another, and the area of survival or dispersion of Burushaski words, Burushaski being by hypothesis the original language of a much wider tract than it occupies at the present day.

I have made some attempt to illustrate the possibility of tracing the transference of grammatical devices and idiom within this group of languages in a paper which is due to appear in the "Transactions of the Philological Society" of 1937.

[113] [1] An examination of G. Raquette's "English-Turki Dictionary", Lund, 1927, reveals a very large number of Ar. Pers. words. Of the genuine Turki words there recorded very few are to be found in Burushaski.

[2] In the Kho. words the cerebrals and aspirates are probably fairly correctly marked. In Shina words many have probably gone unnoted. I have therefore quoted any forms given by Grahame Bailey which differed from mine. In Wakhi I could get no assistance in phonetics from my informants. I recorded cerebral ʈ̚, ʂ, ʐ and occasionally ʈ, but no aspirates, which proves little.

5:Lorimer L-3 (1920-4;1934-5) 1935
AV7 Burusho AV7

Preface

Apart from indicating undoubted loan-words, often to me of unknown origin, which are shared by Burushaski with one or more of the neighbouring languages, I have made no attempt to pronounce on the authenticity of those words which *primâ facie* appear to be true Burushaski. Sanskrit cognates have been suggested for some of them by Professor Morgenstierne. 192 121

One important question remains to which I can give no precise or certain answer: What proportion do the Burushaski words in this Vocabulary bear to the total word-stock of the language? When I returned to Hunza in 1934 one of my hopes was to record sufficient new words to make my collection fairly complete as regards words in daily use and known to everyone. I was well aware that the still popular belief that peoples living in primitive conditions must possess simple languages and employ small vocabularies had been abundantly disproved by facts, but I had not realised what a lengthy business it is to collect and adequately record even a few hundred words after the first couple of thousand in constant daily use have been noted. How many new words I actually recorded I have no idea, but I am certain that they will go only a short way towards making the vocabulary complete. I could always easily get new words, the difficulty was to find time to have them elucidated and to write them down. 192

Burushaski possesses a large number of nouns of a technical nature relating to all the ordinary occupations of life, which, given time, can be ascertained by observation and enquiry, but it also appears to be very rich in verbs, aud these are not so easily and quickly discovered by any direct method.

The *Werchikwar—English Vocabulary* remains much as it was when it was originally compiled. In 1934—35 I made several efforts to bring Werchikwar-speakers to Hunza to work with me there, but failed to secure competent men. The principal result was disappointment and wasted time. Eventually I paid a visit to Yasin and found an old acquaintance, with whom I worked there and whom I brought back to Hunza and kept with me for a few 126

5: Lorimer L-3 (1920-4; 1934-5)1935
AV7 Burusho AV7

126 weeks. Unfortunately I did not remember how full of uncertainties my Werchikwar Vocabulary was, and instead of revising it I spent all my time trying to obtain new material. From this, however, I have been able to fill in some details lacking in the original vocabulary.

128 The *English—Burushaski* and *English—Werchikwar Indexes*, prepared by my wife, are not to be taken as dictionaries, they merely give references to the occurrence of the English words in the preceding Vocabularies. These English words are not necessarily the exact equivalents of the vernacular words which follow them. These should therefore in every case be looked up.

EPILOGUE.

000 With this Preface to the last volume may be combined an epilogue to the whole work. The latter, concocted in the course of the years 1926—30 from material collected in 1923—24, passed on to the ordeal of printing, from which it now finally emerges. It has therefore been something of a preoccupation, almost continuously, for fifteen years, and has consumed a considerable amount of time and labour.

The expenditure of time and energy in routine work, or without definite objective, easily passes unnoticed and seldom arouses active regret. When there is, or ought to be, a definite result to show for it, we become critical, and we are specially apt to find the outcome of self-imposed, directed labour inadequate and unsatisfactory. We then realise that time passed is irrecoverable, and that energy expended is virtue that has gone out of us for ever.

The author of an imperfect work on Burushaski can therefore quote with humble fellow-feeling the sad case of Burzoë described by Ath Tha'ālibi in his "History of the Persian Kings."[1]

[1] Zotenberg, "Histoire des Rois de Perse", Paris, 1900, p. 630. The quotation is from the translation by Sir Denison Ross in the Foreword to Vol. V of the "Ocean of Story", edited by N. M. Penzer (privately printed by Charles Sawyer, London, 1924—28) p. vi. Typographical difficulties rule out the reproduction here of the original Arabic.

5: Lorimer L-3 (1920-4; 1934-5) 1935
AV7 Burusho AV7

Burzoë (Buzurjmihr) was a learned doctor at the Persian Court who obtained permission from the King, Anushirwan, to proceed to India to search for a medicinal plant, of which he had read, which possessed the property of bringing the dead back to life. He went, and searched, and failed:

"Burzoë, avoiding no effort or fatigue, wore himself out in picking, collecting, sorting and combining these plants, so that he might have said with the people of Baghdad, 'We have continuously been busy with nothing at all, and now we have finished.' He experienced much grief and disappointment, because without attaining his object he had wasted his days . . . ."

But Burzoë's story continues to a happy ending.

AV7 Burusho AV7

INTRODUCTORY NOTE.

The alphabetical order followed in the Vocabulary is as follows: 194

Vowels: *a*, *ʌ* and *æ*, *ai*, *au*, *e* and *ε*, *i* and *ɪ*, *o* (including *ɔ* and *ɔ̃*), *u* and *ʊ* (and *ü*).

Consonants: *b*, *ḃ* (including *ḃh*, *ḃ* and *ḃh*), *d* and *ḍ*, *f*, *g*, *γ*, *h*, *j* and *ǰ*, *k* and *kh*, *x*, *l*, *m*, *n*, *ŋ*, *p* (including *ph* and *pf*), *q*, *r*, *s*, *š* and *ṣ*, *t* (including *th*, *ṭ*, *ṭh*), *ts* and *tsh*, *w*, *y*, *ỷ* *ẓ* and *ẓ*.

An attempt was made to distinguish and separate *a* from *ʌ*, and *e* from *ε*. This I came to see was a mistake, but only when it was too late to rectify it, except in the Werchikwar Vocabulary, and in the Burushaski Vocabulary in the case of initial *e* and *ε*, which have been combined.

In many cases the differences between these sounds are accidental, due merely to stress, which may vary, and to other undiagnosed causes, and these variable sounds cannot be relegated to one category. In this connection see Professor Morgenstierne's remarks in his Preface, p. XX.

The alteration of some of these variable sounds in the course of revision necessitated the transference of a number of words in the Vocabulary. A few have been overlooked and are now out of their alphabetical place, e.g. *lalεr*. Attention has been drawn to these in the Corrigenda.

While vowels were over-differentiated, certain types of consonants which should have been distinguished, were treated as one. Cerebrals and non-cerebrals, aspirates and non-aspirates ought to have been kept separate, but I was originally too uncertain about many of the sounds to be able to give effect to this principle. Now, however, the initial keyword represents, in almost every case, the form of the word considered correct by QUB.

Internally, some effort was made to rearrange groups of otherwise similar words according to the presence or absence in them of cerebrals and aspirates (e.g. the entries *dam* and *ḍam*, *dεr* and *ḍεr*), but at the stage then reached practical considerations necessitated the abandonment of this procedure, with the

S. Lorimer L-3 (1920-4; 1934-5)1935
AV7 Burusho AV7

194 result that series of entries such as *tham*, *ṭam*, *ṭam*, *ṭham*, have remained unadjusted.

The following remarks on a few of the vowel sounds supplement what is stated in § 3.

ɔ, representing the sound of English *awe* may some times be heard in a few words as a variant of *o*, e.g. *yowči*.

ô occurring medially in some monosyllables appeared to me to be a short and advanced *o*.

ü I now believe to be *u* pronounced with spread lips and the tongue somewhat retracted owing to the neighbourhood of *y*. The point of articulation is probably in advance of that of *u*.

akwwiki this much (?) S. λ. — *čap akwwiki gwoti* he will make your flesh for you into bits like this (indicating with the fingers) i.e. he will tear your flesh into little bits. 168.7. Cp. *akkorum*.

akkorum, akkoromaz, akkoromaz — Adj. Pn. as much as this; this much, all this; as many as this; so much, so many. — Adv. so (much as this). *H. rina.* — *akoromaz gabeg ḫoz mermi* this much cloth will be enough. *akoromaz yemez* so much gold. 88.6. *akoromaz pateemu? awere, akoromaz gatez ḫoiyam* had you seen this much? (or, all this?) Yes, I had seen all this. 88.2. *akorum dreuiplo ja weg aziimat ezje ḫo* for these many years I have been serving you. 374.7. *akkoromaz S.K.s ḫwimer semimi* at this point (= *koromaz*) S.K's said to his mother.

000 388.6. V. § 182. (*a* + *kh* + *u* + *r*, cp. *berumaɴ* how much? *be* + *r*. The *-r-* seems to denote "quantity".)

axavat, axirat, axarst the next life, the last day. — *axavatɛ* (or, *axarets*) *guntsvlo* at the last day. 58.25, 62.9. *axavatvlo* at the last day, in the next world (?) 58.26. *wuṇor axirate jakun amanṇal* may I be your donkey in the next world! 54.23. Ar.

axer, axev finally, in the end, at last, well then. 50,8, 1.9, 10.6. Ar.

axir kav in the end, eventually. 356.2. Ar. + Prs.

ax'ɔn ax'ɔn pl. *ax'ɔndɔro, axundɔro, axoyo* hm mullah, priest. 68.25, 302.14, 310.12 ff. Prs.

albat, albatta, alwatta certainly, for sure, surely, doubtless. 10.2, 108.11. 128.12. Ar.

alemum (Ns.) from there = *torlum*. S. λ. (cp. *ele* and *ale.i*).

alim hm learned man. 48.5. 68.21. Ar.

almari, -miṇ y cupboard, almirah. (Cp. N. *almaira*).

a'lta x form of *a'lto* q.v.

alt'a'ṇuts 8 days. 326.8. (*altam* + *kuts*).

altarts, a'ltats an x form of *a'lto* q.v. two. — *turma a'ltatsatsum talo xu tsir gu'čan* we shall give you from 12 (= 10 + 2) to 7 goats. 194.12. N. *altarts hayurints, kabarimuts, čandamuts* two horses, coats, pockets.

alt'am v. *altambo*.

altambi'lum, a'ltambilum eighth.

alt'ambo, a'lt'ambo (h,x,y), *alt'ambi, alt'am* (s), eight. — *altambo hiri, ha'kičaṇ* eight men, houses. *alt'ambi dan, hši* eight years, times. *alt'am kum* eight pairs, sets. *alt'am sa* eight months. *alt'a'ṇuts* eight days. *talo alt'ambu.an* 7 or 8 persons.

000

aˈltʌn h form of *aˈlto* q.v.

aˈltər (invariable), N. *aˈlther*, *ʌlther* twenty, a score. — *aˈltər hin, hʌn, hik* twenty-one (h, x y, z). *aˈltər hunčo* twenty-nine. *gutse aˈltər* these twenty (x things). *šʌdəršo aˈltərʌn* twenty followers. *aˈltər tovumo* thirty.

aˈltəvlum, N. *ʌltheriˈlum* twentieth.

aˈlto (y, z); *aˈlta, aˈliaˈts* (x); *aˈltʌn* (h); *aˈlto, aˈlti* (z) two. *aˈltʌn hiˈri, gušingents* two men, women. — x *aˈlta hʌγurišo, tsir, šuqamuts* two horses, she-goats, chogas. — y *aˈlto mʌleŋ* two fields. — z *aˈlt'oˈsa* two months; *aˈlto heši* twice. *aˈlto den* two years. — z *hik uˈer u, aˈlto heši jaˈr jo* give them one share and give me two.

The following examples of a z form *aˈlti* have been recorded:

aˈlti romər to the two tribes. *aˈlti mʌkso* two shares of communal labour. *aˈlti denkus birʌγo* a two-year-old colt.

aˈltokum two pairs, two sets. — *huˈčo aˈltokum* two pairs of pabboos. *qʌči aˈltokum* two pairs of scissors. *jərʌpičiŋ aˈltokum* two pairs of socks.

aˈltovlum, altˈoˈlum.

i. second.

aˈltolum *-*ʌmiš* the second finger (i.e. the one next the little finger);

ii. secondly, in the second place.

ʌwal bəreˈnin ... aˈlto.vlum eʃčiŋər bʌrˈenin see first .. secondly look at his waist. 154.18.

aˈltowaˈltər, aˈltu.aˈltər, aˈltuwaˈltər forty. — *aˈltowaˈltər kuts omʌnj xa* before 40 days have elapsed. 50.16. Cp. 52.10. (*aˈlto* + *aˈltər*).

aˈltowaˈltər tovumo fifty.

aˈltu pl. h. and x. twins (human or animal). — *aˈltu (hilešo, dʌsiwʌnts) duˈmʌnʌn* twins (boys, girls) have been born.

3a

yuvs ɑ·ltu muyur doɣmʌno bɔm his wife had given birth to twin sons. 110.14. *ja bɔvɑ . . . ɑ·ltu dɔvɑ.ʌnimi* my cow has given birth to twin calves. 354.4. 000

ɑ·ltul (y?) two days. — *gute (krtayp) jerimo hɑ·le ɑ·ltul ʏʌtaiyʌm* I shall read this (book) in my own house for a couple of days. 70.1. *ɑltul duwɑɣumɔr* when two days remain. 326.11. *altolʌn iski kuʏtsʌn* two or three days. *altul(ʌn)tɔvm i·lji* after two days. *ɑ·ltulum ju* come after two days. *ivns ɑltulum yɔr dimi* he came two days before. *ɑ·lt'ulʌnmo* after two days, two days later. 330.11. *ɑ·lt'ululo* for, during, two days. 300.3.

h·lu x sg. and pl. potato. — *hʌn ɑ·lu.ʌn* a potato. (Prs.) H.

ɑ·m common, public. — *ɑ·m xʌbɔr* public news, common knowledge. Ar.

ɑ·mi the common people, the common herd. — *kim ɑ·mi.s u.iyen bai.i* this is a son of the common people, i.e. of humble birth. 93.17. (Ar.)

amin hm, hf; *amis* x; *amit* y. (Variants: *ʌmin, ʌmis, ʌmɪn, amiɣ*). — pl. *men(ik) amin, amits, amik.* — hf. sg. gen. *aminmo;* dat. *aminmur;* abl. *aminmulum* etc.

1. Interrogative Pronoun and Adjective "which? who?" V. §§ 159, 161. — *kin amɪn bai.i?* which is this (person)? who is this? *menik sisik duwɑ·n?* which people have come? *amis hʌʏur, bʌyum, dʌn?* which horse, mare, stone? *amit mʌl?* which field?

2. In Indirect Questions, v. § 467. — *amin,* etc. . . *ke.* — *ʌmins delibɑ·n ke ye borenin* now look and see who has (have) killed it. 184.18.

3b

OOO 3. Indefinite Pronoun and Adjective, v. § 152. — *amɪn hirʌnɛ . . . . ʊltalik yuʷ . . . kʌš ʊʷti kɛ, baʷdša dyuʷši* if any man kills his two sons, the king will escape. 40.14. (No examples recorded of x and y forms.)

4. Relative Pronoun, v. § 185. A doubtful usage; only one example: — *uʷnɛ kinɛ . . . gu.i dimi amins uʷnɛ daulʌt . . . ʊʷrimi* this son of yours has come who wasted your property. 370.10.

5. General Relative, v. § 186. — *amin(ʌn) . . . kɛ, ʌmis . . . kɛ, ʌmit . . . kɛ.*

Often impossible to distinguish from its use as an Indefinite Pronoun in a conditional clause: if anyone comes.. || whoever comes.. *uʷʒ amɪn ba kɛ . . . ja gʌtʊʒ aγ'ʊn* whoever you are give me my clothes. 14.10. *ʌmisər uʷʒɛ xʊš bi kɛ isɛ tsu* whichever (horse) you prefer, take it.

ʌm'uko of terrifying appearance, dreadful, fearsome, H. *ḍaraʷmewaʷla, haibʌtnaʷk.* 158.11. (Probably a- privative, cp. Skr. *su-mukha-*).

ʌmʊlo, ʌmʊlo, N. *ʌmʊli.*

1. where? in what place? whither? *ja pfaʷrtsin ʌmʊlo bi?* where is my cap? *uʷnɛ uʷ ʌmʊlo uyɛtsʊma?* where did you see them? — dat. *ʌmʊlər(?)* N. *ʌmʊliʷrɛ* whither? — abl. *ʌmʊlʊm,* N. *ʌmʊliʷm* whence? from where? *un ʌmʊlʊm dukoʷma?* where have you come from? *kin ʌmʊlʊm d'itsʊmʌ?* where have you brought (this infant) from? 268.6. — Belonging to where? *ʌmʊlʊm ba?*

000 where do you belong to? — how? wherefore? *da ɛtɛ aʷlta amulum hərəʷm umʌnimi.ɛ?* then how have those two (other animals) become unlawful? 64.15.

2. Anywhere, somewhere — *ʌmulo čot ɛt'aʷ* you have dropped it somewhere. *hoʷi amulo dukoʷɣurkuma?* will you get vegetables somewhere? 62.28. *hʌsaʷr amulo wɛ aulaʷdʌn maimi.ɛ* perhaps there may be a descendant of theirs somewhere. 242.5. — *amulum* from somewhere, somehow. *amulum pfopuʔʌn d'ɛsmʌnuma* somehow you have given birth to a bastard. 268.8. *Tʌpkiants aulaʷdʌn amulum ditsun* getting a descendant of the T. from somewhere. 242.2. — *amulo (kɛ)* + negative verb "nowhere, not anywhere". *ʌkil sisʌn amulo atiʷmiɣurčʌn* nowhere shall we find such a person, we shall not find . . . anywhere. *ʌmulo yaʷɛ ečər diš apim* there was nowhere a place to bury it. 112.21. *ʌmulo kɛ e.itsumʌn* they did not see him anywhere. 14.4. *ʌmulo kɛ atoʷɣurkumʌn* they did not find him anywhere. 10.5.

3. *amulo* + verb + *kɛ* wherever. *ʌmulo bai kɛ . . .* wherever he is. 30.16. *amulo bo kɛ domuʷtsu* wherever she is bring her. 18.11. (*amulo* = *am*, *ʌm* + *vlo*).

aʷo, v. *aʷu*. 212.4.

ap-, *ʌp-*. Negative of the verb "To Be" (*a* + *ba* etc.)

Present Tense.

1st. 2nd. sg. *apa*. — 3rd. sg. hm *apai.i*. — hf *apo*. — x, y *api*.

1st. 2nd. 3rd. pl. h *apaʷn*. — 3rd. pl. x *apiʌn* — 3rd. pl. y *api*.

drink and have a rest. 124.17. *šu.a aravmeka yavɪki yatɪki bezan uyon ɛpači bi* he has excellent comfortable under- and upper-bedding and everything. 124 11. (γaši) *šu'a aravme ka nesqul* burning the wood at his entire ease. 126.15. Prs. 000

avan, avan -iŋ y. a wooden frame on which a basket containing saline earth is placed, through which water is poured to extract the salt. — *diščiki avan* a mould for making bricks. (Cp. Sh. *ivɪn*, brick-mould). 258

avɪ N., v. *av*, to me. 000

avrkuš y. fear, dread, anxiety. — *ja avrkuš bila* I am anxious. Cp. *Ar.*

ar'un pl. *aruyo* disobedient, refractory, Prs. *nafarman* (*bordav*). Said of a horse that won't go on, or a child that won't obey.

asan easy. — *kot but asane dərowan bila* this is a very easy matter. 50.20. *ugone gutsəras asane me.ibilum* it was easy to traverse everything. 28.17. (*asane* perhaps for *asani* used as adjective). Prs.

asani easiness, ease. — *asani.ska mevmi* it will be done with ease, easily. Prs.

asalam ale.rkum; wa ale.rkum salam Peace be with you; And with you be peace. 58.18. Ar.

asman sky — *asman šikam* sky-blue, azure. Prs.

astan x. shrine. — *Misgarvulo han astanan bi* there is a shrine at Misgar. 290.1. Prs.

aɪrq -tiŋ in love with, enamoured of; lover. — *inmu suvrats aɪrq manuwam* he had fallen in love with her face. 14.7. *šu.a hayuren bi. but aɪrq imanumi* there is (was) a fine horse. He fell greatly in love with it

000 (metaphorically). 6.3. *aškıqtiŋs jimiŋ* the souls of lovers. 358.7. Ar.

aškıltər -iŋ (y) strap with which yoke is fastened to shaft of plough; formerly of withies, now of leather. (*hərs bərpitiŋ*).

ašuʂ IUB cheerful music, H. *baʒja*, *sur baʒja ka*.

ašuʂ nilbaʒdo IUB — ? H. حنگي ديوى — (div's bell?)

aʒtΔšbel -iŋ y. fire-shovel. Prs.

aʒtΔšgiʒr -iŋ y. fire-tongs. Prs.

atiʒγunum unripe. (Negative Static pc. of *d°-γunΔs*).

atiʒrum raw, not cooked. — *atiʒrum čΔp* raw meat. (Negative Static pc. of *diraʒs*).

aʒu, *aʒo* exclamation to call attention, or in reply to a call. Hullo! Yes! Yes? — *yərpa aʒu mΔnimi* there was a (call) "hullo" on ahead. 252.10. . . . *qau.u eč'Δm* . . . *iʒlum ine aʒu eč'Δm* (the one) used to call out . . . and the one on the other side used to shout "hullo". 354.3. "*ss maʒma*" *senimi*. "*aʒo*" *stumo* "Mother", said he. "Yes", she replied. 212.4. — Cp. 132.10.

aʒuʒya N. — *js aʒuʒya ba* I have got thirsty. (Probably Perfect tense of a hypothetical *°-uyΔs*. Cp. *yuʒyΔs* to dry up, and in the same sense *buʒk yuʒyimi* my throat became dry, I became thirsty).

awaʒjs necessary (to), required (by). — *hΔn Δkil bΔlkΔn jaʒr awaʒjs bila* I require a plank like this. *kins sis duroʒwər awaʒjs apai.i* this man is not needed (fit?) for the work. — N. *Δwaʒji -mots. js juʒyΔs Δwaʒji dila* I have to come. *jaʒrs mu BurošΔski baʒʂ hensΔs Δwaʒji dila* I must now know (learn) Burushaski. (Sh. 3rd.

sg. Pres. Fut. of *ʌwarjovrki* to be necessary). 000

ayʌš v. *aiyʌš*.

ayʌta = *a* + *-yʌte* upon me.

ayau = *a* + *a* + *-u* neg. impv. of *-uyʌs* with 1st. sg. Pn. Pf. — *šʌpik javr ayau* don't give me bread.

aye = *a* + *e* neg. impv. (short form) of *etʌs*, do not thou do.

ayetʌs. Negative of *etʌs*.

aya, *ʌya*, *-tsəro* hm (*-*ya*?) 601

1. my father! A Vocative used in addressing fathers and father-equivalents, e.g. paternal uncles, step-father, foster-father, father-in-law; but it is also said that in recent times it has ceased to be used for uncles: "because there is only one father".
2. my father, used in the nominative and other cases.
   uyum aya father's elder brother.
   jut aya } father's younger
   ečukun aya } brother.
   aya divmi my father came; *ja uršʌm aya* (*or au.e*) *hukəmulo manin* abide by the orders of my foster-father. 28.1. *je.imo ayavr seyʌm*, "*le.i ʌya*" I shall say to my father. "O father . . ." 368.3. *mi ine aya berumʌn durosku yor šʌpik* . . . . *uče.i* to how many labourers does that father of mine give bread? 368.1.
3. In verse used by woman addressing her beloved (?) 364 3.

(It is not clear whether there is any etymological connection between *aya* and *-uy*. The genitive forms *gwa* and *mwa* (282.18. 19) could be referred to a hypothetical *-ya*).

6b

ayamo, ʌyamo "our family", "our relations" (an expression used only by women). — *'ayamo hər'o het bi.en* the oxen belonging to our relations are loose. 246.9. *ayamo bʌɣərku bʌm* our relations are evil people. 246.13. *ʌyamo gʌliŋʌʃər* to my father's staircase. 364.7. 601

(The word seems to be composed of *aya* (-°*ya*) and the adjectival ending *-mo* and so should mean pertaining to my father).

a·za·d free, at liberty, independent. Prs. ○○○

a·za·di freedom. Prs.

aza·r troubled, vexed, displeased. — *bɛzʌnʌʃs azaʌr numa* being troubled (*or* vexed) by something. 292.13. *bɛzʌntsum a·za·r gumaima?* what are you displeased about? *je u·ntsum bu·t a·za·r* I am much displeased with you. Prs.

ʌ and ʌ.

(See also under a).

ʌ- v. *a-*. Negative prefix used with verbs.

ʌ-, a-. Privative or negative prefix used in composition with some adjectives and nouns. The corresponding positive prefix being *su-*, e.g. *ʌbʌš, subʌš; ʌçɛ·mo, suçɛ·mo.* (Cp. Sh. *a-* and *su-*; Skr. *a-* and *su-*).

ʌba um'a· said to be a Balti expression meaning "It is I", but this is not supported by the L. S. I. 152.14.

°*-ʌbʌltʌs,* °*-ʌbʌlč-* to cause s.o. to wash s.t., to wash s.t. for s.o. (probably only of y objects). — *thʌmʌ iriŋ 'ɛ·ɛbʌlčər mʌhʌrʌmʌnɛ tsil dʌsu·čai* a private servant brings water to make the Tham wash his hands. 340.7. *thʌmʌ n'ɛ·ɛbʌlt da ʌka·bərtiŋ 'o·rbʌlčaʌn* having made the Tham wash (his

hands) they make the elders wash theirs. 340.8. Cs. of *baˈltʌs*. 000

*-*ʌbərʌnʌs*, *-*ʌbərɛ-* to cause s.o. to look, to make s.o. examine. — *iˈte dišər nutsun oborʌnumʌn* taking them to the spot they made them look (at what was there). 284.5. *thʌme axˈon saˈʌtər ˈeborebai.i* the Tham makes the mullah look for a favourable hour. 326.5. *saˈʌtər nobərɛn* making them look for a favourable time. 300.3. Cs. of *bərenʌs*.

ʌbʌs ordinary, H. *maˈmuˈli:* — *ʌbʌs gatuŋ* ordinary clothes. (Cp. Sh. & Kho. *ʌbʌs* worthless, useless etc.) Ar.?

ʌbʌš y. difficulty, trouble, hardship, calamity, misfortune; difficult etc. — *ʌbʌš diˈ bila*, or, *mʌnila* a misfortune has occurred, trouble has arisen etc. Ordinary idiom: *ʌbʌš ˈjuyʌs* + dat., or *-ʌfe* trouble comes to s.o. *or*, on s.o. *jaˈr besʌn ʌbʌšen juči* should any difficulty present itself to me. 22.6. *besʌn gorr ʌbʌš diˈmi?* what difficulty has met you? 26.16. *burt ʌbʌš ɛr diˈmi* he got into great straits. 366.9. *ʌbʌš ayʌtə diˈmər* when trouble has come on me. 22.7. *guyʌte ʌbʌšen diˈmi ke* when you have got into difficulties. 22.9. *ɛr besʌn ʌbʌš apiˈm* there was no difficulty to them i. e. they were in no sort of difficulty or danger, 284.20. *ʌbʌš denʌn bila* it is a difficult year i.e. a year of scarcity. (Cp. Sh. *ʌbʌš*).

*-*ʌbilʌs* (*-*ʌbrlj-?*), Impv. *-*ʌbrl*, Ppa. n*-*ʌbil* to make s.o. put on clothes. (Probably the object must be y as with *belʌs*). — *gatuŋ tu.aˈŋ ne.ibil* making him put on new clothes. 32.8. (*sərpa*) *iˈne Rumi hir ɛbilimi* he made the Rumi man put on (the robe). 46.1.

7b

000 *gʌtvŋ kiᵛnɛ ˈɛᵛbɪrlin* make ye him put on clothes. 373.18. *gʌtvŋ inɛr ɛᵛbɪrlin* 368.13.

Here the Dat. *inɛr* is peculiar and suggests that the force of the verb is "cause clothes to be put on him" or "put clothes on him".

The dat. occurs in the text in vernacular script written by Sarfarāz, who may have been misled by the Shina idiom. There is, however, a possibility that the verb means, or may mean, "to put (clothes) on s.o. else". Cp. **-ʌltʌlaiyʌs*. Cs. of *bɛlʌs*.

**-ʌbirʌqʌs* to make s.o. dig. — *mʌl uyoᵛnvlo ɛᵛbirʌqimi* he made him dig all through the field. 252.12. *ilɛ dišvlo ˈoᵛbirʌqimi* he made them dig in that place. 82.7, also 352.16. Cs. of *birʌqʌs*.

**-ʌbišaiyʌs, *-ʌbišʌč-*,

1. to cause s.o. to throw, put, H. *ḍʌlwaᵛna*.

2. to throw, place etc. = *bišaiyʌs*. v. § 242.

dʌsin xʌmʌli moᵛbišɛčɔr in order to make the girl make bread (lit. "throw the *xʌmʌli*" sc. on the griddle). 306.3. *hʌstowʌtɛ tʌxt nˈɛᵛibišen oᵛtsumi* having a howdah placed on the elephant he made them take it away. 76.20.

The exact meaning of *nˈɛᵛibišen* is obscure. It very probably simply means "he having placed", though being a king he certainly did not himself place the howdah.

padša ɛsvlo aiyˈɛᵛbišačaᵛn they do not convince him. 134.20.

Probably "they do not inject it

000 into his heart for him". See generally §§ 242—247. Cs. of *bišaiyʌs*.

ʌblʌq piebald. Ar.

ʌčaᵛčo IUB hasty, brusque.

ʌčəra, ʌčʲera, æčəra confused, bewildered, having lost one's head, startled, alarmed, Prs *pərišaᵛn; H. gʌbraᵛkər*. — *Šʌhri Baᵛno ačʲera numuᵛmʌn qi.u ne . . . . sus mumʌnumo* Š. B. being bewildered cried out . . . . and lost consciousness. 30.19. *ačəra numʲuᵛmʌn . . . iγʲunumo* losing her head she gave him (the things). 212.7. (Perhaps *ʌ + čəra*, cp. *čərči* = *ʿčər + tsi?*)

ʌčʌs pl. *ʌčʌšo* x. sheep and/or goat. 72.25.

ʌçᵉmi hf. mischievous (woman), malicious. — *ʌçᵉmi.en* (γumikršen) *bo* she is an evil woman. (F. sg. of Sh. *ʌçᵉmo*).

ʌçᵉmo, ʌçᵉəmo, açᵉmo, pl. *ʌčʲᵉmutiŋ* h. mischievous, dishonest person; rascal, villain, dangerous person; H. *šʌriᵛr*. — *iᵛljum biltse* (*beltse*) *ačᵉmutiŋ dʌmaᵛmʌnumʌn*(?) (Sh. *ʌçᵉmo*. Cp. *suçᵉmo*).

ʌči = *a + tsi*. — *ʌči γʌsičumʌn* they will laugh at me. 98.2.

ʌčo, pl. *ačoᵛin*.— 1. wait! *be ačukoᵛn, ačoᵛin doγərus doᵛljen* No, my brothers, wait (and only) after enquiring let us beat them. 248.8. — 2. waiting(?) delay(?) *duᵛŋ ʌčoᵛwər* or, *duᵛŋ ʌčo ke* presently, soon. *duᵛŋ ʌčoᵛwər juᵛči* he will come soon.

601 *-*ʌço* pl. *-*ʌçukoᵛn* hmf. Gen. sg. hm. *-*ʌçu.e*, hf. *-*ʌçumo*.

inemo mumimo moʿčo her mother's sister. *oʿsmo moʿčo* my wife's sister. (*ja*) *oʿyere eʿčo* my husband's brother. *roʿme ečukoʿn* his (the bridegroom's) tribal brethren. 300.8. *uʿe mučukoʿn* those sisters of hers. 118.7.

ačumai.i -miŋ y. mischief, evil-doing. 000
ačum'aimiŋ uyʌtis, ačumaimiŋ sərdaʿr leader in mischief.
ačumai.e etʌšo uyʌtis (or *sərdaʿr*), } ringleader of evildoers.
ačumaimiŋ etʌšu e sərdaʿr } ringleader of evildoers.
ačumai.i etʌs uyʌtum uyuʿm the chief of evildoers. (Cp. *Ačemo*. Sh. *Ačemai.i*).

ʌdʌp, ʌdʌb y. respect, politeness. — *ʌdʌp etʌs* to show respect, treat respectfully. *ʌdʌpe ka huruʿ* all respectfully. Ar.

**-ʌdilʌs, *-ʌdilj-*, Impv. **-ʌdili*, Ppa. *n*-ʌdil, n*-ʌdilin*.

1. Cs. of *delʌs*. — *prik delʌs* to leap, jump; *prik *-ʌdilʌs* to make jump. *prik eʿdiljume* making his horse jump. 122.21.
2. Equivalent of *delʌs*. (The pronoun prefixes seem to be acting as Ethic Datives) to put, apply, fix. — *ese hunəʿr urinčiŋ oʿdilumʌn* they

fixed their hands (for them) in the piece of wood. 86.16. *Aṇyerib balda ewdili* put the load on the horse. *Aṇyerikoete baldag ewdili* put the loads on the horses. (The prefixes referring to "horse" and "horses" respectively). (*ivum ins*) *ṭam edilumor* after washing (the dead person). 310.7. Cp. *sap* *-*adilas*, *mali.as* *-*adilas*. Ca. form of *delas*. Cp. § 242. 000

adilas satin (?) 88.4. Ar. *aflas*.

*-*adurugas*, *-*adurut*-, Impv. *-*adure*, to use, make use of, employ (thing or person). — *gusa drk eduro* use this pot; *biruṇ sia ayerdure* don't employ this man; *gerdurutam*, *eduruṭam* I shall make use of you, of them. (Denominative from *dure*).

*-*a.atas*(?), *-*a.atas*(?) Ca. of the *atas* form of *-*atas*? The vowel of the Pa. pf. is lengthened or diphthongal. V. § 240.

*-*a.ayunas* v. *-*ayanas*.

*-*afat* v. *-*apat*.

afyun, *afyun*, *afiun* y. opium. — *afyun ferysa* to eat opium. *afyun tasbure* (or, *minure*) to smoke opium. Pra.

afyuni, *afyuni* opium-eater, opium-smoker. (Pra.).

agor . . . *ke* if. — (*agor* is not acclimatised in Burushaski and has only been recorded a few times). — *agor pasuru imanumi ke* if he were to hesitate. 153.5. *agor teil athima ke* if you gave me water. 384.15. *agor beam gur musibat dia ke* if any misfortune comes on you. 386.13. Pra.

(*-*agatas*?) v. *ugatas*.

*-*agirat.as*, *-*agirat*- to make s.o. dance, H. *nacana*. — *bitaiyo 'ugirateenas* they

9b

[See corrigenda category 116, p. 541 — Analysis]

made "bitane" dance. 242.1. *da tkame menor rak stimi he 'ogirakaci* then the Than makes dance whomever he pleases. 318.6. *ogiratema daya* the story of his being made to dance. 182.18. Cs. of *giratas*.

*-*ogiyas*, *-*ogyas*, *-*ogić-*, Impv. *-*ogi*; Fpa. n*-*ogin*. V. § 248.

1. Cs. of *giyas* v.i. (to plunge into, to enter) to cause s.o. to enter. — *koma durdur A. K. . . . hayur ogiter ditsimi*. A. K. brought his horse to make it enter in order to cross the ford (?) 112.24.
2. Cs. of *giyas* v.t. (to throw etc.). to cause s.o. to throw, to sow (seed). — *Tapkimis oulardan he ogiten* (if) you made a descendant of the Tapkients sow the seed. 242.8.
3. To put, place. Pa. pf. with force of ethic dative. — *ja mši hanalićig ogići* he will put chains on my neck (for me). 60.8. *ja he ogureka burkur hanalićig merići* he'll put chains on my and my children's necks (for us). 62.20.
4. To plant (trees). — *koma ogićam, ogyam, ogi baći* I shall plant, I planted, he had planted a tree. *koma ogi, ogergi, nergin* plant, don't plant, having planted a tree. *bebićig ogigalo bora* they are going to plant willow-trees. 176.4. *hasi he . . . gfori . . . nagjur ogi ham* he had made the garden and tank and planted the weeping willow. 18.9. (It is doubtful whether the verb properly applies to the first two nouns).

*-*agočiyas*, *-*agočać-* to make s.o. lie down, put s.o. to sleep. H. *solomas*. —

CCC *ɣyučatam* I shall make him lie down. *ɣyučati* he will make me lie down. *gɣyučati* he will make you lie down. *ɣyučaiyam* I made him, it lie down. *mapab dal jakma gɣko ɣyučami* he put the donkey foal to sleep beside her. 118.6. *ɣuz mɣyɣr kɣr ɣyučatum* they make the wife and husband lie, sleep, together. 306.16. *mɣyučam* v. 118.10 note. *ɣyučz ba* thou hast made it lie down. 118.13. Cs. of *gučaiyas*.

°-*ɣuseɣyas* N. °-*ɣuseɣ-*, Impv. °-*ɣuseɣ* °-*as* °-*ɣuseɣyas* to make s.o. fear, frighten s.o. — *ine je ɣe ɣyuseɣča bai* he is frightening me. *ine ume gue gɣyuseɣču bai* he is frightening thee. *se ɣuseɣča ba* I am frightening him. *se ɣuseɣ!* frighten him! *se ai.ɣuseɣ!* don't frighten him. Cs. of *guseɣyas*.

°-*ɣutsɣrɣas* to cause s.o. to go, to make s.o. proceed, to despatch, to carry on (government). — *kɣyɣr ɣyutsɣrimi* he made the horse go. 8.4. (p/af) *ɣyutsɣrimi ɣmo bakai ɣakalatɣr* he made the Div proceed in the direction of his own country. 174.20. *ɣne kukurmat ɣyutsɣrimi* he carried on the government. 10.7. Cs. of *gutsɣrɣas*.

°-*ɣyam* distasteful (to), disliked (by), unfavoured (by); disliking, feeling aversion, repugnance (towards person, thing or speech). — *ɣyam ɣuɣ* his unfavoured wife, cp. *ɣyerum ɣuɣ* his favourite wife. *ilrium ɣyam numan ɣuɣakal berɣa ba* for that reason I look at you with aversion, dislike 60.8. *padiz zafa imaibrii, nimam burt ɣyam maii bila* The King becomes annoyed (at the act of a person).

Becoming annoyed he feels disgust(?). 120.16. *guve gorɣam manu ke* IUB if your wife should become distasteful to you. ooo

*-ɣanas, *-ɣaṇi-, Ppa. n*-ɣan to regard as, reckon, account, seem to see. The pn. pf. agrees with the subject. — *dakil aɣaiṇa ba* I see it thus, thus it seems to me. *ite taṇi gorɣ ba* you see that thus, it seems so to you. 186.9. *dakil aɣaṇi baṇi* it seems thus to him. *ite ɣunikiṇ nukoɣan* you regarding this as an evil thing. 84.13, 86.1. (*mapere*) *ine juman neɣan harlar utsumi*, v. 22.17 note. (Cp. ɣanare to appear and *-ɣanas to count).

*-ɣarras, *-ɣarré- to make s.o. play music. — *yurgudants sitar nerɣar* having made his daughters play the "sitar". 182.14. *ginanila harip arɣarčam* they make them play the "ginani" tune. 326.9. The form *arɣaras* (q.v.) is used for to play music. Cs. of ɣarare?

-ɣ'arkas, *-ɣ'arč- to drive oxen in ploughing, to plough with oxen. — *har arɣarkas* to plough with oxen. *maniko (har) arɣarčam* some people are ploughing with oxen. 248.2. *boruṇa harkiar ɣ'arčam (ɣ'arkumas)* they were ploughing for the buckwheat sowing. 246.12. *har ɣ'arkasulo* as they ploughed. 246.14. — Twice with u- prefix. "*uɣ'arkin!*" *arumo* she said to them: "plough!" 246.16. *har nutsum malulo uɣarčam* having taken the oxen there they were ploughing in the field. 248.19. 1/A

-ɣaṇas, *-ɣaṇ- to make s.o. laugh. — *je in arɣaṇam* I shall make him laugh. *ina je aɣaṇaṇi* he makes me laugh. *arɣaṇimi* he made me laugh. *'arɣaṇaṇar*

11a

1/A [See addenda, category 11b, p. 541 - Analyst]

in order to make them laugh. 116.12. ○○○
Cs. of γasa·s, cp. d*-ʌγʌsʌs.

(*-ʌγoltυrʌs) v. εγoltυrʌs.

*-ʌγυnʌs, [1A] *-ʌγu.i impv. *-ʌγυn. (Forms frequently as from *-γυnʌs. The Nagiri form, from a few instances recorded, seems to be *-γo·nʌs, *-γoy·) to give (only when the direct object is y pl.). The pn. pf. refers to the indirect object. — *pyuwʌn šrqa ʌγυn, gʌtυŋ ʌγυn* give me a little grass, give me clothes. *pfʌlo ʌγυnin* give me grain. 140.4. *Di.u Sʌfi·dʌ εγυnυm biršk* the hair given him by the Diu Safid. 26.14. γenʌŋ *moγ'υnimi* he gave her gold. 58.3. (*gʌtυŋ*) *amoγυnimi* he did not give her (her clothes). 14.11. *ίnʌ hίrε sizər gυr oγu.i bʌm* the man used to give wheat to the people. 100.2. (*yυrtiŋ*) *oršu.ər oγ'υnυmo* she gave the feet to the guests. 232.7. *šu.a dištmiŋ ʌγυnυma* you did not give me good places. 112.14. (*gυr kε mʌltʌi*) *ma ayaγυnυmʌn* (and *'ayaγ'υnυmʌn*) you did not give me the wheat and ghee. 140.17, 142.2.

Forms from *-γυnʌs.—(*hoγi*) *guγuγʌm* I shall give you vegetables. 64.4. "*ta.očiŋ kε xfʌγo dumərči, εγυn*" . . *ίγυnυmo* "if he asks for his leg-bandages and stick, don't give them to him" . . she gave them to him. 212.7. (Here *ta.očiŋ* is taken as the object. Elsewhere we have *ta.očiŋ kε ʌfʌγo jo* give me my bandages and stick, where *ʌfʌγo* is taken as the object). *bʌspυr wazirər ίγυri ba·n* they give the Wazir grain (for his horses). 342.10. *šrqa ίγυnʌs bitsa* grass is to be given to him. 342.10. For the Pn. pf. of the 1st. pers. sg. *ja-, jʌ-* is sometimes used instead of *a-, ʌ-*. V. § 255.

116
[1A] [See corrigenda, category 116, p. 541 – Analyst]

000 *kovi* *ϫⲁⲩⲱⲙⲁⲓ?* will then give me vegetables? 64.8. *ⲡⲱⲗⲉ ⲧⲁⲓⲁϩⲓⲉⲣⲉ ⲣⲩⲙⲁⲓⲉ ϫⲁⲩⲟⲙ* (or *ⲁⲩⲟⲙ*) give me a little of this gold. 84.23.

*-ⲁⲩⲱⲁⲓⲩⲁⲓ) to cause to defecate. S. l. — *kin ⲣⲱⲙⲉ ⲙⲁⲓ ⲛ'ⲁⲩⲱⲁⲓⲩⲁ* a woman having made her (baby) see stool. 272.8. Cp. ⲩⲱⲁⲓ.

ⲁⲕⲙⲁϩ, ⲁⲥⲙⲁϩ, ⲁϩⲙⲁϩ fool. — *ⲁϥ ⲃⲉⲓ ⲁⲕⲙⲁϩ* you are a great fool. 73.7. Ar.

ⲁⲕⲱⲉⲓ (v. *ⲕⲉⲓ*) state, condition, circumstances. Ar.

601 *-ⲁⲓ pl. *-ⲩ'ⲱⲣⲱⲁⲛⲉ bf.

1. Daughter (also, brother's daughter M.)—*ⲟⲓ, ⲣⲉⲓ, ⲟⲓ, ⲙⲁⲓ* my, thy, his, her daughter. *ⲙⲁⲓⲓ, ⲙⲁⲓ; ⲙⲁⲓⲓ, ⲙⲁⲓⲓ; ⲟⲓ* our, your, their daughters. *ⲟⲓⲱⲣⲱⲁⲛⲉ* my daughters. *ⲣⲱⲣⲱⲁⲛⲉ* his daughters. *ⲙⲱⲣⲱⲁⲛⲉ* her daughters. *ⲙⲁⲓ ⲙⲓ* our daughter and son. *ⲙⲓⲣⲉ ⲙⲓⲣⲱⲣⲱⲁⲛⲉ* our sons and daughters. *ⲣⲱⲣⲉ ⲇⲁⲙⲁⲙⲉⲛⲉ ⲇⲉ* if a daughter were born to you. *'ⲉⲓⲣⲉ ⲙⲁⲣⲙⲓ ⲇⲉ ⲙⲁⲣⲁⲣ ⲉⲙⲙⲉ* the (his) daughter said to her father and mother. 280.12. *ⲙⲁⲙⲁⲓⲁⲙ ⲙⲁⲓⲓⲣⲉⲛ ⲇⲉ ⲙⲁⲓⲣⲉⲛ ⲇⲁⲙⲁⲓⲓⲙⲉⲛ* a son and a daughter will be born of you (pl.). 280.14.

2. Tribal daughter. — *kin ⲕⲁⲣⲁⲧⲉⲛⲉ ⲣⲱⲙⲉ ⲡⲓⲕⲓⲙⲉⲛⲉ ⲟⲓ ⲃⲟⲙ* there was a woman with child (who was) a daughter of (the people of) *Pykimen* (name of a village or community). 242.7. *ⲃⲁⲣⲁⲧⲁⲗⲓⲕⲉ ⲟⲓ ⲃⲟⲙ, ⲙⲁⲣⲕⲁⲗⲓⲕⲉ ⲱⲉ ⲃⲟⲙ* she was a daughter of the Baratalig (tribe) and a wife of the Markalig (tribe). 244.2.

000 *-ⲁϫⲓⲙⲉ, *-ⲁϫⲓⲕⲓ)-, Impv. *-ⲁϫⲓⲕⲉ.

1. To teach, instruct, educate, train

000 (human being, horse etc.). With Fu. pfx: *ə.ši(r.ə.r)*, *pə.šə*, *ə.šə*, *mə.šə*; *mə.šə*, *mə.šə*, *ə.šə*. — *jə ə.šəimi* he will teach me. *jə wŋ pə.šəir.əm* I shall teach you. *ləi wi mə.šəimi* he will teach us. *əgə.šəin!* don't teach him! *ə.šəirəum ləi.i* he is educated. *ə.šəirəum ləcr* a trained hawk.

2. To inform, communicate (a message). — *dur.əke ka ləir* (*ə*, *ləyə*) *ə.šəiməs ləiŋ.əm* I had informed them by a messenger. *ə.šəin.əm* I informed them; *ə.šəiŋ.əm* I shall inform them. Cs. of *ka.šəin.ə.r*.

ə.ŋ.ŋ, *ə.ŋ.ŋ* strange, wonderful, extraordinary; wonder. — *ə.ŋ.ŋ* *ə.ŋ.ŋ.əm ləi.i* he is a strange, wonderful man (in praise or blame). *ə.ŋ.ŋ* *dwə.ŋ.ŋ.ə.r.əm* an extraordinary thing (article). *jə ə.ŋ.ŋ* *ə.ŋ.ŋ* *ləi* I wonder, marvel. Ar.

ə.ŋ.ŋ.ŋ strange, wonderful. — *ka.əm ə.ŋ.ŋ.ŋ* *ka.yə.rəm ləi* there is a wonderful horse. 6.1. *ə.ŋ.ŋ.ŋ* *ləcm ə.ŋ.ŋ.i* he says a strange thing. 78.18. Ar.

ə.ŋ.ŋ, *ə.ŋ.ŋ* IUB quickly, H. *jaldi*.

ə.ŋ.ŋ.ŋ, *ka.ŋ.ŋ.ŋ*, v. *ka.ŋ.ŋ.ŋ*, marriage-song. H. *lardi ka gīt*.

ə.ŋ.ŋ.ŋ IUB strange. H. *ə.ŋ.ŋ.ŋ*. Sh. *ə.ŋ.ŋ.ŋ*.

-*ə.ŋ*, (-*ŋ*) a suffix associated with the idea of instrumentality. V. ere. *jə.ŋ.ŋ*, *-ŋ.ŋ*, *-ŋ.ŋ*, *ŋ.ŋ.ŋ*, *ŋ.ŋ*.

-*ə.ŋ.ŋ* v. *ka* with, along with.

ə.ŋ.ŋ.ŋ, *ə.ŋ.ŋ.ŋ*, -*ŋ.ŋ*, -*ŋ.ŋ.ŋ*, -*ŋ.ŋ.ŋ*. leading man, headman, elder. — *ŋ.ŋ.ŋ.ŋ* *ka.ŋ.ŋ.ŋ

akʌra without knowledge, without reason; H. *nurma'lum*, *nādān*. 000

*-*akrtum* in the service of. — *ɔkrtum ɔna*, we that person, those persons, in my service. *gɔkrtum ɔna kir (gua)* the man (woman) in your service. *ja 'kartumar ov zakar* ati tell those in my service. 94.19. *morkrtum dāsin* the girl who accompanies and stays with the bride for the first days after marriage. 206.2. (Probably derived from *karī* with, otherwise from *karī* condition, undertaking). [585]

*-*akat* -iq *y.* armpit. — *akaliarum* (*akat parum*) *brāki* hair from under his armpit. 22.8. *'akatiguvar ja dam ai'ēgalimi* my breath did not reach (under) his armpits. 110.8. *jakum gɔrko akatiarv nāilin* putting the donkey-foal under his arm. 118.4. (Perhaps *-*agat*, cp. *-*qat*).

akhra IUB inopportune, untimely (?). H. *narungī*. (*a* + *khra*).

akhrī, IYB, *akī*, *akī*, pl. *akhrīo* strange, novel, extraordinary, remarkable; stranger. — *kirna kut akī dayan otai* this man says this strange thing. *akī dastakhra* a strange thing, object. *akrian kai* he is a stranger. (Cp. Sh. *akhrī* unfamiliar, inexperienced).

*-*ak*-*i* N. daughter and son, children. — *ɔkari*, *gokari*, *ɔki*; *makni*, *makmari*, *ɔkari*. (*-*ai* *ki* *-*ɔ*. Cp. *-*ak* *-*gu*). [601]

akki akki = *akkīl akkīl* — *akki akki nuwa kirsn dayami* the man, having said thus and thus, kill himself. 378.19.

akkīl IYB, *akīl*, *akīl akīl*. — Adj. such as this, like this, of this kind. — Adv. thus, so, H. *aisa*. — *akīl halkan* a plank like this, of this sort. *akīl ciyeli* don't do thus. *akīl ovan* don't be like this.

akhélafe in this wise, thus, in this manner. — *čayu akhélafe étuu* they tell the story on this wise, thus. *akhélafe beruman gustarg néni* some days passed in this manner. 8.7. 000

akhéljuwo pl. h. (of *akhél*) similar, such as. — *čaumutum akhéljuwo tha muyu dumanuman* a hundred similar sons were born of her. 102.17. *be, ai, akhéljuwo yon'ikents man ke ayuu* No, my son, there are no such ill-favoured people (as you). 168.22.

*-*akin*, *-*akimig*, N. *-*akinig*, *y*. liver. — *kan 'akinan . . čiitum* they give him one liver. 338.17. Cp. 66.6, 68.16, 74.4.

*-*akirminas* EOL to make s.o. write. Cs. of *girminas*.

akirtum of dreadful, alarming, appearance, H. *hatibqtarà*; ill-favoured, hideous(?); IUB *hadpuvat*. — *akirtuman hai.i* he is a terrible-looking person.

akuu these (people). — *akuu hamas upum* all those people who are present. 172.8. Variant of *kuu* pl. of *kéu*.

k- (*kh-*) has the force of a proximate demonstrative and is sometimes preceded by *a-*, *a-*. V. § 133 note.

ak'ula here. — *yo akula d'i hia* has the bear come here? 228.8. Cp. *kula* and preceding note.

akuš IUB without leisure (?) H. *uaryarqat*. (Cp. Khо. *yuš* leisure).

*-*akuselas* v. *-*aqušélas*.

*-*ak* *-*gu* daughters and sons, children. 601

Sg. 1. *ak aiyu, ak ayu.*
2. *gok guyu.*
3. *ak yu.*
muk muyu.

Pl. 1. *muk muyu (muiyu).*
2. *muk muiyu.*
3. *ok uyu.*

13b

601 *mʌk maiyu baʷnʌ? awa nʌxər, ʌk ayu baʷn* Have you (pl.) any children? (lit. are there your children?) Yes Sir, I have children. *gok guʷi (guyu) baʷna?* have you (sg.) any children? *ma ja ak ayu baʷn, sanirn* you are my children, speak. (Cp. *-ʌk *-i).

*-*ʌxakin* v. *-*xakin* daughter-in-law.

000 *ʌxəna . . . ke.*

1. if. — *ʌxəna pfut ma dili bam ke buʷt tsil dudum tse* if you had killed the Div, much water would have come out. 292.9. *ʌxəna duʷyen ke . . . ʊʷu.in* if they come (lit. came) say to them . . . 246.16.
2. though. — This meaning (H. *agərče*) is supported by IUB and by one other doubtful example. *ʌxəna maper bam kuli ʌʌfərete nimi* though he was an elderly man, he went on a journey.

*-*ʌxənʌ* is rarely used in Burushaski and its occurrence is perhaps due to the influence of Shina. (Sh. *ʌxəna* if).

*-*ʌxəwʌs* v. *-*xəwʌs*. — (Written by IUB اخجارس i.e. *ʌxuwʌs*, but *ixəwʌs* was probably meant).

ʌxʌrut v. *ʌxuwʌt*.

*-*ʌxuwʌs*(?) v. *-*xiʷʌs* to rend (slay). (Only once so recorded). — *kəri kəri s'ingetiq ʌxʌʷʌs* the render (slayer) of famous monsters. 176.11.

ʌxmʌq v. *ʌhmʌq*.

ʌxta castrated. — *ʌxta stʌs* to geld (a horse). Pra.

*-*ʌxurpʌt -iq*, v. *-*xurpʌt*, lung. — N. *ʌxurpʌt* his lung.

ʌlam, ʌlam -iq, -ičiq flag, standard. — *ʌlam deli.ʌs* to put up, plant a flag. *ʌlam di.uʌs* to take down, remove, a flag. *ʌlam deskuyʌs* to lower, haul

000 down a flag (leaving the flagstaff). *ʌlʌmičiŋ n'idilin* having put up flags. 206.16. *alʌm gai.i bʌ·n* they carry the flag. 252.18. Ar.

*-*ʌlʌs* *-*ʌlj-*, Impv. *-*ʌl*, Ppa. *n*-*ʌl*. The Pn.pf. refers to the subject. Only recorded in *til* *-*ʌlʌs* to forget (with, or without, an object expressed). — *ti·l a·ljʌm* I shall forget. *ti·l a·lʌm* I forgot. *ti·l a·la baiyʌm* I had forgotten. *til go·l!* forget; *til ako·l* don't forget! *til ako·lḭ* you (sg.) mustn't forget. Ppa. *na·l, nukoʌl, na·l, numo·l; nimʌ·l, nʌmʌ·l, no·l* I, thou, he, she etc. having forgotten. EOL. *je ti·l a·lʌsʌn ba?* am I one who forgets? *hʌn bərʌn til me·lumʌn* one thing we forgot. 22.5. *yu·lji ni.itsin til e·limi* he had a dream and forgot it. 72.1. *ulji . : . ti·l o·lʌn ke* if they have forgotten their dream. 74.13. *tu·mʌriŋ je til(e) na·l daiyʌm* I have come, forgetting the talismans. 356.2.

*-*ʌle*, *-*ʌlər* case suffix, v. § 67.

ʌle.i, *ʌle.i* N., there. — (*ha*) *ʌmuli dila? iti ʌle.i* (or, *ʌle.i dila*) where is (the house)? Over there (or it is there). EOL. (Cp. *alemum* and Hz. *e·le*).

ʌlmaira N., pl. *ʌlmairimiŋ* cupboard. Cp. Hz. *alma·ri*. (Anglo-Indian, *almirah*, H. *almaʌri*).

*-*ʌltʌlʌnʌs*, *-*ʌltʌlemʌs*, *-*ʌltʌlai-*, Impv. *-*ʌltʌlʌn*.

1. to turn over v.t. (bread on griddle, cloth drying in sun etc.) — *xʌmʌli ine eltʌlai bai* he turns over the bread (on the griddle). *gur eltʌlʌnʌs* "to thresh the wheat" (probably to "turn over" the cut wheat in order to let it dry. D. L.).
2. to turn back v.t. (a person on road, horse, bird etc.). — *i·lji eltʌlʌn*

turn him back! *ɨlji ayɛltʌlʌn* 000
don't turn him back!

3. to wave round, revolve v.t. H. *fɪrɑmɑ:* — (*thʌmər*) *gʊšiŋʌntɛ urin(či.ɔ) 'ɛltʌlai.i bɑn* the women wave their hands (in compliment) to the Tham. 290.7.

This is a demonstration of reverence made by women to the Tham, a shrine etc. They wave their two hands with a circular motion in front of the body, each hand inwards, upwards, outwards, downwards, and so on. They remain sitting while doing this. 782

Cs. of *-*ltʌlʌnʌs*, cp. also *tʌlɛnʌs*.

*-*ʌltʌlɨk*, *-*ʌltɨk*, pl., Adj. and Pron. 000
both, the two of. — *mɛ-, mɑ-, o-* both of us, we two, both of you, both of them. — *oltʌlik bʌlhoŋ* both planks. *mɛltʌlik niyʌs amɨmʌnumʌn* neither of us had to go. EOL. Cp. 42.1, 148.10, 198.5. V. § 177.

*-*ʌlt(h)aiyʌs*, *-*ʌlt(h)ʌč-*.

1. to put (shoes) on s.o. else; to cause s.o. to put on (shoes).

In the 3 examples available the first meaning would best suit the sense, and in the third of them the second meaning is unsuitable. See note on *-*ʌbilʌs*.

yuɛtiŋulo kʌfīamots ɛltai.in, and *yuɛtiŋulo kʌfīa 'ɛltai.in* put ye shoes on his feet. 368.14, 373.19. *goɛltʌčər bɛsʌn aiy'aiyɛʌm* I got nothing to put on you, i.e. to shoe you with. 156.20. Cs. form of 2. *-*ltaiyʌs*, cp. also 3. *i(h)aiyʌs*.

2. In an obscure note I have: *yuɛmuŝonɔ ɛltʌmi* glossed "he joined on".

The idea, I think, is that "he

OOO added falsehood to truth", "he embroidered on the truth".

Here *ɐltʌmi* might be the Cs. of **-ltaiyʌs* meaning "he caused (falsehood) to follow (truth)".

ʌltherɐlʊm N. v. *ɐltərʊlʊm*.

**-ʌltiɐk* v. *-ʌltʌliɐk* both. — *mɐltik* we two, *maɐltik* you two, *ɐltik* they two.

**'-ʌltiɐrʌs*, **'-ʌltiɐrč-*, Impv. **-ʌltiri*, Ppa. *n*-ʌltirin* to show (s.t. to s.o.).

The Pn. pf. refers to the Indirect Object. Where the Indirect Object is also expressed by a noun or independent pronoun this is uninflected. *iɐn uɐŋ goɐltirčʌm* I'll show him to you. *uɐŋ in ɐltirčʌm* I'll show you to him. *gʌn aɐltiri* show me the way. 28.4. *Pʌŋ̌čuɐ.ɐ men ayoɐltirʊmʌtɐ iɐsɐ jʌkune goɐko Lʌŋa Brumo moɐltirčai.i* P., without showing it to anyone else, shows the donkey foal to L. B. 120.8. *bɐsʌn aɐltiri. nʊkoɐltirin tsučʌm* show me something (says a thief). After showing it to you I'll take it away. (This perhaps refers to some unexplained form of the 'confidence trick'). *itsɐ* (*bʊroɐndʊmʊtɐ*) *maɐlt'irʌ kɐ* if I show you (pl.) the rings. 80.23. (*maɐltira* 1st. sg. pret., v. § 314.2). The form recorded in N. is **-ʌtiɐrʌs* q.v.

ʌm, am, v. *am* and *amʊlo*, where? whither? — *nišaɐniŋ ʌm bitsʌn?* where are the tokens? 136.4. *kos ʌm niɐmi?* where has this (bread) gone? 30.9. *uɐn am niča?* where are you going? Cp. 72.12.14. — + *kɐ* wherever. *akole fʌt eta bayʌm. ʌm niɐmi kɐ api.* I had left it here. Wherever it has gone, it is not (here now). 166.22. *ʌmiɐtɐ ʌm nimo* she departed somewhere or other(?) = she vanished. 198.7. V. s.v. *ʌmiɐtɐ*.

OOD *ʌma, ʌmma* but. — *jaʷka waʷd stimi, ʌma pur' ai.stimi* he made an agreement with me, but did not fulfil it. *Sai.id Ša Hunzolsum . . . duʷsimi, ʌmma Hunzulo hʌn . . . dišʌn . . . buʷt xuš st'ʌm* S. Š. departed out of Hunza, but there was a place in Hunza which he had taken a great fancy to. 292.16. So also: 58.12, 102.9, 220.7, 228.5.

In a number of instances the adversative nature of *ʌma* is not clear This may be due to inconsequence of thought or looseness of expression on the part of the narrator. So 84.18, 118.18, 164.15.. Ar.

*-ʌmʌlʌs, *-ʌmʌlj-*, St.pc. *-ʌmʌlum.* to feel shame, be ashamed, H. *šʌrmaʷna.*

ʌmʌn peace, quiet. — *buʷt ʌmʌneka . . . huruʷtimi* he abode in great peace. 32.14. Ar.

'ʌmʌna then, then next. — *waziʷr ke esqʌnimi, ʌmna ṭuʷru ke tʌq stimi* He slew the Wazir and then he broke the pumpkin. *iʷse ṭuru.vlum dele bortsilʌŋ duwašimi* (=*duwʌšʌmi?*); *ʌmna . . . ikhor esqʌnimi* from the pumpkin flowed streams of oil; then he slew himself too. 384.23.

*-ʌmʌnʌs *-ʌmai-* to be able, can, to be capable of. The dependent verb is put in the *-ṭ* form.

1. With dependent clause v. § 359.
juṭ 'aʷmaiya ba I can come.
je niṭ ay'aʷmaiya ba I can't go.
juṭ am'omai.i bo she can't come.
kʌš oʷtiṭ ame.imaiyan we shall not be able to slay them. 44.15.
šuʷ stiṭ gomai ima? are you able to blow? 162.3. *ɣʌtʌnę aiy'ermʌnimi* he was unable to read it. 48.5

000 *stiš meʷmʌnʌn ke* if we can do it. 50.10. (*meʷmʌnʌn* 1st. pl. short preterite).

One apparent instance of the infinitive in the dependent clause has been recorded: *je mu niyʌs aiyˈʌmʌnʌm* I have become unable to go now. 92.25. The short vowel, however, makes one suspect that the verb may be *-mʌnʌs not *-ʌmʌnʌs.

2. Without dependent clause: to be able, to be able (to do s.t.).
be gˈomaː ba? } what will you
besʌn gˈoʷmaima? } be able to do? 120.26, 144.16. *beʷumʌn goʷme.i ba ke toʷʷumʌn* (ʌʏʊn) (give me) as much as you can. "*Gor Mʌhʌlmʌsi eči*" *senimi*, "*aiyˈeʷmai.imi*" *senumo* "ˈ*eʷmai.imi*" . . . "G. M. M. will do it" said he. "He won't be able to", said she. "He will be able". 164.21. This use is common in the negative: to be unable, to fail, to do (s.t.). *ayˈaʷmaiya ba* I am unable. 48.6, Cp. 48.8, 176.25. *Akoʷmʌnuma ke* if you fail. 150.2. *da besʌn ayˈeʷmai.imi* he won't be able to do anything more. 150.18. *beʷumʌn tsučai.i ke eʷmʌnumʌn* . . he may take away as much as he can. 140.3. *eʷmʌnumʌn* seems to be the. St.pc. + *ʌn* and to have been transposed with *tsučai.i besʌn ame.imʌnʌsʌn?* what may we not be able to do? V. 50.11 note.

ʌmburʷ -iz, -miz h. pincers, pliers. — *uʷmi doʷpirtsʌs ʌmburʷ* teeth-extracting pliers, i.e. dentist's forceps. Prs. *-ʌminʌs, *-mi-, Impv. *-ʌmin, to cause s.o. to drink. — *tsil inemurʷ muči moʷmin* give her the water and make

her drink it. 106.21. *sčukoʷn . . . mal oʷmi bai.i* he makes his brothers drink wine. 300.8. Cs. of *minaʷa*. 000

*-*ʌmis* hm grandson, H. *nawasa*. 242.14.

*-*ʌmrǐ*, pl. *-*ʌmi.ʌnts*, (*-ents*), x finger, (toe).

The fingers are reckoned in order from the little finger.

γel aʷmrǐ my little finger. *aʷltoʷlum aʷmrǐ* my third finger. *makvči aʷmrǐ* my middle finger. *waʷltilum aʷmrǐ* my first finger. *laphut aʷmrǐ* my thumb. *gutise goʷmrǐ* thy toe. *oʷmients čuruʷk oʷtumʌn* they bit their fingers. 138.10. *torrumo ʼʷmi.ʌnts uyoʷnulo (burʼoʷnduʷmots) biʷma bɛ?* were there, or were there not, rings on all his ten fingers? 80.18. *emrǐulo buroʷndo . . . ell(ai)in* put a ring on his finger. 368.13.

ʌmitʌle only twice recorded. — *kiʷn . . . ʌmitʌle din miyər duʷcai.i* . . . coming by some (what?) way he has got in front of us. 124.7. *iʷse bʌlʌtər nimʌn. Ti ʌmitʌle gʌn apim* they proceeded to that bridge. There was no road any other way(?) 156.1.

The exact nature of the word is obscure. Perhaps it is *ʌmit* + *ʌle* = on, or by some or any (way).

ʌmiʷte ʌm somewhere or other(?) Only once recorded. — *yaʷse beske lel omʌnimi. ʌmiʷte ʌm nimo* Nothing further appeared (became known); she vanished. 198.7. The phrase is glossed H. *kıdhərse kıdhər giʷa*.

*-*ʌmoʷqrǐ*, v. *-*moʷqrǐ*, cheek. 92.1.

ʌmulaʷr being of base birth, low-caste; H. *badzaʷti*. (Cp. *ʌmuʷlu*[1] Sh. *amulaʷr* opposition, hostile).

ʌmuli N. where? *ʌmulim* whence? *ʌmulirs* whither? Cp. Hz. *amulo*.

17 a

[1] [See corrigenda, category 116, p. 541 – Analyst]

ʌmu·lo IUB base-born, of low birth. (Cp. *ʌmulaʍ*. Sh. *amulo* base-born, low-class, mean. < *a* + *mu·li* without root?). ooo

ʌmulum v. *ʌmulo* whence?

-ʌn, (*-sn*) Suffix.

1. Denoting Singleness, Individuality, used with nouns and predicative adjectives. V. § 43.1—5.
2. With various Interrogative, Indefinite, Quantitative Pronouns and Adjectives, and with the Numerals. V. § 43.5—7, also §§ 201 & 203.
3. In the plural endings of certain tenses of verbs, e.g. 1st pl. fut. *sč·ʌn*, 3rd pl. pret. *si·um·ʌn*. V. paradigms of verbs.
4. In certain cases with the Static Participles (or Static Participle forms), especially those of the verb "to be", and with the Infinitive form. V. § 43.8.

ʌndaʍzʌn approximately, about. — *ʌndaʍzʌn a·ltər dənrŋ* for about twenty years. 212.1. Cp. 196.7. Prs.

-ʌngə Only once recorded, apparently for *-ʌŋə* q.v. *jʌkur šu·limutsʌngə tobʌk* a gun with two barrels, a double-barrelled gun.

ʌŋʌro, *ʌŋaʍro* y Tuesday. — *ʌŋʌro gunisə* on Tuesday. 306.16. *ʌŋʌro tsoʍdimo* Tuesday morning. 306.17. (Sh. *ʌŋgaʍro*).

-ʌŋə, *-əŋə* Suffix used with nouns and pronouns. For uses and examples v. § 68. Cp. *-ʌŋgə* and *-iŋyə*.

ʌŋyəʍ N. hail. (Sh. *aĩyaʍ*, *aĩ.aʍ*).

**-ʌ.olʌs* (?), **-ʌ.olj-*, to cause s.o. to put on (an x garment). With Pn. pf.s: *au.ol-*, *gol-*, others not recorded. — *inə jə šuqa au.ulimi* he made me

17b

000 put on a choga. *we je šuqa au.vlumʌn* they made me put on a choga. *je wᵊŋ šuqa goᵊljʌm* I'll make you put on a choga. Cs. of *yoᵊlʌs*.

*-*ʌpʌči* beside, close to, with, in the possession of. Used almost exclusively with reference to animate beings. Dat. *-*ʌpʌčər*, *-*ʌpʌčiər*. With verb of motion denotes movement to, up to, a person. For uses and examples v. § 79.

*-*ʌpʌčim* Abl. and adjectival form of *-*ʌpʌči*.

1. From beside, from the presence of (referring to human beings). *oᵊpʌčim hʌmeᵊčʌ fʌt ayᵊtʌs* never to let him go from them. 116.13.
2. Being with, beside, in the possession. *Pʌŋču ᵊpʌčim u.ʌ mariŋ sis dᵊljaᵊn* the superior persons (who were) beside Pangchu beat him. 120.11. *goᵊpʌčim kiᵊne hilᵊs* this boy (who is) with you. 154.1. *zərgər ᵊpʌčim duᵊrə* the work (which was) in the hands of the goldsmith. 162.10.

ʌpʌroṭo upside down, inverted, inside out(?), H. *vlṭa*. (Sh. *afroṭo* twisted, complicated).

ʌpʌrts, *ʌpərts*, *ʌpaᵊrts*, *apaᵊrts* the wrong way, contrariwise, reversed, wrong side out; perverse, cross-grained, H. *vlṭa*, Sh. *ʌboᵊm*. — *apaᵊrtsʌfʌ huᵊnts deᵊgus* pulling out the arrow in the wrong direction. 154.9. *gusʌ šuqa ʌpərts bi* this choga is inside out. EOL. *isʌ gʌtu.ʌ ʌpərts* the wrong side of the cloth. EOL. *warts apaᵊrts čʌγamiŋ aiyᵊsti* don't talk confusedly. *ʌpʌrts sisʌn baiᵊi* he is a perverse man. (Negative *a* + *warts*).

000 *-ʌpʌt, (*-ʌfʌt) -iŋ y side, flank (of person); beside, close to. — *ja aᵛpʌtulo hʊruᵛtimi* he sat down beside me. *dʌl aᵛpʌt* beside me on the upper side. *khʌt aᵛpʌt* beside me on the lower side. *ilji aᵛpʌt* behind me. *yaᵛr aᵛpʌt* in front of me. *mopʌtə dʌl jʌkune goᵛko eᵛgučʌmi* he put the donkey foal to sleep along beside her. 118.6. *eᵛfʌtər guča bai.i* he is lying on his side. *iriŋ 'epʌtʌte jek netʌn* laying out his (the dead man's) arm along his side. 312.2. *ʃuruᵛwʌn thʌm yər epʌt oᵛsimi* he placed a pumpkin before the Tham. 384.21. *goᵛpʌt yaᵛrum eᵛrʌs* —? Prov. 17. (Cp. Sh. *efʌt* side, direction; beside).

601 *-ʌpi -tsəro hmf grandfather, grandmother (on either side). Used also of any old man or old woman. — *jeᵛimo aᵛpi* my paternal grandfather. *aᵛpkutse aᵛpi* my maternal grandfather. *wa 'ʌpi!* O father's mother! 286.4. *wa šʌkər ʌpi!* O dear mother's mother! 228.15.

In these two cases the renderings are as given by the narrator. The woman was not actually related to her interlocutor.

Kisəre eᵛpi mutsuya ba I have married Kiser's grandmother (father's mother). 182.18, cp. 184.1, 8. *guts kitaᵛb gopkutse goᵛpi.e bilum* this book was your maternal grandfather's. 70.2.

*-ʌpkuts (related on the mother's side), maternal; maternal relatives. *aᵛpkutse nʌna, aᵛpkutse aᵛŋgo* my maternal uncle. *aᵛpkutse aᵛpi, aᵛpkutse daᵛdo* my maternal grandfather. *eᵛpkutsatsum dumərumʌn* they demanded (the boy) from his maternal relatives. 242.18, cp. 70.2.

*-ʌpusʌs, *-ʌpuš-, Ppa. n*-ʌpus to tie up, bind, fasten (s.t. on to s.t.). 000

Only recorded with pn.pf.s a-, e- & o- amu'pušj napus tying up my muzzle for me(?) Prov. 14. sʌp epusʌs bi (the horse) is to be shod. sʌp opusʌs manišj (the horses) must be shod. || *-pfusʌs, cp. also pusuyʌs. Semantically compare Sh. sa'rpe ganoʼzki, H. na'l bandhna — to shoe (a horse). Cp. pusuyʌs.

ʌqəl intellect, intelligence, sense. Ar.

ʌqəlkšj, ʌkrlkšj, pl. ʌqəlkyents(ik) intelligent, clever, wise, sensible, prudent. — ja uŋ ʌqʌlkšʌn ba you are my clever fellow (sc. son). 58.17. ye mu bur aqəlkyentsik namaʼn Paŋčuʼər bərenina now you very intelligent people go and have a look at P., 128.13. (Ar.).

*-ʌqərʌfʌs, *-ʌqərʌš-, Impv. *-ʌqərʌf, St.pc. *-ʌqərʌfom v.t. to stick, fix, join on to, H. joʼrna, paiwʌst karna. Only recorded with Pn.pf. e-, e-, gute baʼlk baʼltse eqərʌf fix this plank on the wall. Ca. of xərʌfʌs.

*-ʌqʌtʌnʌs(?) *-ʌqʌtai, Impv. *-ʌqʌtʌn ppa n*-ʌqʌtʌn to cause s.o. to read. Ca. of γʌtʌnʌs.

*-ʌqušelʌs (-k-), *-ʌqušelj- to spoil, damage. Recorded only with Pn.pf.s e- and o-. — gorovniʼs xʌmʌli 'ekušelumo ke if the bride spoils the bread. 300.9. itsuŋ 'ekušeljume obliterating his footmarks. 312.4. (sis) but bušaiʼi oʼqušeljʌm (people) used much to damage (their) land for them. 256.2. Trs. of qušelʌs.

ʌr, ər, ar (afraid, frightened).

1. ʌr*-ʌtʌs to frighten, put in fear, threaten, startle. menʌn ʌr stʌs

to threaten s.o. *in ar elam* I frightened him. *fwajtsum, ar netan, (kok) duswyam* putting him in fear I took these things from the treasurer. 61.14. 000

2. *ar* °*-manas* to be afraid (of), to fear.

The object, when expressed, is put in the ablative:

akil ar gumaiś ham ko if you were so afraid. 212.21. *ar namas atʼaiya ko* I have not returned, fearing (i.e. out of fear). 232.22. *ja wuṇtsum ar anaiya ko* I am afraid of you. 114.6. *Ś. Bahrum Diu Safidtsum ar mimas . . . mostaqami* fearing the Diu Safid, Ś. B. . . . hid her. 16.4.

The dative is found in:

ispaćiar nićer ar umaiśam they were afraid to go to it. 232.5. (Cp. Sh. *ar*).

ar °*-manas* as Adj. and Noun.

1. One who fears: cowardly, timid. — *ar imanas hiran boiś* he is a timid man.
2. That which one fears; alarming, dangerous, dreadful, terrible (to look at). — *ar mimanas dil, gan* a place, road which we are afraid of, i.e. a dangerous place, road. *ar mimanasan boiś* he is a dangerous man, or a man of alarming aspect. *ar mimanasan (kayur) ko* it is a dangerous horse.

arabu -mute x gun-carriage, a kind of crude wheel barrow, on which a basket is fixed, used for transporting earth. 493

aran v. *awan*.

araq -iṇ, -ićiṇ y alcohol, spirit, arrack. — *gindawera araq* spirit made from "Sinjid" (fruit of jujube tree). *biranto araq* mulberry spirit (used 273

273 to be made till recently in Hunza). *hir ziw hirants arakitiq dizwin* the man, having produced mulberry spirit. 330.4. *pudāk morakowlo arag mi hzw* the King was drinking spirits in the court. 86.18. *pudāk triqoli arag bilow minimi* the King drank the arrack that was in his hand. 88.22. Ar.

604 °-*arar* -*do* hm son-in-law. — *lzi 'arar!* O (my) son-in-law! *ererz ha bari zuz manimi* he became much pleased with his son-in-law. 89.2. *pudāk hakow atimi . . . . wo ererāmar* the King gave orders to those sons-in-law of his. 130.21.

000 °-*arar*, °-*arō*, Impr. °-*ari*, Pps. n°-*arin*.

1. To send (a.o.), despatch. The Pn. pf. refers to the direct object.
   ine ji arōi he will send me.
   gerāam I'll send you.
   ererāam, mo.erāam I'll send him,her.
   merāmar they'll send us.
   marāam I'll send you (pl.).
   erāam I'll send them.
   ererin having sent him.
   wo aiperi don't send them!
   Imarm Yaw Bag Faikaje eri send I. Y. B. to Faik. *da arāan ererāmi* again he sent two men. 34.8. *iwa . . . gurāar merāmar* they sent her to the hut. 114.8.
2. It may be regarded as supplying the causative of *nizar* to go, i.e. to cause to go.
3. It is used, more or less metaphorically, in various idiomatic expressions: — *gwa . . . ziar ererōi ke jirāam arōi* if this (elephant) flings me down it will kill me (despatch me from life). 74.25. *wuz dzalat yenikat derwiqale*

000 *evimi* he has expended (squandered) your wealth in evil doings. 370.11.
ite ḥal ugem ite tili e fatwi.ɛr evimi he stuffed the marrow into the section of the walnut(shell) (glossed H. *bhareya*). 138.18.
bori evimi he made the sky clear. 160.8.
daqiwem movimi } he roused her
daq movimi } from sleep. 118.9.
(In the former phrase the meaning would seem to be "he caused her to go from sleep" in the second, "he caused sleep to go away for her", the result being in both cases the same).
gwahilatem ɛuvte 'vori wipe the dust off your face.
malah *-*ɛrɛa* to overturn (thing or person).
ite tili malah evumɛn, } they felled
or, *ite tili dalimɛn* } the walnut tree. 300.8.
mowɛa IUB to divorce (a woman).
*-*ɛa* *-*ɛrɛa* EOL to discourage.
ɛa ɛgowi don't discourage me.
ɛa ɛgori don't discourage him.
mɛa ɛmowi don't discourage her.
It will be noted that most of the above idioms become easily intelligible if we take *-*ɛrɛa* as "to cause to go", and in fact in intransitive expressions *nipɛa* "to go" is associated with *bori, daq, d malah*. (Cp. *d**-*ɛrɛa*).
ɛrɛlo lazy, slack.
ɛrbori -tiq km headman (of Wakhie only) *Galmittem ɛrbortiq* the headmen of Galmit. 326.6. Ar.
*-*ɛrfɛrɛa* v. *-*ɛrfɛi.ɛa* to get drunk.
ɛrɣum, ɛrɣun born of a mother of inferior status to the father, e.g. the child of a Tham by a commoner, (non-royal), wife. Pun). *derɣa*. Oppo-

sed to *karali* q.v. Prov. 7. (Cp. Sh. *argun*, low-born). 000

armán y sorrow, grief; longing, desire. — *armaw ɛ̃ɛ* to grieve. *kuyoť wɛ̃ gugɛ̃ɛ̃ɛ armawalo buť* how your subjects are earnestly longing to see you. 4.7. *Ɛ̃ɛ̃ɛ̃ri Burun ja jeri* [illegible] *gana armaw bilum* I desired to marry S. B. myself. 18.18. *ja armawano* . . . [illegible] (vernac. Ma.). 354.9. (In my dictated Ma. it is: *ja jirmo* . . . [illegible] my beloved's hair). Pre.

°-*arɛ̃ɛ̃i.ɛ̃ɛ* °-*arɛ̃ɛ̃ť* Impv. *gurɛ̃ɛ̃*, Pya. n°-*arɛ̃ɛ̃n*. (Also received as °-*arɛ̃ɛ̃ɛ̃*, 1st sg. pret. *urɛ̃ɛ̃ɛ̃m* 3rd sg. hm 'urɛ̃ɛ̃mi, 3rd pl. *urɛ̃ɛ̃m.ɛ̃n*) to get drunk, become intoxicated.
arɛ̃ɛ̃ťm I shall get drunk. *urɛ̃ɛ̃ťi* he will get drunk. *arɛ̃ɛ̃.ɛ̃m* I got drunk. *ɛ.rɛ̃ɛ̃mi* he got drunk. *gurɛ̃ɛ̃mɛ̃* you got drunk. *gurɛ̃ɛ̃i.ɛ̃?* have you got drunk? *akurɛ̃ɛ̃!* don't(thou) get drunk! *amarɛ̃ɛ̃i.in!* don't (ye) get drunk! *ɛ̃ɛ̃mɛ̃ urɛ̃ɛ̃ti mɛ̃l wumin nurɛ̃ɛ̃n ɛ̃ɛ̃ɛ̃m* having drunk wine and get drunk, he used to come to the Thama. 208.11. *nukurɛ̃ɛ̃m* you, having got drunk. 310.1. *u'urɛ̃ɛ̃n* they, having become drunk. 330.4.

arz -iɛ̃ y representation, statement, petition. — *arz ɛ̃ɛ̃* to make a representation, state (respectfully). *dɛ̃ɛ̃rɛ̃ɛ̃mi, "ha gum.ɛ̃ɛ̃mɛ̃?" arz ɛ̃ɛ̃mɛ̃, "la ja ɛ̃ɛ̃ɛ̃ mu ɛ̃ɛ̃ɛ̃ɛ̃ ɛ̃ɛ̃ɛ̃ɛ̃ bi* He asked: "what's the matter with you?" She replied (with all respect): "O my father, the monster is now going to devour me". 382.14. Cp. 30.22, 28.8. Ar.

arɛ̃ɛ̃n, arɛ̃ɛ̃n cheap, plentiful, abundant. — *ɛ̃ɛ̃ɛ̃ɛ̃ ɛ̃i.ɛ̃ɛ̃ ɛ̃ɛ̃'ɛ̃ɛ̃ ha arɛ̃ɛ̃n, ɛ̃ɛ̃ɛ̃*

mincw tril ke orazwa he has abundance of food to eat and water to drink. 134.19. Pra.

orazwi cheapness. Pra.

-ae, 1. *-aewaete*, x heart, mind. — *A. D. . . . hunte de.agwe ve ʇat ne (B. L.) ivimi* A. D., drawing out the arrow, breaking his heart, B. L. died. 184.9. (It is not clear whether A. D. or B. L. is the subject of *ʇat ne*). *podke ewele aiy'ebiiʇawa* they do not project it into his heart (they do not convince him?). 184.19. *L.aqabrumo matsuy.aaw ewle rui atimi* he planned (or desired) in his heart to marry L. B. 118.16. *gowe mod'e bel.aʇe gow ma.imi?* how will the desire of your heart come to pass for you? 66.11. Cp. 84.8. *owe ke gwie ozawa.aa "mi.aiyu kai oden"* they did not with their hearts (gladly, spontaneously?) say this: "we will slay our sons". 44.21. "*ya podke gowa kaqulituw.al etae ba ke gwie ʇ.aya gow ofam*". "*'aae ke altuw.al ofam*" "If you, O King, will listen attentively, I will tell you this story". "I will listen attentively". 96.10. *ewle bea.ae api* there is no harm in him. EOL. *aaolowa* v. s.v. *-aaolowa*.

-ae figures in a large number of idiomatic phrases:

1. *-aeafe* + vb. "to be", to remember ("to be on one's mind"). — *je awale bila* I remember (it). *gowafe aqi.a?* don't you remember?
2. *-aeafe -afae* to remind s.o. — *iwa je aeafe 'wafimi* (or, *dawafimi*) he reminded me. *sahib ewafe oti* remind the Sahib.
3. *-aaw* + st. pc. of *fuyae* + vb. "to be" to like s.o., or s.t. —

ooo *ʌʒʊr domomʌn bo* I like her.
ʌʒʊr dimʌn bi I like it (x).
ʌʒʊr dim ʌpi I don't like it.
gowʌr dim ʌpi you don't like it.
ʌʒʊr (domomʔ) ap'o I don't like her.

4. In combination with adjectives:
*-*ʌʒʊ* (or *-*ʌʒʊ*) *ʌšaʷto* faint-hearted, poor-spirited, cowardly.
ese ʌšaʷto bai he is poor-spirited.
*-*ʌʒʊ* (-*ʊ*) *dʌg* stout-hearted, courageous, valiant.

In the following the adj. is predicative:
*-*ʌs bidil* — *kimʊ* (gen.) *es bidil bi* his heart is cowardly, he is a coward. 144.11. *A. K.... singe ʊ bimʊ* A. K. was lion-hearted. 114.2

5. In association with verbs: (se under the respective verbs).
*-*ʌs* *-*ʌrʌs* EOL to discourage.
*-*ʌs d*-*ʌtsʌs* to make s.o. take heart, encourage, EOL.
*-*ʌs duxʌrʌs* IUB to become happy.
*-*ʌs fʊʷnʌs* IUB to become vexed.
*-*ʌs gʊsʊʷyʌs* N. to fear.
*-*ʌs* *-*ʌgʊsʊʷyʌs* N. to frighten.

In the above where the verb is intransitive the subject of it is *-*ʌs* so that the idiom is "some one's heart performs some particular function".

Where the verb is transitive the Pn.pf. refers to the direct object.

ʌʒʊ soft, tender, not tough (of cucumbers, lambs etc.).

ʌʒʊl, ʌʒʊl v. *ʌʒʊli*.

*-*ʌsʌlʌs*, *-*ʌsʌlj-* Ppa. *n*-*ʌsʌl* to look at, watch. Recorded only with Pn.pf.s *ʌ-* and *e-*. — *B. J. esʌljʌm.* "*menʌn bai.i mʌtʌnom ʌsʌlʌs imeʔ*" B. J. was looking at him. "Who is that who is looking at me from a distance?"

○○○ 93.10. *aŋ ma.ŋaaw ji ban .andi'u?* why do you look at me from a distance? 93.13. *we ŋaiji.an, ŋaiaw.an* they were watching, watched him. 133.8. 134.10. *ŋaiimi* he watched him. 64.8. *ban ŋawal ji* keeping an eye on the time, come; i.e. come when it is the right time. *ŋawal daw ŋ.aw* I did the thing intentionally (sp. "with my eyes open").

andi, andi, anel, anel real, proper.

andi yawat bila, } is is real gold.
anel yawat bila } 58.33, 62.8.

anel kapiy bila it is a real corroboree.

ŋaw anel kaber ŋabin entering into his own proper skin, i.e. changing into his proper form. 133.21. Cp. 143.10. — *anel daw ŋ.aw* I did the thing intentionally(?). (Perhaps *-.ŋ + ali*). Ac.

-.aŋ.an, -.ŋ.an Imper. *-.aŋ* Pyn. *ŋ-.aŋaw* (*ŋ-.aŋ.in*). For additional forms see § 298.5. The Pn.pl. refers to the person addressed. To say to a.n., to tell a.n. a.t., to call a.n. a.t.

Pres. *gwiki ba* I say to you. *gwiki "ji" gwiki* the King says to you: "come"! 78.8. *"ba ali gwanimaw?" ŋbiki* he says to him: "can you blow the bellows?" 78.8. *B. K. "ji daijan" ŋwiki* he says to her: "I'll slap B. K." 134.8. *jaw "gwanbaw" ŋbaw* they say to me "blow, lent one". 884.13. *"Lip gwiyan" ali bi* (the calf) says to him: "I'll bite you".

Fut. *gwiyan* I'll say to thee. 58.7.
ŋbiyan I'll say to him.
gwiki he will say to thee.
gwiki - - - to us. Cp. 898.16.
ŋwi - - - to them.

Pret. "*hrynli ditur*" *ucrui* "*tends the sheep*" he said to me. 73.32. "*ŝiev le ge*" *ouimi* "*pour it into that (room) too*" he said to him. 154.9. "*hel ditur ŝ.ovyam*" *ouvme* "*bring it here that I may see it*" she said to him. 146.30. *mevam* I said to her. 18.8. *mevimi* he said to her. 149.4, 204.13. "*ŝiji ŝmeŝe*" *mevimi* he said to us "*take it back*". 73.3. "*mu rui ŝiev le ŝimeŝe*" *ouimi* "*take (many) whomsoever you please*" he said to them. 116.21. "*ev mimam gavŝi*" *ouvme* "*he will be afraid and run away*" she said to them. 144.18. "*mive ŝ.ovule*" *ouvmam* "*Go and look*" they said to them. 194.9.

Pret. *ovulule* v. a.v. 68.30.

Plup. *mi mumu ŝiev am hem* my mother had said to me. 188.18. *gvem ŝuiyamu le* had not I said to thee? 114.16, 188.17. *le mam* hadst thou not said to me? 73.18. *gavŝiyge mam* he said to the Pwin. 19.1.

Impv. Sg. *(ŝiev)* *am* tell me. 199.23, 149.23. *pudŝev ŝui ovu* my thee-to the King. 76.4. *mevu* say to her.

Pl. *ŝiev ovu.in* tell me. 88.14. *ovu.in* say ye to him. 76.23.

Once or twice recorded without the -v.

mumiu 94.10 and *ovuin*.

Neg. *ŝiev vin ŝiyam* don't tell me a thief.

ŝiyam don't tell him.

-4 Form (*-ɛwɛ).

A. D. mɔnɔ ay'ɛwɛ̃ɛn may no one call me A. D. 150.6.

P. P. mɔnɔ ak'ɔwɛ̃ɛn may none call thee P. P.! 150.8.

Past Pr. Act.

"ɔ̃ kɔlɔr ɔ̃ɛ" nɔnɔ . . . *ɔ̃ɔ̃nɔ̃* saying to him "Come to my house" he went off. 68.9. *"ɔ̃ mɔnɔnɔ dɔ̃ bɔ̃ɔ̃"* ɔ̃ɔ̃nɔ̃. nɔnɔn, *"ɔ̃ɔ̃"* ɔ̃ɔ̃nɔ̃ He said to them: "Someone else has killed it". Having said (this) to them, he said to them "go" 136.7. nɔnɔnɔnɔ saying to her. 194.13.

Sit. Pr.

ɔ̃ɔ̃nɔ̃ ɔ̃ɔ̃ on his saying (this) to him. 183.13. . . . *nɔnɔnɔ̃.* nɔnɔnɔ̃ɔ̃ɔ̃nɔ̃ He said to her. . . . When he had said this to her, she said . . . 148.5.

Infin.

Wɔnɔ̃r kɔ̃kɔ̃r gɔ̃ɔ̃ ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃nɔ̃ . . . The Wɔnɔ̃r, after saying this to the King, went out. 4.12. *nɔ̃ gɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ (go-?) ɔ̃ɔ̃ɔ̃ɔ̃ ɔ̃ɔ̃ɔ̃ɔ̃?* what advantage (would there be) from our telling you? 88.18. *ɔ̃ɔ̃ɔ̃ɔ̃ ɔ̃ɔ̃ "nɔ̃" ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃* there is no one to say to you, commanding, "go". 94.5.

ɔ̃ɔ̃ɔ̃ɔ̃, ɔ̃ɔ̃ɔ̃ɔ̃, ɔ̃ɔ̃ɔ̃ɔ̃ pl. *y*..

1. Kit: weapons, arms; horse-furniture; equipment. — *ɔ̃ɔ̃ɔ̃ɔ̃ ɔ̃ɔ̃ɔ̃* taking arms, arming themselves. 200.13. *ɔ̃ɔ̃ɔ̃ɔ̃ ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ . . . . ɔ̃ɔ̃ɔ̃ɔ̃ ɔ̃ɔ̃ɔ̃ɔ̃ ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃ɔ̃

000 *ashrêsn(e)lu gîrmsn kurlur mamimi* there was a noise as of something being poured(?) into a big vessel. 140.7. Ar.

(*-*ssfarmsn*?) IUB to praise oneself. *ssfarimi* ʾi may praise itself, H. *ssmi ta'rêf kare*. Prov. 18.

(Perhaps *-*ss* heart + 3. *yfarmsn* to grow. There is also *-*ss farmsn* to be vexed (v. sv. *-*ss*) which may possibly be *-*ss* + 2. *yfarmsn* to crack).

ssi, ssei s breakfast (only for EKJ&s and aristocrats).— *tarrdimo ssi* early breakfast, *dayrimo ssi* midday breakfast, *ssi bi.n?* is there breakfast? is breakfast ready? *ssei fi bsiân?* has he eaten breakfast?

ssi -mate (s) star.

ssiv, ssiv.

Adv. near close.

ss ssiv kare they are near.

ssiv drêqsltsm he had arrived, got near. *ssiver ssîl ke* when he went near. 266.2.

Postp. (with the dative) near.

ên gapsiv ssiv fat ayeli don't let him near you. *kurlur ssiv drêqsltimi ke* when he arrived near the house. 272.24. *farrimi sersfsmer ssiv* near 10 o'clock.88.1.

but: *ke ssiv ssîfsrsn* hiding near the house. 40.6. *gusmo ke ssiv msmimi* he came near the old woman's house. 266.11.

*-*ssivsn*, *-*ssivê*, Impv. *-*ssivi* v.t. to feed, make s.o. eat(?), give s.o. s.t. to eat, H. *ikûlawa*. The Pa.pt., which frequently develops a subordinate *-s* refers to the eater. The object eaten is in the nominative form. *ssivîi* he will feed me.

24 a

[See corrigenda et addenda, category 116, p. 541 - Analyst]

000 *ʌapik gosirćʌm* I'll feed you with bread. I'll give you bread to eat. *ins ji ćrisirimi* he fed me. *ćrsirumo* she fed me. *gʌ.rsirʌm* I fed you. *ćrsirʌm* I fed him. *ʌapik ʌe 'ćisirumo* she fed it (the lamb) with bread. 68.2. *mo.rsirimi* he fed her. *bʌyum* (*bʌyur*) *bʌrpur ćsiri* feed the mare (horse) with grain. *ʌiqa ćsiri* give it grass to eat. *bʌyur(iko) 'ćsiri* feed the horses. *gʌtimuta ćsirume ʌʌya ov ćimi* he told them the story of his being fed with bread. 182.18.

Metaphorical.

ʌʌmijur gosirʌm N. I have caused you trouble.

(The exact force of the word is doubtful. It has the appearance of a Ca., but no corresponding simple transitive form is known).

ʌsiri, ʌsiv, pl. *ʌsiri; ʌsivi* N. pl. *ʌsirimuta* cook. — *thʌmur yulćin ʌe ʌa ʌsiri.e xʌm ćtum* the head cook and the assistant cook(s) (*Gujhalia*) prepare vegetable soup for the Thum. 340.9. *ʌsiriur 'ćrin ʌuyuru . . . ʌaf'ćrqo bilen* the skins . . . of the two goats are (allotted) to the cooks. 342.2.

(I understood that in Ha. *ʌsiv* was the sg. and that *ʌsiri* was pl.; but in view of the forms recorded in N. and the Sh. sg. *ʌsiri*, pl. *ʌsiro*, it seems probable that *ʌsiri* is also the Hunza sg.).

ʌsirum adj. near. — *ʌsirum jowu* near relative. EOL.

(Adjectival form based on *ʌsiv*).

(*.*ʌsisirʌsif*) in the form *ćsisirʌs* N. to strain, filter (water). — *ćsisirum ʌsil* filtered water. (Cp. *ćsirum* and Sh. *ćsiro* clear, pure).

000 *-*askhāqun* hollow below the lower end of sternum. — *awkhqunsle azoljirla* I am suffering from heart-burn(?), indigestion(?) (*-*as* heart + *khāqun* spoon? Morg. reports Yidgha *kafči*, spoon, used in the same sense).

*-*askanas* v. *-*asqanas* to kill.

*-*askhoranas*, *-*askhorui-*, Impv. *-*askhoran*, v.t. to make s.o. late, delay s.o., keep s.o. waiting. — *-*askhoraiyam* I shall delay .. *-*askhoranam* I delayed .. *wuṣ ine gure hesi mowkhoranma?* why did you delay that woman? *amowkhoran*, *ma* don't keep her waiting, give it to her. *hesi ewkhoranma?* why have you delayed it(?)? why have you brought it late? Ca. of *-*khoranas*.

*-*askhortas*, *-*askhoṛ-* (*-*askhoṛ-*), Impv. *-*askhorte*, Ppa. *-*askhorte*.

1. To cut, cut off, cut down, cut (wood) across.

The Pa.pf. generally refers to the person who has something cut off. *gupstie gowkhorda ha* I am going to cut off your head (for you). 56.5. *hwkhowstie gatie ayowkhortej* as so long as the fowl's head is not cut off. 56.8. *gupstie akowkhortej* as so long as your head is not cut off. 56.4. *gupstie mokowkhorte* cutting off your head. 72.4. *ovlzalike ugatowstie mowkhorte* cutting off the heads of both of them. 174.24. *gatie ewkhortema ha* after its head has been cut off. 56.4.

In the following the Pa.pf. does not refer to the person affected. It perhaps refers to the object *yuyaq*: *yuyaq ev ewkhortam* I shall cut off my hair for him. 358.16.

And in the following the verb seems to be used without an object:

(*čuvs*) *ay'evkortsimi* (the knife) did not cut. 142.4. 000

2. To make gallop, to make s.o. flee, put to flight, rout. — *evkortsumʌn* they put me to flight. *uʌ un gevkortumʌn* they will put you to flight. *hoi evkortsumʌn* they routed the army. *nevkorts* putting them to flight. (*hʌyur*) *dandʌnsfe evkortume dilsimi* he brought (the horse) along, making it gallop over the stones. 122.8. Cp. 150.18.

3. To decide (a matter, case), settle (a quarrel, dispute). — *ye eskorts gots astʌm . . . eskortʌm* Now decide this case . . . I will decide it. 83.19. *astʌm eskortsumʌn* they decided the case. *thʌme gots astʌmulo besʌn evkortsimi?* what did the Mir settle in this case? *yor eskortsum evtsum bila* Ns. it is a previously-decided case. — Also: *gevtsum bila(?)* Ns. *tsundo rupiʌ mav eskortʌm* they settle the brideprice at five rupees. 304.7. Cp. 302.17.

4. To make come down, to make pour down (of rain). — *kirʌltʌn evkortsimi* he made a storm of rain descend, pour down. 155.28.

IUB gives two meanings for **-eskortʌs:*

A. To separate, H. *jodn karna.*

B. To remove, drive away, H. *dur karna.*

It is not clear whether there are two radically distinct verbs of the same form. There is obviously one **-eskortʌs* which is the Ca. of *gevtsʌs* q.v.

This covers the examples given under 2 above. It also possibly

000 covers 4, as *gavtsas* seems to mean "to flow" as well as "to run", and in one idiom it apparently means "to throw oneself (down)".

There remain the meanings under 1 and 3. The underlying sense of the first "to cut (off)" is probably seen in IUB's "to separate, *joda karna*". In cutting off there is a separation of parts, but it is still rather a long step to *gavtsas*.

Similarly there is doubt in regard to the conception which lies behind the third set of meanings, to "settle, decide".

There are two points to be mentioned:

a. A synonym for *astam eskortsas* is *astam kanpa stas* to put a case or a decision on one side which suggests that the former may contain the idea of "separation" or "removal", IUB's *joda karna* and *dur karna* respectively.

b. From a very early note it seems that Nz. gave me *astam gavtsum bila* as a synonym for *astam eskortsum bila*, which would imply that *eskortsas* in this idiom was derived from *gavtsas*.

Note that the Sh. *čhinoski* and the Kho. *čhinik* mean both to cut, sever and to settle a dispute etc.

Attention may be drawn to the following phrases which correlate the verbs *gavtsas* and *-askortsas* 1. to cut off:

-il gavtsas "(a person's) means of subsistance to be cut off, stopped"; *-il *-askortsas* "to stop (a person's) means of subsistance". *gwimo gu.il a.rskorts* "don't yourself destroy your own means of livelihood".

000 *-*ʌski* y. remembrance; longing, desire. H. *awzu*. Recorded only with the Pn.pf.s *ʌ-*, *e-*, *& mo-*. — *sailər sčʌn*. *But ʌski duwʌ'ʌlila*. Let us go for a walk. I have conceived a great desire (to do so). 52.26. *ja jʌma'ʌt moeki duwʌ'ʌlila* my wife ardently desires. . . . 56.8. *duwʌ'ʌlila* appears to be the 3rd sg. Perf. y. of *duwʌlʌs*, of which the ordinary meaning is to fly. It is stated that when a member of the family (?) has returned from, or is going on, a long journey the women say: *ʌski duwʌlimi* ("my heart has risen" sic!) and kiss and touch the eyes of the traveller. *wʌtʌns eski dimin ilji dimi* his desire for his country coming on him, he came back, i.e. feeling a longing for his country he returned to it. 386.21. (Cp. Werch. *eski* which seems to be a locative form of *-*ʌs*).

*-*ʌskir*, pl. *-*ʌskundəro*, hm. father-in-law i.e. wife's father, or wife's father's brother, or husband's father. — *eskire hʌlər dimi* he came to his father-in-law's house. 32.7. *eskirʌlər* to their father in law. N. pl. *-*ʌskrivnts* "father-in-law on either side, or father-in-law's brother, or father-in-law of your child, or any male relation by marriage". (*-*ʌs* + *kir*? Cp. *-*ʌskus*).

*-*ʌskirʌs* IUB, *-*ʌskirč*, St.pc. *-*ʌskirum*, to dye, H. *rang karna*. — *eskirum* Ns. dyed. *eskirumrlo gʌtunts* EOL dyed cloths.

ʌskuw, *askuw* (*ʌsquw* Gh. Kh.) -*iq* y.

1. Blossom, flower.—*bʌsilum ʌsquwiq duwum* bringing in flowers from the garden. 382.11. *ew balis niw askuwiq ʃrmi* the sheep went and

ate the flowers. 64.9. *joŋ duxər-čume . . gir'amulər askuriŋ divi ki* when, the apricot trees coming into blossom, the blossom (pl.) has reached the village. 320.1. 000

2. *askur* sg. (?) & pl. x. smallpox rash, smallpox. — *imtsə askur duwaləə bi.en* smallpox rash has come out on him. *askur awala ba* I have got smallpox. *askura (i)walai.i(ʃ)* or *askure walai.i(ʃ)* he has got smallpox. *askurtsum duwai.i* he has recovered from smallpox. *askurtsum duwaləə bar* they have recovered from smallpox. (Cp. Kho. *isprur* blossom, smallpox; Sh. *pfonər* flower, smallpox).

*-*askurtsas* v. *-*asqurtsas*.

*-*askus*, *-*asgus*, pl. *-*asgušiŋants* N. *-*askušints* hf. mother-in-law, wife's mother, husband's mother, H. *sas*, *xoidarman*. — *awkus apo* my mother-in-law is not (here). *gowkus tele bo* your mother-in-law is there. *han pačien . . . mosgusmor ʃat ečubo* she leaves a shirt . . . for her m.-in-law. 306.5. *ise gatu mosguse* (or *morəskuse*) *yorljubo* her mother-in-law puts on that garment. 306.6. (*-*as* + *gus*. Cp. *-*askir*). 601

*-*asmilas*, *-*asmilj-*, to pacify, placate, persuade, IUB. H. *ravkpar lama*, *manguw karama*, *qabul karama*. — *uyum ine i-'asmilasor dwi'awskinimi* he began to persuade the elder son (H. *use manawe lage*). 374.6. 000

*-*aso* pl. *-*asomots* kidney. — *jotrə̄o mosomots* our "little kidneys" (meaning?). *gosomots* thy kidneys. 66.15. *esomots* his, its, kidneys. 66.6, 74.4, 338.18. *'asomots duriimi, kaberə̄ ortimi, d'otsorimi* he took out its

kidneys and roasted and cooked them. 68.11. ○○○

1. *'-aspalas, *-aspalj- Impv. *'-aspal to kindle, light, H. *jalawa*.

Only recorded in the form *aspalas*, the object in all cases being singular x and y.

čirayŋ (or, *čirag*) *aspalasulo* at the time of the lighting of the lamp. 314.12. *geri espaljam* they light a lamp. 314.2. *pfu espal* light the fire. *pfu espaljan* let us light the fire. *ai-espal* don't light (it). Cs. of 1. *balaw* v.i. to burn.

2. *-aspalas, *-aspalj-, Impv. *-aspal, Ppa. *-aspal.

Recorded only with Pn.pfs. *go-*, *e-*, and *o-*.

1. To lose, H. *gum karna*. — *gu-kar ayespal* don't lose yourself. *ei . . espala baiyam* I had lost my son. 368.16. *go-čo . . . 'espalam* we had lost thy brother. 374.16. *gawe sirme nišam espalimi* he removed (lit. caused to be lost) the trace(s) of the burial. 56.22.
2. To exile, deport, expel, H. *jala wafan karna* — *kuwe šhamo espalimi . . aespal . .* he drove out those kings . . having driven them out. 142.18. *wŋ gespaljam; gespalam* I shall expel you; I expelled you. *W. H. Čitrawer 'espalowan* they exiled W. H. to Chitral. 344.15.

Trans. and Cs. of *aspalas* to be lost.

(*-aspapayas?) probably only in the form *espapayas* q.v.

*-asperas, *-asperč-, Impv. *-asper. v.i. to tire, fatigue, exhaust. — *asperči* he will tire me. *gesperam* I have tired you. *amesperčam* I will not tire you (pl.). N. (EOL) *-ker *esperas*

000 to tire (one)self, exert (one)self. *gukər ay'espər, akuwər* don't exert yourself, don't get tired. *gukər lokʌn espərʌs bila* you must exert yourself a little. Trs. and Ca. of *-wərʌs to become tired.

(*-ʌspʌsʌs?) only recorded in the form *espʌsʌs* q.v.

(*-ʌspi.ʌs and N. *-ʌspuɣʌs?) only recorded in forms *espi.ʌs* and *espuɣʌs* q.v.

*-ʌsqʌnʌs, *-ʌsqʌí-, Impv. *-ʌsqʌn, Ppa. n*-ʌsqʌn, v.t. to kill, slay, murder, H. *mawdalna, qatl karna*. A number of forms are given in § 298.3. *ʌsqʌimí* he will kill me. *uɣ ke gosqʌimí* he will kill you too. 264.20. *ʌk'ər esqʌi.ʌm* I shall kill myself. 12.9, 16.13. *padša je ke uɣ meltʌlík m'esqʌimí* the king will kill us both you and me. 54.21. *je mə wʌsqʌiyʌm* I shall kill you (pl.) 12.2. *ʌsqʌi.i ba? gosqʌi.a ba* are you going to kill me? I am going to kill you. 54.17, *ʌwə esqʌnʌi.i* he has killed my father. 70.16.

Also:

ʌwə ʌsqʌnʌi.i he has killed my father (for me). 70.15, 80.12. *i-mo yu esqʌnʌm* he had killed his own sons. 266.18. *ayesqʌn* don't kill him. *ʌiyʌsqʌn* don't kill me. 54.22. *gəliqəmis esqʌnin* kill the women. 240.4. *in esqʌnj be g'omsi.i ba?* how can you kill him? (or you can't kill him?) 70.28. *in be ʌmʌibai.i je ʌsqʌnj?* how can he kill me? (or he can't kill me?) 70.24. *Tʌpki.ʌnts esqʌnʌmʌsʌm ilji* after the killing of the T. 240.17. *yu esqʌnʌm ite dišolo* at the place where his father was killed. 82.6, cp. 84.4. *je 'esqʌnʌs be* I am going to kill him. 70.25. *ku mənə esqʌnʌs*

000 *be* let no one kill these persons(?) 86.13. *kine ɣu esqanasulo* at the time of the killing of this father of yours. 82.21. *esqanasir . . ?ak etimi* he determined to kill them. 288.10. *nesqan . . .* having killed him. 84.2. IUB *esqaimtse* (he) would kill him(?), H. *mavta zwa karta. esqanum maimtse* he would be killed(?), (or, he would have killed him). IUB gives as equivalent H. *mava hoya* he will have killed, which seems to be wrong.

(*-*asqanas*?) *seqanas* IUB to make beautiful, H. *zubyurai banama*. (Perhaps connected with γanas to appear).

*-*asqoranas*?) *seqoranas* IUB to carve, draw(?), H. *nagi karma. seqorai.i bai, seqora.i bam, seqoranimi, seqoranum.*

*-*asqases* to make go bad, rotten, addled. The only example is: *tiqaiyo esqasi bi* (the hen) has addled her eggs, i.e. has let her eggs go addled. Cs. of γases.

*-*asqulas*, *-*asqulj-*, Ppa. n*-*asqul*, IUB *nesqulin*.

1. To burn, burn up. Only recorded with the Pa.pf.s *go* and *e*. — *'esquljam* I shall burn it. *esqulam* I burnt it. *ise Boyo Gale hum aiyesquljam* they do not burn the wood of that Boyo Juniper. 216.5. (γasil *bitse*) *nesqul* burning the wood (y. pl.). 136.15. *esqulas* γasil wood for burning, firewood. 173.23. *Bi.ulo gesquli* he burnt thee in the forge. 356.5.
2. To roast, parch. — *gfy'wan hori n'esqul* roasting, parching a little barley. 328.9.
3. IUB to lose, waste, squander (?). H. *nagpam karma*. Cs. and trs. of γulam.

*-asqurisas, N. *-asyurisas, *-asqurš- v. t. to sink, make sink, drown. — *asqurši* he'll sink me. *gosqurišam* I'll sink you. EOL *ai.asyuris* don't drown me. *ai.asyuris* don't drown him. Cs. of *-yurisas. ooo

astakwi old, aged, very old (of human beings only?); an elder. (Sh. *astakwi*, cp. Kh. *awaqwi* from Turki *aqsaqal* = white-beard).

astam, astawm, astawm, astam -iŋ y.

1. Judgment, decision, settlement of a case, justice, H. *'adalat*. — *jaw astawm ayutimi* he did not do justice for me, did not decide my case. *ma astawm stin* do you decide the matter. 106.10. *astawm nodas* getting people to decide the matter. 106.4. *-ov astam ma* settling the matter for them. 43.20. *astawmar dawimi* he came up for a decision. 106.5. *ast'amulo ja mai.i bi* according to justice (in law?) it is mine. 104.4. *yus'iki.aŋ astawsig* bad decisions, unjust judgments. 92.29 *maw tsana astam ešam* I shall do true justice for you (pl.). 98.8.

2. A matter for judgment, case, suit, cause. — *astam sikortsas* to settle, decide a case v. s.v. *-sikortsas. *astam hanpa stowas* they settled the case. *astam hanpa wanimi* the case was settled. *thama gots astamulo besas faiwlo stimi?* what decision did the Tham give in this case? *ja ast'amas bila, ite haw ov sti* I have a case, settle it for me first. 80.8. *Baltitum wuriti giram Hamodatigsko ast'am stowas* the four tribes of Baltit instituted a suit with (i.e. prosec-

dings against) the Hamachating. 258.1. 000
(Cp. Sh. *astom* judgement).

(*-*asthayas*) v. *esthayas* to extinguish.

*-*asthap*. — 1 2 *astap manumulo divus gavi manila*. 358.4. Glossed: "in the middle of my back behind the heart" (a bullet wound has come). *astápà* was elsewhere given by IYB as a word with a final aspirated *pà* with the meaning "between the shoulders at the back", but it was written by him in the above passage, *asthap*. (Probably a compound of *-*as*).

*-*astaqayas*, *-*astaqać*-, Impv. *-*astaqa*.
1. V.t. to hide, conceal (living beings).
je wŋ gostaqaćam I'll hide you.
je estaqaćam I'll hide him.
mostaqaći he'll hide her.
yawe wyow estaqaćam they hide all the others. 232.8.
Pret. *gostaqaiyam* I hid you.
estaqami he hid him.
mostaqami he hid her.
Perf. *estaqa hoi.i*, *mostaqa hoi.i*.
Static Pe. *morpći estaqam ine pahlawar eesmo* she said to the pahlwan (who was) concealed beside her. 146.9.
2. To close (the eyes). — *eićin estaqayam* I closed my eye. *iićimoto estaqam hi.s ke* if his eyes are shut. 264.24. Ca. of *dayai.as*.

asu ćas to chew the cud. — *asu ći hi* (the cow) is chewing the cud.

asuhrj gullet (based on the preceding *asu*?).

*-*asuiow* which-is-in-the-heart, pertaining to the heart. *asuiwm ite her wŋ mis* you speak to me the thought that is in my heart. 80.8. (*-*as* + *sio* + *ow*).

*-*aj* pl. *-*ajomuts* n.

000 1. Neck, nape of the neck, external throat. — *ino hir Kiser eṭaje gʼa/ ne Kiser*, throwing the man on his neck i.e. over his shoulder. 194.8. *yumuło otom ino eṭaje halda* the burden (be) on the neck of him who has lied! (i.e. he must be responsible). 46.4, cp. 178.8. *gʼdar ḫaṇaliṭiṇ gʼogiṭam* I'll put chains on your neck. 60.2. *yuṇ .. ṭot ṭi eḍolo waṇṭoṭ* the father falls on his younger son's neck. 383.9. *ḫut gʼd ṭiṇ oṭje* don't stretch your neck too high (said to a proud, insolent person). *ebewtsolo dam* seizing them by the necks. 206.9.

Special locative: *-aṭi* v. § 66, on the neck. — *ja aṭi ḫaṇaliṭiṇ ayiṭi* he will put chains on my neck (for me). 60.8.

As regards meaning this locative appears from various examples to replaceable by *-*aṭaje* or *-*aṭer* be as in the preceding illustrations.

2. Collar (of coat, shirt, shoes).
3. Col, neck of hill. — *domiawa Hindi Kaṭa ḫaw eṭolo, eṭolow laṭatar dum'u.ḫum,an* bringing her to the col opposite to the Hindi fort, they took her up from the col on to the spur. 194.8.
4. Pommel (of saddle). — *ḫaw ḫa ṭili eṭ(e) eṭer ebʼiḫaṇḫin* putting also the whip on the pommel of the saddle. 78.18.

aḫeto, aḫeto, aḫato weak, feeble, powerless, destitute. — *ino hir ḫut yerib ḫam, but aḫeto ḫam* the man was very poor, he was very weak (or powerless). 84.8, also 108.6, 17. Cp. *-*as aḫeto* s.v. *-*as*. N. ḫu

000 *ateto* pl. *ateteweta*. *at ateti* pl. *ateteweta*. (Sh.m *ateto*, f. *ateti*, < *a* + *ati?*).

ateteloj weakness.

atelpuv IUB weakness, poverty, H. *kamzori*, *muflisi*. (Sh. *atelov*. *atelpuv*).

-elfiq *y*. pl. small of back, loins, reins, waist, (of human being and animal). — *elfiqir ker'vnin, ker bi.'viko bilen* look at his waist it (pl.) is very slender. 184.18, 188.8. *erfiq eqerqio manirdes* my loins have become big (a narrator's slip for *halpiriq* back). 188.8. *yerye elfiqulo kam* he was (still) in his father's loins. 88.21. *fur elfiq gami* its back has been touched i.e. it is sore-backed (of a horse). *elfiqulo halyan imawi li* a wound has come on its back, or, it has become wounded on its back. Cp. 64.18.

elfom waistcloth, waistbelt. Recorded:

1. In the form *erfom* in the following: *erfom -rdo* (waist)belt (of pattu). *erfomu berpil* leather belt. *erfomu jokowi* this belt of poor man. *erfomu mudon li* (no translation, but *mud* glossed "edge"). (In *erfom* the *e* is invariable).
2. In the form *erfumudi*. — *erfumudi rilli bilow* there was a dagger at his waist (explained as stuck through between his waistcloth or waistbelt and his body, handle up, point down). 198.6.

In the light of *elfomu mudon* this must be taken to be *elfum* + *mudi*, *mudi* being a locative of *mud*, which means any extremity i.e. end, edge, side. What the exact meaning would be here it is difficult to surmise.

From *ərʲʃum* and *ərʲʃum* we may assume a basal form *-*aʃ(um* taking the pronoun prefixes, *ərʲʃum* being the 3rd plural form applying to people in general. 000

(*-*aʃ(um* must almost certainly be connected with *-*aʃ(iq* the waist etc. which is y. pl. and presupposes a singular *-*aʃ-* which has not been recorded, but which would stand in the same relation to *-*aʃ(iq* as English loin does to loins and perhaps actually possesses the same significance: *-um* would be the adjectival suffix and *-*aʃ(um* would mean what pertains to the loins or waist and might be specialised to mean waistbelt).

aʃər v. *ataʃər*.

aʃʲʃum ugly, evil-looking H. *badpuwat*.

*-*aʃki* at the head, under the head (of a person lying down); bolster, pillow, H. *sirhana*. — *dəryum ərig 'əʃki ərəʃan* putting (the corpse's) right hand under his head 312.2. *Ham γ'uman əʃki ətan* they put a clod under his head (as a pillow), 312.3. *hin dasinan əʃkirtur dumə bo* a girl has come up to his head (as he lay there), 180.6.

aʃkat (*aʃkat?*) happiness, comfort, delicacy(?), H. *sukh, ḥaq, ārām*. — *aʃkat ərmə hərwʲʃaman* they abide happily. (Cp. Sh. *aʃkat hərtki* to embrace), 142.11.

*-*aʃkij* pl. *-*aʃkimiq* y. pillow.

(*-*aʃpuraq?*) y. pl.

Only recorded in form *əʃpuraq* mane.
hayuru əʃpuraq horse's mane.
burmə əʃpuraq a markhor's mane (beard?). *bəkərdus əʃpuraq* the calf's mane. 104.24, 184.5, etc. (Probably *-*aʃ* neck + *bur* hair).

ałłan, ołłan, ałłen, pl. *ałłoiyo, ołłoiyo* hm groom, "aais". — *ówo ḥayer ... ałłano ḥa ołłumi* he sent his own horse with the groom. 76.11. *ḥa ḥaste ałłoiyo!* O elephant grooms! 76.22. *ałłoiyo w'ałłumaa* four grooms. 336.5. *ḥan ałłoiyu.w ałłen* they give one (goat's head) to the grooms. 340.18. (Sh. *ałłen*). 000

ałłyo by chance. — *ałłyo manimi* it happened by chance. *ałłyo doi'ełłan* I heard by chance. (Cp. Sh. *ałłyo, ołłoiyo* unexpectedly, accidentally).

°-*ałłan*, °-*ał*, Impv. °-*ałł* and °-*ł*, Ppa. n°-*ałłan* and n°-*ł*.

For forms v. §§ 274 and 298.4. Some of the short Impv. forms will be found separately mentioned in this vocab., v. *er, ir, mor*, and neg. *eye, ołye, ołye*. To make, to do etc.

The pronoun prefix refers to the Direct object, or to the Indirect Object, or to a Noun Dependent on the Direct Object.

Where the word to which the Pn.pf. refers is the 3rd pers. hm sg., x sg. y sg. or pl., the Pn pf. is *e*.

Where the verb is associated with a noun to form a compound verbal expression, the noun being the object of the verb e.g. *gur ełłan* to marry, we get compounds in which the *e*-prefix remains constant (— *ełłan*).

ełłan also fills the place of the English "to do" where the direct object is a thing or action.

In view of these facts it is natural that *ełłan* is much the commonest form of °-*ałłan*, so much so that it appears to be an invariable verb in its own right.

000 1. The uses of *-ɛtɛ* in association with a noun, adjective or adverb are analysed and illustrated in the Grammar § 261, and need not be further dealt with here.

2. To do, make, carry out etc. — *čayɛ ɛtɛ* to make a statement, tell a story, narrate. *ivɛ bukɛ̄ɛ duro ivɛ Wazivɛ ɛtɛm* his Wazir used to do the business of, i.e. manage, his land. 1.4. *ʌ̄ɛ ɛtɛ* to make, build, a house. *kapik ʌ̄ɛ ʌ̄ɛrbat ɛtɛn* preparing bread and sherbat. 342.9. *ʌ̄ɛmarɛ ɛtɛrɛ* they do (i.e. recite) prayers. *gɛkɛ kasɛp ɛtil . . . ɛti* make the round of these gardens. 10.12. *ivɛ gɛtɛ duro ɛti* he will do this. 94.16. *ʌ̄ɛurɛ . . . ɛtɛrɛ* they hold, celebrate, Nauruz. 316.1.

In the above we have the *ɛ-* prefix only because the object is in every case x or y sg. It would be the same were it y pl.

With the x pl. we get *ɛ-*. *pɛ̄ɛtimɛtɛ ɛv ɛtɛmɛ* she made cakes of bread for him. 182.8. *ishi ʌ̄ɛmatɛiŋ . . . hal'ariŋ ɛtɛrɛ . . . ɛlto čɛkɛn kani ɛtɛrɛ* They prepare three sacks of dried apricots . . . they prepare two "*čɛk*" of kernels. 306.22.

3. Ca. to cause to do, make do. — *ɛstɛrɛ ʌ̄ɛrɛn* making them decide the case. 106.4. *ji kʌ̄ʌ̄riŋ ɛtɛm* I'll make them show their accomplishments 106.6. *ʌ̄ʌ̄wilčiŋ ɛwlwyɛ dɛtɛrɛ dʌ̄ŋ ɛtɛrɛ* fetching their relatives they make them bake "*ʌ̄ʌ̄wali*". 300.4. *ivɛ kani ɛtɛm* he had made them (people) make that garden. 12.6. *čʌ̄ʌ̄rɛ pirilɛn*

000 *ortimi* he made them (people) make an iron peg. 190.8.

+ Infin.

orpačim hʌmrʌa fʌi aystʌs orčai.i he causes them never to let him go from beside them. 116.18.

4. To let, allow, permit. With the -ŋ form of the dependent verb: *im nrŋ sti, aysti* let him go, don't let him go. *nrŋ ayorti* don't let them go. V. § 359.

5. With a dependent Infinitive the sense is causative:

ires bʌntsum hole dwesʌs aiy'stumʌn they caused it (the donkey) not to come out of the boulder. 200.17. N. *gots čʌyʌ ins sis deryʌlʌs sti* make that man hear the story.

6. To say, to speak (a language).

stʌs is apparently occasionally used with the meaning "to say". It is not a regular idiom as with the Sh. *thorki* to do and to say. *bismilla ne* saying "bismillah".8.1. *mukorings . . . ʌkil scobo, "da kot be mʌnimi" nosen* she says thus to herself "What is this that has happened?" says she. 118.11. *kirns sifʌt mar sčʌm* I will tell you his merits. 92.1. *Borošʌski stʌs* to speak Burushaski.

7. To have sexual intercourse with (a woman). — H. *čordna, mujarma'at k.* — *mortʌs* to "have" (a woman). *hʌn yam.. hʌkičʌŋer dim gušiŋʌnts orči bim* a bear used to come into the houses and violate the women. 228.2.

In this sense are probably to be interpreted: *gortʌm* (recorded as a term of abuse), *matumʌn* (recorded as referring to illicit intercourse).

-ejs, -ejs, -ejs suffix on, upon; over. V. § 70. ○○○

-ejw suffix to. V. § 70. VI.

-ejwm, -ejwm suffix from on, being on. V. § 70. VII.

*-ebiwas N., *-ebiwi-, Imper. *-ebiwi to show s.t. to s.o., cp. Ha. *-ebiwas. Pn.pf. refers to the indirect object. N. *ine ste ke hete kirey ebiwiden* the man is showing me this book.

(*-ebeni.ses) v. ebei.as.

*-ebei.as, *-ebei-, Ppa. a*-ebein.

1. To press down, crush down, trample on: to stuff into, fill into a vessel, trample down (earth etc.), H. *debewas*.
   a. Pn.pf. referring to Direct Object. *gwtei/am* I'll trample on you. *gwtiyr ilk ebei hoi* he has trampled down, stamped down the earth with his feet. 84.1. *gf'etig kr kenjil kayere gapolo 'ebeini.* *Nitein* . . . . he stuffed ashes and charcoal into the horse's skin. Having done so . . . i.e. he stuffed the skin with ashes etc. 180.10. *kayerer ashiva ufigeb 'ebeidrem.* *n'eiain* . . . . pouring (the flour) into the bin they trample it down with their feet. Having trampled it down . . . 234.5. *kkewk ebei hoi* he has pressed down the straw. With the Pn.pf. referring to the indirect object: *kaiele gf'etig metei/amiw* . . . . I would have stuffed (or would stuff) ashes into your skin(s) (for you), i.e. I would have stuffed your skins with ashes. 154.2, Cp. 160.10, 176.10.
2. Metaphorical: to oppress, treat unjustly, wrong (of a superior doing

injustice to *ra* inferior, refusing share of property due to him etc.) — *ottiwi*, *mulaini* he treated me, us, o. justly. *nimurhin* opposing-me. 248.8.

8. *-dar (*-dal) *gfa* *-ulaiar* to set fire to, burn v.t. The Fu.pf. refers to the thing set fire to. — *Inrhanwagiar gfa ottiri* he will set fire to, burn down idol temples. 93.21. *ottai gfa ottiima* you have set fire to me, ruined me. 168.8. (*-ulaiar in 8 is clearly the Ca. of *lai.ar*, but it is difficult to connect the latter with *-ulaiar in 1 and 3).

*-ulaqar, *-ulawi-. In the form *ottaqar*, to send.

The verb appears to be the causative of *laqar* with the possess prefix of the 3rd. pl. "to cause them to take away", but the "them" frequently does not refer to people who have been actually specified.

In no case recorded does the *o-* refer to the object sent.

On the whole it seems probable that *ottaqar* is in origin "to cause them (i.e. people) to take away", but that it has become so identified with the idea of "sending" that the possess prefix itself, i.e. *o-*, has lost all definite significance.

Ow ima wulaar 'ottawi he sent it to his own country (nowhere not specified). 166.11. *Aayar . . . ottawi* he sent the horse to him. 76.11. *Aatawaja taaf wirihiko ottawi.* "*Guarja maijen ja' ana.ia*" *aata ottawi haato. Haato tawaa* putting a howdah on the elephant he sent it off. Saying: "Say to him "Mount

000 on this and once[illegible] he despatched the elephant. They took the elephant away. (Here there are conveyors). 74.33. *the hel'ai.ámitiq ugrour nal ortaami* (or, *hilami*) he despatched a letter to all those countries (no conveyor mentioned). 98.10. *thamu ḡamrulir ko ḡapiñ kamikete ortaotaru . . . wur wimu gaber ainetaru* they send dishes of food also to the Them's wife . . . they send them to them to their own quarters. 340.18. (Here neither subject nor conveyors are clearly specified). *hewam.an kedi wulur ortaqam* I sent (what?) to them several times.

*-a.wiljeiqa.Impr. *-a.wiljo.Pps.n* -aljen to cause s.o. to mount (on a horse), v.t. to mount (s.o. on s.t.) Pa. pf.s recorded: *o'ial*), *o.(wó'*); *ol*). — *ewaljo* make me mount. *a.wiljeiqam* I made him mount. *Ayyere gapab o'aljami* he mounted him on the horse's skin. 150.11. *na 'wiljen* having made him mount. *Ayyer tawin. Nerljen d'ojw.in* take out horses and having made them mount bring them in. 34.9. Cs. of *ḡaljeqa.n*.

1. *-a.wi.as, *-a.wi.at* Impr. *-a.wi.o to expend, use up, make use of, put to work. Only recorded with Pa.pf.s *o'(w-)* and *o(w-)*. — *(tawar) ewi.ami* he made use of (the iron). *rite kanjól* (x pl.) *ewyami* he expended that charcoal. 170.30. *rupi.n* (x pl.) *owi.aam, owi.ami* I'll spend, he spent, the money. *'ewi.a* put him to work.

2. *-'a.wi.as* (as 1.) *-a.wi.as* to teach, train. *'ewi.am Ayyer* a trained (to pole) pony. *ñwa 'wwi.aami* he is training it well. *ñwa ye*

000 *ottalib ha.n* 'ovi.ctsi he is teaching, or training his two sons well.

* ʌ.ovuʃʌ, *'-ʌ.ovud, Ppa. u'*-ʌ.ovuʃ. Pa.pfa recorded: *pu(r-)*, *ou(r)*, *mu(r-)*; *o(r-)*.

1. To cause to sit; seat. — *hovi.ofo ovudoti* he makes him sit down on a chair. 74.10. *dalimud movudovu* they make her sit at the upper end (of the room). 204.19. *'ovutimi* he made the animal lie down (when going to slaughter it), (or, *uatimi* he cast it). *potrfo uʌ.ovud d'ilim.in* seating him on this (litter) being him here. 79.3. *potrfo ualu.ovut gotovi.ton* seating you on this we shall take you away. 78.5. *ha.n difonor dwalumi ovutimi. Novovi ualovu ulimi* he set him down in a nice place and made him sit down. Having seated him, he salaamed to him. 8.8.

2. To settle, centre to dwell, make stay. — *jo wy hovlo povoton* I'll settle you here. *ilo hrgudolo movovulimi* he established her in the palace. 172.24. *Ulimo hagro ovoton.on* they settled their flocks in Ulter. 250.6.

3. To maintain, keep (servants, animals etc.). — *Ayuv* (noke) *hovon.on ovoda?* *uarlo Ayuv ovoda* ha how many horses (servants) do you keep? I keep four horses.

4. To keep, detain (a person). H. *rakkoz.* — *mivig pavo ovovtoa* sis a man detained under our hands, i.e. a hostage. Cf. of *hovuʃʌ* (f. IUB etc.).

ʌvo, ʌuo yes (in answer to a question). — *Hakati podki ovi motuvu le?* ʌuo, motuvgu ha Have you not married

the daughter of the Habashi king? Yes, I have married her. 88.4. *aust* *ausa* to say "yes", consent, agree. (Cp. Sh. *aust*, yes).

aurá, *aual* in the first place, firstly, originally. — *aual hawwin yadig fwtig bitar. ariin.alow* . . firstly look his feet are small, secondly. 104.18 . . *aual Hawaa Baltiyle Tapkl.awis alard* how originally the T. were settled in Baltit in Hunza. 188.1. *awalolo* . . . *tale tawak mawaaam* firstly,originally, he had appeared there. 186.20. Ar. *awwalalow* (?) first.

awwlam N. first.

(*-*awwasf*) v. *awwaa*.

*-*awal* back (tooth), molar. — *awal awa* my molar teeth (or teeth). *gawal gawa* thy ditto. *warpal wawa* our ditto. (Other authority gives *-*wal* *-*wa*).

*-*awakl.as*, *-*awakl*, *-*awakl*, Pps. *a*-*awakla*, *a*-*awakla*. Only Pa.pt.s recorded: *go*, *ori*. *wa(a)* to cause to throw(?), to throw, pflg, place.

The problem of this verb is discussed in § 248. Occasionally it seems to be a causative, but in the majority of cases it is most naturally to be considered by a simple transitive, the pronoun prefix referring in many cases to a third party who is in some way affected.

The following appears to be causative, but may possibly belong to the transitive category:

Lazz.Brumo mashkw wali wawawalin tail dum wawaisimi making L. B. throw a "mashk" on her neck, he made her fetch water or throwing a water-skin on her neck (for her) he made her fetch water. 176.16.

The following seems more probably to fall into the transitive category: *Aligāl ei gōki pawdīam* I'll throw Aligāl's daughter on your neck (for you). i.e. I'll secure her for you as wife. 88.15. Cp. *ōsu ei* (i.e. *ei*) *bōdar wuhimi* he threw his son on his neck, i.e. he embraced him. 378.13.

000

For further examples see § 246. Ca. form of *wuhi.ar*.

*-*ugalar* N. *-*ugalj*, Imper. *-*ugal* to break s.t. affecting s.o. else; to make s.o. break s.t.(?) ← *ōsu pōnf ei.ugal* does't make him break his polo-stick. N. *jīrendes bolo dalamdo ōkawr wuar pōnf ugaljī* tomorrow the Mir will make you break your stick when playing polo N.

The meanings of these two sentences however appear suspect and it seems more probable that they are to be rendered in the same way as the following.

nawrōn hauar ugali le if the horse throws me and breaks some (part of me). 76.16.

I have taken it as actually meaning "breaks something (for me)", cp. *o.n ugamili* he has killed my father (for me). 70.15. Ca. form of *-*galar*.

*-*ugar*, *-*ugal*, Fpa. *-*ugan* to cause to take, or carry; to load up; to charge with.

The problem of this verb has been dealt with in the Grammar § 247, where typical examples are given. A few more examples and forms may be added here:

halda 'ei.ugar hau gfulon bōu ditsimi he brought a dēo who was there, in order to make him carry (or to load on him) the treasure. 174.18.

C.O.C. [illegible] cutting off their heads he made (people) carry them(?), or loaded them up(?). 174.23. *je g'eyuuuu gob ksiyun* fro take away this token which I have made you take, or have charged you with(?) 196.16. *mawu . . . kin kapolitkan ueiyun* . . . making a herd carry the milk. 322.6. *tkaw yeuile gawii eye.ilaw* they make them carry the Sir's bag of gold. 348.4. *kayuwejo halde eyun* put the load on the horse. *kayuwikajo halldag eyun* put the loads on the horses (in this last the *e-* cannot refer to *halldag* which is *y* pl.). *je wy eiiyuw* I shall make (some person) take you up (H. *ofkuwua*). *je wy eiiyuu* I shall make (some persons) take you up. *je wy poiyoiyun* I shall make thee take up (something). (*wy* in the last cannot be the object taken up).

Infin. + *ar*.

eiyanaar in order to cause him to carry. *poyanaar* in order to cause you to carry.

First. base + *ar*.

eiyeyar in order to make me carry. *poiyeyar* in order to make you carry. *eeiyar*, *'eiiar* in order to make him carry. Cs. form of *yanaa*.

*-*yanaa*, *-*yaei*, *-*aye*, Impv. *-*ayen* to fall asleep, go to sleep. — *eiyeyaw* I shall go to sleep. *wy poyai.ema* thou wilt go to sleep. *mi ma.eiyen* we shall go to sleep. *je dwy 'eiyeyo ba* I am going to sleep for a little. 292.9. *'podio poyeiiaeis eyanawan. Pay'a eyeeewie di.en dwaimi* the King's daughters went to sleep. When they had fallen asleep F. got up and went out. 118.2.

000 *m'ayenomo* she fell asleep. 105.17. *mayenomlo* or *mayenaser* after she had gone to sleep. 108.18. *ayenasi* he has gone to sleep, is asleep. 254.24. *ayenaşen* he had gone to sleep. *şayen* go thou to sleep.

*-ayerem, *-ayerem, -rão beloved, dear, favourite. — *ja ayerem* my darling (said to child, wife, lover, brother). *ja ayerem kapuło* my dear friend! *ayeremzło gaga* thy beloved sons. 44.18. *ayerem* gave his favourite wife (opposed to *-ayam). *Ř. Bakerem la bari ayerem ham* R. B. was also very dear to him. 18.10. *kimirar 'ayeremzło haw* they were dear to each other. 80.1. *Xodaya ja ayerem kapupalimi* God took away my beloved (child). EOL.

ałdar, ałdir dragon, monster x. — *ierele ław ałdaran him* in it (the pond) there was a monster. 250.4. *le ja ewi, mu'ałdiro ałwrti bi* O my father, the monster is now going to eat me. 252.14. (Pers. *ałdar*. Cp. Sh. *ałdero* brave, valiant. *ałdar* occurs as a man's name among Shina-speakers).

ał.

(ał- before i or y is merely a modification of a or ə).

ałb, ałp -itig (EOL) y defect, harm, fault, injured. — *łayere łeaza ałb bila?* what's the matter with the horse? *ja łeaza ałb bila?* what fault is it of mine? *ałb ałpi* there is no harm, it doesn't matter. *nawał ałp amaraw* falling, I hurt myself EOL. *ałp yamaraw* you were injured EOL. Ar.

ałi bf. v. *-ałi my daughter.

ałina -mete x mirror, glass (as window pane). — *belwlo ałina* mirror of thick

glass. *ovuwlo aiśna jawan hai* he is like a mirror (compliment to a handsome young man). ○○○

aiśnak -ṭṭo, -ṭṭe x spectacles, eyeglasses. — *aiśnakuto* a pair of spectacles.

aiśnag, aśnag, -ṭṭo x marmot. — *aiśnag asnas kan jandawan hi* there is an animal called a marmot. 282.21. (Said to be a *Śiṇāṇī* word. Cp. Wkh. *aśnali*.

aisu v. *aśno*.

aiy'a verses of the Qur'an. — *asundowas aiy'a yatali haw* the mullahs recite verses of the Qur'an. 312.6. (Ar. *ayat*, pl. *ayat*).

aiyawa, aiyawano v. *-ayas*. 374.9.

1. *aiyas, ayas, ayas* *y* the sky, the heavens.

a. *ayahoto* in the sky: *ayahotowa* from the sky. *ayas ṭaṭkum* sky-blue, azure. *yahu aiyas yakal* makuction *ron talor hikami* he shot up towards the sky at the middle pigeon. 148.8.

b. Heaven, = God(?). — *ji aiyas ka way gotinar haywa awana ka* I have become evil in the sight of heaven and of thee. 368.4. (A literal rendering, probably unidiomatic, of the N. *mai awaran ka aur tewi nazar mai gunahgar hun*, "I have sinned against heaven and before thee". Luke XV.18).

2. *aiyas, aiyed* pleased, happy, delighted. — *sunyar hurt zud imanimi, but aiyas imanimi* the goldsmith was greatly pleased, he was greatly delighted. 162.10. Cp. 122.10, 374.18.

aiye, ais = *a* + *i* + *°-a*, neg. Impv. sg., with 3rd. sg. Pn.pf., of *°-atas*. — *yat galtor aiye* don't do so again, next time.

aiye = *a* + *u* + *°-i* neg. Impv. sg., with 3rd. pl. Pn.pf. of *°-ałas*. — *wiyaxy fał aiye* don't let them go. 000

au.

au- N. Negative verbal prefix, cp. Hz. *ev*.

aufrin brave! — *aufrin manił!* brave be to him! 172.9. Pra.

aulavł usually plural, sg. *aulavłax* h offspring, descendants. — *ivu Datusiq aulavł . . . ałux gaiłhow* the descendants of Datusiq carry the standard. 282.17. *ivu Bastł aulavłtem wuvto . . . 20, 15 hałitaq wawitas* from the offspring of that B. there have now become 10 or 15 households. 272.10. *wuvto ła ivu aulavłs . . . hanik niwu nitaiś* even now a descendant of his goes with the bowl. 212.20. *Taphi ułła aulavłax awołow ditaw* fetching from somewhere a descendant of the T. 242.2. Ar.

auqarł y sg. means (of living), resources. — *auqarł bilawax xwł ełax* he had expended all his means. 372.10. Ar.

e, e.

e-, e- represents 1. Pn.pf. *i* + *°-a*.
2. Neg. *a* + *i*.

e sg. Impv. of *i* + *°-ałas, ełas*. — *gwiś łaś e* slay thy son. 42.3.

eduku younger, youngest. — *eduku ayu* my father's younger brother. (Cp. Wert. *eduyom*).

edilas, v. *°-adilas*, to rub on, apply. — *gwłafe malłam* (or *mali*) *edilas* to rub ointment (or medicine) on the wound.

eqełas v. *°-agiyas*. — *filłax eqełł* put on the saddle.

ełas v. *°-aałas, °-ałas*. Cp. § 240. — *filłax ełł* put the saddle on (the

horse). *Kan kayuran tili.aq tirhaq nevtan li* there is a horse saddled and bridled. 6.11.

ryalas[1] *ryalić*- to drive s.t. into s.t. — *ferazq ćis gorsolo neiqal* driving (or, digging) his horse into the meadow (?) 182.28. (*-*apalas*, Ca. cf *galore*?)

ryyas v. *-*apiyas* — *ferm ryi hali* he has planted the tree.

ryuran, *'ryuć*-, Impv. *'ryur*, Pya. *n'ryur*. Cp. *-*ayuran*.

1. To play (a musical instrument, including drum). — (*gifts kerip*) *mu ka 'ryurćuru* even at the present day they play it (the Div's tune). 284.16. *Kan keripan silevqis ryurin . . . ryurumsan* play (pl.) a tune on the sitar . . . they played. 180.12. *Sovimi haja na n'ryur nitum* playing till 10 o'clock they then go away. 226 9. *ryurćo herito* music-playing Dums, musicians, bandsmen. 216 10. *damab* (*kalaqs*) *ryuran herito* drummer.
2. To strike (of clock), *H haja—nikivadi 'ryurumur* (or, *'ryurasur*) when six has struck, at or, after 6 o'clock.

ryulf'uran EOL. *ryulćuć*-, Impv. *ryulćur*, Pya. *nryulćur*. To turn upside down, invert. (Probably *-*ayulćuran*).

ry'unjaiyan, *ryunjać*-, to be eclipsed. — *ez, kalonts, ryunjimi* (*ryunjać*) the sun, moon, was (will be) eclipsed, there was an eclipse etc. (A later informant gives the verb as *ry'unji.an*, *ryunjić*).

(*ryunsiyan*?) v. *-*ayunsiyan*.

ri, v. *-*i*, my son.

ri, *ri*, *ri*, exclamation, O! *ri Langa Brumu!* O, Langa Brumu! 180.16.

rů, *ele* 7 pl. sg. *ot* q.v. V. § 140. Demonst. Adj. & Pron. those, those things. Cp. 128,22, 142.8.

38a

[1] [See corrigenda et addenda, category 116, p. 641 - Analysis]

ele, ele, ele there.

OOO 1. *ele ke apei.i* there too he is not. 252.10. *ele kan hawan bi* there is a boulder there. 194.2. *'ele hede* there and here, i.e. here and there. *ele holom ele dawa* people coming from there and here i.e. from every side. 254.13.

2. *elar, elar* thither. — *elar nin* he is going thither. 194.4.

3. *elaw* from there(?) — *elaw ilji* thereafter, after that. 268.16. (*i + ale?* Cp. *fede*. V. also *elawan* & *ale.i*).

1. *ale.i* N. there.

2. *elere* thither. — *elerer* (= *elelar?*) thither.

3. *elewo* thence. (Cp. *ale.i* and *elawan*).

'elgil, -ero (*-dero?*) a she-goat (over one year old, which has not yet borne young).

er, er to him, for him. — *er elewin* don't open (pl.) for him. 12.1. *er mamar dero nelan* milking (her sheep) for him. 286.2. *er gon elowan* they called to him. 284.15. (Agglutinative Pronoun *i + er*, v. § 122).

eraiafe v. *-aaar* (= *era ka + afe?*) 1st sg. Perf. of *eraa* to say to him + suffix *-afe?* on my having said to him. 68.20. V. § 407.

era, ear, era n sg., pl. *ele*, q.v. V. § 140. Demons. Adj. and Pron. that, that one, that thing, it. — *wa era gulas wime hede eurufawan* they placed the (that) corpse in their own house. 112.20. *era dawan* its (the horse's) owner. 8.11. *era ka ewerwanimi* he did not begin on (lit. with) it (x). 166.9. *fi era an fawa?* where have you taken that thing (x) of mine? 166.28. *eraifon nilawig* the marks that were on it (the calf). 186.4.

сіісіѵаѕ v. (*-*аіісіѵаѕ*). ○○○

сѵрѵіѕѕ v. 1. *-*ѕѵрѵіѕѕ* and 2. *-*ѕѵрѵіѕѕ*.

ѕѵрѵрѵуѕ v.t. to make s.t. boil, to boil s.t. *-*ѕѵрѵрѵуѕ*(?) Cs. of *hѵр..ѕ*.

сѵрѵѕѕ, *сѵрѵі-*, Fpa. *ѕѵрѵѕ*. To make s.o. sit down; to complete, finish off, settle; to cool down (boiling water). *gukor 'сѵрѵѕ* seat yourself, quiet yourself.(?) *gor ѕѵрѵѕ* finishing off the marriage. 16.1. *gorіѵ сѵрѵѕѕѵѕ* they concluded the marriages *-*ѕѵрѵѕ*(?). Cs. of *hѵѕѕѵ*.

сѵрі.ѕ, *сѵрі́-*, Impv. *сѵрі*, neg. *ѕѵрі*, Fpa. *ѕѵрін*. V.t. to dry, parch (clothes, bread etc.). — *ѕ́ѕѵѕ сѵрі.ѕ* to dry it at the fire (or, by fire?). (*kok*) *ѕ́ѕ.ѕіѕ gorѵѕѕѵ ѕ ѕѵрін* warming them (y pl.) at the fire and drying them. 182.7. (from *ins*) *n'сѵрін* drying him (the dead man). 310.8. (See end of next entry).

сѵрѵѕ N. v.t. to dry. — *сѵрѵѕ ѕаѕ ѕѵѕ ѕѵ* put it in the sun to dry.

Regarding the relationship of this verb to the intrans. verbs *hѵрѵѕ* v.i. to dry used of y subjects and *ѕѵрѵѕ* used of x subjects, v. § 282.

It is probable that *сѵрі.ѕ* just above is properly *сѵрі́ѕ* and referable to the same source, though the well-authenticated -*і*- vowel requires explanation.

сѵthѵѕ,[1] *сѵthі-*, Impv. *сѵthі*, pl. *сѵthі.іѕ*, Fpa. *ѕѵthіѕ(іѕ)*, (it is doubtful whether the root contains -*th*- or -*t*- to extinguish, put out, blow out, H. *bujhna*). — *čѵraq*, *lаѵіѕ*, *ѕ́ѕ*, *сѵthі* put out the lamp, lantern, fire. *ѕѵthіѕ* EOL, *ѕѵѵthіѕіѕ* (-*thі-*) IUS having put out. *-*ѕѵthѵѕ*(?). Cs. of 1. *t(h)іѕѵѕ*, or

imaʻm Imām. 284.11. Ar.

imaʻn y faith. — *imaʻn bilumʌn bai.i* he is a faithful fellow. Ar.

imaʻndaʻr faithful, loyal, trusty. — *imaʻndaʻrʌn bai.i* he is a faithful fellow. Ar. Prs.

imʌrʌyʌs IUB, *imʌrʌč-* to cut, pollard. (Stated to be a variant of **-mɤrɤyʌs*; v. s.v. *imʻuʻritinʌs*).

imaʻrʌt palace. 136.23, 84.20. Ar.

imʌkrʂ, pl. *imʌki.ents*, x.

1. A vessel for dough, H. *xʌmiʻrdaʻn*.
2. A man who is lazy and doesn't move about ("travel").

imauqti N. *-mots* x cupboard. 1/A

imeʻkus, imʻeʻkus, iʻmekus, pl. *iʻmekuyants* x small peg which fits into a hole in the bolt (*sɤrik*) of a door and so secures it. Rung (of ladder). [355]

(Perhaps **-me* tooth. For *-kus* cp. *yaʻrokus* and *yʌtokus*? It may also be noted that the word for bolt in

456

1/A [See corrigenda et addenda, category 116, p. 541 — Analyst]

000 Sh. is *ɜrikos* and that the Burushaski pl. *ɜrikuyants* would correspond to a sg. of this form).

ɪmi nomuyen a term of abuse. It is noted that *nomuyen* does not come from *yanas*, but this must, I think be a mistake, as it has all the appearance of being the Ppa. or Impv. with the infix *-mu-*. — *ɜɜɜ ɪmi nɜm'uyen!* having taken its mother(?) 64.18.

imiɪras, *imiwč-*, to act homosexually (of a man or animal); to commit sodomy, to have carnal commerce (of males?); sodomy. IUB H. *jɪmaɪ' karna, mujamA'at.* — *imiɪrčor rai stimi* (the male dog, goat, mule) wanted to mount (another male?).

ɪmo, *ɪɪmo* hm and x sg.; y sg.-and pl. his own, its own; his, its (referring to subject, cp. H. *apna* and Latin *suus*). V. § 143. — *Buɪur Jamhuɪr ɪmo hador nimi* B. J. went off to his (own) house. 68 17. *hakičaŋ* (y pl.) *ɪmo ranati tapi doritsan* the houses have fallen down of themselves at night ("by their own will, or intention"). Cp. 286.9.

imu'uɪritinas[1] v.t. to pollard. — *tom imuɪritinas* to pollard a tree. *imu'ɪritinum tom* a pollarded tree.

The following forms were also given, which imply a form of the infinitive without the *-in-*.

1st sg. Fut. *imuɪritam*.

1st sg. Pret. *imuɪrutam* || *imuɪritinam*.

(Later information gives three forms of this verb: **-muɪrutas*, **-muɪrut-*; *muɪrutinas*[1] **-muɪruti-*; and **-muɪruyas* with no Pres. base. V. also *imarayas*).

inaɪm y reward, present. — *lut inaɪm*

462

[1] [See corrigenda et addenda category 116, p. 541 - Analyst]

000 *gov ečʌm* I shall give you a great reward. 72.9. *ja kuvr inavm uči.ʌm* I gave these people presents. 92.24. Cp. 378.7. Ar.

ivnč inch. Eng.

ivndil v. *-ndil* hill slope, face of hill. 294.5.

ivne, ine hmt., oblique m *ivne*, f *inemo-*; x *ivse*, y *ivte*. Pl. h *uve*, x *ivtse*, y *ivke*. Demons. Adj. and Pron., and Personal Pron. that, the; that one; he, she, it. V. § 120.

ɪnkavr stʌs to deny. Ar.

ɪnsavf y justice. — *ɪnsavf api* it is not justice, there is no justice. *ɪnsavf stʌs* to do justice. *ɪnsavf stʌs sis* a doer of justice, a just man. *ɪnsavf apivman bai.i* he is an unjust man. Ar.

ɪntɪzavm y arrangement. — *ɪntɪzavm stʌs* to arrange. *gute ɪntɪzavm netʌn* making, carrying out, this arrangement. 386.10. Ar.

-ine case suffix, v. *-ʌne*.

[252] *ipfuvporʌs*, Ppa. *n'ipopor*, to rub grain between the hands to get the husks off. — *heri ipfuvporuman ke* if you rub barley between your hands. 328.1 Ppa. *n'ipopor*. 328.9. (*-pfuvporʌs? but probably always with i- as object is probably always y. Cp. *ešpupurʌs*).

ɪgravr confession. — *ine ɪgravr etimi, "ja yiski ba" nusen* he confessed 'I have committed theft'. Ar.

ɪravda y intention, purpose, design. — *ɪravda besʌn bila?* what is the intention? *ɪravda etimi* he intended, proposed to . . . Ar.

ivʌn, -ʌbo x cream. — *ivʌn bi* there is cream. Cp. 340.12. (A liquid that is x and not y is a surprising phenomenon). 1/A

46 b

1/A [see corrigenda et addenda, category 116, p. 541 - Analyst]

*-*ivʌs*, *-*ivč-*, Ppa. *n*-*ivrin* to die. — 000
Pn.pf. + *v-*: *evr-* (*exr-*), *gu.ivr-*, *ivr-*, *mu.ivr-*; *mivr-*, *mevr-*, *u.ivr-*.

Fut. *evčama?* shall I die. 146.19. *gu(w)ivrčuma* youwill die. 134.4. *aku.ivrčuma* you will not die. 146.20. *ivrči*, he will die. 44.10. *exrči* he will not die. 44.9.

Pres. *be ke je evrča ba* otherwise I am going to die. 44.19, cp. 50.8, 358.5. *gu.irča* you are going to die. 50.6,11. *Aku.irča* you are not going to die. 50.18. *jimʌle padša irčai.i* tomorrow the King dies. 38.19.

Pret. *evʌm* I died. *irimi* he died. 112.15. *mo.i mu.irvmo* her daughter died. 66.22. 72.25, cp. 226.2. *bevumʌn u.irvmʌn* how many of them died. 4.8.

Perf. *savʌli irai.i* he (has) died yesterday.

Plup. *irʌm* he had died. 308.15, 370.15.

-*ẹ* form. *uyon u.irẹʌn!* may they all die! 172.4.

Pres. Pc. *u.irčume* they dying. 128.9.

Past Pc. *nirin* he having died. 296.3, 344.11.

St. Pc. *irum* dead. — *ai.irʌmər* when I am dead. 218.4. *irum gutʌs* the dead corpse. 114.23 *irum bʌm* he was dead. 373.21. *mirumər* when we have died, after we are dead. 202.1. *u.irumə havlər aiyarin* don't send me to a house of dead persons i.e. where someone has died. 201.16.

As Optative: *oyər irum* may my husband die! 356.5.

47a

Infin. *iʔʌsɛ γʌmulo* in grief for his death. 38.20. *gu.iʔʌs gunts dimi* the day of your dying has come, i.e. your last day. 50.6. *iʔʌs(ɔr) imʌnimi* he nearly died. 000

Pres. Base. *ins γʌliʔ nimʌn iʔrčɔr imʌncai* having fallen ill he is (has become) about to die.

Conditional. *'ɛʔrčum tɛs* he would not have died. 150.21.

The following form I cannot explain:

iʔrs iʔrs nimʌn dyu.ɛsimi having been on the point of death, he recovered.

iʔrʃš pl. *iʔri.ints* (*-ints*), *iʔrʃšo* x crest. ridge (of a descending spur). — *mɔrts*, *čɔrs*, *iʔrʃš* spur, ridge of earth-cliff, of rock-cliff.

The word was on two separate occasions given me in the plural duplicated:

iʔri.ents iʔri.ents bi.en, *iʔrʃšo iʔrʃšo bi.en* and *iʔri.ʌg iʔri.ʌg(?) bi.en* This must denote some common physical formation — a series of spurs?

iʔrum v. *-iʔrʌs dead.

isɔʔmɔʔnum IUB first-born (child), H. *ʌwʌl bʌčʌ*. (According to later information a form of *-ts'ʌmʌnum*). [601]

isʌn IUB a stone vessel. H. *patthʌr ka bʌrtʌn*. (Not confirmed).

isɔrkʌs v. *-sɔrkʌs*.

iʔsɛ, *isɛ* x sg., pl. *iʔtsɛ*, cp. h *iʔnɛ*, y *iʔtɛ*.

Demon. Adj. and Pron.: that, the; that one, it. V § 120.

isɛ tisɛtɔr nitsun ɛsqʌnimi taking him to the (that) pit, he murdered him. 56.20. *iʔsɛ yāʔ ʌkolɛ di bi.a?* has that bear come here? 218.8. *iʔsɛ dʌn ʒi.aʔrʌt ɛt'ʌm. da mu kɛ isɛtɔr nuʔn hiʔriɛ ʒʌlaʔm ɛčaʔn* they

000 had made that stone a shrine, and even now, men going to it, pay their respects. 290.6. *gusɛ hʌn bʌlʌsʌnɛ hʌn isɛr sɛ.ibi* this bird is saying to that one. 96.18.

iɛk, -umuts x V. **-sk* the young (of, an animal).

iɛka v. **-sga*.

iskɛ N. hmf three. — *iskɛ hirikʌnts* three men. *iskɛ gušiɛyɛnts* three women.

iɛken hmf three, v. §§ 188 and 201.

iɛki z three, v. §§ 188 and 190. Cp. *usko* (x y).

**-iɛki* h in form *u.iɛki*, v. §§ 133 and 201.

iɛki surface(?) — *kʌfša yaɛrum iɛki* the sole (under surface?) of a shoe. (Probably *iɛkil* from **-skil*. Cp. however Kho. *iɛki* heel).

iɛki aɛltər sixty.

iɛki aɛltər (or *ʌltər*) *torumo* seventy.

iɛskikum, ɛskikum, ɛskiɛkum, three (referring to composites?), three pairs, three sets of, triplets). — *iɛskikum yuɛtiŋ* three pairs of feet, three people's feet. *kuɛ ɛskikum rom Šimšaɛlolo bam* these three tribes (tribal groups?) are in Sh. 272.14, cp. 236.1. 350.2. V. § 197.

iskikuts.

1. Three days. — *aɛltul iɛskikuts pfʌt eti* let the matter stand for 2 or 3 days. 72.6. *iskikutsum ʌŋʌro guntsɛ* after three days on the Tuesday. 306.16.
2. Terms applied to certain ceremonies observed 3 days after a person's death. — *mots'iɛts iskikutsɛ čɛraɛ espalumʌn* in her funeral rites they lighted the "iskikuts" lamp. 244.21, cp. 312.20.

iskil, -iŋ y v. **-skil* face, side.

skiɛlum N. } third.[1]
s ki.'uɛlum }

48a

[1] [See corrigenda et addenda, category 116, p. 541-Analyst]

ispʌkpa y minced meat. (Said to be Shina). 000
ɤstinjaʷb ɤtʌs to urinate, relieve nature.
54.4. Ar. *ɤstrnjaʷ*.
iʷstər, *-iŋ* y.
1. Lining, inner side of cloth. H. (IUB) *astʌr*, *kʌpre ke ʌndʌr ka rux*.
2. Planks fixed on outside of house to keep off rain. (IUB vernacular Ms. *estər*, but this is probably merely due to a misuse of symbols).
-iʷš, *-š* (*šʸ*) Nominal suffix, v. § 21.c. e.g. *γʌsaʷs* to laugh, *γʌsiʷš* laughter.
-iš, *-š* Verbal suffix, v. §§ 321 and 357.
iʷša solstice. period following the solstice(?) — *sa išaʷr walimi*, or *nimi* the sun has fallen into, or, entered the *iʷša*, i.e. the sun has reached the solstice. *bai.imo iʷša* winter solstice (explained as the months of Dalv, (Ḥuʷt), Jaddi — the Chilla, but the Chilla is roughly only January and the beginning of February). *šinimo iša* summer solstice. *sa iʷšaʷr gimi je šərmaʷr guyʌm* or *sa išaʷr je ke šərmaʷr* the sun has gone into the *iša* and I have gone under the rug(?), i.e. I have got fever. 805

(Biddulph gives B. iša and Sh. iša as "winter solstice" and "summer solstice". Leitner gives them as "January" and "July" and translates iša literally as "mill pond". V. "Handbook" pp. 18—20).

išaʷra, *išaʷrʌt* y sign, signal. — *išaʷra ɤtʌs* to make a sign, to signal. *ʷmrštʌts išaʷrʌt ɤtimi* with his finger he pointed out (the hill). 28.11. Ar. 000
ɤšpoʷš y sg. and pl. seedling (of rice, tobacco etc.). *brʌsɤ ɤšpoʷš ɤncərkʌs* to plant out (rice) seedlings.
išq y love (of lovers). Ar.
itʌn, *itaiyo* x. v. *-thʌn*, top, point.

48b

ite y sg., pl. *iska*, cp. h *ime*; x *ise*. Demons. Adj. and Pron. that, the; that one, it. V. § 120. — *ite paći* that side, the other side, v. *iti*. *ite dil wor xuł dimi* that place pleased them. 294.9 *han ke ham bila itor ke gu* there is another house too, put the charcoal in it. 164.7.

As a Pronoun it provides an abstract "that". — *itetsum* for that reason, therefore. 30.5, 240.14, 54,21, 56.5. *itetsum ilji* after that, thereafter. *xan awełi ke . . . itew be ečam?* if it throws me down . . . in that case(?) what shall I do? 78.1.

iti, *ite* that side (of), across, H. *par*, *vəłaraf*. — *ja bagusa iti dusa* you are going across my share (of land). 114.1. *dəri.atsum . . . paćła ke hol iti duwaše bam* the king and army had crossed the river to the other side. 146.22. — *iti kiti*, *ite kite* that side and this, backwards and forwards, H. *idhar udhar*. *sinda huma ite kite manuman* they went backwards and forwards over the river ford. 114.26, cp. 264.27. *ite kite ataš* to exchange (prisoners). *iti kiti manimi* (the matter) has been settled, decided.

itifaq.

1. Agreement, composition. — *itifaq ne* agreeing together.
2. Chance. — *ajab itifaqtsum* by a strange chance. 378.15. Ar.

-itsas v. *-stsas*.

itsu, itsi, v. **-tsu*, **-tsi*.

itsimo v. 1. **-tsimo*. 130.20.

itsimo fresh(?), latest(?). — *mʌltaj itsimo bila* the ghee is fresh. (From **-tsi* after, "what follows", i.e. most recent?).

ilsir v. **-tsir* 1, 2 and 3.

itsu v. **-tsu*.

itum the other, the further (side). — *itum paći* that side, the other side. *hunts itum pər* (*pa* + *ər*) *atusum* the arrow not having come to the other side of the man. 146.11. *senumər itum ine anu ečʌm* on his saying this the man on the other side used to shout "anu". 354.3. (Adj. based on *iti?*)

iyol v. *yol*.

ززʌt y honour, respect. — *but or ززʌt etimi* he showed them great honour. 22.18. Ar.

o.

(See also under u).

o-, N. *au*, Negative verbal prefix, v. § 339. *oni* don't go. 120.26. *osenuma* you did not say. 22.6.

odi the collection of milk in the Wazir's house for the Mir of Hunza. — *jimʌle odi isərkas* (or, *usərkas*) *bila* tomorrow the "odi" is to be kept, set aside. 322.2. (Vide note on the passage).

odori **-ʌtʌs* (*odori, udori*) to seek, search for, look for. — *odori stanna be?* have you looked for it or not? *bəriŋ udori ʌtʌs* a searcher for news,

000 i.e. a spy. *beruman guntsiŋ xa odori m'otuman* they searched for her for several days. 244.20. *doγ'ərušume odori otuman* (keeping) making enquiries they searched for them. 242.6. Cp. 10.4. (Sh. *oḍorozki* to look for).

oγ'ərkas v. *-*aγərkas*.

oγur -ło (x) wave.

oiyas, oić-, Impv. *oi*, to measure grain (by bulk?). — *phalo oi, aiyoi* measure the grain, don't measure it. *oićam* I shall measure; *oimi* he measured.

okši rakši y plenty, abundance (of food). — *besans kam aipi, okši rakši bila* there is no scarcity of anything, there is abundance.

olja = *a* + *holja* neg. impv. of *holjayas* don't mount (the horse).

'oltalik v. *-*altalik*.

or to them, for them. — *or ast'am ne čup otam* settling the matter for them I silenced them. 42.20. *or čaγa ećam* they report to them. 124.19. (Agglutinative Pron. *u-* + *ər*, v. § 123).

ori.as v. *-*a.uri.as*.

orutas = *a* + *hurutas*.
1. Not to sit etc. 2. Uninhabitable. *orutas gutien bim* there was an uninhabitable hut. 112.12.

o.rutas = *u* + *-*a.oruutas*, to make them sit etc.

oṡas, oṡ-, Impv. *os*, Ppa. *nos(in)* to put down, place, set, lay; keep (things); impose (tax). — *kitab tikefe os* (*ayos*) put (don't put) the book on the ground. *uyoŋko uyans ke hanikute oṡam* they set dishes before the chief men also. 340.13. *hurco ke ta.očiŋ . . tsilulo ilumian. nil dərγo.ete*

50a

000 *o·ʊʊmʌn. no·ʊin . . . oyenʊmʌn* they soaked their boots and leg-bandages in the water. Having done so they put them (hung them) on a stick. Having thus put them they went to sleep. 130.25. *hʌn baḍʌlikʌn gopʌ·i no·ʊ čup ʊʊ hʊrʊ·t* placing a bowl beside you, sit in silence. 106.18. *i·k o·ʊʌs* + gen. to give a name to s.o., to call. *i·ʊʊ i·k je bʊsʌn oʊʌm?* what name shall I give him? 102.13. *gurin̥ (yʌ·r) o·ʊ* keep it in your hand. *ʌʌ̨ ʊʊ o·ʊ* keep it carefully. *o·ʊʊm* (St.Pc.) *diʊʊlo bʊrʊ·i bʌi.i ʌpi o·ʊʊm diʊʊlo* he looks in the place where he had put it, it is not in the place where he had put it. 166.20. Cp. 274.7, 342.5, 14.

o·ʊʊnʌs negative *o·* + *ʊʊnʌs* not-to say; to say "no", prohibit (?).

o·ʊʊin, pl. *o·ʊʊo*, h guest, visitor. — *o·ʊʊin ʊʊʌs* (*-*ʌʌʌs?*) to entertain as a guest. *hikum 'o·ʊʊo·ik dʊ·mʌn* a party of guests came. 232.4. *o·ʊʊu.er oγ'unumo* she gave them (y pl.) to the guests. 232.7. *mʊnik o·ʊʊo* some guests. (Sh. *o·ʊʊo*, pl. *o·ʊʊ*).

o·t y loss.

ot'ʌq, ut'ʌq food supplies provided free (in Gujhal) to the Mir when on tour (It appears to be the same as *mʊ·ʊ*). — *it'e·ʊʊ utʌqo bʌp osʊ·n* on that (field) they have placed the "otaq" tax. 342.14. Cp. 336.8.

585 *o·tiki mʊ·l* a form of food given to a bridegroom by his parents three days after his marriage. — *i·ʊʊ mʊ·l ʊʊčʌi.i. i·ʊʊr o·tiki mʊ·l ʊʊ.ibʊ·n* he eats that "mʊ·l". They call it "o·tiki mʊ·l". 306.20. (*o·tiki* = copulatory, from *o·tʌs*. Cp. *-*ʌtʌs* 6).

o·tsuyʌs v. *-*ʌtsuyʌs*.

506

252 *ownərʌs, ownərč-*, Impv. *ownər*. to make (oxen) extract the grain by walking round over the cut crops. — *buva ownərčʌm* I'll make the cattle trample (out the grain) (*u* + *-ʌwərʌs*, from *-wəra*, to make go round?). V. § 236. a.

000 *ryom* variant of *uyum* great.

oyom variant of *uyom* q.v., from *-yom* q.v., all.

U, U.

(See also under o).

u v. *uv*.

u- Pn.pl. 3rd. pl. h and x.

-u, pl. *-umots*, (x) tear. Forms: *ovu, guv, yuv, muv; miyu, mavu (movu?), uvu*. — *uumots* their tears. *muvwcʌn ine ivakiletər tsər mʌnimi* one of her tears (a tear of hers) fell on his face. 282.12.

-u v. *-uy* father.

učʌk, učʌq, -čeiq y.

1. Chamber, small room (in Raja's palace etc.).
2. Small separate building for baking bread in (possessed by Mirs, Wazirs etc.).

Š. B. pfuts ivtə tengululo, han učʌqʌnulo, bʌm S. B. was in a small chamber in the Div's palace. 10.8.

(T. *ojaq* hearth, fireplace; E. Turki *učʌq* fireplace, cooking-place).

uvčo MA. tongs. (Sh. *ūvčo*, tongs).

udovi v. *odovi*.

uv, uv h pl., sg. *ine*. Personal and Demons. Adj. and Pron.: those, the; those people; they. V. § 120. — *tslum uv sise ivtsi yʌsuvmʌn* the people (belonging to) there laughed at him. 140,5. *padša evərdu.s. ovumilo uv ovpʌčər duvmʌn* those (men)

5/a

despatched by the king's sons-in-law returned to them. 126.28. ʍʍ *ɔpačɔr nimi*; *ni.inin u.rtum dɔyɔrusumi* he went up to them; having gone he enquired of them . . . 88.10. 000

ʍi, *ʍi·* h and x pl. Corroborative Pron.; (they) themselves. V. 1. **-i*, v. § 142. — ʍʍ *ʍi*, *ʍ· ʍi* they themselves, *hayɔrzło*, *hayɔmzło ʍi* the horses, mares, themselves, (but: *hʍ·ki̇čag* (y pl.) *i·* the houses themselves). ʍʍ *ʍi hɔrag dum'u·čɔm* they are coming to terms among themselves. *ʍ· ʍi hɔrag ʍkɔr ɔqanɔman* they among themselves killed, themselves i.e. they killed each other. 82.6. Reduplicated *ʍi ʍi* they each, (they) separately. *biłka ʍi ʍi i·m'oqɔman* they each tore out the hair. 136.2.

ʍimo, ('ʍyɔmo) their own. Possessive adj. V. § 142. — *ʍimo hʍ·čɔr dʍ·mɔn* they returned to their own houses. 22.8. *'ʍyɔmo nokɔrɔr ni.ibʍ·n* they say to their (own) servant(s). 126.4. *ʍimo hʍki̇čagɔr ničʍ·n* they go off to their own houses. 306.15. — *ʍi ʍimo* each their own. *ʍi ʍimo dił muqarɔr bila ʍwča'n* their place for each is fixed (and) they make them sit down in them), i.e. each has his own appointed place. 340.6. Cp. 302.11, 338.8. (Adj. form from *ʍi*, *u* + **-i* + *mo*).

u.i·ʍas = *u* + **-i·ʍas* (people's) dying, i.e. death.

ʍiyas = *u* + **-ʍyas*, v. s.v. *ʍli*.

**-ʍl*, x pl. **-ʍlzło*, *y* pl. **-ʍliŋ* belly, abdomen: pl. bellies, innards. — Forms: *ʍl*, *gʍl*, *yʍl*, *mʍl*; *mi.ʍl*, *moʍl*, *uʍl* — pl. 1st *myʍlzło* our bellies; *gʍliŋ* thy innards. N. *'ʍʍl*, —, *i.ʍl*, pl. **-ʍlirło*. — *ʍʍlolum da qaw stimi*

000 again he called out from inside her belly. 108.13, cp. 108.24, and *moγumərulum* (*-γumur). 108.9. *murlulo čaγamiŋ ełas ime giyaγ moγumutsə murltsum da sin* the child who had spoken in her belly, on her going to sleep, coming out of her belly . . 108.29, cp. 110.2, 4. *urlšo tsər oti* cut open their (the women's) bellies (for them). 88.25.

*-*ul manaγ* to have one's belly filled, to be satisfied (with food). — *ja ol mani bi, yul mani bi* my belly has been filled, his belly has been filled, is full. *ine esulo ərmaγ bilum . . . itsetsum ja ol maniŋ* he wished that his belly might be filled with those (husks). 366.12. (Cp. *duljayas*).

*-*ul* *-*ałas* to fill s.o.'s belly, to satisfy s.o. (with food). — *jaγ bur jo: ol oti* give me much; fill my belly. 63.16. *ikete imo yul ne* filling his belly with those (husks). 372,1. (Cp. *d*-*asuljaiyas*).

There is a difficulty about the category of *-*ul*. It is usually x with plural *-*urlšo*, but in the plural at least it also appears in a y form *-*uliŋ*.

On different occasions I was told:

1. That the x form refers to a full belly, the y form to an empty one.
2. That the x form is used of the human belly, the y form of an animal's.

It will be noticed that both these statements, as far as they refer to the x form would be true of the expressions *-*ul manaγ* and *-*ul* *-*ałas* as ordinarily used.

I am inclined to believe that the x form denotes the belly as a whole i.e. as a non-composite unit — the

000 view usually taken of the human abdomen, and that the y form denotes the belly as consisting of an assemblage of parts, intestines, stomach etc. — the aspect in which this portion of the body in animals is perhaps most earnestly regarded by people who do their own butcher work.

This theory seems to cover the single instance I have recorded in which the y form is used with reference to human beings — the woman's curse:

gu·liŋ ʃem (or *ʃeṛʃ*) may thy innards be devoured! an alternative, I believe, of identical meaning being: *gutsiriŋ ʃem!* (*-*tsir* intestine etc.). (A later authority says that *-*uliŋ* is used of dead animals, *-*ulišo* of living ones).

u·l, ul, (inside). — *u·l ne* inwards; + abl. to the inside of, on the inside of. *qau ečaiʃ u·l ne* he calls out to inside (the house). 164.6. *Xa·n Wali Škha·ritsum ul ne Murkuš* . . . inside (i.e. up the valley from) the X.W. tower, Murkush . . . 252.23. *Hasanaba·dtsum ul ne ite bər* the nullah on the inside of (i.e behind and above) H. 238.3. *telʌtsum ul ne Šišpərs xa* thence inwards (i.e. up the nullah) as far as Sisper. 238.5. (*u·l* cp. *u·lo; ne* Ppa. of *etʌs*, v. §§ 408.4, 416).

342 *'ulʌči* "clean place in the house for keeping flour in". — *'ulʌče.ər d'emičan* they pour (the water) out in the "*ulʌči*". 314.4. (A later authority says the word denotes the innermost, private part of a house).

000 *ula·nʌs, ul'ʌnʌs* N., *ula·-*, Impv. *ul'ʌn*, to be able. — *je mu nrš ula·ya ba,*

52 b

[see corrigenda et addenda, category 116, p. 541-Analyst]

awlaya ba I am able, unable, to go now. *kitap sinas ulaya ba* I am able to read the book. *Burošaski etiš ulanas ine hir kine bai.i* this is the man who can speak Burushaski. *doro etas ulanas* . . . this is the man who can (do the) work. Negative: *aulanas, aulaya ba, aulanam; aul'an.* (Recorded by EOL from a N. source. I have not met with the word in Hunza. It is given by both Biddulph and Leitner). ooo

*-*wlgrš*, pl. **-wlgi.aŋ*. y nest; sheath, scabbard. Only recorded in forms: *ywlgrš* q.v. with 3rd sg. Pn.pf., and *wlgi.aŋ* with 3rd. pl. Pn.pf. — *han činane usko ywlgi.aŋ bitsan* one bird has three nests. *čivo wlgi.aŋ bitsan* there are birds' nests.

-ulji y. dream. Pn.pf. + 1: *ol-, gwl-, ywl-,* —; *mi.wl-* (*mivl-*), —, *wl-*. The Pn.pf. refers to the dreamer. — **-ulji yetsas* to dream. **-ulj(i)en yetsas* to have a dream. *kwlto ja han oljiyan yetsam.* *Oljilo hikum gušinentsik hevčam* today I had a dream. In my dream a party of women were weeping. 44.3. ("A dream" occurs usually in the form **-ulji.en* or **-uljen*). *kwlto je jerimo watanər olji awˈalam* today in a (my) dream I found myself in my own country. 20.8. *unge gwlji yetsa* you have had a dream. 72.3, *unge gwljulo* in your dream. 84.9. *gwlji.e čaya* the story (content) of your dream. 72.7. Cp. 84.9. *ywlji yetsum ine sise ivskil ja evitsiš xa* so long as I have not seen the face of the person who had the dream. 74.18. *ine mivlji yetsum hirər qau ečan* let us call the man whom we saw in our dream(s). 284.14. *sis*

000 *uyoˑnɛ uˑlji inɛ ʌšdər delum inɛ hir yeˑtsumʌn* all the people saw the man who had slain the dragon in (their) dream(s). 284.8.

(The *yeˑtsumʌn* seems to do double duty governing both *uˑlji* and *hir* as direct objects, but cp. *oˑlji ʌwʌlʌm* "above" where one must take *oˑlji* as meaning "in a dream").

menɛ uˑlji ni.itsin any persons having had dream(s). 74.13.

uˑlji yər funeral rites, obsequies. — *uˑlji yərər gur hərі nˈoˑusin* putting aside wheat and barley for funeral rites (i.e. for funeral alms, *xairat*). 332.11.

(Explained by H. *aˑge piˑčhe*, so *uˑlji* is from *-*lji* and possibly liable to change of Pn.pf. The phrase seems to be an exact equivalent, with inversion, of the Sh. *yer fʌtu*).

(Later authority gives basal form *-*lji* *-*yərər*).

uˑlo, uˑlu adv. in, inside, within. — *uˑlo ju; uˑlo hurutˑ* come in; sit inside. *uˑlo hiŋɛn* γʌnˈimi inside a door appeared. 54.5. *uˑlu niˑmi* he went in. 12.12. *iˑsɛ tisər neˑsqʌn uˑlo wʌščʌm* killing him I shall fling him into that pit. 84.2. *uˑlo haˑler niˑʌser* on going (in) into the house. 370.5, 374.4. Regarding: *hiŋɛ uˑlo*. 212.10, and *tsəriše uˑlo*. 304.17, v. § 65.

(Probably an oblique form of *uˑl* and related to *-*uˑl* belly).

-ulo case suffix, v. § 76.

uˑlum 1. Adv. from inside. — *uˑlum juwaˑb aˑtimi* from inside no answer came. 24.8.

2. Adj. inside-, inner, internal, indigenous. — *uˑlum inɛ* (*se.ibai.i*) the inside man (i.e. the man inside the house says . . .) (or perhaps: "the other, from inside, says . . ." 164.4.

000 *u·lum baiyu* indigenous (i.e. locally produced) salt. *u·lum bilaštu.ε ime gu·tas ni'tsun . . . ṣičaʼn* domestic, i.e. human, "bilases" carrying off his corpse . . . devour it (*u·lum* is here glossed Prs. *bavtrni*).
